The armies now encamped within sight of each other, the Argives occupying the most advantageous position. Hence Agis desired to draw them; and, for this purpose, diverted a stream which descended from the mountains so as to cause it to overflow the country. Believing, however, that they were resolved to maintain the situation they occupied, he was returning towards the hills, when he met them in order of battle. So admirable was the Lacedæmonian discipline, that his troops, although taken entirely by surprise, formed instantly, and almost instinctively, into the closest and most unbroken lines, and marched slowly on, in perfect phalanx, to the sound of their solemn but inspiring music. This firm and deliberate valour was successful. The Argive and allied forces were completely defeated, but the number of the slain was not great, from the prudence of Agis, who declined pursuing the foe, after

VOL. IX.

he had ensured the victory. This brilliant success restored the Lacedæmonian character in Greece, and with it that power which character alone can bestow among an energetic and thinking people.

The immediate consequence of the battle of Mantinea, was the transference of the government of Argos, from the people to an oligarchy, and its defection from the alliance at Athens. A treaty was concluded between the Argives and Spartans, and the Mantinians soon after yielded to the victors. Thus all the hopes of Athens resulting from the new confederacy were destroyed, and her rival advanced in glory and in strength. But the chiefs of Lacedæmon were unequal to the improvement of their successes. A second revolution soon took place in Argos, which caused the restoration of the people to their rights, and the expulsion of the nobles. Alcibiades personally assisted in completing this change, yet the Spartans remained inactive. They also suffered the Athenians to invade and subdue their allies, the Melians, without offering them the least assistance. After the surrender of Melos, the Athenians, with more than savage cruelty, put to death all the men capable of bearing arms, and reduced the women and children to slavery.

While the Lacedæmonians remained thus torpid, the Athenians were elated with brilliant hopes of extended conquest, which proved eventually more injurious than any inactivity which might have paralyzed their energies. Dreams of the conquest of Sicily and even of yet more extended fields of glory and spoil, were now enticing them to their ruin. They had, in the course of the war, sent naval forces to aid the Leontines against the Syracuseans, but these expeditions had been planned with little interest, and attended with little success. The restless ambition, and high spirit of enterprize of Alcibiades, now incited by the magnificent idea of conquering Sicily, imparted a new feeling to his fellow citizens. An application from the people of Eggesta, against the Salustines and Syracuseans, was the immediate occasion of the splendid and fatal visitus with which the Athenians were deluded. The Eggestans sent an embassy to Athens representing themselves possessed of the most ample treasures to defray the expenses of warfare. To ascertain the truth of this declaration, ambassadors were sent to Eggesta, who returned with sixty talents in silver, and the most brilliant tales concerning the wealth which they had inspected. In vain did Nicias remonstrate; the expedition was resolved on; sixty galleys were ordered to be made ready; and the command was entrusted to Nicias, Alcibiades, and Lamachus. (See *ALCIBIADES*.)

About Midsummer, the immense preparations were completed. When all was prepared for sailing, solemn prayers were offered to the gods for success, the navigators to every ship poured libations into the sea, and drank to the felicitous issue of the enterprize out of golden cups, and the navy majestically moved from the shore to the sound of the psalm.

The fleet first sailed for Corecra, and was joined by vessels from the allies. The whole navy consisted of a hundred and thirty-four trireme gallees, of which a hundred were Athenian, and the remainder contributed by the people of the minor states, chiefly by the Chians. After the commanders had been refused admittance into several ports, they were allowed a market at Rhegium, though not admitted within the city. Meanwhile

they received the report of commissioners, whom they had sent to ascertain the true amount of the hoarded treasures of Eggesta, whose answer destroyed all the golden dreams which had been entertained respecting its resources. On finding that the people of Athens had been deceived by the allies, to whose succour they had sent out their armament, the commanders entertained different notions respecting the proper measures to be taken. Nicias proposed that they should relieve Eggesta and return; Lamachus, that they should sail at once to Syracuse, and make an immediate attempt against that city; and Alcibiades, adopting a middle course, urged the propriety of endeavouring to attach the Sicilian states to their cause by negotiation, excepting those whom they were immediately sent to oppose, and that, afterwards, they should direct their arms against the Syracusan power. The last advice was followed; and the generals succeeded in procuring the alliance of Naxos and Catana, and the liberty of purchasing supplies from the Messenians. On a message from Camarina, that the people of that city were ready to unite with the Athenians, the fleet sailed thither; but the chiefs, finding the invitation to have been prematurely made, returned to Catana, their former position. Here they found the Salaminian galley, bearing an order for the immediate return of Alcibiades, and other officers, to answer charges which had, before their departure, been advanced against them. This order they obeyed; but Alcibiades found means to escape at Thurium. On the arrival of the Salaminian vessel, he was condemned to death in his absence.

It soon became manifest, that the only chief really suited to the conduct of the expedition, was removed from it. Feebleness and irresolution marked the steps taken by Nicias and his remaining colleague. The season of action was wasted in a fruitless negotiation with Himera, the capture of Hyccara, and the seizure of a great number of defenceless Sicels. As the people of Eggesta were unable to fulfil their promises of pecuniary aid, Nicias raised a large sum by the sale of his unhappy captives, among whom was a girl named Laïs, said to have been the person afterwards so famed for her seductive attractions.

On the approach of winter, however, the Athenian commanders seem to have been roused to a degree of energy, of which they had hitherto displayed no symptoms. They resolved to invest Syracuse; and, having by false intelligence thrown its citizens off their guard, sailed from their station, and seized on a post of great advantage in the vicinity of the capital. This movement excited no small alarm in the minds of the Syracusans, who perceived that the great strength of the position occupied by their foes, precluded all hope of carrying it by storm. The next day, the Athenians drew out in order of battle, and succeeded in compelling the Syracusans to take refuge within their walls. But Nicias and Lamachus were not prepared to take any vigorous measures for improving their successes. They left their position, sailed quietly to Catana, laid up the fleet, and dispersed the army in winter quarters.

Measures of
the Syra-
cusans.

During the interval which the winter afforded, the people of Syracuse took the most prudent measures for averting the dangers of the expected siege. Happily for them, Hermocrates, a man of great ability and patriotism, was the chief director of their councils. He renewed their confidence in their own energies,

which the late defeat had shaken. Chosen commander in chief, with two colleagues, he proceeded to extend the fortifications of the city, and to place garrisons in the forts in its neighbourhood, which might prevent it from being surrounded. He next endeavoured to win over or secure allies to the Syracusan cause, and succeeded in obtaining from the apparently hostile people of Camarina, a promise that they would remain neutral. But his chief measure was the appointment of an embassy to Greece, to solicit aid from the foes of Athens.

His deputies first proceeded to Corinth, by the citizens of which place Syracuse had been originally founded. Here they experienced a most favourable reception, arising not only from regard to Sicily, but from that inveterate enmity to Athens, which the Corinthians had never ceased to cherish. Ambassadors were appointed to accompany them to Sparta, and add weight to their requests for aid, before the Lacedæmonian senate. Happily for their mission, they found Alcibiades, who had been received with cordiality at Lacedæmon, ready to support them with all his information, and all his eloquence. Endowed with consummate abilities, acquainted with all the strengths and weaknesses of the Athenian people, and necessarily possessed of the most extensive and accurate knowledge respecting the plans and the resources of the expedition of which he had been the chief adviser, he was able to decide the hesitating councils of the Spartan magistrates. They consented to send Gylippus to command the troops which Corinth could supply, though they declined furnishing either men or treasures. They also resolved to fortify Decelæa, and to renew the war with Athens.

Meanwhile the Athenian commanders in Sicily prepared for the intended siege. Finding the mountaineers ready to revolt against Syracuse, they engaged them in their cause, and obtained from them money and provisions. They procured horses to afford them cavalry, of which they were greatly in need. Stone, iron, and other materials, they also succeeded in collecting. Early in the spring, they moved their forces, gained the advantage in a skirmish, took the town of Centoripa, and ravaged the surrounding regions. On returning from Catana, they found reinforcements and supplies from Athens, consisting of two hundred and fifty horse soldiers, three hundred talents in silver, and a considerable quantity of military stores. On receiving these, they determined immediately to sail for Syracuse.

The first measures of the Athenian generals were taken with great judgment, and prosecuted with great success. They landed at Leon, near Syracuse, and took possession of the hill Epipolæ, commanding the city, before the enemy knew that they had left their position at Catana. Immediately, however, on observing that the forces had attained the height, the Syracusans attacked them with great vigour, but were soon repulsed by the steady discipline of the Athenians, and forced to retreat within the city. The next day, the citizens declined renewing the combat. Their foes improved the occasion by fortifying the height of Labdulum among the steep slopes of the mountain, and commencing the contravallation of the city. This they succeeded in completing on the northern side, having repelled another attempt of the Syracusans to impede them. On the southern side, Hermocrates carried out

a work from the wall, to break the line, but it was shortly after surprised by the Athenians, and its garrison forced to retire. Another work erected with the same design occasioned a fierce contest, in which Lamachus was killed, and Epipolæ would have been taken, had not Nicias, who was afflicted with sickness, ordered fire to be set to the outworks, and thus checked the progress of the enterprising troops. After this engagement, the Athenians were permitted to continue their circumvallation for some time without further resistance.

Every thing seemed now conspiring to favour the Athenian arms. Despair crushed the energies, and faction divided the resources, of the people of Syracuse. Many of the cities of Sicily, believing the Athenians must succeed, came to offer them their alliance. Repented propositions were made in the public assemblies of the Syracusans for a capitulation to their besiegers. While affairs were in this critical situation, Gongylus, a Corinthian commander, arrived in the harbour, and revived the almost expiring hopes of the people, by assurances of immediate support from Lacedæmon and Corinth. Nicias, meanwhile, remained in a singular state of inaction. Gylippus, who now arrived in the neighbourhood with 5,000 soldiers, was actually suffered to pass Epipolæ by the same road through which the Athenians themselves had attained its summit. The lately dispirited people of Syracuse went out to meet and welcome him, and escorted him into the town without the least opposition from their foes. Willing to show his confidence of success, he sent a herald to the Athenians, with a message, that if they would quit Sicily, he would allow them a truce of five days for their peaceable departure. To this bold intimation no reply was given, nor was any attempt made to show, by action, the futility of the defiance. The Spartan general was allowed to choose his own position, and pitched his camp in the quarter of Tementes, on an elevation suited to his plan of warfare.

The next day Gylippus drew up his troops in order of battle before the works of Nicias. Perceiving that general still passive, he sent a detachment, which took possession of Epipolæ, and destroyed the Athenian garrison. After this, Nicias appeared to stand on the defensive, and erected three forts near the southern entrance of the great harbour, for the protection of his forces. Two actions soon ensued, in the first of which he gained the advantage, but in the second was compelled to retire. He was about the same time dispirited by the arrival of the squadron of Spartan and Corinthian ships, and the capture of an Athenian galley at the mouth of the harbour. So completely, indeed, were affairs changed since the appearance of Gylippus, that Nicias sent home a letter to Athens, in which, after stating the difficulties of his situation, he implored that he might be allowed to resign the command, and impressed on the people that either the forces must be recalled, or increased to double their number. This remonstrance, as far as it related to the recall of Nicias, or the troops, was in vain. The Athenians could not endure the frustration of hopes which they had cherished with so great an ardour. They commanded Nicias to remain with Menander and Euthydemus, as his colleagues, sent Eurymedon with ten vessels, and twenty talents of silver, to reinforce

him, and prepared to dispatch Demosthenes for the same purpose, with larger succours.

But while Demosthenes was on his voyage, the Athenians in Sicily were suffering a continuance of reverses. Gylippus took the bold measure of causing an attack to be made on the Athenian fleet, while he led the infantry towards the three forts occupied by the army on the southern side of the harbour. In the naval action which ensued, the Syracusans were beaten, after a hard contest; but, while the troops of Nicias were drawn to the shores to assist the fleet, Gylippus took their three fortresses, almost without experiencing resistance. Thus large quantities of stores, ammunition, magazines, masts of vessels, and three ships laid upon the shore, fell into his hands. He demolished one of the fortresses, placed garrisons in the other two of them, and drew up a squadron near them, by which the supplies would be prevented from reaching the Athenian camp. New allies were induced, by the successes of the people of Syracuse, to assist them with money, recruits, and arms. Agatharchus forced his way through the harbour with ten vessels, one of which he dispatched to the Peloponnesus, and with the remainder intercepted store-ships and transports, which were proceeding to relaunch the Athenians. And Gylippus, hoping to strike a decisive blow before Demosthenes could arrive, made preparations for another attack on the hitherto victorious navy.

When the fleet was ready for action, the Spartan commander drew out his land-forces, and made a feigned attack on the Athenian lines, by which he diverted the attention of the generals from the scene where his real operations were commencing.

At the period agreed on, the fleet of the Syracusans, consisting of eighty vessels, moved towards the naval station of their foes, who hastily manned seventy-five galleys to resist them. An obstinate contest ensued, in which neither party gained a decisive advantage, but two Athenian vessels were destroyed. The event of this doubtful engagement was exceedingly dispiriting to the Athenians, who had long been accustomed to know no rivals on the ocean. Instead of meditating conquest, they sought to provide for the security of their marine, by a kind of naval fortification, consisting of a line of merchant-vessels, bearing instruments of great weight, which might sink any hostile ship attempting to pass them. The day after the battle was occupied by these preparations, which the Syracusans did not impede. On the following morning, the engagement was renewed, and continued for a long time with dubious success. At length the Syracusans retreated in good order, and the Athenians retired, little expecting a renewal of the contest. But the troops of Gylippus, having taken a hasty refreshment, prepared for them, returned to the ships, sailed forward, attacked their foes while wholly unprepared for combat, and compelled them to retire with loss behind their floating fortresses.

While the hearts of the Athenians were sinking within them on these repeated misfortunes, Demosthenes and Eurymedon arrived with a force calculated once more to inspire them with confidence of victory. They saw with joy seventy-three galleys majestically entering the port, with five thousand heavy armed troops and light armed infantry and slaves, which swelled the total number to nearly twenty thousand soldiers. The sight

Naval en-
gagement.Arrival of
Demosthe-
nes with
succours.

History. of this new force, so fresh and so vigorous, struck the Syracusans with terror. To them the resources of Athens, which could equip a second armament thus noble, seemed boundless. The effort was, indeed, nation-ising under the present circumstances of Athens. By the fortifications of Decelia, the whole of Attica was overruled, and the Spartans enabled to ravage its fields. The city was almost in a state of siege; it was changed from an imperial commonwealth to a secessitous garrison. And yet such was its power, such the magic of its name among the allies, that it was enabled to raise, as by enchantment, one of the greatest fleets which ever left the Grecian shores; and such was still the spirit of enterprise in its people, that they chose to employ this mighty force in a scheme of distant conquest, hitherto unsuccessful, rather than to use it against their domestic invaders.

Attack on Epipolæ.

On the arrival of Demosthenes, the generals resolved to attack Epipolæ, the possession of which, by the foe, was a great obstacle to the progress of the siege. As, however, the place was exceedingly strong, as well from the advantages of its natural position as its fortifications, there seemed little hope of effecting its capture, unless by surprise. At the hour of repose, the army was set in motion, seized one of the out-works, and advanced to the second line of fortresses. But the garrison was now alarmed, and the troops under Gylippus advanced to oppose the progress of their foes. Still the Athenians proceeded with great vigor, climbing the steep, and repulsing the Syracusans, till they were met by a body of Boeotians, who firmly opposed them, and increased the confusion, which, from the declivity and the unevenness of the ground, had already prevailed through the ranks. Dreadful carnage ensued; the moon gave on uncertain light, which only served to confuse the Athenians; in their ignorance they fell on each other, and, in their disunion, suffered their watch-word to be learned by their enemies. Broken, fatigued, and bewildered, they endeavoured to retreat, but the flight was attended with a series of disasters. Many perished amidst the rocks, dashed to pieces in falling from the heights; many were killed by the enemy in the steep and narrow roads; and those who escaped to the woods were found and cut to pieces. The Athenians lost two thousand soldiers, whose bodies were, the next day, given to them, on the usual request of the defeated.

Determination of the Athenians to retire.

On this sad and unexpected disappointment, Demosthenes proposed the immediate return of the forces to Athens. But Nicias, who had secret negotiations with a party friendly to his cause within the walls of Syracuse, at first earnestly pressed the continuance of the siege. At length, finding that the troops were wasting away with sickness, and that Gylippus was receiving new succours, he assented to the proposals for retreating. Measures for this purpose were taken with the secrecy requisite for their success; but an eclipse of the moon prevented the embarkation, for which all the preparations were completed. The augurs being consulted as to the import of the phenomenon, declared that it indicated the will of the gods that the fleet should not sail until three times nine days were past. On this, Nicias, superstitious as he was just, refused to consent to any removal until that period should be concluded.

The design of retiring, of which the execution was

thus delayed, was most injurious to the Athenians. It inspired the Syracusans with additional boldness. They resolved to prevent the retreat of the enemy, and, if possible, by the signal destruction of the fleet, to crush the means of any future invasion. They accordingly set both their land and naval forces in motion, and compelled the Athenian fleet to meet their navy. They were inferior to their adversaries by ten galleies in the number of ships; but taking advantage of the extension of the Athenian line, by which Eurymedon hoped to surround them, they broke through the centre, and defeated the armament after a fierce contest, in which Eurymedon fell. But a detachment of the land forces, sent by Gylippus to prevent the landing of the crews of such Athenian vessels as were driven beyond the range of the fortresses, were met by part of the infantry of Athens, and compelled to retreat, after considerable slaughter. This advantage was, however, a very inadequate compensation for the naval defeat which the late masters of the seas, with superior numbers, had been compelled to endure.

Want of provisions now began to occasion great distress among the Athenian forces. It was, therefore, determined to attempt a withdrawal of the armament, with whatever risk it might be attended. When the mariners had embarked, the generals, Demosthenes, Menander, and Euthydemus, led on the navy to force a passage through the entrance of the harbour. They had succeeded in taking the vessels which blockaded the port, and proceeded to unmoor them, when the Syracusan fleet advanced in order of battle. A terrible combat now ensued, in which the Syracusans obtained a decisive victory, and such was the despondency of the Athenians, that when Demosthenes and Nicias proposed that they should all embark on board their remaining vessels, which were still superior in number to the Syracusan fleet, they refused, offering to pursue any course by land, but alleging, that as they were fated to destruction. The time seemed favourable for this object, since it was the eve of the festival of Hercules, when no persuasions could induce the Syracusans to march. But the opportunity was lost through a stratagem of Hermocrates, who sent one of his emissaries, under pretence of friendship, to the Athenians, to advise Nicias not to move that night, as the Syracusans occupied the passes, and lay in ambush to destroy him. He believed the intelligence, and remained that night and the next day taking measures for retreating. While he thus delayed, Hermocrates and Gylippus burnt the whole of the Athenian fleet, seized the passes of the country in those directions which they conceived Nicias would pursue, guarded all the paths through the mountains, broke down bridges, and spread cavalry over the plain, so that there could be no passage without a combat. On the third day the march commenced, in agony and despair. No sooner did the soldiers move, than all the slaves and attendants deserted, so that they were reduced to the necessity of carrying their own baggage and provisions. The retreat resembled the flight of a city from a besieging army. Nicias, greiter in adversity than ever he had been in prosperous fortune, still strove to animate the soldiers with a prospect of their yet becoming the deliverers of Athens from its dangers, and the restorers of its glory now so unfortunately shodded. The Athenians marched in two divisions, with the baggage in the centre, Nicias

Distress of the Athenians.

Attempt to escape, and naval defeat.

Retreat from Syracuse.

History. commanding the van, and Demosthenes the rear. They were so harassed by the enemy from the rear, who did not dare to come to a general engagement, and found so many obstacles in front to their advance, that their progress was exceedingly slow, and every day added to their distresses. They now resolved to change the direction of their march; and, instead of attempting further to reach the Sicel territory, by the direct and mountainous road, to proceed near the coasts, by Gela and Camarina, through a more circuitous and more level road. The change was effected in the night, and in the movement, the division commanded by Demosthenes was separated from that under Nicias. The former troop being unable to reach their comrades, marched till they came to the brook Erineus, where they were overtaken by the Sicilian cavalry. Demosthenes anxious to engage, changed his line of march so as to gain the best ground for annoyance. On perceiving this, the Syracusean horsemen stopped to give time for the infantry to come up, and the Athenians were surrounded. After defending themselves with great bravery, they were reduced by losses, hunger, and despair, to surrender, on the mere condition that their lives should be spared; and were, to the number of six thousand, conducted to Syracuse.

Meanwhile, Nicias crossed the Erineus, and encamped on an elevated position beyond it. Here he was informed, by some of the enemy's horse, who called to him to surrender, of the fate of his colleague, which at first he refused to believe, but soon ascertained beyond question, through a messenger whom he was permitted to send to make inquiry. On the confirmation of the melancholy tidings, he offered to pay the Syracuseans all the expenses of the war, if the troops under his command might be allowed to quit Sicily in safety. The Sicilians having rejected this offer, surrounded Nicias, but declined coming to a close engagement, and continued dreadfully to harass his troops with missile weapons. Thirst and hunger compelled him to make an effort to escape, and at midnight he began silently to withdraw his forces. But the enemy discovered his intention, and rushed to arms. He then with his forces, excepting three hundred, who broke through their foes, but were afterwards taken, remained in the camp till the dawn, when once more he endeavoured to proceed, and gained the banks of the river Assinarus, which there ran through a steep and rocky channel. Extreme thirst maddened his troops—they forgot their discipline—rushed down to the stream, and, while death pressed on them from behind, drank of the waters with a ferocious eagerness. Meanwhile the light-armed Syracusean troops gained the opposite bank, and thus surrounded the miserable Athenians in the craggy bed of the river. Numbers were slain while fighting with desperate valour, or drinking the bloody stream, half choked with the bodies of their fellows. At length, seeing all further resistance absolutely hopeless, Nicias surrendered himself to Glyippus, and his surviving troops were made prisoners.

Fate of the The two Athenian generals now experienced the atrocious revenge of the Syracuseans, drunk with rage and with victory. They solemnly decreed the death of Nicias and Demosthenes, who fell immediately by the hands of the public executioner. There is every reason to hope, that this cruel and perfidious act was sanctioned neither by Hermocrates, nor Gly-

lippus, although, in the time of the great contemporary historian of the Athenian calamities in Sicily, the real circumstances of the dreadful catastrophe were unknown at Athens. The fate of those of the soldiers taken, who were public property, was more dreadful, because their misery was of longer duration. The slaves were sold by auction, the freemen confined to a quarry in the hill Epipolæ, without shelter from the burning sun, or the chilling air of the night, and with food scarcely sufficient to protract a wretched breathing time in this their living grave. Those who died were left to putrify amidst their still existing comrades. The islanders who survived, were, after seventy days of horror, indulged by being sold to private masters. The fate of the residue of the Athenians is doubtful. Some of the captives who became the property of individuals, met with a gentler destiny. They are said to have conciliated kindness by their ability to repeat the verses of Euripides, whose soft, flowing, and tender strains were better calculated to win a Sicilian, than the more austere and majestic works of his nobler rivals. This tale affords the only gleam of humanity to be discerned amidst the complicated horrors with which all narratives of the expedition to Sicily are crowded.

The intelligence of these dreadful calamities was not credited when it first reached Athens. The person who accidentally heard, and dared to repeat it, was punished by tortures. It was only by degrees that the astonished citizens learned the full extent of their misfortune. Grief, rage, and terror, alternately agitated their bosoms. At length, their passionate feelings had subsided, and they began to seek consolation from despair. They retraced their public expenses, strove to renew their navy, and appointed a council of elders to examine all measures before they should be proposed in the popular assembly. But no prudence or wisdom could prevent the dependent states of Athens from revolting from her in her change of fortunes. A part of the Lesbians and Eubœans offered their services to Sparta, and the former obtained aid to accomplish the revolution desired by their chiefs. It soon became evident, that the Athenian power had been withered for ever in one mighty and vain exertion. The naval force which had acquired complete dominion over the sea, was totally destroyed; and the Peloponnesian fleets now sailed round every coast without a rival. The flower of the Athenian youth had perished; the high feeling of invincibility was for ever chilled; and, though some gleams of prosperity yet remained for Athens, her glories, as the imperial republic of Greece, had vanished for ever.

The Grecian cities in Asia, which had been hitherto tributary to Athens, now manifested strong symptoms of a desire to throw off the yoke. Mutual interests consequently united the Lacedæmonians and Tissaphernes, the satrap of Sardis, in an alliance most dangerous to the existence of Athens. But while revolt seemed spreading in every direction, and danger threatened the Athenians from every side, the state of their affairs was greatly changed by the decline of the power of Alcibiades in Sparta, the shameful order of the Lacedæmonians for his murder, and his retreat to the court of Tissaphernes, to which these occurrences speedily led. From this period, Alcibiades appears to have been uniform in his exertions in behalf of the Athenian cause. For the present, he persuaded Tissa-

phernes to temporize, to decline effecting the ruin of Athens, and to relax in his efforts to serve the Peloponnesian cause. His intrigues, at length, effected his recall, after an oligarchy had obtained, the direction of the government of Athens, and had been expelled thence by popular champions. Before his return, he once more raised the character, and, in some degree, restored the naval superiority of Athens, by a series of most brilliant successes. We refer our readers to his life, for a more minute detail of the occurrences of Grecian history, in which he was the principal actor.

While Alcibiades was raising the fame of the Athenian arms by repeated victories, the Lacedæmonians gained a great advantage by a fresh negotiation with Persia. Artaxerxes, advancing in years, resolved to commit the chief administration of the provinces, bordering on the Grecian seas, to his son Cyrus. Before the youthful prince left the capital, to execute the trust thus committed to him, ambassadors who were at the court of his father from Sparta, obtained his ear, and completely won him to favour their cause.

He came, therefore, to Sardinia, with prepossessions friendly to Lacedæmon, and hostile to the Athenians. At the time of his arrival, the commander of the Spartan fleet for the year, was one exactly calculated to confirm the impressions of an oriental prince, Lysander was bold, yet crafty; proud, yet cringing; valiant, yet luxurious; equally fitted to solicit or to command, to labour or to enjoy. He immediately visited the prince, and experienced a most gracious reception. Through his means a treaty was concluded with Persia, by which the king stipulated that he would allow thirty Attic mna for the pay of every galley engaged in the war against Athens. Defeated in his endeavours to procure a much larger allowance, Lysander took a favourable occasion after supper, on his royal host making use of liberal expressions towards him, to request that an obolus a day should be added to each seaman's wages. His desire was readily granted, and not only gave high satisfaction to the marines, but was calculated to occasion large desertions from the Athenian fleet when opportunity should offer.

These circumstances were unknown at Athens when Alcibiades sailed from the Piræus. His force consisted of fifteen hundred heavy armed infantry, a hundred and fifty horse, and a hundred triremic gallees. After defeating the Andrians, but leaving their city as too strong to be reduced, he sailed for Samos, where news of Lysander's success excited in his mind considerable alarm. He dreaded the effects of Persian gold, not of Persian arms. Distressed for money, he left the fleet in order to raise it, leaving strict orders with Antiochus, the second in command, that he should not engage in his absence. These directions were disobeyed; Antiochus defeated Lysander, and was defeated near the head land of Notium. This victory of the Spartans, of no great importance in itself, was, in the highest degree, injurious to Athens, by directing popular fury against her ablest, and now most devoted, chieftain. Alcibiades was superseded, and ten generals, with Conon at their head, were appointed to the command of the naval and military forces of the republic.

Conon, who was engaged in prosecuting the siege of Andros, was immediately directed to hasten to

Samos, and take the command of the fleet. Finding, on his arrival, that the forces under his direction were not animated by a spirit which could encourage him to seek a battle; he divided the navy into squadrons, with which he collected contributions, and made prizes. But Callieratidas, who, according to the rule now adopted by the Spartans, that no one should remain more than a year in the command, had superseded Lysander, resolved to prevent the mischief with which this mode of warfare was attended. After taking Methymne, in Lesbos, he pursued the Athenian fleet to Mitylene, took or destroyed thirty gallees, and compelled the remainder to seek refuge beneath the fortresses. Here he besieged Conon by sea, while the Lacedæmonian infantry invested Mitylene by land. But the Athenian commander, though closely blockaded, found means to send a vessel home with intelligence of his perilous condition. The people of Athens immediately prepared to relieve him, with a vigour astonishing, after their repeated losses. They equipped and manned a hundred and ten gallees, on board which, not only the citizens, capable of bearing arms, but even men of the dignity of knights, who had always been exempt from naval service, were collected. Meanwhile the situation of Conon became more alarming. Dionedon, another of the ten officers lately appointed, while coming to his assistance with twelve ships, was intercepted, and ten of his vessels taken. The fleet before Mitylene became also greatly distressed for want of provisions, as no supplies could reach it. But while all things seemed to promise Callieratidas an easy triumph, he received intelligence that a large Athenian armament was approaching. Detaching, therefore, fifty ships to continue the blockade, under Etonicus, he sailed with a hundred and twenty to meet the more formidable enemy. He came up with the fleet, which was commanded by the colleagues of Conon, among the islands of Arginusæ, near Lesbos, and, failing in an attempt to surprise it, he soon found that his numbers were superior to his own. Hermon, the master of his vessel, advised him not to risk an engagement under such a disadvantage; but he replied, in a truly Læconic spirit, "Sparta will not miss me if I fall, but my flight must disgrace her." The contest was long and obstinate, both while the fleets preserved their order, and after the line, on both sides, had been broken. At length, the galley of Callieratidas, striking with its beak an Athenian vessel, he fell overboard at the shock, and perished in the water. By his fall the event of the engagement was decided. The Peloponnesians fled in disorder, lost seventy of their ships, and left their foes in possession of a victory, purchased by the loss of many soldiers, and thirty-five gallees.

After this brilliant, though hardly-won success, it was determined that the great body of the fleet, with all the generals, should sail to the relief of Conon, while Thimystulus and Thieramenes, who in this expedition served only as the captains of single gallees, should be left with forty-six ships, to succour those who had been wrecked or wounded in the recent contest. But a storm arose, which compelled the whole armament to seek shelter among the islands; and thus the citizens, who had been cast on the seas, were left to perish. During the delay thus occasioned, news reached Etonicus of the defeat of his comrades,

upon which he instantly decided on escaping. He directed the soldiers who brought the tidings, to sail back, and, in the morning, to return, wearing chaplets as though they brought ovens of victory. This being done, he assembled his troops, offered sacrifice, and while he deluded his foes with the belief that he was celebrating a conquest over their friends, he ordered preparations for his departure. When all was ready, he set sail with a favourable wind, reached Chios, and led his infantry to Methymne. Thus Conon found himself unexpectedly relieved, and was soon after joined by his victorious countrymen.

Accusation
of the victor-
ious gen-
erals at
Athens.

Two of the generals only who had commanded in the battle of Arginusæ, Aristogeus and Pholomachus, remained with Conon, who took his station at Samos, while the remaining six, Aristocrates, Diomedon, Erasimides, Lysias, Pericles, and Thrasyllus, returned to Athens. There they met with a reception very different indeed from that which their success had led them to anticipate. A previous decree had deprived them of their offices. They were accused by Theramenes before the council, of having neglected to take measures for the safety of the crews, wrecked during the late battle, and thrown into prison. They were not allowed the privilege of making a full defence, but only permitted briefly to address the people. They then asserted that they were engaged in the important duty of pursuing the foe, but that they had been far from neglecting measures for the preservation of their fellow-citizens. This charge they had committed to two most competent officers, one of whom now appeared as their accuser. If any neglect had arisen, then, they might not only remove it from themselves, but retort it on their adversary; but they had no wish to throw blame on any one, as they well knew the violence of the storm precluded all efficient exertion. Moved, or rather, convinced by these statements, the majority voted for acquitting the generals; but the party against them proposed to adjourn the assembly, on the pretence that it was growing too dark to distinguish the hands held up on either side, and then, with the inconsistency of passion, made a proposition of their own, that the council should consider and decide on the manner in which the trial should be conducted. This proposal, which really gave to the council a power of dispensing with all the constitutional forms, was hastily carried without a division.

The members of the council, thus invested almost with the power of determining the fate of the accused, were instigated by Callixenus, one of their bitterest foes, to determine that the people should ballot by wards for their destiny. In the mean time, a number of persons, habited in mourning, were directed to traverse the city as the relatives of those who were wrecked at Arginusæ, imploring vengeance. But the friends of the generals, and especially Euryptolemus, earnestly protested against the mode of trial proposed, as illegal. Overborne by clamour, they, however, thought it prudent to give up this point to their foes, and entreated the people to allow each individual a separate trial, and a day to prepare for his defence. This modest request was denied; the proposition of Callixenus, after some doubt as to the majority, was carried, and the people proceeded to the ballot. The judgment thus obtained was for death; the eight commanders were sentenced; and the six who were

then at Athens led to execution. As Diomedon was conducted to the place where he was to suffer, he addressed the crowd in the most heroic, yet mourning terms. "I wish, Athenians," said he, "that the judgment which you have passed on us may not prove the source of affliction to the commonwealth! We have one favour to beg of you, that you will perform for us, in the temples, the vows which we made before the battle, on our behalf and your's, to the gods who honoured us with victory." No word of resentment or complaint escaped the noble sufferers. Yet were they terribly avenged. In their death, faction the most wretched had been triumphant, and all order, justice, and dignified virtue forsook the Athenian councils. Athens, her honour sunk, and liberties profaned, hastened, even amidst victory, to her ruin.

The allies now earnestly requested of the Spartan rulers, that Lysander should be sent to command them. With this desire, the magistrates complied in effect; but chose to adhere to the terms of their law, by which the same individual was never eligible a second time to command the navy. They sent out Archus as nominal commander in chief, and Lysander as vice admiral. This able chief hastened to Ephesus, in the beginning of the winter, and exerted all his energies to equip a fleet which might be able to cope with that of Athens. At Sardis he was again received with great kindness by Cyrus, who furnished him with ample supplies of money for the payment of his troops, and manifested the warmest interest in his success. Thus assisted, he soon raised his fleet to an equality with that of the foe, but chose rather to direct his arms against the Athenian dependencies, than to risk a general combat. He took Cudræa, a city on the coast of Caria, and gave it up to be plundered by his soldiers. Thence passing along the Asiatic shore of the Hellespont, he attacked Lampacus by sea and land, and became master of the city. Meanwhile the Athenians, struck with some remorse for the murder of their commanders, compelled Callixenus and his friends to fly from the city. They committed the charge of their fleet to six chiefs: Menander, Tydeus, Cephalodotus, Adeimantus, Philocles, and Conon. These, with the whole armament, went in pursuit of the Peloponnesian fleet, and finding that it lay at Lampacus, took their station at Aigospotamos, near the opposite shore of the Hellespont, the width of which did not there exceed two miles.

The Athenian commanders were anxious immediately to give battle to Lysander. But that politic general, though he ranged his ships in proper order, and drew up his land forces on the shore, did not think proper to engage. He soon learned that the fleet returned, after offering him battle in the morning in disorder, and that the troops afterwards were dispersed in quest of provisions, or amusement on the shore. Three days he suffered them to defy him, that their insolence and security might increase, while he prepared for their destruction. At this crisis, Alcibiades, perceiving the danger of his countrymen, made one effort more to save them. He hastened to their naval camp from his Thurian residence, exposed the perils they were incurring, entreated the commanders to change their measures, and even offered to co-operate with them, at the head of a band of Thuriacs. But they scornfully rejected his admonitions and his offers, and forced him to leave them to

their destiny. This was not far distant. On the fifth day, when they had retired as usual, and the troops were dispersed on the shores, Lysander suddenly attacked the fleet, when wholly unprepared, and seized every vessel almost without resistance, excepting nine gallees, with which Conon fled. Thus nearly the whole naval force of Athens, consisting of a hundred and seventy ships, fell at a single blow into the hands of the Spartans. Troops, amounting to three thousand, and all the generals, except Conon, were made prisoners. These, dreadful to relate, were all, with the exception of Adimantus, put to immediate death, under pretence of retaliation for the fate of the crews of two vessels, from Andros and Corinth, whom Philoetes had ordered to be cast down a precipice. It was also urged by the advocates of this horrible massacre, that the Athenian commanders had, with the exception of Adimantus, agreed on reaching the Hellespont, to cut off the right hand of any prisoner whom they might secure. On Philoetes being asked what he could urge in his defence, he replied, "Ask not those for a defence who have no judges; use the right conquest has given you, and dispose of us as we would have done of you had we been the victors." Meanwhile Conon escaped to Cyprus where he was hospitably received by Evagoras, the monarch of Salamis.

Miserable
condition of
Athens.

The whole residue of the Athenian power was thus in one day destroyed. Athens had exhausted all her resources in sending out the noble armament, which was now added to the trophies, and the naval strength of her foes. Still the state in its despair, preserved something of a lofty attitude. As a siege by sea and land was expected, preparations were made to endure it. All the ports but one were blocked up, the gates barricaded, and guards mounted on the walls. While Lysander was making triumphant progress, receiving the submission of states now eager to hail the victors, Pausanias, son of the unfortunate Spartan of that name, entered Attica, and joined by Agis from Decelæ, fixed his head quarters in the gymnasium of the academy, near the city. The people, thus blockaded, became, in a short time, greatly distressed for want of provisions. Scanty supplies were indeed sometimes procured by the intrepidity of the youth, who with still unconquered spirit, broke through the mouth of the Piræus, and returned with the means of appeasing the hunger of the people. At length an attempt was made to open a negotiation with Agis, which he sternly repressed by declaring that all proposals must be addressed to the government of Sparta. An embassy was then dispatched to Lacedæmon, to offer the resignation of all the pos-

sessions of Athens, excepting the city and the harbour, and a treaty of offensive and defensive alliance, which implied subjection. But the envoys were stopped on the borders of Laconia, by a message from the Ephori, commanding them to return, since the terms with which they were charged were already known at Sparta, and, if they desired peace, they must come with different conditions. On the return of these messengers, Theramenes offered to go to Lysander, and endeavour to negotiate with him for a treaty; but, after an absence of three months, returned without success. He was then, with nine others of his fellow citizens commissioned to go to Lacedæmon, with no instructions but to procure peace on the best terms he could obtain for the despairing Athenians.

On the arrival of the embassy at Sparta, an assembly of the deputies of the Lacedæmonian confederacy agreed on. was convened to decide the fate of Athens. The deputies from Thebes and Corinth, with those from others of the states, vehemently urged the total extermination of a republic, which they alleged had attempted to deprive all Greece of its freedom. But the Spartans checked this ferocious spirit of revenge, and declared that they could not think of wholly destroying a people who had once rendered services so important to Greece in the Persian invasion. Peace was, therefore, concluded on the following terms: "That all the Athenian ships of war, except twelve, should be surrendered; that the long walls of the city should be destroyed; that all exiles should be restored to their country, and their possessions; that the Athenians should treat the allies of Lacedæmon as their friends, and its foes as their enemies; and that the forces of Athens, by sea and land, should be at the complete disposal of the Spartans." These hard conditions having been ratified, Agis, with his army, took possession of the walls; and Lysander, with his fleet, entered the harbour. The fortifications which connected the city with its ports were demolished, while military music was played, and exulting shouts everywhere proceeded from the conquerors. The nobles of the aristocratical party, who were in exile, returned to their homes. On their arrival, the popular constitution was overthrown, the assemblies of the people prohibited, and the powers of government vested in thirty rulers. When this revolution was completed, the Peloponnesian forces withdrew, and left the humbled Athenians to enjoy all the repose which their new governors would allow. Thus, in its twenty-seventh year, ended the Peloponnesian war, after totally subverting the grandeur of Athens, and destroying the finer spirit of Grecian freedom.

INTRODUCTION

TO THE

GREEK PHILOSOPHY;

WITH A SUCCINCT ACCOUNT OF THAT WHICH IS USUALLY TERMED BARBARIC.

History.

Greece may, with propriety, be designated the cradle of philosophy. That was the distinguished country which nursed its infancy, and first brought its features to light; there its opening powers developed themselves; there its "nursing fathers" resided; and there it acquired that degree of vigour, maturity, and character, which have gained for it an immortal celebrity.

But whatever opinion we may be disposed to form of the systems of Greek philosophy, and of the particular merits of their various founders and promoters, it is necessary to guard against being led into error by indulging an undue and disproportionate admiration. While contemplating the struggles of mighty minds with the difficulties and perplexities which involved them, and observing the patience, the skill, and the perseverance with which some of them groped their way amidst the most palpable darkness—exploring with assiduity every nook and corner for the discovery of truth, hailing with rapture every gleam of light that broke upon the deep obscurity, and following with eager steps, its bright direction, we must not forget that we are favoured with an illumination infinitely superior; and that in possessing, under the Christian dispensation, the "wisdom of God," even the "hidden wisdom" and the "mind of the Spirit," we have risen to the summits of true philosophy, in consequence of combining scriptural knowledge, in all its practical influences, with an exalted and heaven-born ethics. In reviewing the period we are now to survey, and the biography of men who have transmitted their names to all posterity, by recording their researches into the region of morals; we are furnished with the instructive opportunity of seeing what the human intellect could accomplish, without a divine revelation, and consequently, of being able, in some measure, to appreciate the importance of those discoveries which that revelation unveils. We acknowledge, and we admire, the light, glimmering as it was, emitted by those stars which appeared during the benighted ages of the world; and through that very twinkling which rendered the "darkness visible," we are taught to rejoice with a more glowing enthusiasm in the manifestation of the "Sun of righteousness."

Term.

The term *philosophy* may be considered as importing the love of wisdom, or of those principles which refer to the general happiness of mankind; for, though its legitimate purpose has, at different periods and by different individuals, been either misunderstood or misapplied, this is unquestionably its genuine meaning; and the name, so explained, indicates its great design. Reason and revelation are the two springs of philosophy; of which the latter has, as we have remarked, incomparably the pre-eminence, and includes the former, which is, at present, the object of our inquiries. It is the business of philosophy, as Brueker judiciously

Greece.

states,* to cultivate the understanding, and to show the manner in which it may best perform its operations; to correct the will and improve the affections, by discovering the objects that are desirable, comparing their respective claims, and showing how they may be rendered most productive of happiness; to investigate the causes of natural appearances, and thence arrive at the First Cause; to conduct to a knowledge of the properties of natural bodies, and their reciprocal actions, in such a manner as shall enable them to promote and secure their own personal advantage; and, above all, to assist men in discovering the principles of social virtue, and such rules of conduct as spring from convenience and interest, from justice and humanity, and the voluntary engagements of civil society.

The original application of the word was very extensive, embracing every discovery and useful art: and hence persons of very different claims and characters were, at first, heterogeneously classed together as philosophers. The devices of ingenious imposture, and the researches of profound and comprehensive intellect, were blended in one undistinguishing appellation. The inferior order of men, indeed, assumed the higher epithet, and, with presumptuous boldness, aspired to the character of wise men, or sophists; but the genuine modesty which ever characterizes true science, induced those of superior merit and juster pretensions to prefix a qualifying name, indicative of their own conviction, that they were rather in the pursuit of wisdom, than daring to pronounce that they had attained it. Hence they took the title of *philosophers*, which, according to Cicero, was first assumed by Pythagoras. He used it in a conversation with Leon, prince of the Philaians, who inquired in what he principally excelled: to which his reply was, that he was a *philosopher*, without pretending to be absolute master of any art; explaining his meaning to be, that he was in search after wisdom.

A cursory survey of the state of philosophical inquiry in the other nations, whom the Greeks had Barbaric civilised and courtesy to denigrate *barbarians*, will naturally introduce us to a view of the more regulated and systematic pursuits of civilized Greece; for, while this country advanced philosophy to a high degree of improvement, to the barbaric nations is to be attributed its origin.

Placing the Israelitish community not of the question, who, though favoured with those extraordinary communications which constitute the purest philosophy attainable, in the form of a revealed theology, cannot be admitted to the rank of philosophers, in the common sense of the term: the next most ancient people to

* Hist. Crit. Philosophiæ.

History. whom such an epithet may be deemed applicable, is the
Chaldeans. It is not, however, easy to detect the truth,
amidst the traditionary accounts we have received of
their antiquity. It is a matter of indisputable cer-
tainty, that the magi cultivated learning at a very early
period, and even previous to the time of Moses, of
whom we read, that "he was learned in all the wis-
dom of the Egyptians;" and there is good evidence
that these obtained their knowledge from a Chaldean
source. The magi, were, in fact, the priests, whose
office it was to teach the principles of their religion to
the people, and to interpret the laws; and availing
themselves of the ignorant credulity of the age, a por-
tion of which indeed may be safely attributed to their
own minds, and naturally produced a self-delusion,
they pretended to divination, the interpretation of
dreams, the power to confer good or avert evil, and
the science of astrology. The name of Chaldean sooth-
sayer is familiar upon the page of history, from the
remotest times, and their profession no doubt origi-
nated in the circumstance of their being the first to
pay attention to the motions of the heavenly orbs.
From these they asserted their ability to predict na-
tivities, and calculate events; maintaining that human
affairs were influenced by the stars, and that by their
skill, they could read the destinies of the earth, by the
light of the firmament. Within this compass the chief
of their science was compressed, and they contrived to
secure the public admiration, by throwing over their
studies the deep veil of mystery. A chosen few only
were initiated, and their instructions were communi-
cated by means of symbolical representations. They
had among them a variety of sects, or schools, which,
however, differed only in certain unimportant points;
all of them faithfully and regularly transmitted from
father to son. Zoroaster may be regarded as the
founder of Chaldean philosophy in general, and of
him we have already given an extended notice. *Belus*
is another name of some celebrity, as the promoter
of astronomy among the Assyrians: he enjoyed the
posthumous honour of a place among the divinities.
Berous also, at a later period, acquired considerable
fame. He was a Babylonian, and a priest of Belus,
and commenced a school of astrology in the island of
Cos. He acquired great reputation by his predic-
tions, and a statue was erected to his honour at
Athens.

The Chaldeans believed in a Supreme Deity, as the
governor of the world, by his providence; but imagined
that the universe was pervaded by several other orders
of spiritual beings, good and evil, gods, demons, and
heroes, sub-divided into many classes. They worship-
ped the sun, moon, planets, and stars. Their magic
consisted in certain incantations, which were supposed
to produce happy effects, and their astrology related
to the beneficial, or malignant influence of the stars,
as the ground of certain predictions. Their astronomy
is not transmitted to us, but we have reason to be-
lieve they made some real discoveries. They had a
notion, that, when all the planets meet in Cancer,
the world will be consumed by fire, and when they meet
in Capricorn, it will suffer destruction by a flood.
They imagined a boat to be illustrative of the earth's
true figure. Their ideas of the origin of the world,
and of the nature of the human mind, seem borrowed
from the Mosiac history.

Among the Persians, the magi were the guardians
and teachers of religion and learning from the earliest
times. Like the Chaldeans and other oriental nations,
the religion of Persia embraced the worship of the
sun, or rather the invisible deity, whom they named
Mithras, supposed to be resident in that luminary.
Herodotus and Strabo say, that the Persians sacrificed
horses to the sun.* Another of their deities was
Oromasdes, whom they considered as the author of
all good. They also adored the supposed author of
all evil, under the designation of Arimanius. He was
not, however, called a god, but a demon, and they
wrote his name with the letters inverted. Their Zo-
roaster introduced a variety of alterations into the an-
cient system of the magi, which indicate the state of
philosophy. The sacred fire, instead of being main-
tained on altars exposed to the atmosphere, was now
enclosed within temples, and placed under sacerdotal
superintendence. The priests were of three orders:
the inferior, for the performance of the ordinary cere-
monies; the second class, for presiding over the sa-
cred fire, and the high priest, or archmagus. There
were three kinds of temples—common oratories for the
people, having the sacred fire in lamps; public temples
with altars, where the fire was continually burning, and
where the superior magi guided the public devotions,
and the people performed magical incantations, and
heard interpretations of dreams; and the grand seat of
the archmagus, which was visited by the people at
particular seasons, with great solemnity. No images
or statues were permitted in their worship. Its mys-
teries were required to be understood by the kings,
before they could assume the crown and the sceptre.
The doctrine of Zoroaster, or Zoroastrianism, is thus given
by an Arabian writer, Sharristan, cited by Brucker—
"Zoroastrian affirmed light and darkness, Yazdan and
Ahreman to be contrary principles, which were the
origin of every thing subsisting in the world; the
forms of nature being produced from the combination
of these principles: but maintained, that the existence
of darkness is not to be referred to the only Supreme
Deity, who is without companion or equal, but must
be considered as the unavoidable consequence of his
determination to create the world, in which light can
no more subsist without darkness, than a visible body
can exist without its shadow."

Diogenes Laertius gives the following account of
the Persian magi: "They are employed in worshipping
the gods by prayers and sacrifices, as if their worship
alone would be accepted; they teach their doctrine
concerning the nature and origin of the gods, whom
they think to be fire, earth, and water; they reject the
use of pictures and images, and reprobate the opinion
that the gods are male and female; they discourse to
the people concerning justice; they think it impious to
consume dead bodies with fire; they allow of marriage
between mother and son; they practise divination and
prophecy, pretending that the gods appear to them;
they forbid the use of ornaments in dress; they clothe
themselves in a white robe; they make use of the
ground as their bed; of herbs, cheese, and bread for
food; and of a reed for their staff." Strabo speaks of a

* Ovid alludes to this circumstance,—

Flacet equo Persae radiis Hyperionis, electum.
Ne datur celeri victima turba Deo.

History. large number of magi in Cappadocia, who were denominated fire-worshippers (*Pyrethi*), and many temples of the Persian gods, in the midst of which were altars, whose fires were daily renewed by the priests; the ceremony being attended with music. From comparing the authorities, Brucker observes, that "it will appear probable, that Zoroaster, adopting the principle commonly held by the ancients, that from nothing, nothing can be produced, conceived light, or those spiritual substances which partake of the active nature of fire and darkness, to be emanations from one eternal source; that to the derived substances, he gave the names already applied by the magi, to the causes of good and evil, Oromasdes, and Arimanius; and that the first fountain of being, or the supreme divinity, he called Mithras. These active and passive principles he conceived to be perpetually at variance, the former tending to produce good, the latter evil: but that, through the mediation or intervention of the Supreme Being, the contest would at last terminate in favour of the good principle."

Indians. It may be inferred, from the circumstance of some of the most distinguished men of Greece visiting India, to enhance their stores of knowledge, that at a very early period that was a country of eminent attainments—eminent, at least, in comparison with the rest of the world. There existed among the inhabitants a sect called Gymnosophists, from the habit of appearing almost in a state of nudity. The Brahmins, or Bramins, properly speaking, constituted a subdivision of this class of wise men; as did the Samanvans, who relinquished all ideas of separate property, and gave their children to the protection of the state; and while supported at the public expence, devoted themselves to meditation, conversation, and religious performances. They were frequently known to take a sudden leave of their relations, and throw themselves upon funeral fires, prepared for their destruction. The Hylobeans lived in the solitude of forests, and upon the most precarious modes of subsistence. In general, the Gymnosophists were indolent, and of a proud independency of temper, but, with little exception, addicted to extreme abstinence. When Alexander sent them an invitation to visit him, they are said to have replied, with an ample share of the petulance of philosophy, that if Alexander had any business with the Brahmins, he might come to them. It is well known that, even to the present day, those amazing self torments, for which they are celebrated, are still persevered in; such as standing in some painful posture, looking steadfastly, and with unverted eyes, at the sun from morning to night, performing luminous pilgrimages, lacerating their flesh, &c. all which have a powerful tendency to impress a race of people addicted to superstition, and buried in profound ignorance, with a conviction of their superior sanctity.

The opinions propagated by these people respecting God, resemble those of the Persian Zoroaster. They represented him as light, from whom the mysteries of wisdom are communicated; the source of good and not of evil; the soul of the world, the principal seat of whose divinity is the sun. He pervades the universe, which invests him, as a garment, and is immortal. They conceived the sun, moon, and stars, to be his eyes. The human mind they considered as an

emanation of the intellectual fire which animates the world, and, therefore, of divine origin; at death they believed it would return, and reanimate with the fountain of light and life. They fully taught the doctrine of a periodical restitution of all things in nature; when returning to their source they would be again emitted, and thus in perpetual revolution. They worshipped inferior deities as emanations from the Supreme, but without the presentation of animal sacrifices.

Of the ancient *Arabians* we can obtain scarcely any information. They had some acquaintance with astronomical sciences, were skilful in solving enigmas, and practised the arts of divination. Like the Chaldeans and Persians, they had their magi, or wise men, who were their instructors in general knowledge, and their priests in religion. A sect of philosophers, called the Zabians, is assigned them at a remote age, but upon very dubious authority; they are said to have worshipped the sun, stars, and planets.

Celebrated as the ancient *Phœnicians* have been, we may yet venture to question the probability of their having acquired very extensive knowledge, or explored, to any considerable distance, the paths of real science. From their commercial habits, indeed, they were necessarily acquainted with some things that may come under this classification, and possessed, as we have before intimated, * skill in arithmetic and astronomy, as applicable to the purposes of navigation; and, doubtless, from their general intercourse, they were able to import true learning from foreign countries. Their most ancient philosopher was *Mochus*, or *Mochus*, a native of Sidon. Some have ascribed to him the source of the Atomical philosophy, which afterwards acquired so much celebrity in Greece, under Leucippus and Epicurus; but there is sufficient evidence that his opinion is destitute of a solid foundation. *Cadmus* was born also at Sidon. He formed the Greek alphabet upon the foundation of the Phœnician. But though this is a well ascertained fact, the notion that he instituted schools of philosophy at Thebes is destitute of probability. The Phœnicians maintained the same general views respecting the origin of the world which were at an early period diffused over the oriental nations. The fragments of Sanchoniathon, preserved by Eusebius and Theodoret, contain a philosophy perfectly opposed to the Mosiac account of the creation; namely, that from the necessary energy of an eternal principle, active, but not intelligent, upon an eternal and passive mass of matter, arose the visible world. This doctrine was afterwards advocated in Greece. But the fragments in question are not deemed authentic.

No people have been more the subject of panegyric than the *Egyptians*, who undoubtedly furnished some of the most culprits of the Greek philosophers, as Thales, Pythagoras, and Plato, with much valuable information. To their country it was common to travel, in order to accumulate those stores of wisdom by which they were enabled to improve their minds, and embellish their systems. "A country which," as Brucker observes, "has claimed the honours of being the first seat of learning, and the fountain whence the streams of philosophy flowed to Chaldean, and other Asiatic nations, till it reached the remotest borders of India." But though, as he says,

* Hist. ch. vi. sec. 2.

History. "there seems to be no sufficient ground for admitting these high pretensions, Egypt is unquestionably to be ranked among the most ancient civilized countries, and was early famous for wisdom."

In communicating instruction, the Egyptian priests assumed hieroglyphical characters, or symbols, which were only taught to the initiated, and have since unhappily been lost; so that the real knowledge which existed, and the different fluctuations of opinion, cannot, at this time, be ascertained. A few fragments only, of some of the Egyptian writers, have escaped the wrecks of ages, and these exist in a dispersed and mutilated form.

Thoth is generally considered as the father of Egyptian literature, and after him they named the first month of the year. He is the same with Mercury. According to Diodorus Siculus, he was the inventor of letters, and introduced a variety of improvements into language. He moreover taught astronomy, music, and other arts; and instituted religious rites. Hermes Trismegistus, or the second Egyptian Mercury, is said to have translated the sacred characters which had been written by his eminent predecessor on tables of stone, and buried in the earth; and in addition, very considerably advanced the state of the arts and sciences, particularly geometry. He entrusted to the care of the priests, in order of his own institution, the columns which had been previously inscribed by symbols, with his own interpretations. From the priesthood Egyptian learning was transmitted to other places and times, while they acquired in consequence an extraordinary reputation. Part of their time was devoted to the worship of the gods, and another portion of it to the pursuits of science and learning. Their attainments, however, were sedulously concealed from the great mass of the people, by adopting the hieroglyphical mode of writing, which modern critics have been unable to decipher. They also used alphabetical writing to explain the former, but with this the priests only were acquainted, and their literary treatises were deposited in the innermost recesses of the temples. Hence the perpetuation of their own influence, and the promulgation of the political designs of government, were the chief ends likely to be answered by this proceeding.

The Egyptians were acquainted with geometry; but, as it appears from the best evidence, in a very imperfect degree. We may ascribe the same with regard to astronomy, the invention of which science is often ascribed to them. They had a knowledge of the rising and setting of the stars, the aspects of the planets, and the signs of the Zodiac. They observed the equinoctial and solstitial points, by which they ascertained the length of the year. They ascribed the origin of the medical art to their demi-gods, an evidence that there were men among them in remote ages, who had made some proficiency in the method of healing diseases. Homer represents the country as abounding in drugs. Herodotus mentions their physicians, who, however, can scarcely be termed philosophers, if the statement of Diodorus be correct, that every physician was required to follow a written code, from which he could not deviate without endangering his life. Medical practice was connected with magical incantations, and in fact was altogether empirical. In astrology, they were great adepts. The philosophy or theology of the Egyptians subsisted in two branches, the esoteric,

belonging to the multitude, and the esoteric, or the theology of the priests and those who were destined to regal power. The mysteries of the latter were represented by images of sphinxes, set up at the entrance of their temples. The *croteric* doctrine abounded in the most extravagant superstitions, which are ridiculed in the fifth satire of Juvenal, in the following manner:

*Quis necit, Vultu Bythiæ, galla demens
Ægyptus portenta colat? Crocodiles adorat
Pars hæc; illa pariet auras serpentibus ibile.
Effugies sacri silet aures Cerophylæ,
Disiuncto magice resonant ab Æthere chorde,
Atque vetus Thebe centum jacet abstrusa portis.
Illic cæruleæ, hic placem fluminis, illic
Oppida tota cæcum venerantur, nemin Dianam;
Porcum et cepe nefas violare, ne frangere iunon.
O sacras proles, quibus hæc nascuntur in horris
Nemina!*

Who has not heard where Egypt's realms are nam'd,
What monster gods her frantic sons have fram'd;
Here this scorp' d' with well grown æsculapi, there
The Crocodile commands religious fear:
Where Memnon's statue magic strings inspire
With sweet sounds, that enslave the tyre;
And Thebes,—such, Fate, are thy disastrous turns!
Now prostrate o'er her pompous ruins mourns;
A monkey god, prodigious to be told!
Strikes the beholder's eye with burnish'd gold.
To gossip here hear Triton's acoly herd,
The river progeny in there prefer'd!
Through towns Diana's power neglected lies
Where to her dogs aspiring temples rise;
And should you lack æcræonæ eat, no time
Would capitate the sacrilegious crime;
Religious nations sure, and blest abodes,
Where every orchard is o'er-run with gods!

The witticism of Lucian upon this subject is well known, and no less correct than cutting. "In Egypt," says he, "the temple itself is found to be beautiful and ample in its dimensions; built with choice stones, and ornamented with gilding and hieroglyphics. But if you pry within to find out the god, you meet with a monkey or a crane, or a goat or a cat." Hence Cicero remarks (*De Nat. Deorum*), "it was never known that any person in Egypt ever abused a crocodile, an ibis, or a cat; for its inhabitants would have suffered the most extreme torments, rather than be guilty of such sacrifice."

The following is in brief the learned Brucker's account of the *esoteric*, or *philosophical* doctrine of the Egyptians:—They imagined nature to be the first principle of all things, and that originally an eternal chaos existed, which contained the materials of future beings. This was worshipped under the name of night, or athen, in the earliest ages, and was represented to their temples by the symbol of a cow. In addition to their material, the Egyptians admitted an active principle or intelligent power, eternally united to the chaotic mass, and operating in the separation of the elements and the formation of bodies. This they believed to preside over the universe as the cause of all effects. They represented this ruler as good, under the name of Cneph, which signifies a good genius, and assigned him the serpent as his symbol. The following remarkable inscription was placed upon a temple dedicated to Neith, at Saïs, in Lower Egypt:—"I am whatever is or has been, or will be, and no mortal has hitherto drawn aside my veil; my offspring is the sun." Hence Plutarch observes, the ancient Egyptians worshipped the Supreme Deity. With this belief, however, they connected the doctrine

Greece.

History. of inferior divinities, conceiving emanations of the highest intelligence to reside in various parts of nature when they witnessed life, motion, and enjoyment communicated to the inhabitants of the earth from the sun, and from other heavenly luminaries. These effects were ascribed to the influence of divinities inhabiting, as they fancied, these bodies. Hence the worship of the sun under the names of Osiris, Ammoo, and Horus—of the moon, under those of Isis, Bubastis, and Buto; of the Cabiri, or planets, called the sons of Phthas, or Vulcan; of Sothis, or the dog-star, and other celestial divinities. Whenever they approached the deity under the idea of his being offended, they called him Tithrambo; and the evil principle, the source of misfortune, they deprecated under the name of Typhon. As in other nations, it is probable, though not certain, that they had among them deified men whom they thus exalted from the supposition that a portion of that divinity which animates all things, resides abundantly in illustrious heroes, legislators, or other eminent individuals, and that after their decease the good demon that animated them passes into the society of the divinities. Their opinion respecting the human soul is variously represented; but all writers agree that they believed in its immortality. Diodorus Siculus says, that instead of lamenting the death of good men, they rejoiced in the assurance that in the invisible state they would dwell for ever with the pious; and he mentions the custom of bringing the characters of the deceased under a public trial, and offering prayers to the gods on behalf of those who were proved to have lived in a virtuous manner, that they might be admitted to their kindred society. There have, however, been many debates with regard to the place where it was supposed the souls of men passed after death. Plutarch, Diodorus Siculus, and others, intimate their cherishing the notion of a subterraneous region, corresponding with the Grecian idea of Hades; but Herodotus, on the other hand, affirms, that the Egyptians imagined the souls of men to pass at death into the bodies of other animals; and, that after traversing the circuit of birds, beasts, and fishes, for a period of three thousand years, it resumed its pristine dignity as the tenant of a human frame. It has been suggested, with great probability, that these different opinions were maintained by the different colleges of priests; of whom some advocated the doctrine of transmigration, while others held, that after wandering for some time among the stars, the souls of good men were allowed to return to the society of the gods. It is likely, also, that they supposed these migrations were of a purifying nature and design, and consequently that men of different classes and characters would, according to their respective merits, wander through the universe for a longer or shorter time. The Egyptians believed in the existence of a continual tendency in nature to dissolution, and that the universe undergoes a periodical conflagration, when every thing is restored to its original form, to be again, at the predestined season, subjected to a similar process.

With regard to their ethical principles, superstition is blended with them in so intimate a manner, as to render them, in many respects, imperfect and erroneous. Their divinity corrupted their morals. The prevailing ignorance must, of course, prevent many sound or elevated sentiments, whose practical influence

might refine their character; and we have before seen, that their religious writings were carefully concealed, and have, perhaps, deservedly perished.

We copy a few particulars from Brucker relating to the Ethiopians. Their wise men, he says, like those of the Indians, were called Gymnosophists, from their custom of wearing little clothing. They discharged the sacred functions after the manner of the Egyptian priests; had distinct colleges and classes of disciples, and taught their dogmas in obscure and mythological language. They were remarkable for their contempt of death. Strabo speaks of the Southern Ethiopians as atheists; but we must understand by this character, not that they were destitute of all belief in a supreme power, but that they did not worship the same gods, nor make use of the same ceremonies with their neighbours. In another place, the same historian says, that they acknowledged two gods, one immortal, and the other mortal; that the immortal god was always the same, the first cause of all things, but that the mortal god was uncertain and without a name. Perhaps this mortal god was the principle of evil, which the Egyptians acknowledged under the name of Typhon, who being at length to be overcome by the good principle, might properly be said to be mortal. However this be, it is certain that the Ethiopians were scrupulously exact in their religious worship, and therefore could by no means deserve the charge of atheism.

If we pass from Asia and Africa, into the northern and western parts of Europe, we shall still perceive nations much to deplore in the general state of the human mind, at the period in question, as to all the great points of speculation, or practical philosophy, and sound wisdom; a cursory glance, however, will serve to prepare us for estimating, with more exactitude, the progress of truth in these places which have the reputation of being the most enlightened, and for tracing with deeper interest the investigation of individual philosophers. The first of the nations which here presents itself to view, are the Celts, but their history is extremely obscure from the defect of sufficient records, arising from the unhappy disposition of the ancient Gauls, Germans, and Britons, to discourage their being kept. Hence the songs of bards became the principal medium of transmitting to a distant posterity, what has survived of their general knowledge and public transactions.

In the remotest period of antiquity, we hear of that extraordinary order of men denominated Druids, who have been compared with the Persian magi, the Chaldean soothsayers, and the Indian Gymnosophists, Cæsar, in his Commentaries, has given an account of their origin and character in Gaul, with their mode of communicating instruction, and various other circumstances. He represents them as presiding in religious concerns, directing the public and private sacrifices, and interpreting the will of the gods. They were held, he says, in the highest respect by youths who were sent to them to receive instruction: to them was referred the decision of almost every controversy, whether of a public or private nature; in case of any crime, any murder, or dispute respecting an inheritance, or the boundaries of lands, they pronounced sentence, and decreed the rewards to be given, or the punishments to be inflicted; and if any one, of whatever station, refused to submit, they excluded him from

Greece.

Ethiopians.

nations.

History.

the sacrifices. They were under one chief, never went to war, and were exempted from taxes and military service. They were divided into three classes: the Bards, the Eubages, who performed religious rites and divinations, and the Druids, properly so called, whose business it was to administer public affairs, and educate their youth. They taught their disciples in caverns and retired solitudes, forbidding them either to divulge, or commit to writing, their doctrines. Their rites were extremely barbarous; and, according to ancient writers, they offered human sacrifices.

— Et quibus insculptis placatur sanguine dolo
Tutates, horrendaque feri altibus Hecus,
Et Taraula Scythicum non mitior ora Dianæ.

Lycen. Pharsel. l. 1.

And you where Hecus' horrid altar stands,
Where div Tutates human blood demands;
Where Taraula by wretches is obeyed,
And rics in slaughter with the Scythian maid.

The Celtic priests, or Druids, explained to their disciples the allegories which they were accustomed to adopt, and which were delivered in verse; and a poetical representation of their notions is given in a book, called the Edda, written in the Runic language, which has furnished fictions to the Icelandic rhymists. It is the most ancient account of the Northern mythology, and was probably compiled from Asiatic originals.

The Attic theology stated the universe to be animated by a divinity, of which, portions reside in different parts of nature. From this idea originated their adoration of the sun and moon, and their reverence of rocks, caverns, and groves, where they believed that certain deities had taken up their residence, and from which oracular communications were issued. Divination prevailed amongst them; and in Gaul and Germany, women pretending to prophecy, obtained the name of Samnites, and acquired great reputation. Tacitus says the Germans were much addicted to divination by omens and lots. A singular account is given of the Cimbric women by Strabo, in his seventh book. "The women who follow the Cimbri to war, are accompanied by grey-haired prophetesses, in white vestments, with canvass mantles fastened by clasps, a brazen girdle, and naked feet. These go with drawn swords through the camp, and striking down the prisoners they meet, drag them to a brazen kettle. This has a kind of stage above it, on which the priestess ascending, cuts the throat of the victim; and, from the manner in which the blood flows into the vessel, she judges of future events. Others tear open the bodies of the captives thus butchered, and, from the inspection of the entrails, presage victory to their own party."

They had numerous divinities, of whom *Hertha*, or *the Earth*, was a general object of worship among the Celts and Scythians. As a specimen of the simplicity of ancient manners, and of the ingenuity of the priests, in treating on the mysteries of religion a passage is quoted from Tacitus, by Brucker, containing an account of the worship of this goddess. (Tacit. de Mor. Germ. c. 40.)

"The Reudigni, Aviones, Angli, Eudoses, Suar-dones, and Nithuones, unite in the worship of *Hertha*, or Mother Earth, and suppose her to interfere in the affairs of men, and visit the different nations. In an island of the ocean stands a sacred and unviolated

grove, in which is a consecrated chariot, covered with a veil, which the priest alone is permitted to touch. He perceives when the goddess enters this secret recess, and with profound veneration attends the vehicle, which is drawn by yoked cows. At this season, all is joy, and every place which the goddess deigns to visit is a scene of festivity. No wars are undertaken; arms are untouched; and every hostile weapon is laid aside. Peace and repose are then only known, then only loved; till, at length, the same priest re-conducts the goddess, satisfied with mortal intercourse, to her temple. The chariot, with its covering, and, if we may believe it, the goddess herself, there undergo ablation in a secret lake. This office is performed by slaves, whom the lake instantly swallows up. Hence proceeds a mysterious horror, and a holy ignorance of what that can be, which is belied only by those who are about to perish.

The Celts believed in one supreme deity, the animating principle of the world, and the source of all other ruling powers. They named him *Odin*, the father of all; by this power they supposed the sun, moon, and stars, to have been produced from the deep and chaotic mass. They ascribed immortality to the human soul, and conceived it to be of a divine original. This sentiment was diligently propagated among them, in order to inspire courage, and it must be admitted to have been highly calculated to produce such an effect. Their most generally received fables countenanced and gave circulation to this doctrine, a perfect contempt of death was the consequence. Hence Valerius Maximus speaks of a people of Thrace, who were accustomed to shed tears at a birth, and testify pleasure at a funeral, believing the end of life to be better than the beginning. To those who died in battle, the gates of the palace of *Odin* were supposed to be opened immediately. They were to live in his hall in the utmost state of enjoyment. The good, who at length died by sickness, were to pass through a stage of purification, and then live for ever in *Girule*, a glorious and happy dwelling; but the perpetrators of enormous crimes were to be sent to *Hela*, remain in a state of punishment till, what they termed "the twilight of the gods;" meaning by the phrase, the general restitution of all things, when a new era of existence was to commence after the burning of the world.

The information of the ancient Celts on astronomical and other scientific subjects, must have been very circumscribed; and the sum of their moral doctrine was to worship the gods, to do good, and to exercise fortitude.

It is probable that the Celtic mythology was of an oriental origin, being brought into Europe by the migrations of the Scythians at an early period.

Few, and these generally uninteresting, particulars have descended to us respecting the philosophy of other barbaric nations, as the Etrurians, or Tuscans, and the Scythians, inhabiting the eastern part of the north of Europe and the west of Asia. The latter led a wandering life, and seem to have had few ideas beyond an admission of a Supreme divinity and the immortality of the soul. The first most notorious name amongst them was *Abaris*, who lived at about the time of the third Olympiad, and whose skill appears to have consisted chiefly in imposing upon the vulgar by magical

Greece.

History.
Anacharsis.

arts and oracular predictions. After him arose *Anacharsis*, the brother to a Scythian prince, who is celebrated as an extensive traveller in search of wisdom, which he endeavoured to implant in the minds of his countrymen, though with little or no success. At Athens he went in company with *Toxaris* to Solon's house, and desired an attendant to inform him that he was at the door, and wished to be received as his guest and friend. Solon sent for answer, "that friendships are best formed at home." *Anacharsis* replied, "then let Solon, who is at home, make me his friend, and receive me into his house." This apt retort produced his admission, and laid the foundation of a lasting friendship. This eminent Scythian acquired at Athens a distinction never before conferred on a barbarian, that of citizenship.

When, upon one occasion, an Athenian reproached him with being a Scythian, he remarked, "My country is indeed a disgrace to me, but you are a disgrace to your country." Having been asked, how a person addicted to intemperance might be taught sobriety, "by placing before him," said he, "a drunken man." "The vine," he observed, "bears three kinds of fruit: the first, pleasure; the second, intoxication; the third, remorse." He was celebrated for a noble and manly mode of speaking, which, from his time, acquired the epithet of Scythian eloquence. His death is introduced by Herodotus in the following manner. In his passage over the Hellespont, he touched at Cyticus, at the time when the inhabitants were celebrating a solemn and magnificent spectacle to the mother of the gods; upon which, he vowed, that in case of his returning safe and without injury to his country, he would institute the same rites which he had witnessed at Cyticus, and the same solemnities observed on the eve of the festival, in honour of this deity. When, therefore, he arrived in Scythia, in the district of Hylæ, near the Course of Achilles, a place full of trees, he performed all the ceremonies to which he had pledged himself, having a number of small statues fastened about him, with a cymbal in his hand. In this situation, he was observed by a native, who communicated intelligence of his proceedings to Saulius, the king of Scythia, who went immediately to the spot, and killed him with an arrow. This Saulius is said to have been his own brother.* He deeply lamented with his dying breath, that his countrymen would not suffer a wiser man than themselves to live among them.

Toxaris.

Similar views and feelings with those which had inspired *Anacharsis* influenced *Toxaris*, another of the Scythian luminaries, who resided at Athens, and formed an intimate acquaintance with Solon and other eminent philosophers. During several years he practised medicine in that city with great success, and expired there universally lamented. A sepulchral monument and statue, to which superstition attributed a healing virtue, were erected to his memory.

Zamolxis.

But Scythia boasted chiefly of her *Zamolxis*, who is represented as teaching the doctrines of immortality and transmigration to the Celtic Druids, and to Pythagoras: the latter, however, may be justly questioned; and Herodotus says, that he flourished at a much earlier period than Pythagoras. *Zamolxis* was a Thracian, and is regarded as the father of Scythian wisdom.

* Herod. Mel.

His name was enrolled among the divinities, and the notion was generally circulated, that they should, at death, go to dwell with him in the invisible world. On certain festivals they chose several persons, by lot, who were sent as messengers to *Zamolxis*, and who were put to death for this purpose by throwing them up into the air, and catching them as they fell upon the points of their spears. Profound, however, as was the superstition which this and other revolting practices indicated, and slow as these uncultivated nations were to admit even the feeblest glimmerings of real wisdom into their dark recesses, we cannot but unite in the congratulatory language of *Ælian*, "No Indian, Celt, or Egyptian, ever questioned whether there were gods, or whether they concerned themselves in human affairs." (*Ælian. Var. Hist.* l. ii. c. 31.)

Leaving the dreary wilderness of barbaric philosophy, Greeks, we now turn to the more cultivated regions of Grecian science; where, after passing over the mythological and fabulous period, we meet with the names of *Prometheus*, *Linus*, *Orpheus*, *Musæus*, *Eumæpua*, *Hesiod*, and *Homer*, to whom we have before alluded in our general view of the early Greek poetry (*Div. Æli.* p. 121, &c.) We have also had occasion to record the principal facts respecting Solon and others, who, in Greece, founded the science of legislation upon the basis of moral wisdom, and thus evidently advanced the interests of genuine philosophy. Next to these may be ranked those eminent sages who acquired the distinctive appellation of the seven wise men of Greece, of whom Solon, already mentioned, was one, and Thales another; whose biography we shall presently give, with some detail, as having been the founder of a sect, and the father, in some sense, of Grecian philosophy. The rest were Chilo, Pittacus, Bias, Cleobulus, and Periander.

Chilo was, according to *Laertius*, an aged man, in Chilo, the fifty-second Olympiad, and expired through excess of joy, upon his son's returning victorious from the Olympic games. He was one of the *Lacedæmonian* Ephori, and acted with such extraordinary and rigid integrity, that he declared he remembered nothing that gave him regret in his public conduct, excepting that he once screened a friend from merited punishment. The following are his chief maxims:

Three things are difficult: to keep a secret, to bear an injury patiently, and to spend leisure well.

Visit your friend in misfortune, rather than in prosperity.

Never ridicule the unfortunate.

Think before you speak.

Do not desire impossibilities.

Gold is tried by the touchstone, and men by gold.

Honest loss is preferable to shameful gain; for by the one, a man is a sufferer but once; by the other, always.

In conversation, make use of no violent motion of the hands.

In walking, do not appear to be always upon business of life and death; for rapid movements indicate a kind of frenzy.

If you are great, be condescending; for it is better to be loved than to be feared.

Speak no evil of the dead.

Reverence the aged.

Know thyself.

PITTACUS was born at Mytilene, in Lesbos, in the Pittacus.

Greece.
Zamolxis.

History. thirty-second Olympiad, and had the command of a fleet in a war with the Athenians; and having overcome the Athenian commander Phryno, in single combat, by the stratagem of throwing a net over his antagonist, he acquired a very high reputation among his countrymen, and was elevated to the supreme power. His moderation was, in all things, exemplary. He was offered as much of the recovered territory as he chose, but he only took what he could measure by a single cast of the javelin, and of this, declaring that half was better than the whole, he dedicated half to Apollo. He, at length, retired into private life, and left these maxims to posterity:

The first office of prudence is to foresee threatening misfortunes, and prevent them.

Power discovers the man.

Never talk of your schemes before they are executed; lest, if you fail to accomplish them, you be exposed to the double mortification of disappointment and ridicule.

Whatever you do, do it well.

Do not take to your neighbour which you would take ill from him.

Be watchful for opportunities.

Bias. Bias was a native of Priene, in Ionia, and remarkable for his generosity. Some female captives from Messene having been brought to Priene, he not only rescued them, but educated them as his own daughters, and then returned them to their parents, with a dowry. During an invasion, his friends remonstrated with him, for not endeavouring to secure his most valuable effects as others did; "I carry," said he, "all my treasures with me," referring to the superiority of a well-stored mind to the amplest fortune. His maxims are—

It is a proof of a weak and disordered mind to desire impossibilities.

The greatest infelicity is, not to be able to endure misfortunes patiently.

Great minds alone can support a sudden reverse of fortune.

The most pleasant state is to be always gaining.

Be not unmindful of the miseries of others.

If you are handsome, do handsome things: if deformed, supply the defects of nature by your virtues.

Be slow in undertaking, but resolute in executing.

Praise not a worthless man for the sake of his wealth.

Whatever good you do, ascribe it to the gods.

Lay in wisdom as the store for your journey from youth to old age, for it is the most certain possession.

Many men are dishonest; therefore love your friend with caution, for he may hereafter become your enemy.

Cleobolus, of Lindus, in Rhodes, surpassed all his contemporaries in corporeal strength and beauty, and was also highly celebrated for his skill in unravelling enigmas.

Be kind, said he, to your friends, that they may continue such; and to your enemies, that they may become your friends.

Happy is the family where the master is more loved than feared.

When you go abroad, consider what you have done; when you return home, what you have done.

Marry among your equals, that you may not become a slave to your wife's relations.

Be more desirous to hear than to speak.

Avoid excess.

Periander, of Corinth, who died at the age of eighty, in the fourth year of the forty-eighth Olympiad, offended his countrymen by the rigour of his discipline, and the rest of the Grecian states, by changing the form of government from an aristocracy to a monarchy. He was fond of the society of wise men, and framed very useful and important institutions. He was, moreover, skilful as a poet. His moral doctrines are—

Let the prince, who would reign securely, trust rather to the affection of his subjects, than to the force of arms.

Pleasure is precarious, but virtue is immortal.

Conceal your misfortunes.

Study to be worthy of your parents.

There is nothing which prudence cannot accomplish.

Greece.

HISTORY.

CHAPTER XIII.

OF GREECE.

History.

We have now arrived at the end of the second of the three great leading epochs in the history of Greece. The interest which is excited in the mind of the reader for that extraordinary nation, by their heroic resistance to the overwhelming force which had been poured against them by Persia, as recorded by Herodotus, is well sustained by Thucydides in the narrative which he has left us, of the domestic wars among the different states which arose, after the cessation of all danger from without; but after the conclusion of the Peloponnesian contest, the amusement as well as the instruction to be derived from Grecian history rapidly diminishes. It has been well observed by Mr. Mitford, that the proper point of view in which we ought to consider that obstinate and protracted war, is in the light of a civil contention. It was not the ambition of Athens disputing with the pride of Sparta, for political ascendancy; but it was the turbulence of the many arrayed against the prescription of the few, it was a question between the democratical party in the several states, which composed the Grecian confederation, and that of the oligarchical; and it is in this circumstance, that we must trace the cause of that deep interest which every reader is made to feel in the progress of the contest, and which is so disproportioned to the magnitude of the stake, and so greatly superior to that which is commonly excited by the ordinary details of war and conquest. Mankind have few sympathies to spare, except where they are personally concerned in the occasion, for mere ambition and lust of power, whether exhibited in the history of nations or in that of individuals; and unless our interest on one side or the other can be excited in the cause, for which the respective parties contend, and our moral feelings and attachments be put into motion, it is seldom that any strong and permanent hold can be gained upon the imagination, merely by eloquence of description.

The truth of this is strongly felt, when we close Thucydides, and take up the continuation of the history of Grecian affairs, which has been left us by his accomplished successor. If ever there existed an individual, whom natural talent and actual circumstances of every kind, would have pointed out for the office of historian of the transactions which happened during the age in which he himself lived, it was surely Xenophon. Distinguished, perhaps, even above the very

greatest of the captains whose exploits he has recorded in genius or war; having access to means of information, which no individual besides himself could probably have commanded; with a taste the most refined, and an understanding strengthened and enlarged, not merely by an experience of mankind and of public affairs, such as falls to the lot of few; but also by the instruction of the father of all that is sound and elevating in philosophy, we may safely take for granted, that he has imparted to the history which he has left us of the affairs of Greece, all the interest and value, of which the facts that he had to record were properly susceptible. And yet while the work of Thucydides is known almost by heart by every scholar, and quoted by every writer as the great repository of political wisdom and historical illustration, the work of Xenophon, which as a piece of composition is one of the purest specimens of Attic taste, which has been spared by the destructive hand of time, is almost unknown to the general reader, and not always read even by those who feel ashamed to confess their ignorance of Livy or Herodotus.

The fact is, after the submission of Athens to the will of the conqueror, that which follows of the history of Greece, until the rise of the Macedonian power, when a new state of things begins to arise, is like that part of a drama which is protracted after the catastrophe. Some curiosity is perhaps felt to know what afterwards became of the several cities and states; just as in a novel, we linger to be told the final destiny of the persons of the story; but our curiosity is merely adventitious—it is unconnected with any hopes or fears—it is a mere desire to know, without regard to any wish that we seek to gratify. On this account, we may the less regret that the knowledge which we possess of the events that intervened between the fall of the Athenian power, and the rise of that of Thebes under Epaminondas, is, in many respects, imperfect. The principal events themselves are indifferently known to us by means of Xenophon and Diodorus; but the reader is often puzzled in what way they ought to be interpreted. Wars arise; jealousies and heart-burnings are manifested; alliances are broken and concluded; but what that particular state of things may have been in the several states, from which they originated, or by what accidents that constant revolution of parties is brought

Greece.

State of parties in Greece.

Xenophon peculiarly adapted for the historian of this period.

History.

about, which is for ever happening at Corinth, at Argos, at Thebes, and, to a certain point, even at Sparta itself, we are, for the most part, left only to conjecture. From these circumstances the narrative is broken, as it were, into pieces, without any clue being left to us by which to connect the events with each other. How detrimental this necessarily is to the interest of the story needs not be pointed out; and what is perhaps no less important, the instruction to be derived from this part of Grecian history, is diminished in a still greater degree. When every thing appears accidental and capricious, and to be the result simply of a disorganized state of politics and parties, it is difficult to reason either to or from any general principle; the only moral which a philosophical reader is able to deduce, is a strong feeling of the discomfort and insecurity which belong to all forms of government, be they of what denomination they may, the principles of which are not laid upon the foundation of hereditary institutions.

For these reasons we propose to pass over with

rapidity that period, which ensued in the interval between the termination of the Peloponnesian war, and the rise of the Theban power. The only prominent incident in this part of Grecian history, was the expedition of the Greeks under Cyrus, in the rebellion of that prince against his brother Artaxerxes. This event may be considered, as having ultimately led to the overthrow of the Persian monarchy, by opening the eyes of the Grecians to the internal weakness of that large and ill-constituted empire. The details of the expedition also, as they have been handed down to us by Xenophon, at once the historian and the lender of that unfortunate but marvellous achievement, throw no inconsiderable light upon the manners and customs of the times, both in the east and among the Greeks themselves. This interesting and celebrated event, which forms perhaps the most curious episode in the annals of Greece, will form the subject of our present chapter; and it falls with propriety under the head of Xenophon, whose life will thus furnish the material for an important article of biography.

Greece.

XENOPHON.

Biography.

Early years of Xenophon.

Or the origin and early years of Xenophon, the Athenian, our information is extremely scanty: the political party to which he was attached, the interest which Socrates took in the formation of his principles, the high connections which he formed wherever his fortune cast him, and the resources which he appears to have commanded, all conduce to establish the probability that he was well born and well educated; but history affords us no positive intelligence, further than the name of his father, Gryllus, and that he belonged to the Archian division of the Egeid ward. The date of his birth has been the subject of much ingenious discussion; and the result of the accurate investigation of Mitford, which determines the commencement of his military career to have been about his twenty-fifth or twenty-sixth year, and which, consequently, would place his birth about B. C. 437, does not differ materially from the statement of Diogenes Laertius that he became of age (ἡλικίᾳ) O. 94. 4. A. C. 400, and subsequently joined the expedition of Cyrus. The last-mentioned author

Account of his youth by Diogenes Laert.

insinuates, that Xenophon in his youth was not exempt from the vices of his age and country; and it is probable, that before he became acquainted with Socrates he had not given much attention to the duties of morality.—“He was,” said Diogenes, “well mannered, and finely formed to a miracle, and to these advantages were added extraordinary vigour of body and hardihood of constitution. His introduction to the great philosopher to whom he became so deeply indebted, and so affectionately attached, was highly characteristic of the abrupt, yet winning, manner of the teacher, and of the ingenuous docility of the pupil.” It is said that Socrates, meeting him in a narrow gateway, extended his walking-stick across it, so as to hinder his passage, inquiring how a man could acquire the means of profit? and upon receiving a

suitable reply, he inquired further, how men could attain to virtue and honour? Xenophon being at a loss for an answer, the philosopher added, “Follow me then, and learn.” And from that time he became a hearer of Socrates, and was the first who took notes from his lectures, which he afterwards published, with the title of memoirs. *Memorabilia*.—(Diogenes Laertius.) This connection, however favourable to his future happiness, and to his fame, did not conduce, at the moment, to render his situation at Athens more comfortable. It appears probable that he was, from his birth and family, attached to the aristocratic party, which suffered at that period all the exactions and mortifications which the low tyranny of the mob, exulting in successful sedition, could inflict; and it had for some time been more than suspected, that the disciples of Socrates were trained in notions unfavourable to the continuance of an unbridled democracy—a suspicion which, more than the alleged accusation of impiety, or the virulence of the rival sophists, contributed to the condemnation of that philosopher, by the jealous temper of the sovereign people. About a year before this judgment, which cast so indelible a stain upon the Athenian character, an event occurred which gave a new turn to the prospects of Xenophon, and deprived his country of his services and of his example. Cyrus the Younger, who, on the death of his father Darius, had been left commander-in-chief of a district of vast extent and richness, was, soon afterwards, at the suggestion of the perfidious satrap Tissaphernes, seized by his elder brother Artaxerxes, the new king, and condemned to death; but, at the intercession of Parysatis, the queen-mother, who appears to have been partial to her younger son, he was liberated, and restored to his command. Indignant, however, at the insult, and made sensible of the insecurity of a younger brother's

His introduction to Socrates.

Biography. state, under Eastern despotism, he became guilty of that crime of which he had been, perhaps unjustly, accused, and entertained a design against the throne and life of the king, under the too-well founded impression that both could not continue in safety.

With this view the Persian prince laid himself out to win popularity, by a splendid and liberal hospitality; and he laboured to strengthen his forces, by every means in his power, without awakening the suspicions of the royal court; seeking, under pretext of differences with the neighbouring satraps, to engage in his service a formidable body of Grecian heavy-armed mercenaries, of which he had taken care to exhibit a specimen at Susa, when he travelled thither shortly before the death of Darius, and had carefully observed the effect produced upon the minds of his countrymen by their formidable appearance.

Proxenus Among those whom he now entertained, Proxenus, a Theban of rank, pupil of the Levantine Gorgias, who brought him a reinforcement of one thousand five hundred heavy-armed soldiers, and five hundred targeteers, or light infantry, was received into his confidence, and treated as his personal friend; he being intimately connected with Xenophon wrote to him at Athens, inviting him to share the prince's favour, and to join the projected expedition as a volunteer. Xenophon shewed the letter to Socrates, and desired him to be his counsellor on the occasion. The conjuncture was important: Cyrus was the ally of Lacedæmon, and consequently, in the hostile spirit of the times, considered as the enemy of Athens, although nothing had passed to prove that he had any designs inimical to the republic; to follow his fortunes would, therefore, be to incur the suspicion of Lacedæmonism, an offence at this time nearly synonymous with the crime of being an aristocrat, and likely to be punished by a sentence amounting to banishment for life.

The philosopher, who probably saw in his youthful friend talents and energies for the exercise of which his situation in his own country afforded him little opportunity, and who could not but feel the questionable nature of the proposed adventure, declined giving judgment himself, but recommended a reference to the oracle of Apollo at Delphi. Xenophon, in compliance with this suggestion, undertook a journey to that celebrated temple, and it is likely secured the favour of the Pythia by well-timed liberality; but instead of inquiring whether or not he should accept the invitation to Sardis, he merely put the question under what auspices, and with what sacrifices, he should prepare for the expedition? to which a direct and favourable answer having been returned, he informed Socrates of the result, who, after mildly reprimanding him for his departure from the advice which he had solicited, bid him set out under the direction of the God. (Diogenes Laertius.)

As Xenophon must have passed his eighteenth year, sometime previous to the conclusion of the Peloponnesian war, it is likely that he would, in compliance with the laws of his country, have seen some service, although the part which he took in it is no where recorded; but many circumstances concur in rendering it probable that he served with other Athenians of rank in the cavalry, and employed himself in acquiring information on military subjects; for he does not appear to have been received at the court of Sardis like a raw recruit, and his establishment there, as we

afterwards incidentally learn, was peculiarly equestrian.

On his arrival, he found that the prince had engaged a Grecian force of about eleven thousand heavy-armed troops, and two thousand light infantry, principally under the direction of Clearchus, a Lacedæmonian exile, in whom he placed great confidence, and to whom he had entrusted a sum of ten thousand darics, (nearly £8,000.) for the purpose of clandestinely raising troops among the Hellespontine Thracians.

Cyrus's general. He had also employed, in a similar service, Aristippus, a Thessalian, who had been driven from his home by one of those violent factions so common in Grecian states, and had availed himself of the asylum and ready aid which Cyrus afforded to all warlike fugitives, to reanimate himself and his party by force of arms. Proxenus, the Boeotian, to whom Xenophon owed his introduction, had been engaged to raise an army under pretext of chastising the Peisidians for some inroads upon the government of the prince; while Sophanesus of Stymphalus, with two associates, (Socrates of Achaia, and Pasion of Megara) was directed to enlist all the soldiers he could meet with, for the avowed purpose of prosecuting the dispute with Tissaphernes respecting the Milesian territory.

At length, thinking himself sufficiently prepared for his great undertaking, Cyrus ordered Clearchus immediately to join with all his force, and Aristippus to make terms with his citizens, and to send him the troops he had collected under the command of his countryman Menon. He also sent to Xenias, the Arcadian, who had before accompanied him to Susa, and who afterwards commanded the foreign forces in his garrisons, to bring him all who could safely be spared from that service. He recalled the generals who were conducting the siege of Miletus, and commanded the Milesian exiles to join him in the pretended expedition against the Peisidians; other Grecian reinforcements received a route to meet him on the road; and his whole disposable Persian army accompanied him. It is probable that he hoped to have so deceived the king, with respect to the object of his march, as to have taken him quite unprepared, and to have overcome him almost without a battle; but the wily Tissaphernes, exasperated by former enmity, as well as by recent aggression, perceived at once the disproportion between the means provided and the object professed; and taking five hundred cavalry as his body guard, set off, with the utmost speed he could use, to Susa, and thus enabled the king to make preparations for repelling the approaching invasion.

The army set out from Sardis in the month of April 401. a. c. with all the pomp, and much of the luxury of a Persian camp, only it was ill provided with money, Cyrus having probably exhausted his treasury in enrolling so great a force, and depending, according to the system of the times, upon the voluntary or forced contributions of the countries through which he was to pass, and upon the hopes of speedy success and immense booty.

It will not be necessary to detail all the minute particulars of a march, which Xenophon relates without taking any occasion to make mention of himself, but with an attention to the topography and natural history of the various districts through which he travelled, which suggests a conjecture, that the idea of writing the *Anabasis* was entertained from the first,

Biography. and might possibly have been proposed to him by his friend and adviser Socrates; some incidents, however, must not be omitted, which throw considerable light upon the character of those Grecian mercenaries on whom the fate of empires now began to depend, as well as upon the resources to which their leaders were driven to supply those deficiencies of pay, which the poverty of the Greeks, and the mismanagement of the Persians, so often occasioned. More than three months pay was in arrear, when Cyrus arrived at the plain of Caystrus, where he halted for five days, having left Sardis little more than seven weeks; and the soldiers, says Xenophon, "went frequently to the door of his lodging to demand what was due to them. He put them off alleging the great prospects before them; and shewing the vexation which he really felt; appealing to their experience that it was not his habit to fail of payment when he had it in his power."

Cyrus in distress for treasure,

is relieved by Epyaxas.

At this critical period he received a visit from Epyaxas, the wife of Syennesis, whom Xenophon calls the king of the Cilicians, but who was nevertheless a tributary of the Persian empire, and subject to the imperial sceptre of Artaxerxes. It was currently reported, that this lady not only brought the prince a large supply of money, but granted him still more costly favours; and he was enabled, besides discharging the demands of his army, to gratify the soldiers with a month's pay in advance. The princess continued some days with the army, either from political or other motives, and at her request Cyrus reviewed his troops at Tyriarum, which Xenophon distinguishes as "an inhabited city," with reference to the frequent occurrence throughout the Persian empire, of "cities great and fair, without inhabitant," in consequence of the system of spoil and plunder, by which the petty wars between the Satraps were conducted, and of the weakness of the imperial government, which was unable to protect its dependencies or maintain subordination in the provinces.

The lady appears to have been more frightened than pleased with the display of Grecian warfare; but Cyrus derived additional hopes from the alarm which the brilliancy of their armour, the exactness of their discipline, and the vigour of their charge, produced among the natives of the east. In this review, Menon, at the head of his Thespians, occupied the right wing, and Clearchus the left. The former had afterwards the honour of reconducting the Cilician princess with an escort to her residence. He appears to have been in high favour with Cyrus, though Xenophon speaks of him in strong terms of disapprobation, and relates some circumstances much to his disadvantage; it is hinted (by Diogenes Laertius), that he had some personal reason to dislike him.

When they arrived at Tarsus, the metropolis of Cilicia, a negotiation ensued between Cyrus and Syennesis, in consequence of which another large subsidy was provided for the pay of the troops; but here a new cause of discontent arose, which speedily broke out into open mutiny, and threatened to destroy all the schemes of Cyrus, by the dissolution of his ill-compacted army.

The soldiers refuse to march, but are prevailed

The soldiers had for some time entertained suspicions, that the real design of the prince was against the king, and they now declared, that as they were not enlisted for that service, they would proceed no further. Clearchus attempted to enforce obedience to his commands, and his horses beginning the march,

were stoned, himself narrowly escaping with life. Xenophon finding subordination at an end, he desisted; and having called a general assembly of the troops, where the extraordinary spectacle of a Spartan general in tears commanded silence, he addressed them in a speech probably more laconic and less skilful than the harangues put into his mouth by Xenophon, but which had the effect not only of restoring satisfaction and obedience among his own troops, but even of inducing more than two thousand men who had hitherto served under Xenias and Pasion, to transfer their arms and baggage to the camp of Clearchus, a striking instance of the want of military discipline, arising from the prevalence of republican principles.

By these and other arts which the deficiency of authority compelled him to adopt, he induced the assembly of soldiers to send a deputation to Cyrus, in order to ascertain the real objects of the expedition. The prince, who was suffering the most extreme uneasiness on account of their defection, could not venture to announce his actual intentions, and replied to the deputies that an enemy of his, (Abrocomas, Satrap of Syria,) was then on the banks of the Euphrates, distant only twelve days' march from Tarsus; and that he desired to proceed against him. The assembly were not so deceived by this feint, but that the design against the king was still suspected; but in the difficulty of returning without pay, and against the will of their leaders, through an enemy's country, and apprehensive that Cyrus might turn his arms against them, if prevented from pursuing his original plan, they resolved to follow him, on condition of receiving an augmentation of one third to their pay. And thus this alarming sedition was effectually quieted.

All, however, were not satisfied; and the two generals, Xenias and Pasion, mortified by the secession of their troops, and the acquiescence of the prince in it, availed themselves of the opportunity soon afterwards afforded, by their arrival and stay at Myriandrus, a Phœnician sea port of some commercial importance, where the united Lacedæmonian and Persian fleets met the army, to take their passage home; and Xenophon has acknowledged that he was tempted to follow their example, but was withheld from it by the dictates of prudence and honour. Cyrus was the first to announce this desertion to the Greeks, and he availed himself of the circumstance to gain popularity by a display of magnanimity, not only abstaining from pursuit, which, with his swift galleys would have been certain of success, but assuring the soldiers, that the wives and children of the deserters, who had been left in his power at Tralles, as pledges of their fidelity, should be restored to them in safety.

No further difficulties arose till they reached Thapsacus, a large and rich city upon the right bank of the Euphrates; where, having halted for five days, Cyrus sent for the Grecian generals, and avowed his design of marching to Babylon against the great king, desiring them to exert their influence to prevail on the soldiers to follow. A general assembly being called, the communication so long secretly expected was made; the soldiers, as usual, shewed reluctance, and accused their officers of having deceived them, with a view of extorting a further increase of pay or gratification, and they demanded the same sum which had been given on a former occasion to the Greek mercenaries, who attended the prince on his visit to

Cyrus immediately promised a gratuity of five minas of silver (about £16.) to each man, on their arrival at Babylon, and undertook to continue their monthly pay at the increased rate at which it then stood of three half darics, till their return to Ionia. The greater part of the army were engaged by this offer; but while they were yet deliberating upon it, the artful Menon drew his men aside, and advised them to take that opportunity of ingratiating themselves with the prince by crossing the river first, while the rest were hesitating. This being done, they immediately received the thanks of Cyrus, and the promise of a liberal reward, and Menon himself was honoured with splendid presents. The whole army soon followed, and found the Euphrates easily fordable; an event which the flattery of the Thapsacenes attributed to the homage of the river paid to his future king; alleging that it had never before occurred in the memory of man, and that Abrocomas was supposed to have effectually prevented the passage by removing all the vessels upon the stream.

Soon after this, the army having encamped in some deserted works, nearly opposite the populous town of Carmanda, on the Euphrates, and being employed in transporting provisions on temporary floats made of skins from the market, a violent quarrel arose between a soldier serving under Clearchus, and one belonging to Menon's division; and the former general, deciding that Menon's man was to blame, inflicted stripes upon him, in that hasty and arbitrary manner, which the deficiency of an established discipline frequently occasioned. The comrades of the culprit so warmly resented this interference, that when, on the same day, Clearchus happened to pass from the market through their quarters, with few attendants, one of them, who was employed in cleaving wood, flung his hatchet at his head, and was supported by the rest with stones and similar missiles. Escaping to his own camp, he called to arms; and, but for the timely intervention of Proxenus, would have led his Thracian horse to action; during the discussion which ensued, Cyrus opportunely arrived, and rushing with his suite into the midst of the confusion, cried out, "Clearchus, and Proxenus, and you Greeks who are present, know not what you are doing; if you fall out among yourselves, I shall this day be cut off, and you not long after; for if my native troops see any thing amiss between us, they will instantly become more dangerous than the forces of the king." This remonstrance brought Clearchus to himself, and all parties laid down their arms.

This storm was scarcely appeased, when a new alarm was excited by the treachery of Oronatas, a relative of the prince, who was discovered to hold a correspondence with the king, and to have arranged a plan for deserting with a chosen body of cavalry. Being apprehended, he acknowledged his crime, and admitted that having twice before been pardoned, after similar offences, he could never hope to re-establish his character; Cyrus, unwilling to appear despotical, asked Clearchus for his judgment, having admitted him as first in rank of the Grecian army to his council on this occasion; Clearchus, without hesitation, declared his opinion for death, and all present, even the relatives of the criminal, assented to its propriety. Cyrus therefore condemned him to suffer, he was respectfully led out; and seen no more.

Treachery of Oronatas, detected. and punished.

The time for action now approaching, Cyrus took care to animate his Grecian troops by renewed and splendid promises, and to warn them of the immense superiority of numbers, with which they would have to contend, encouraging them at the same time with assurances that they would find the Persian soldiers less than women.

He assigned the Greeks a position on the right of his army, flanked by the Euphrates, and directed Clearchus to command their right wing, and Menon the left. And here for the first time Xenophon makes mention of himself. "Cyrus rode along at a moderate distance surveying both armies, looking now at the enemy, now at his friends. Xenophon the Athenian, seeing him from the Grecian line, riding out to meet him, inquired if he had any commands for him. He stopping his horse informed him, and desired him to tell them all, that the sacrifices and victims were favourable. While he was saying this, he heard a clamour through the ranks, and asked what it was. Xenophon told him that they were exchanging a fresh watchword. He wondered who could have given it out, and asked what it might be. Xenophon replied, that it was Jupiter, the Preserver and Victory. Cyrus having heard it, said I agree to it; let it be so, and having said this he rode off to his station."

The minuteness with which a circumstance, in itself so little important, is related, is highly characteristic of a young man ambitious of notice and gratified by the honour conferred upon him. At the same time it seems to imply, that Xenophon had hitherto taken no part in the conduct of the army, and had not been invited to the councils of the prince; for had he been accustomed to converse familiarly with Cyrus, he would scarcely have recurred the present interview.

The battle of Cunaxa, which followed immediately after the anecdote that has just been related, and in which Cyrus was slain and his army completely defeated by Artaxerxes, belongs to the history of Persia rather than to the life of Xenophon, or to the affairs of Greece.

The native troops in the army of Cyrus were totally routed and dispersed; but in that part of the field in which the Greeks fought, the forces of Artaxerxes were driven from the field in every direction, and almost without resistance. These last were pursued until the Grecians at length, wearied with slaughter and fatigue, returned to their camp. As they had gone into battle without dinner, it was no small mortification to them, on their arrival, to find that their quarters had been plundered; nevertheless, as they supposed that a great victory had been gained, their spirits were raised, and they waited patiently, hoping that the morning would bring them intelligence and orders from Cyrus. When day dawned, the generals, surprised at receiving no communication, resolved to march forward in the hope of falling in with him; but at sunrise, two officers of distinction, Procles, the governor of Teuthrania, who was descended from Demaratus, the Laconian, and Glous, the son of Tamas, admiral of the fleet, informed the Greeks that Cyrus was dead; and that the remainder of his army had fled to their camp under the conduct of Arius their general, who desired to inform the Greeks that he would wait for them that day, but on the morrow should march homewards for Ionia. This intelligence was received by the whole army, officers and men, with the deepest consternation; but Clearchus, with true Spartan spirit, replied, "I would

Battle of Cunaxa, and death of Cyrus.

Spirited reply of Clearchus to Arius.

Biography. that Cyrus had lived to profit by our victory; but since it is otherwise, we are not less masters of the field, and but for your arrival, should have been now on our march in pursuit of the king; wherefore tell Arius that if he will return hither, we will set him upon the throne of Persia, since they who conquer have a right to reign." Having thus spoken, he sent them back, and desired Chersiphos the Lacedæmonian and Menon to accompany them; the latter, indeed, had himself proposed to undertake the embassy as the friend and *xenos*,* or guest, of Arius.

Artaxerxes demands the surrender of the Greeks.

Debate of the Grecian generals.

Xenophon's answer to Phaulon, the messenger of the king.

Clearchus replies with caution to Phaulon.

In the mean time, Clearchus was too good a general to neglect provision for the immediate wants of his army. He ordered a number of draught oxen and asses to be killed, and gathering up the darts and wicker or wooden shields of the barbarians, and breaking up some unnecessary waggon for fuel, they fed that day upon boiled meat. After dinner, when they were, according to the manner of the Greeks, assembled together to spend the heat of the day in conversation, some heralds arrived from the king and from Tissaphernes, (among whom was a Greek named Phaulon, in the service of the satrap, and highly esteemed by him,) demanding, in the name of the king, that they should ground their arms and surrender at discretion. Clearchus merely replied, that it was not usual with the victors in an action to surrender their arms; and leaving the other generals to return a more explicit answer, he went out to attend a sacrifice, promising speedily to return. During his absence, several of the principal Greeks took part in the discussion; but having had no previous consultation on a message so unexpected, they spoke as their different tempers and interests led them, some with indignant contempt, others with a disposition to accommodation, and a few with offers of mercenary service in Egypt or elsewhere; among the rest, Xenophon thus addressed the messenger.

"With us, Phaulon, as you may perceive, nothing is of value but our arms and our honour. As long as we preserve our arms, we can rely upon our own valour; but in parting with them, we should be conscious of betraying ourselves. Think not, therefore, that we will resign our only remaining property, but rather we will use them in fighting for yours." Phaulon laughed heartily at this set speech, and replied, "You appear to be a scholar, young gentleman, and what you say is pleasant enough; but I would not have your inexperience so much deceive you, as to set your boasted valour against the power of the king."†

Clearchus having, probably, under the usual pretext of a sacrifice, taken time for private consultation, now returned to the assembly and inquired what had been determined. Phaulon having replied, that the rest had said some one thing and some another, and that he hoped for a definitive answer from him alone, Clearchus desired him, as of Grecian extraction, to say what Greeks ought to do in their situation. The question being evaded, Clearchus boldly took upon

himself to send the following message to the king. **Xenophon.** "If we are to be considered as the king's allies we shall be more worthy of his service in our armour; if we are to fight for our safety, we cannot spare it."—"This answer," said Phaulon, "we will report; but the king has also commanded us to declare that he will keep truce with you whilst you remain here, but will consider you as enemies if you either advance or retreat; say, therefore, whether you choose truce or war."—"Say," replied the general, "that we consent to the proposition of the king."—"But is it truce or war?" urged Phaulon. "A truce, if we remain—war, if we advance or retreat." And the question being repeated, he returned the same answer, and refused to declare what were his intentions; and with this answer, the messengers were constrained to depart. Soon afterwards, Procles and Chersiphos only returned from Arius, declining the offer made him on account of the inferiority of his birth to that of many Persian nobles; and stating that if the Greeks should not join him that night, he should march in the morning without them. Clearchus, in his usual manner, declined that they would do as they thought best, and declined to inform them what were his own intentions. He appears, however, to have considered the matter deeply, and to have determined wisely; and knowing the effect which the belief in divination still had upon the minds of the soldiery, he employed it, as other generals and statesmen of that age usually did, to confirm his own authority. Calling the officers together after dusk, he assured them that having sacrificed with a view to pursuing the king, the victims had appeared unfavourable; and that these indications were well founded was proved by intelligence since received, that the king had passed the Tigris, whose stream was not fordable, and had removed all the boats. To remain where they were encamped, without supplies, was manifestly impossible; the victims were altogether propitious for a return to the Cæreian party; he proposed, therefore, that they should retire to sup as well as they could; that upon the sounding of the bugle, which usually dismissed them to bed, they and countenance a retreat.

Here then commences the celebrated "retreat of the ten thousand," as it has been somewhat loosely termed by the moderns, but better known to the ancients as the "Return of the Cæreian Greeks." The army was now encamped at the distance of sixteen thousand and fifty furlongs from the city of Ephesus in Ionia, which they reckoned as their rendezvous, or to compute distance by time, ninety three days march. By their resolution to remove, they had in effect declared themselves at war with the king, in the very heart of an enemy's country, who could at any moment pour down upon them with fifty times their numbers, and cut off all the sources of supply; and their only allies within two thousand miles, were a defeated band of

* There is an English word in any degree corresponding with the Greek terms *ἑως* and *ἐως*, in that sense in which they are here and frequently used. It was a right of friendship, arising out of a contract of reciprocal hospitality, and a remnant of the manners of the earliest age of Greece.

† It is wonderful, that in the teeth of this contemptuous speech, recorded by Xenophon himself, two distinguished critics and historians, Spelman and Dodwell, should have contended that he was at this time about fifty years of age.

Sargaphy, rebel barbarians, whose weakness and cowardice they knew, and whose fidelity they had every reason to suspect; conducted by a man who appears to have possessed neither spirit in rebelling, nor honesty in obedience. To add to the difficulty and dangers of their situation, their own numbers were thinned by desertion as soon as it was dark, and there was too much reason to apprehend that the deserters had carried intelligence to the king. Marching with the remainder, Clearchus reached his first encampment adjoining that of Arius about midnight; and immediately laying aside their armour, the generals and principal officers waited upon the Persian commander, and a solemn compact was made between the Greeks on one part, and Arius and his chief officers on the other, to observe mutual fidelity, and to afford mutual assistance; the Persians further covenanting to act faithfully as the guide of the army. The ceremony consisted in slaughtering a boar, a boi, a lynx*, and a ram, and their mingled blood being poured into a shield, the Greeks dipped into it a sword, and the Persians a spear, and thus took the prescribed oath. Clearchus then desired Arius to give his opinion respecting the route homewards. It is difficult at this distance of time, to form any opinion respecting the real intentions of Arius in making this league with the Greeks: and Xenophon gives no hint of any insincerity in the advice which he now offered them—to avoid the road by which they had come, on account of their want of supplies, and of the barren nature and exhausted condition of the country, and to return home by a longer way through a rich and fertile district; it was, however, evident that by taking the Greeks into a totally strange land, he had them more completely in his power than while they were pursuing a track already known to them.

It was agreed, nevertheless, to follow his recommendation, which was certainly supported by cogent arguments, and to lose no time in gaining ground on the king's forces, who, it was argued, could not overtake them with a large force, and dared not attack them with a small one. Upon this arrangement Xenophon makes a very characteristic remark, observing that it clearly acknowledged the necessity of retreat, at least, if out of *fight*; "but fortune," he says, "played the general more honourably;" for it shortly happened that the Royal troops came in sight, but were afraid to attack them, and actually removed to a safer distance during the night; a caution principally attributable to the Spartan spirit of Clearchus, who with a dignified indifference continued his march to their view, neither caring to attack, nor seeking to avoid an engagement. These circumstances led to an intercourse, and finally to an arrangement between the parties, the terms of which were so favourable to the Greeks, that they ought to have excited suspicion; and whatever might have been the original intentions of Arius, there can be little doubt that he now bought his own pardon at the expense of concurring in a scheme of cunning treachery for the total destruction of his Grecian friends. To this he was induced by the persuasion of the unprincipled and po-

litic Tissaphernes who had been appointed to succeed the unfortunate Cyrus to his great command, and was, in consequence, preparing to pursue the same journey towards Sardis with a powerful army.

It was obviously for the interest of the Persian empire, that the Cyprian Greeks should not return in safety, to excite the cupidity of their formidable countrymen, by relating the facilities of their march, the improbability of their adversaries, and the immense booty to be obtained by a successful invasion; and it was, at the same time, extremely hazardous to attempt their destruction by force, even with that vast superiority of numbers which the king could command. In the history which follows, we shall trace a deliberate design to mislead, to disorganize, and ultimately to annihilate the Grecian army, founded upon the knowledge which the Persians had acquired of its strength and of its weaknesses, and so artfully contrived, and in part executed, as to have ensured success, but for the extraordinary talents and prompt decision of Xenophon.

The boldness and independence which the Greeks had shewn, by determining to march homewards in defiance of the king, and the proud style which their leader assumed in every communication with him, had taught the Persian court that little was to be effected by haughtiness and intimidation; and Artaxerxes, or they who acted in his name on this occasion, wisely laid aside the lofty tone of oriental despotism, and not only submitted to the rough manners of Clearchus, but acceded to all his demands, and supplied him liberally with provisions; ensuring by such compliances the peaceable behaviour of his troops both towards the king's forces, and the country at large, the former of whom dreaded nothing so much as an attack from a small phalanx of Greeks, and the latter knew too well the dreadful consequences to be apprehended from Grecian cruelty and rapacity in pillage.

Of the treachery intended against them, Clearchus appears to have entertained some idea; for Xenophon mentions, that in conducting his troops, under Persian guides, to the place assigned them for refreshment, he thought it necessary to push forward as rapidly as possible, observing that the numerous canals and drains across which they were led, by means of portable bridges, were much fuller of water than at that season would ordinarily have occurred, and fearing that there might be a design of entangling them in the fens, and inundating the country. If such was the intention, it was frustrated by the expedition with which the Greeks traversed these lustrate marsh lands; and on their arrival at the villages they were abundantly refreshed, and well entertained: and here, partly for rest and partly from policy, they remained three days.

During this repose, Tissaphernes, accompanied by the brother of the queen, and three Persians of rank, and with a great train, had an interview with the generals, in which he displayed all that finesse, and ready perception of character, which characterize an accomplished diplomatist; and which prove that they, whom the Greeks with so much contempt termed barbarians, though less warlike, and generally less vigorous in mind and body, were in fact more highly civilized, more polished in manners, and more adroit in negotiation than themselves. The result of the present discussion, was a reference to the Royal council, whose reply the Greeks awaited two days

* This is usually translated a *wolf*, but as the lynx was with the Persians a domestic animal kept for the purposes of hunting, as hounds are with us, and as the occasion could only admit of something such animals as were at hand, it seems most probable that *lynx* here signifies, as it is supposed to do in Homer, a lynx.

The Greeks and Persians have an interview.

Biography.

made.

In great anxiety. On the third day, Tissaphernes returned, and the treaty was settled on the following terms. That after the army which was to accompany the new satrap should have joined that of Arius, this united force should march towards Ionia, and act as guides to the Greeks; that they should provide them a market for purchasing provisions at their different stations on the road; that in failure hereof the Greeks should be allowed to seize in the villages as much as might be necessary for present consumption, but without committing waste; provided always, that whenever a market could be procured they should not plunder the country.

This being agreed, Tissaphernes returned to court to complete his preparations, and the Greeks encamping near Arius awaited his return about three weeks. During this period the symptoms of alienation became so strong on the part of the Persians, that the Greeks took alarm, and pressed Clearchus to remain no longer; but that prudent general, though he acknowledged that he participated in their uneasiness, would not consent to begin the rupture by departing from the terms of the treaty; alleging his total ignorance of the country, and especially of the rivers they might have in cross, the formidable superiority of the Persian cavalry, and his own total want of that species of force, as sufficient reasons for avoiding open hostilities.

Tissaphernes at length arrived, accompanied by Orontes, the satrap of Armenia; who is supposed to have been the son of that Orontes executed by Cyrus, and to have received the king's daughter in marriage, as a compensation for the death and disgrace of his father incurred in the royal cause. Each of the satraps led a great power, principally of horse, and Orontes brought his bride with him. The close connection which immediately appeared to subsist between Tissaphernes and Arius, strengthened the suspicions and increased the uneasiness already prevailing in the Grecian army, and although the terms of the treaty were formally observed, yet all friendly intercourse wholly ceased, precautions against surprise were adopted with the same jealousy as in the face of an enemy, and some blows passed among the lower servants of the two camps.

A few days afterwards the evil intentions of the Persian generals became apparent, by a feigned communication made to Proxenus and Xenophon, of some intended treachery against the Greeks, the object of which appears to have been, by exasperating the jealousy of the army, to excite them to defection, or to some violation of the treaty; and an great was the consternation of Clearchus that the plot would possibly have succeeded, had not the penetration of Xenophon pointed out an inconsistency in the story of their pretended friend, which considerably relieved him from the apprehension of any immediate attack by the Persians. The circumstance, however, added to other causes of discontent, induced Clearchus to demand an explanation of Tissaphernes, in the course of which that wily and accomplished statesman prevailed upon the Spartan to lay aside his suspicions and his caution, and by artful insinuations transferred to Menon the whole blame of the late differences; so that Clearchus was induced to propose, that himself and the principal officers of the army, should wait upon the satrap, and that a cordial reconciliation should take place; after which he remained to supper, and was treated with

the most engaging hospitality. There were not wanting in the Grecian army persons who distrusted these professions, and we may gather that Xenophon himself advised the general against committing himself to the faith of his doubtful allies; but Clearchus, blunt and honest by nature, fell into the snare; and taking with him four other generals, and twenty inferior officers, and being followed by about two hundred soldiers or volunteers all unarmed*, he repaired to the Persian camp.—On their arrival, the five generals Clearchus, Proxenus, Menon, Socrates, and Agias the Arcadian were immediately admitted, the other officers waiting without; and not long after, upon a signal given, those within were arrested, and those without were cut to pieces, while a body of horse scouring the plain, slew all the mixed crowd which had followed them; and so complete was the destruction, that the Greeks who had observed the confusion from the camp, and were at a loss how to act, were only informed of the truth by a single fugitive who escaped mortally wounded. All flew to arms, expecting an immediate attack; but the policy of Tissaphernes was not to fight, but to wear them out, and accordingly he instantly dispatched three persons supposed to have been well affected towards Cyrus, Arius, Artaxius, and Mithridates, and, as was reported, his own brother, with a well armed escort of three hundred horse, to demand an interview with the remaining officers, and to endeavour to practise upon them the same artifices which had been so successfully played off upon Clearchus. Cleirchus the Lacedæmonian next in rank to Clearchus was absent, and the only generals in the camp were Sophonnetus, and Cleonor of Orchomenus; these, having taken proper measures to secure their safety, went out to meet the Persians, and Xenophon accompanied them that he might, if possible, ascertain the fate of his friend Proxenus. Arius then declared that Clearchus, having broken the treaty, had suffered capital punishment, but that Proxenus and Menon, who had given information of his treachery, were received among the Persians with high honours; the king, he added, demands that you should give up your armour, which, having been the property of Cyrus, has, in course, escheated to him.

This demand, which amounted in fact to an unconditional surrender, was answered by Cleonor with becoming indignation, and with an appeal to the honour and generosity of those friends of Cyrus who had involved themselves in the perils of Tissaphernes, which could only have failed of effect with bad hearts and depraved understandings. Arius merely reiterated his charge against Clearchus; upon which Xenophon, with his characteristic acuteness, observed, "Clearchus then, if indeed he has violated his oath, and broken the treaty, has suffered justly; (for it is right that perjury should be punished with death); but since our generals Proxenus and Menon have deserved well of you, send them back to us, for it is manifest that they who are friends of both parties, can best advise for our mutual advantage." To this fair and able proposal the Persians could not coarve a reply, and after considerable discussion among themselves, they retired without coming to any conclusion.

It does not appear that there was the least ground for the charge pretended against Clearchus, or any of the five generals, unless the excessive invariance, the

Biography. shameless selfishness, the gross dehaucheries, and the total want of principle, which Xenophon attributes to Menon; and his known attachment to Arius, might raise a suspicion that he had tampered with the Persians, and offered to assist in betraying his countrymen. But if he were thus guilty, he received the due reward of his crimes; for the other generals having been conducted alive into the presence of the king were honourably beheaded, while Menon was condemned to one of those ignominious punishments, too well known in Persia, which destroys life after many months of lingering torture.

Xenophon sums up his account of this extraordinary transaction with a handsome tribute to the military genius and high character of Clearchus; and briefly notices the brilliant talents, and engaging qualities, of his young friend Proxenus, whom he represents as capable of conducting affairs of the greatest moment, but too desirous of being beloved among his soldiers to inspire awe or maintain due discipline; his approbation was valued by the well-disposed; but his only censure, the withholding his accustomed praise and encouragement, was lightly regarded by the disorderly.

Contrast between the Greeks and the Persians. It is highly probable that the Satraps produced the five generals at court as prisoners of war, and claimed the credit of having defeated the Grecian army in action, and effectually prevented its return home; an event evidently much dreaded by the Persian government, aware of the predatory habits and sanguinary temper of the Greeks, and of the great superiority which personal hardihood, exact discipline, and impenetrable armour must give them over any number of Persian soldiers, who, though often brave, and not deficient in address and activity, were, from the nature of their accoutrements, and the delicacy of their habits, equally incapable of being made effective in close action, and of sustaining the fatigues and privations of a protracted campaign. The policy and arrangement of the Persian court, differed little from the general character so remarkable in oriental despotism; while a veneration scarcely short of idolatry was ostentatiously paid to the person of the great king; his authority was set at naught with impunity, and the grossest frauds were practised upon his revenues; a system of profound deceit and treachery was veiled under the most courtly manners; and the servants of the crown, often too powerful to be controlled, were secretly encouraged in a system of private warfare, that the king might keep up a shadow of power by balancing them against each other. It was this weakness in the head, and division among the members, of the empire, which opened to the enterprising genius of Cyrus those great prospects which his personal rashness nipped in the bud; had he survived, it seems probable that he would have changed the face of that vast dominion, and have given a new energy to Persian councils and Persian arms, for he had all the qualities which command respect, and many which engage affection, and he entertained enlarged and liberal views of the political and military institutions of European Greece.

Republican sentiments of Greece unfavourable to military discipline.

It has already been observed, that the republican sentiments which pervaded Greece were extremely unfavourable to the adoption of an effective military discipline. Where the council of war consists of the

whole army, and the deliberations are conducted as in a popular assembly, it is impossible that there should exist any thing like secrecy of design or promptitude of execution; and where the generals owe their authority to the election of the troops, or the consent of the inferior officers, their operations must generally be controlled, and their opinions often over-ruled; and so such a mode of appointment precludes a regular gradation of rank, there is commonly no second ready, on any emergency, to supply the place of the commander-in-chief; so that the success of every action depends upon the life of one man, and the conduct of the whole campaign, upon every casualty to which he is liable. Hence it is, that in reading the history of Greece, we are so frequently surprised to find the most brilliant victories followed by no material consequences, and the greatest advantages overlooked and unimproved.

There is perhaps no instance upon record of an army so situated, as that of the Greeks, after the loss of their five generals; for of the three who remained with that rank, not one appears to have possessed talents or experience, or to have thought himself either capable of the great command now vacant, or called upon to provide for the common safety. All gave themselves up to despair. They felt that they were still two thousand miles from the nearest part of Greece, close to the vast armies of the king, and surrounded on all sides by tribes of hostile barbarians, who would supply them with nothing but at the expense of blows and blood; they had no guide acquainted with the country, no knowledge of the deep and rapid rivers which intersected it, and no cavalry to explore the road, or cover their rear on the march. As if discipline and hope had ended together, the roll-call was scarcely attended to, the watch-fires were scanty, or not at all supplied; even their principal meal was neglected; where chance led, they threw themselves down to rest, but not to sleep—for sleep was banished by thoughts of that country and those friends, whom they now no longer expected, and scarcely dared hope to behold again.

But the army had got among them a man, little known indeed, but of far greater talents and bolder energies than any general under whom they had served; and probably the only man who could have extricated them from their present situation of unparalleled difficulty and danger. Xenophon had hitherto held no rank; had been attached to no division of the army; and had appeared only as the friend of Proxenus, but not in any way serving under him. He, like the rest, lay awake, suffering from grief and alarm, but his mind was not of a temperament to suffer without seeking a remedy, and he represents himself as having been encouraged by a dream during a momentary doze, which he has, in his usual manner, so related and interpreted, as to leave it doubtful whether his remarkable attention to omens and sacrifices was the result of sound policy or of sincere belief. Rousing himself from slumber, he began to reflect on the folly and rashness in which all participated. The night was far spent; the enemy would probably be upon them with the dawn; submission could only conduct them through suffering and disgrace to an ignominious death, no one provided for the emergency; despair produced the effect of security; "and from what people among them, thought he, can I expect

voice only.

Full of these thoughts he rose, calling together the officers belonging to the division of Proxenus, he set before them in an animated speech, the certain ruin and destruction which must ensue from their submission; the grounds upon which he trusted for success, from strenuous exertion and prudent counsel; and concluded with assuring them that he was at their service in any capacity; and that if they thought fit to invest him with the command, his youth should only pledge him to more vigorous exertion. Upon this, the officers unanimously declared their readiness to serve under him, with the exception of one Apollonides, who, speaking in the Boeotian dialect, recommended that they should seek safety by submitting to the orders of the king. To this proposal Xenophon replied with well-timed warmth, declaring that sentiments so base ought to be punished by degradation to servile duties, an expression which led to the discovery that the officer in question had actually been a Lydian slave, and retained the marks of slavery on his person. He was accordingly cashiered, and the example proved of the greatest advantage, for it infused a new spirit into the rest, who, on the suggestion of Xenophon, immediately proceeded to summon a general council of all the surviving generals and officers, to the number of nearly an hundred. By this time it was midnight, and the Boeotian officers, to save time, requested that Xenophon would open the business, by repeating what he had stated to them.

He accordingly made another judicious and encouraging speech, in which he strongly reprobated the idea of placing the smallest dependance upon any thing but their own prudence, courage, and unanimity; and recommended, as the first step towards providing for the expected attack, that they should instantly proceed to supply by election the places of the commanders whom they had lost.

Appoint-
ment of the
other gene-
rals.

Cheirisophus, the Lacedæmonian, immediately rose, and complimented Xenophon in the highest terms upon his conduct and his eloquence; and proposed, in order to carry his advice into effect, that the herald Tolmides, elsewhere celebrated for his stentorian powers, should call a general assembly of the whole army, without which, it appears, that no election of commanders could take place. This business consumed the remainder of the night, Timasion of Dardanus being chosen to succeed Clearchus, Xanthicles taking the place of Socrates, and the troops of Agias being committed to Cleasor; Phileasus, of Achaia, was appointed to lend the Thessalians instead of Menon, and Xenophon supplied the loss of his friend Proxenus.

As soon as it was day, the new commanders, placing pickets in advance, again assembled the army, and exhorted them to take courage, to maintain discipline, and to rely on the favour of the gods, who would not fail to avenge themselves upon the perfidious Persians. Xenophon in particular, having armed himself with a splendour becoming his present rank, endeavoured to raise hope and inspire sentiments of honour, and fortunately the favourable omen of serotinitas occurred in the midst of his speech; upon which the soldiers, all with one accord

worshipped Jupiter, the preserver, from whom the army was reputed to proceed; and Xenophon breaking off his harangue, proposed a sacrifice to the gods, desiring those who approved of the mention to hold up their hands: the shew of hands being unanimous, the sacrifice was formally vowed, and an hymn sung; after which he resumed his discourse, and at great length set before the army, now full of hope and cheerfulness, the system which they must adopt to ensure a safe and honourable return to their native country, and especially enforcing the necessity of a strict adherence to discipline, always the great deficiency of Grecian troops, and of all troops in a retreat, when it becomes doubly necessary. His proposals were unanimously carried, as before, by a show of hands. They were principally directed to the means of facilitating the march, by burning the unnecessary tents and carriages, throwing away the most cumbersome part of the baggage, and even allowing a very limited quantity of necessary utensils; to the establishment of close order and an exact obedience; and to the settling a regular line of march, by conceding the lead to Cheirisophus, as being a Lacedæmonian, allotting the command of the wings to the two eldest generals, and reserving the charge of the rear to himself and Timasion, as being the youngest. Thus, without assuming any superior authority, he in fact acted as commander-in-chief, and was readily and cheerfully obeyed; the whole army feeling that they were indebted to his energy and genius for their present safety, and depended upon him for their future hopes.

Whilst the soldiers were at dinner, previously to commencing their march, Mithridates made his appearance with a small escort, and endeavoured once more to entrap them by professions of friendship; but the generals were now on their guard, and perceiving that this kind of intercourse led to desertion, they gave strict orders that every stranger should be treated as an enemy, without further declaration of hostilities, during their passage through the enemy's country.

In the afternoon they crossed the Zabatus in good order, keeping the baggage and servants in the centre of their hollow square; when Mithridates again appeared at the head of two hundred horse, and four hundred well appointed archers and slingers; he approached as near as he thought proper with indications of friendly intentions, and thus poured his missiles into the rear of the Greeks to their great annoyance; for their own bowmen were inferior to the barbarians, who, having discharged their arrows retired behind the horse for protection. Provoked at this, Xenophon, with his rear-guard attempted to pursue them; but he could not separate himself far enough from the main body of the army to render pursuit effectual, and only exposed his own men to the arrows which the enemy discharged as they retired. As the Greeks moved to rejoin the march, the enemy in turn pursued, and thus the whole day was occupied in a harassing skirmish, and the progress made was only three miles. This was sufficiently discouraging, and Cheirisophus with the older generals found fault with Xenophon's conduct, who ingenuously acknowledged his error, but at the same time simply stoned for it, by a display of all the resources which characterize a great commander. "We have today experienced," said he, "on a small scale, the mis-

chiefs to be apprehended from the enemy; and they are such as we can easily obviate; the superiority of their missile weapons may be met by offering encouragement to the Rhodian slingers in our army, who can hurl leaden bullets, much more effective than stones; and my horses, and those left by Clearchus, added to such as are used as beasts of burden, will mount a tolerable body of cavalry, who will enable us to keep the enemy at a greater distance."

The sagacity of this arrangement was not once perceived, and that very night two hundred slingers were enrolled, and the next morning, about fifty horse were duly equipped under the command of the Athenian Lycius. This business consumed the entire day, and on the next, they began their march at an early hour, passing in safety a ravine, where they had apprehended an attack. Soon afterwards, however, Mithridates appeared with a force of ten thousand horse, and four thousand archers and slingers, having been encouraged by his late success to undertake the capture of the Greeks. But he met with a reception very different from his expectations; the new cavalry immediately charged, and supported by the slingers, and a body of heavy-armed in the rear, put the whole Persian force to flight, and following them closely, made considerable slaughter of their infantry, while eighteen horse, entangled in the ravine, were taken. The bodies of the slain were shockingly mangled by the Greeks, with a view of infusing terror into the enemy; but this piece of barbarity was committed without orders. After this, they proceeded without molestation to a deserted Median city on the banks of the Tigris, where they halted for the night.

Tissaphernes endeavours to obstruct the march of the Greeks.

The check they had received, deterred the Persians from any further attempt for two days; but on the third, Tissaphernes with the united force at his command appeared, hovering on their rear and flanks. Adhering to his plan of avoiding close action, he ordered his archers and slingers to commence the attack. But the Greeks had already gained experience from the missile weapons of the enemy, and had begun to use those which they had taken from them, with sure aim and deadly effect; and the slingers having fortunately obtained a supply of gut and lead, did great execution, so that Tissaphernes hastily retired beyond the range of the shot, and the whole army followed his example, pursuing the Grecian troops the rest of the day at a safe distance.

This intermission gave time to the generals to correct the deficiency of their hollow square; which was found very inconvenient in passing defiles or bridges in face of any enemy; and they so arranged it, as to march in column, protected by six pipets of a hundred men each, who were to move either to the front or rear as the occasion might require; the column being so managed as by a ready evolution to be formed into a square when necessary. These dispositions effectually prevented any further annoyance from the enemy on the plain; and the Greeks on the seventh day, since the commencement of open hostilities, joyfully perceived that they were approaching a mountainous country, where the enemy's horse would be unable to act in large detachments. But the Persians having occupied the heights, so harassed them with missiles, that the targeteers were forced within the protection of the heavy-armed troops, and thus rendered useless; and so many were wounded that it

became necessary, on halting for the night, to appoint eight surgeons.

The design of the Persians being to harass rather than to fight, they continued to annoy the line of march for many days by desultory attacks, chiefly with missile weapons; and they carefully avoided all such measures as might render the Greeks desperate, and bring on a general action; so that they neither laid waste the country, nor attempted to intercept the supplies. And the Greeks, by commencing their march later in the day, and thus keeping the Persians at a greater distance, from the fear of being assailed by night, obtained at length two or three days of uninterrupted peace.

But the satraps now began to entertain serious apprehensions, that the perseverance and courage of this handful of men would break all their fine drawn measures; and a determined attempt was made to arrest their progress by pre-occupying with bowmen and slingers, a height under which they must necessarily pass; and at the same time pressing on their rear with the cavalry. But here again their scheme was defeated, no less by the prudent advice, than by the personal vigour and intrepidity of Xenophon, who with a select body of heavy armed troops, and the corps of targeteers, succeeded in gaining a height which commanded the position of the enemy, and immediately dislodged them. While he was encouraging his men on this service to use their utmost exertion, a surly fellow reproached him with riding at his ease on horseback, whilst others toiled on foot. Upon which Xenophon sprang from his horse, and taking his shield from the malcontent, pushed vigorously forward, till the indignation of the soldiers against the offender again induced him to mount, and restore the foot-soldier's shield.

This mode of attack being rendered abortive, Tissaphernes now at length attempted to lay waste the country, and actually set fire to some villages, which occasioned great alarm among the Grecian soldiers, who began to apprehend a want of provisions; but Xenophon riding along the line, humorously observed to them, that "by this act the Persians clearly acknowledged themselves conquered, for they ceased to treat the country as the territory of their king." And Cleitarchus sarcastically proposed to begin burning also, in order to see which party would "first cry, hold, enough."

But though the cheerfulness of their commanders infused confidence into the troops, they had yet great difficulties to overcome; for they arrived at a pass, where precipitous mountains, on one hand, and a river which they could not fathom with their spears on the other, seemed to bar all further progress. After some delay in retrograde movements, and some time spent in examining the captives, it was at length resolved, in the council of the generals, to force a passage through the Carduchian * mountains, inhabited by a wild and fierce race of savages, whose hereditary hostility to the Persians, it was hoped, might render them favourable to the Greeks. And with this hope they abstained from pillage, and took only such supplies of provision as were indispensable. Finding, however, that no friendly demonstration met with any attention,

The difficulties encountered on the march.

but that on the contrary the Carduchians appeared every where disposed to molest them; Xenophon represented to the army that nothing but activity and expedition could enable them to traverse the mountains with tolerable security, and advised a still further sacrifice of their baggage, and especially of their slaves and cattle, the most valuable of the spoil they had acquired. And such is the influence, which talents for command have in seasons of public danger, that no one ventured to dispute the propriety of the order which was made; the males accordingly were mostly dismissed, but discipline was not powerful enough to make the soldiers part with their women.

The Carduchians were found much more troublesome enemies than the Persian forces had been; for with equal disposition to mischief, they had the advantage of rugged precipices, up which the Greeks climbed with difficulty while they rolled down vast rocks, and hurled abundance of smaller stones with the force of slings, and in some cases contrived to throw the men themselves down the precipices; they also shot arrows of uncommon length from their huge bows, which, drawn by the foot, carried much further than those of the Cretans in the Grecian army, and with such force as to pierce helmet, shield, and thorax; so that the march was a continued fight for seven days, attended with considerable loss and many severe wounds. In all these dangers Xenophon bore a prominent part, and displayed those talents for command which are always readily obeyed in seasons of distress: he pre-occupied the heights; he caught savages for guides and interpreters; he led the van, conducted the piquets, or kept order in the rear, as circumstances called him: he was always accessible during the hours of meals or rest; and upon him the whole army felt that they depended for deliverance from their difficulties. Fortunately the towns were unfortified and well supplied, and the mountaineers left them undefended, having stipulated, in return for permitting some slain to be buried, that the Greeks should not burn them. Here they found repose; and on the last day, coming in view of the river which terminates the Carduchian country, and seeing the plains of Armenia beyond, they betook themselves to sleep in the villages, as if all their toils were ended. But at day-break it was found that the opposite bank was occupied by their old enemies the Persians, under Orontas, who had arrived in his satrapy before them, to dispute their passage through it: the river, just fordable, was rapid, and its bottom uneven. The Carduchians, occupying the heights which the army had just quitted, watched a favourable moment to commence their attack on the rear.

Here Xenophon again encountered the almost-broken spirits of the army by relating a dream, the interpretation of which was evidently that he should extricate them from their perilous situation; and soon afterwards he announced information which he had received of a shallower passage lower down, with a landing-place, where the Persian horse would be unable to act against them. The usual sacrifices and libations to the gods having been performed, the whole army sung the psalm, and prepared to cross the river. The Persians, astonished probably at their apparently undiminished numbers and resolution, offered no effectual resistance; and the mountaineers

being held in check by the judicious dispositions of Xenophon, made little impression on the rear. So complete indeed was the success, that the first division of the Greeks actually captured some booty from the Persian troops.

The fertile plains of Eastern Armenia were then passed without opposition in five days' march. And on the arrival of the army at Teleboas, which forms the boundary of the Western Armenia, the satrap, Teribazus, sent to offer them a free passage and necessary supplies through his country, on condition that they should not plunder nor destroy the property of the inhabitants. These terms were gladly accepted; but the soldiers suffering severely from the change of climate and season, notwithstanding the attentions of Xenophon to provide fuel and unguents, were unavoidably quartered in the houses to protect them from the heavy falls of snow. Hence it happened that some buildings were burnt; and Teribazus, considering the treaty as violated, prepared to entrap the army in a defile. Suspicion having arisen, and a prisoner being taken to gain information, the generals prepared for defence, and their preparations alone sufficed to put the Persians to so hasty a flight, that their camp, with the tent of Teribazus himself and all his rich furniture, became the prey of the Greeks.

The next day they passed the defile, and in three days more, marching through a desert covered with snow, they reached the Euphrates near its source, and easily crossed it. In their subsequent march, they suffered dreadfully from snow and frost, so that the men fell down benumbed with cold, and the cattle perished. The sufferings of the army became extreme, and it required all the art and all the authority of Xenophon and the other generals to preserve the men from yielding to the severity of the climate and to fatigue. At length they arrived at some of the habitations of the natives, where pretending to be in the service of the king, and on their way to join the satrap, they were peaceably quartered in the villages, and obtained refreshments in abundance. Xenophon having a particular village allotted him, immediately invited the chief magistrate or comarch to sup with him, and treating him with the greatest kindness, assured him that he need apprehend nothing for his person or property, if he would only undertake to be their guide to the limits of the king's dominions, his son being detained as an hostage for his fidelity. This advantage, however, was lost, after three days' march, by the rudeness of Cheirisophus, who so offended the comarch, that he deserted, leaving his son to his fate, (which though considered a fortunate one by the Greeks was, according to our better notions, the basest of all degradations) in the possession of Episthenes.

Xenophon warmly resented this imprudent violence, and it occasioned the only quarrel he ever had with Cheirisophus. The course of the Phasis was now their guide, till coming opposite the passage through the mountains to the plain beyond, they diverged from it across the country, and at the foot of the hill were met by the Chalybes, the Tachians, and the Phasians in arms. After some discussion, the advice of Xenophon was adopted; the enemy were circumvented, and the passage forced; in the plain on the other side, they found "villages plentifully stored with good things."

A. C.

401.

Hence they marched through the country of the Tachians, who had taken care to collect their property within their fortifications, which they defended with desperate resolution, dashing themselves with their wives and children down the precipices rather than fall alive into the hands of the Greeks, whom want of provisions compelled to storm their strong places. The next people whose territory they invaded were the Chalybes, a well armed and ferocious race, who so successfully opposed them, that they were forced to subsist upon the cattle which they had taken from the Tachians; and to be continually acting on the defensive, till they reached the level country of the Scythians, where, after four days march, they found rest and food in some villages. From this place, in four days, they reached the large and wealthy town of Gymnias, the governor of which offered to conduct them, in five days, through a country which they might plunder and waste as much as they should think fit, to an eminence from whence they could behold the Euxine Sea; declaring his willingness, if he should fail of his undertaking, to suffer death.

The Greeks
arrive with-
in view of
the sea.

His proposition being accepted, on the fifth day they arrived at the sacred hill called Thece, and as soon as the first division reached the summit, the view of the sea occasioned such a shout, that Xenophon, who still commanded the rear, imagined that they were attacked, and pressed forward to give assistance; but the real cause of the clamour being ascertained, all order, all discipline, for the moment, was at an end—generals, officers, and soldiers, in a transport of joyful tears, embraced each other, and the animating cry, "the sea! the sea!" was re-echoed through the broken ranks. When the first tumult of delight had a little subsided, they collected a quantity of large stones, and forming them into a rude column, hung upon it, as a kind of trophy, the arms of the barbarous nations which they had taken on the march. The guide, as might be expected, was magnificently rewarded, and honourably dismissed.

The next morning, some hostile demonstrations were made by the Macrones, through whose thick woods their road lay; when an Athenian slinger coming to Xenophon acknowledged that he had originally been a slave, and that these people were his countrymen; offering at the same time to go to them, and bring them to terms. This being granted, and the Macrones, being assured that the Greeks were hostile to the Persians, readily entered into treaty, rendered them every assistance in their power, and conducted them to the borders of the Colchians.

Here opposition was expected; and Xenophon, in a speech to the generals, strongly recommended forming the troops in column rather than in phalanx, on account of the inequality of the ascent through the mountains; and having carried his point, he rode from left to right along the ranks, crying out, "My men, these barbarians whom you now see, are the last obstacle to our reaching the destination we have so long laboured for; let us, therefore, by all means, make an example of them." The Colchians were easily defeated; but a delay of several days was occasioned by the unwholesome effects of some honey, the produce of the country, of which many of the soldiers had eaten.

When they were sufficiently recovered, they re-

sumed their march, and in two days reached Trapezus,* a Greek town on the coast of the Euxine Sea, having occupied about two months in the expedition and retreat. Here they imagined themselves at home, and supplying themselves with plenty, by ravaging the adjoining Colchian country, they continued a month among the Trapezuntines, who willingly furnished them with a market, besides making them many presents. During their abode at Trapezus, they performed the vows which they had addressed on the march to Jupiter the preserver, and Hercules, celebrating the respective sacrifices and games, in the best manner which their present situation would admit.

The army now tired of marching and fighting, was desirous of passing into Greece by sea, and Cheirisophus undertook to go to Amaxibius the Lacedæmonian admiral, for the purpose of soliciting transports. In the mean time, Xenophon endeavoured to provide for the security and supplies of the army during his absence; and for their journey homewards by land, in the event of their failing to obtain vessels sufficient to convey them all. But he had the mortification to find, that the assembly of the troops, in which, according to the democratic principles of Grecian government, the supreme power resided, although they readily adopted all his measures for present convenience, refused their assent to every proposal that tended to provide for a march.

Disappointed in this, he sent messengers to the different states through whose territory he foresaw they must ultimately proceed, advising them by all means to prepare good roads, guides, and markets, that the passage of so large and unruly a body might be as rapid and as little burdensome as possible; and his recommendation was thankfully adopted.

In the mean while, the army was to be supported by the most iniquitous and perilous plunder of the neighbouring countries, till the return of Cheirisophus with a supply of vessels for short of their wants and expectations: this, together with the failure of other expedients to procure any considerable number of ships, at length brought the soldiers to their senses; and they agreed to send the sick, the women and children, all above forty years of age, and all unnecessary baggage, by sea, and that the rest should travel by land.

On the third day of their journey they reached Cerasus, a Grecian town on the Euxine, where they held a general muster, and found the whole loss of the heavy-armed since their departure under Cyrus, exclusive of desertion, to be about 1400. "These," says Xenophon, "died in battle, or in the snow, and perhaps a few from sickness." Here also they divided the money arising from the sale of their various plunder, and consecrating the produce of robbery and murder, they devoted a tenth of the spoil to Apollo, and to Diana of Ephesus, which was entrusted to the generals in shares to be appropriated to the service of the gods. The use which Xenophon made of the portion committed to him will be seen hereafter.

The army then resumed their march, the transports keeping a parallel course along the coast, and landing as they halted; but the want of discipline which prevailed among the troops, rendered the situation of Xenophon, (who was now acknowledged as their leader, Cheirisophus not having joined) extremely

delicate and difficult. Straggling parties of plunderers were cut off by the natives, and the whole line of country rendered hostile by the impossibility of keeping the soldiers from committing devastation wherever they arrived; and indeed the principles of Xenophon, the disciple of Socrates, himself a moralist and a philosopher, appear to have been strangely warped by the military notions of his time, which considered the plunder of all barbarians as a regular, and legitimate mode of paying and supplying an army, and were not nice even with respect to Grecian property, unless protected by special treaty, and ensured by a species of hospitality resembling the black mail of our own northern marauders.

The evils resulting from this barbarous mode of travelling, became sensibly felt on their arrival at Cotyora, another Sinopian colony on the same coast; and the inconvenience which they experienced, again induced the troops to wait above six weeks, in the hope of obtaining a passage by sea. This season of leisure suggested to the active and statesman-like genius of Xenophon, who knew the impossibility of procuring transports for all, and the dangers which must arise from a division of their strength, the idea of founding a new colony, in a very advantageous situation not far from their present quarters. But, whether his pecuniary resources began to fail him, or the private inclination of the soothsayer was too strong to be overruled, he did not in this instance succeed in procuring the favourable indications from sacrifices and omens which his prudence usually commanded. And perhaps it was not probable that men so long accustomed to desultory and predatory habits, and acquainted with the wealth and luxury of Persia, could be induced to settle quietly to hard labour and simple modes of life, surrounded by continual temptations to resume those irregular practices, so congenial to the idleness and the restlessness of our nature.

However this might be, the project was extremely unpopular, and excited universal alarm and indignation, not only in the army, but among all the neighbouring colonies, who justly dreaded the establishment of so overwhelming a power, actuated by motives and principles of which they had already seen too much. Those who were jealous of Xenophon's authority, or hostile to his views, took the opportunity to inflame the discontent of the soldiers and the apprehensions of the natives; and it required all his energies and all his eloquence to appease the rising mutiny, which threatened the dissolution of all remaining discipline.

Finding it absolutely necessary to give up for the present all idea of colonization, he resolved to profit by the present conjuncture to represent to the army in a long and apparently candid speech, his real wishes and intentions; and to point out to them in strong language, the difficulties to which they exposed him, and the ruin and disgrace they were preparing for themselves, by their disregard of discipline, and by the looseness of their conduct. The remonstrance had the desired effect; and not only were better regulations adopted for the future, but a strict inquiry was instituted into past delinquencies, from which the generals themselves were not exempt; and some of them were punished by fines for neglect or peculation. Xenophon was himself accused of violence towards the soldiers under his command; but this

accusation was supported only by a single witness, a Xenophon, a muteteer, who had been guilty of gross inhumanity, and who was universally thought, upon the case being fairly stated, to have been punished too leniently. No other complaint, after this, venturing to appear, Xenophon took occasion to remind the soldiers of all that he had done and suffered for them; insisting upon it that he had never punished any man unnecessarily, much less unjustly, and appealing to their recollection of continual acts of kindness and benevolence. Ingratitude is not among the vices of a military life; and it was rare among the bold and generous, though licentious soldiery of Greece; the troops were deeply touched by the affectionate reproof of their leader, and acquitted him by acclamation.

From Cotyora, the army passed by sea to Sinope, having been provided with ships by the different people who desired to be delivered from their presence. The Sinopians received them with hospitality; and here they were at last joined by Chetrisophus with some tirrems, but with no supplies of any kind, and bringing nothing from Anxibius but empty compliments, and a vague promise, that if they should reach the Propontis, he would take them into pay as mercenaries. Thus, as they approached their own country, their difficulties seemed to increase; and in the apprehension that divided councils, and want of discipline, might expose them to their enemies, and alienate their friends, they came to a resolution to elect one general, who should have full power over all the movements of the army, and the sole direction of all their measures.

The choice falling unanimously upon Xenophon, he was powerfully tempted to accept a situation so suitable to his talents, and so calculated to extend his fame and popularity; but prudential considerations induced him to decline it, and finding the army unwilling to take a refusal, he had recourse to their superstition, and informed them, that having understood their intentions, he had previously consulted the gods, and that the sacrifices were decidedly against his undertaking the command offered him. Upon this Chetrisophus was elected, and immediately they set sail for Heraclea, a Megarenian colony, where they were received with extraordinary kindness. But Chetrisophus, though a respectable soldier, and a brave man, was no statesman; in less than a week his influence was at an end, and his command formally abrogated. The malcontents to the number of 4,500, chiefly Arcadians and Achæans, separated themselves with the intention of plundering the barbarians on the coast, and elected ten new commanders; Chetrisophus heartily disgusted at the misconduct of the whole army, refused to take the command of any troops beside the Thracians, formerly raised by Clearchus, about 1,400 heavy-armed, and 700 light infantry; there remained with Xenophon only 1,700 heavy foot, 300 targeteers, and all the horse, in number now about 40. Chetrisophus proceeded along the coast, and did not long survive his mortification. The mutineers commenced their system of plunder, and were overpowered by the barbarians, a large part of their number being slain, and the rest surrounded on a hill, and in hourly apprehension of being cut off to a man. Xenophon had taken an inland road, when his horse, who preceded the party as scouts, brought in some messengers from the

Biography. Arcadians, who informed him of their perilous situation. Xenophon immediately saw the danger that would result to his own little troop, from the annihilation of so large a Grecian force in the neighbourhood; and addressing his soldiers, exhorted them to march to the relief of their late companions. By a skilful stratagem he induced the barbarians to retire in the night, and having ascertained that they had actually fled, he marched instantly to join Cheiriso-phus at the harbour of Calpe, lest he should be overwhelmed by the numbers of the enemy; on the road he fell in with the Arcadian and Achaean forces, whom he had thus delivered from the most imminent danger, and a cordial reconciliation took place between the two parties. On their arrival they found Cheiriso-phus already dead, and his command conferred upon Neon; and a decree was unanimously passed, in the true spirit of a Grecian popular assembly, that if any one should hereafter attempt to dismember the army, he should be punished with death. But a spirit of discontent and suspicion yet remained; the soldiers, apprehensive that Xenophon had not sincerely abandoned his design of founding a colony, refused to be encamped in the favourable situation which his military eye instantly selected for them, lest they should be entrapped into a permanent residence. But Xenophon had managed to regain his influence over the prophets, and no auspicious omens could be obtained for marching, or even for foraging, till the army complied with his commands. In the mean while Neon, who had succeeded to Cheiriso-phus, affecting to compassionate the distress of the soldiers unable to procure provisions, offered to conduct a foraging party; and about 2,000 men turned out to follow him; but this unhandsome conduct served only to confirm the authority of Xenophon; for the party under Neos were defeated by the barbarians with the heaviest loss that had ever been sustained by the army; above 500 men were slain, and the rest so surrounded by the enemy, that Xenophon was obliged to go in person with all his force to bring them off; the barbarians following closely, and lurking in the thickets about the camp till dusk, when they attacked and carried the out-posts, drove in the piquets, and obliged the whole army to pass the night under arms.

The reasons of Xenophon for pitching upon a strong natural site for the camp were now apparent, and his wisdom so generally acknowledged, that no further opposition was offered to fortifying the spot he had selected, and transporting thither all his baggage. Immediately the omens were all favourable, and a vessel arrived with a cargo of provisions.

The next morning, leaving the baggage, and the soldiers above forty-five years of age to guard the camp, under the orders of Neon, Xenophon marched out, taking all those precautions which indicated that he expected to be attacked; and after having buried the slain of the preceding day, a ceremony to which Grecian superstition attached peculiar importance, he soon afterwards discovered a large body of Bithy-ans, sent by the Satrap to defend the country, advantageously posted on a hill with a ravine in front. Some of the officers dissuaded an attack on account of the strength of the position; but Xenophon overruling their objections by the prevailing argument of a favourable sacrifice, after a smart action, defeated

and dispersed the enemy; who, finding themselves unable to cope with the Greeks in the field, contented themselves with removing all that was most valuable up the country; leaving to Xenophon and his army the undisturbed possession of a wide district abounding with provisions; so that they patiently awaited the arrival of Cleander, the Lacedaemonian governor of Byzantium, who was expected to bring transports to convey them all into Greece. His arrival, however, miserably disappointed their expectations; he came with only two triremes, and one Dexippus in his train, who having dishonestly left the Cyrean Greeks at Trapezus, had artfully contrived to infuse into the minds both of Anaxibius, the admiral, and of Cleander, strong prejudices against the whole army; especially against Xenophon and Agasias the Arcadian, who had always been Xenophon's friend.

Cleander happened unfortunately to land when the greater part of the troops were absent on forage; and a small detachment was just then returning with some sheep which they had been plundering. Fearful of losing their booty, and aware of the corruption of Dexippus, they offered him any share of the spoil to secure the remainder to them. He eagerly embraced the proposal, but other soldiers coming in, and objecting to the bargain, and a tumult beginning to arise, he appealed to the governor, who ordered the soldier with whom the objection had arisen to be arrested. This man happened to belong to the division of Agasias, who, coming up at the moment, and treating Dexippus with merited contempt, rescued the soldier; a scene of confusion followed, in which stones were thrown, and Cleander himself was exposed to some danger, and betrayed evident symptoms of alarm. Xenophon and the other generals arriving at this juncture, instantly restored order, and endeavoured to pacify Cleander. But fear generates anger; the governor, in the true tone of Spartan insolence, declared that unless Agasias and the arrested soldier were given up to him, he would order every city in Greece to treat the Cyrean army as enemies; and no doubt appears to have been entertained that this arbitrary command of a provincial governor would have been generally obeyed.

The conduct of Xenophon in these trying circumstances was politic and just. He allayed the irritated feelings of the army, and persuaded Agasias voluntarily to surrender himself to the governor; who, after a haughty display of official dignity, was at length persuaded of the baseness of Dexippus, and received Xenophon into his confidence, and honoured him with his friendship. But finding that the command of such a force under such circumstances, was at once difficult and hazardous, and that all the neighbouring states, Grecian and barbarian, were anxious to be rid of a numerous body, subsisting by plunder; he declared that, as the sacrifices were not propitious for his marching at their head, he would go by sea to Byzantium, and prepare for their reception. Xenophon also had intended to sail about the same time for Athens, in the hope that he might, by his eloquence and interest, prevent the sentence which he apprehended from the violence of the people; but at the earnest desire of Anaxibius he continued in his command of the army, till they should arrive at Byzantium. On their arrival at that first European town, and entering, as they had reason to conclude, into the

service of the sovereign state of Greece, (for by that title the contemporary historian, himself an Athenian, does not hesitate to designate Lacedæmon,) the Cyreians fancied themselves once more at home, and congratulated themselves on the end of all their wanderings; but the power of Cleander was much greater to injure than to serve them; and Anaxibius, (bribed, as it was suspected, by Pharnabazus the satrap of Bithyoin, and possibly by other neighbouring powers), not only defrauded them of the promised pay, but by an unfriendly stratagem excluded them from the city, and ordered them on a distant service. Enraged at this treatment, the soldiers seized the town, and hat for the timely interference of Xenophon would have possessed themselves of the harbour and fleet, with the intention of making him their chief, and establishing an independent power.

Anaxibius gladly availed himself of the influence of Xenophon to allay the storm thus raised by his own ungenerous rashness; and having by his means once more excluded the army from the walls, he sent a creature of his own to delude them by offers of mercenary service, and to draw them to a greater distance. Deprived of the guidance and wisdom of their leader, who was preparing to sail for Athens, the Cyreians could no longer be kept together; but their number was daily thinned by the secession of small parties, some of whom obtained a passage home; whilst others settled in the country, or entered into foreign service.

A sudden change, however, in the politics of Lacedæmon, induced Anaxibius, who had now been superseded in his command by Aristarchus, to desert that party at home, which was desirous of maintaining peace with Asia; and he made an unexpected proposal to Xenophon, who was still with him, to return once more to the army, and to lead them, in the service of Lacedæmon, against the rich satrapies of Pharnabazus and Tissaphernes. Xenophon, who knew how popular such an expedition would prove, readily undertook it, and was received by the soldiers with unbounded joy; but upon leading them to Perinthus, with the intention of embarking for Asia according to the instructions of Anaxibius, he was roughly treated by Aristarchus, who had sold for slaves all the Cyreians in Byzantium, to the number of 400, and would have arrested Xenophon himself, had he not been put upon his guard by a friendly intimation of the design against him.

The army
enters the
service of
Seuthes.

Meeting with nothing but treachery and ill treatment from all parties, and finding themselves universally the objects of dread and suspicion, the army now placed all their hopes upon Xenophon thus unexpectedly restored to them. His genius, always fertile of resources, could suggest nothing better than to avail themselves of the repeated offers of Seuthes, a deposed Thracian prince, who had been educated under the hospitable roof of Medocus, king of the Odrysians; and who, desirous of regaining his father's throne by force, proposed to engage the Greeks in his service, with a promise of present pay, and of ample remuneration in the event of his reducing by his assistance his rebellious subjects.

None alone of the generals, being a Laconian, seceded from this proposal, and drew off with him about 800 men, with whom he joined Aristarchus. The rest of the army consenting to follow Xenophon

even in a winter campaign, in the rigorous climate of Xenophon-Thrace, he went with the principal officers by night to the camp of Seuthes, where he was received with high honour, but at the same time with extraordinary caution, and speedily arranged the terms on which the Greeks should enter into his service, which were highly favourable to them, and to Xenophon himself.

A. M.
3603.
—
A. C.
401.

The remains of this gallant army proved an overmatch for the undisciplined fierceness of the rebel barbarians, and Seuthes was not only reinstated in his paternal dominions, without any loss, in less than two months, but was enabled to make great additions to his ancient dominion. But he unfortunately had in his service, and in his confidence, an artful unprincipled Greek named Heraclides, who infused into him a distrust of Xenophon, and a jealousy of the army, and persuaded him to withhold the remuneration which he had agreed to bestow upon them. The troops immediately murmured against Xenophon because they were unpaid, and Seuthes was offended with him for pressing the payment of their due; and to such a length did these unpleasant discussions proceed, that an open rupture was apprehended, and all friendly intercourse was actually suspended.

His breach
of engage-
ment.

The situation of Xenophon and his army was becoming extremely critical, when the arrival of two Lacedæmonian officers improved the aspect of their affairs. A change of administration in the Lacedæmonian councils, had effected that alteration in their policy, on which Anaxibius had prematurely acted; and they were consequently anxious to secure the aid of the veteran troops of the Grecian army in invading the Persian dominions. The officers who came into Thrace upon this business were received by Seuthes with great hospitality, while no notice was taken of Xenophon or his officers; but when the purport of their journey was explained, the Thracian prince altered his tone, and admitted the leaders to an interview, when the manly and decided conduct of Xenophon, the remonstrance of his better counsellors, and the dictates of his own honour prevailed; the demands of the army were fully satisfied; and harmony was restored.

Lacedæ-
monians
desire the
aid of the
Greeks.

There was little hesitation in accepting the offers of the Lacedæmonian government, and the army joyfully anticipating the plunder of Asia, crossed over to Lampascus. It seems probable, that in the arrangement with Seuthes, Xenophon had abandoned his private interest to secure the general advantage, for meeting at Lampascus, with an old Athenian acquaintance, Euclid the Philisian soothsayer, after mutual congratulations and inquiries, he acknowledged himself to have so completely exhausted his pecuniary resources, as to be obliged to part with his horse and furniture to provide necessities for the expedition; Euclid affected incredulity, but the Lampascians having sent in their contribution, and some of the cattle being slain for a sacrifice, the prophet who attended upon his friend, was convinced, as he pretended, by the symptoms of the victims, of the reality of his poverty, attributing it to his own imprudence, and to the wrath of Jupiter Meilichius, whose worship he had neglected. The next day Xenophon arriving at Ophryniun, offered holocausts of swine, after the Athenian manner, to that deity, "and the same day," he tells us, the army received their pay from the

Lacedæmonians, and he was himself gratified by their presenting him with the favourite horse which he had been obliged to sell at Lampascus. It is deserving of remark, that although Xenophon on many occasions evidently directed the responses of the soothsayers, and therefore could not be the dupe of their craft, yet, in conformity with the opinion of Socrates, he thought it right to uphold the popular belief, as a salutary check upon the licentiousness of the times; and not only speaks of it with uniform respect, but relates all the circumstances relating to divination, with a design to impress its veracity upon the minds of his readers. In the present case he proceeds to tell us, that he had no reason to complain of the god; for that being hospitably received at Pergamus, by the wife of Gongylus, the Eretrian, that lady suggested to him a scheme of nocturnal plunder against the castle of a Persian nobleman, Asidates, whose wife, children, and property she proposed that he should seize. The divines having declared that this project was favoured by heaven, Xenophon adopted it without scruple; and though he met with a check on his first attempt, and his friend Agasias was wounded, he succeeded at length to the extent of his wishes, and became possessed, as he informs us, "of horses and carriages, and other things, so that he could now afford to be generous." Soon after this adventure, he joined the main army under Timbiron the Lacedæmonian general, and followed him in the campaign against the Persian satrapies, till the period of his recall, *Ol.* 95, 2, a. c. 398, when he was succeeded by Dercyllidas, under whom the Cyrean troops still continued in the pay of Lacedæmon, and became so incorporated with their other forces, that the particular events relating to them and to Xenophon, are absorbed in the general history of the Asiatic war, related by him (in the *Hæcæticæ*) with that peculiar and picturesque interest, which can only be given to narrative by an eye-witness and principal actor in the scenes he describes.

After more than two years spent in active, and generally in successful enterprise and plunder, the army was put under the command of Agesilaus, the friend, as he afterwards became, and companion of our historian, and to whom he is indebted for much of the honour with which his name has been handed down to posterity. On the recall of that illustrious prince, he still followed his fortunes, and fought by his side at the celebrated battle of Coronæ, *p.* c. 394, after which it is impossible to trace any further the distinct existence of the Cyrean army; disbanded with the rest of the forces under Agesilaus, the individuals who composed it were re-united no more Xenophon had, in consequence of his engagements with Lacedæmon, been sentenced to death at Athens, (about the time that a similar sentence was executed upon his master Socrates,) at the suggestion of Eubulus, the very person who many years afterwards obtained a decree for his recall. Having therefore no home in his native country, he resolved to settle himself under the protection of Lacedæmon; and to this end,† quitting Agesilaus, after the disbanding the

army, he repaired to Scillus, a town in the Eleian territory, which appears to have been assigned to him to be held under the crown of Lacedæmon, by a kind of feudal tenure, probably through the interest of his royal patron. He was accompanied in his retreat by his wife, and by his twin sons Gryllus and Diodorus; but whether this lady was the mother of the young men is not recorded; from the manner in which she is mentioned by his biographer, "a little female, by name Philisia," it seems likely that she was their step-mother.

It is probable, that in the course of his Asiatic campaigns, Xenophon, though by nature expensive and generous, had amassed considerable wealth; and it will be recollected that he was one of the generals who were entrusted with the tenth dedicated to Apollo and the Ephesian Diana, on the division of the spoil among the Cyrean Greeks at Cerasus; a trust not only honourable, but the source also of an ample revenue. Xenophon remitted the portion designed for Apollo to the temple at Delphi; and, on his leaving Asia to return with Agesilaus into Greece, he deposited the other portion with Megabyzus, the treasurer of the Ephesian Temple, desiring that, if he should fall in the approaching contest with the Thebans, Megabyzus himself should perform the solemn act of dedication in such manner as should be most pleasing to the goddess; but that if he should survive, the money should be returned to him; for in the insecurity of all property in Greece, the safest depositary for money and the precious metals was the treasury of a temple, where superstition generally effected what better principles failed to do elsewhere; and hence the Grecian temples, especially that at Delphi, were generally used both as public and private banks.

When Xenophon was securely settled at Scillus, Megabyzus took the opportunity afforded by the olympian games to restore the deposit to him, with which he purchased an estate for the goddess, and built upon it a temple and an altar; reserving a tenth of the produce of the sacred land as the rent due to her as proprietor, and leaving the residue to be enjoyed by the occupier of the soil, on condition of discharging his duties as manager of the festivals, and guardian of the temple; thus securing to himself and to his family a splendid domestic and handsome income, under the protection of reputed sanctity.

The situation of the estate was dictated by the oracle of Apollo, at the suggestion, doubtless, of Xenophon himself, and appears to have been studiously selected with a view to make it a counterpart of the sacred territory of Ephesus. "The river Selenus," he informs us, "runs through the estate; as a river, also the Selenus, runs by the temple of Diana at Ephesus; and there are fish and shells in both. Around the temple is a grove of garden fruit-trees; and the temple itself, to compare great things with small, is built on the plan of that at Ephesus; and the image differs only in being of cypress instead of gold."

On a column in front of the temple was the following inscription:—

* This name is variously written. The form which coincides with Σελήριος may perhaps be thought the most proper.

* His own phrase is εὐνομένης ἀνατολῆς.
† Mitford says, on the authority of Diog. Laert. that he followed Agesilaus to Lacedæmon, and found his residence there unpleasant; but I cannot find any such assertion in that author.

The sacred demesne of Diana.

Whoever holds and enjoys this estate must reserve a tenth of the yearly produce for sacred purposes, and out of the remainder must furnish the temple. If any one should neglect so to do, the goddess will take care to avenge herself on him.

The yearly festival was celebrated with an entertainment to all the inhabitants of the town and neighbourhood of both sexes. The guests being arranged in temporary arbores, pastry, bread, wine, and desert, were set before them, as well as meat fed in the sacred pasture, and taken in the chase. For the neighbourhood of Scillus abounded with game; and the servants of Xenophon, and of the other citizens, were employed in hunting for this occasion, such other persons as chose it joining in the sport, and catching wild boars, wood goats, and venison. And even the cattle and horses of the guests were fed in the groves and hills belonging to the goddesses.

In this delightful retreat, under the protection of the temporal sovereignty of Lacedæmon, and the spiritual tutelage of Diana, Xenophon forgot the toils of wars, in a state of as much enjoyment as can fall to the lot of a man whose happiness must depend upon sublunary circumstances. He seems to have been precisely what we should now call a literary country gentleman, diversifying the more refined pleasures of his studious hours with the active amusements of the field; breaking his dogs, training his horses, and attending to the breed of stock; and so much interest did the philosopher, historian, and commander, take in these healthful pursuits, that they became the subject of more than one treatise from his immortal pen; an example to scholars in all ages that they should not disdain to refresh their vigour, and renew their animation, by allowing the unharnessed faculties to recreate themselves freely in country sports, and exercise themselves agreeably in country business.

From the period of his settlement at Scillus, till after the destruction of the Lacedæmonian sovereignty, by the event of the battle at Leuctra, Xenophon appears to have enjoyed uninterrupted quiet, and to have employed himself in composing those works which exalted him to be the rival of Plato in politics and biography, as well as of Thucydides in history. It is said that the emulation between the two disciples of Socrates occasioned a pitiable jealousy and alienation from each other; but Diogenes relates to the praise of Xenophon, that he gave to the world the history of Thucydides in the name of the author, when he might easily have made it his own. The list of his other works, given us by the same biographer, proves that we have been singularly fortunate in their preservation.—¹ He wrote about forty books, though others reckon them differently. The *Anabasis*, in which he wrote prefaces to the several books, but none to the whole work: the *Cyropædia*: the *Annals of Greece*: the *Memoirs of Socrates*: the *Symposium*, or *Table-talk*: the *Economics*: the *Treatises on Horsemanship, and Fowling, and on Field Sports*: the *Apology for Socrates*: the *Essay on Public Revenue*: *Hiero*, or *Monarchy*: the *Panegyric of Agesi-*

lans; and two discourses on the Athenian and on the Lacedæmonian state, which Demetrius the Magnesian asserts not to have been composed by him.

From this literary and rural enjoyment of peace and security, he was not to be tempted by the reversal of the decree against him, which passed on the change of Athenian politics some time after the battle of Leuctra. Athens was of all places the most dangerous for men in any way eminent, but especially for those who possessed property and talents; and in the continual changes of system which characterise the republics of Greece, the fickleness of the despotic mob, who had banished and recalled him, might at any moment confiscate his property, and take away his life. When, therefore, the protection of Lacedæmon could no longer avail him, and the dissensions which agitated the surrounding states rendered even the sacred territory insecure, he sent his family to Lepreum, and is related to have gone in person to Elis, to plead with the Eleians (now once more masters of Scillus) for immunity, on account of his having accepted the sief from an hostile power. It appears that the prayer was readily granted, and that he returned in peace to the possession of his property; but whether the commotions of the times rendered a country residence less desirable, or the decline of life brought with it a disinclination for bodily exertion, he appears, in his latter years, to have lived principally at Corinth, and to have died there in a good old age; but at what precise date has never been satisfactorily ascertained.

His two sons, Gryllus and Diodorus, however, (as soon as the alliance between Athens and Lacedæmon removed the dilemma in which they had hitherto been placed, between the native country of their father, and the state which had protected and enriched him) took the opportunity which offered itself of serving in the Athenian cavalry, and were both engaged in the battle of Mantinea. Diodorus came off safe, without having done any thing to distinguish himself; but to Gryllus, who fell on the field of battle, was attributed the first merit in the action, the Mantineans giving him the preference above Cephalodorus, the Athenian master of horse, and Podares their own general.

When the news reached Xenophon, he was in the act of offering a festive sacrifice, and was, according to custom, crowned with a garland of flowers. Upon hearing that his son was slain, he observed, with more of Spartan non-chalance, than of Athenian vivacity, "I knew that he was born mortal;" but in consideration of the mournful tidings, he laid aside his gay chaplet; the messenger, however, proceeding to relate the circumstances of his glorious death, the military ardour of the veteran prevailed over his family feelings; he resumed the sacrificial costume, and completed the ceremony. The delight which he felt in the fame of his son was heightened by the numerous testimonies of honour for his memory, which the poets and painters of the time were eager to present to the father; and the evening of his life seems to have been as honoured and tranquil, as his early years were distinguished by harassing difficulties and tumultuous enterprise.

His character is best painted in his life and writings. He was brave, generous, and affectionate; punctual and vigilant on duty; sagacious and enterprising in command; prudent and eloquent in coun-

* Many editions add *argyrea*, which properly signifies small coins; but, when it became customary with the great to throw sweetmeats among the people instead of silver, the name was extended to them also. Ignorance of this circumstance seems to have occasioned some perplexity, among others, to Mr. Mitford.

Xenophon.

Biography. oil; a sincere friend; a magnanimous adversary; a liberal, enlightened, and upright statesman; his excellence as an author is too well appreciated to be the subject of criticism. As an historian he has been thought deficient in attention to chronology; but his fairness and candour are universally acknowledged; and his political wisdom and military science have

assisted in forming the ablest negotiators and the most skilful commanders of succeeding ages. His philosophy is that of Socrates, and approaches more nearly to the truth of Christian principles, than that of any ancient writer, Plato alone excepted. The beauty of his style pervades all his works, and adorns every subject of which he treated.

CRITIAS.—THERAMENES.

A. M. 3600. A. C. 404.

Biography. Upon the surrender of the Athenians to Lysander, the particulars of which we have related in the twelfth chapter of Grecian history, the democracy was subverted, and the supreme power of the states, which had been before vested in the assembly of the people, was committed into the hands of thirty individuals, elected by the Lacedæmonians, to manage for the future, the affairs of the republic. In all other respects, the laws of Athens were permitted to continue in force; nor were the ancient magistracies changed; but the holders of all the offices of the state, those by whom the laws were to be administered, and the will of the new master to be executed, were for the most part removed, and their places filled by persons who from party connections or other causes, were supposed to be favourable to the Lacedæmonian influence; or, at least, who were known to have disliked that order of things which the Lacedæmonians had put down. Xenophon has given us the names of the "Thirty" as they were called, to whom the administration of the republic was committed, of whom only two appear to have been men of superior weight of character; these were Critias and Theramenes.

Character of Critias. Of the former of these little more is known than what is related of him as president of the "Thirty," and prime instigator of all the acts and measures of that rash and desperate usurpation. Except in the course of this part of the Athenian history, we believe the name of Critias is only to be found in the account which has been left to us by Xenophon of the "Memorable Things of Socrates;" and even there, it is probable he would not have found a place, had it not been for the celebrity which he obtained, as having been placed by the Lacedæmonians at the head of their faction. It seems a charge had been made against Socrates of being a teacher of bad morality, from the circumstance of Critias and Alcibiades having both of them been his pupils. These reproaches, Xenophon retorts in an ingenious and pleasant manner; and in the course of his remarks, gives us to understand, that Critias inherited one of the largest fortunes, and was of one of the most illustrious families, in Athens; (his paternal grandfather was brother to the great legislator, Solon;) but that for his arrogance and other unpopular qualities, he had been banished by the people, and had resided in Thessaly, where his associates were not of very different pursuits from those which Socrates would have approved. This in-

justice (as probably it was) had soured his temper and strongly indisposed him to all popular forms of government; and we may conclude, that the knowledge which the Lacedæmonians had of his disposition in this respect, was that which recommended him to them, as a fit person to be placed at the head of the oligarchy, which it was their usual practice to establish in every city in which their influence or power prevailed. (Xenoph. Mem. 1. 1. c. 11, § 12.)

Of Theramenes something more is known. He was one of the generals who commanded at the battle of Arginusæ; and more particularly distinguished himself as leader in the prosecution of his colleagues. His conduct on that occasion was marked with so much violence and injustice, that even the death to which he afterwards exposed himself, from the resistance which he made to the tyrannical measures of the "Thirty," cannot redeem his character from the blot which he then fixed upon it.* The name of Theramenes, also is conspicuous, in the account which is given in the 8th book of Thucydides, of the proceedings which led to the overthrow of the government of the "Four Hundred." On that occasion, the historian tells us, that Theramenes and his associates, established a constitution, the form of which "was upon a better footing than any within his memory; a mixed government being established, with the authority judiciously divided between the few and the many."† In this eulogistic eulogy, is contained the whole account which Thucydides has afforded us, of the constitution which he so much approved; and for which his fellow-citizens appear to have been entirely indebted to the wisdom and courage of Theramenes. It would therefore be in vain to conjecture as to its particular provisions, and almost equally difficult is it, to collect from either of the features which we have just been pointing out, in his political conduct, what could possibly have been the motives of the Lacedæmonians for associating with Critias, in the government of Athens, a man whose whole public life would appear to have been at least as strongly opposed to oligarchical tyranny as to democratical oppression. He had shewn himself indeed an enemy to the licence of mere popular authority, to the government which he set up, on the overthrow of the "Four Hundred," but his opposition to the last mentioned usurpation, was at least a clear proof that he was no friend to

* Xenoph. Hæll. lib. 1. 7.

† Thucyd. lib. viii. 98.

oligarchy; and his behaviour on the disgraceful occasion of the horrible cruelty exercised towards six of the unfortunate commanders, who had gained the victory of Arginusæ, was completely in the spirit of a true Athenian demagogue. Moreover, though of illustrious descent, yet Agnôn his father, the founder of Amphipolis, had been a man high in favour with the people; so that his party connections were certainly such as would have led him to associate himself with those who were adverse to the principles of Lacedæmonian interference. But upon this, as on a great many other occasions, our ignorance of every thing that happened at Sparta, further than is to be collected from the naked statement of the acts by which her conduct to foreign states was marked, forms a perpetual occasion of perplexity in any attempt to unravel the principles of her policy; and in the present instance, no account can be given of the circumstance which recommended the several individuals, whom she selected to form the council of the Thirty. The only authority for the facts connected with this particular point of history, is Xenophon, who simply records the names of the Thirty, without alluding in any way to any discussion; by which the choice of these may be supposed to have been preceded.

As soon as the long walls and those of the Piræus were demolished, as had been stipulated by treaty, the Lacedæmonians quitted the territory of Athens, and left the administration of affairs in the hands of the party whom they had vested with the supreme authority. It was not customary in the policy either of Athens or Sparta, to place garrisons in those towns which they wished to retain in subjection; but availing themselves of the factions into which every state in Greece was divided, it was found that the safest as well as the cheapest mode of securing their respective interests, was merely to take the arms out of the hands of one party, and to place them in those of their opponents. An oligarchical form of government was so strongly in contrast with the institutions and habits of the Athenians, that the Lacedæmonians were well aware that those who composed it, would necessarily be compelled to depend upon their support, for the maintenance of their authority. This was so strikingly the fact in the present instance, that the Spartan king had hardly returned to the Peloponnesus, when ambassadors were dispatched from Athens to Sparta, demanding the assistance of a Lacedæmonian garrison, which was sent accordingly, under the command of Callibius. So violent were the proceedings, so utterly irreconcilable with all justice and equity, were the measures which the "Thirty" appear to have resolved upon, for the conjunction and extension of their authority, that they seemed to doubt the power, or at least the willingness even of their own party, to co-operate with them in many of their acts; but encouraged by the strength which a foreign garrison threw into their hands, they laid aside all their fears, and openly avowed the principles on which they intended to carry on the government. Paying all possible court to Callibius, in order that his report, at Sparta, might be favourable, and implicating him in their violence, by inducing him to execute their orders, they seemed to consider themselves as placed as much above the precautions of common prudence, as of all considerations of common shame and decency.

The "Thirty," it would seem, had been originally appointed, not as forming a definitive part of the government, but rather as a council who were to act as commissioners, for the establishment of a constitution, founded upon such principles, as the Lacedæmonians should approve. Their first step, accordingly, was to publish a catalogue of three thousand citizens, selected by themselves, who were to partake of the sovereign power, *πολιτὶς τῶν τριῶν χιλίων*, and to be competent to the magistrature. By this decree, all other Athenians were at once reduced to the condition of subjects, nominally of the "three thousand," but virtually of the "Thirty." The next step was to proclaim a review of the citizens, who were directed to assemble in arms, the "three thousand" in the forum, but all the rest at a distant place, which was named. As these last marched to the place of review, from the different quarters of the city, the avenues were occupied by the Lacedæmonian troops, and other confidential adherents of the "Thirty;" the arms of those not in the catalogue were then taken from them as they passed, and placed safely in the citadel, under the custody of the garrison.

All effectual opposition being in this manner precluded, the "Thirty" now threw off the mask at once. Xenophon tells us, that hitherto they had apprehended and subjected to death, only such as during the democracy had subsisted by the trade of informers, and had been a nuisance to honest men. But from this period no man's life or property was safe, whose name did not happen to be found in the list of the privileged citizens, whom the present rulers had selected; and all who, it was supposed, would never be brought quietly to acquiesce in their violent proceedings, or who had influence enough, had they so wished, to raise a party against them, were at once apprehended and put to death.

Critias and Theramenes had at first acted with great friendship and unanimity; but their union soon began to be interrupted, and shortly proceeded to open contention. Theramenes had, in the first instance, protested against the nomination of the "three thousand." "It was an absurdity," he said, "for men, who at first proposed to form a government, in which the power should be vested only in the hands of the best and wisest men of the community, to draw up a list consisting of three thousand, as if that number necessarily implied that all of them were men of worth and honour; and that whoever did not belong to it, was necessarily unworthy to have any share of power. But I plainly see, he added, that you are intent upon reconciling two schemes of government, which will be found upon trial to be utterly inconsistent with each other; a government to be supported by violence, the agents of which, are nevertheless to be much less considerable in point of power, than those who are to be governed." The effect of these expostulations, however, on the part of Theramenes, was not only to convince Critias of the danger with which the line of policy which he was determined to pursue, was necessarily surrounded; and to induce him in consequence to resort to measures more and more violent, for securing himself against the machinations of the disaffected. It would,

Reflections.

indeed, be difficult to believe even the express testimony of Xenophon, to the desperate shamelessness in crime, to which Critias and his colleagues now proceeded, were it not that his account is corroborated by two other contemporary writers.

In reading the history of Greece, it is often difficult to decide, which form of republican government, is most unsuited to the growth of civil liberty. No sooner is our strong disapprobation of the democratical form excited, by some act of injustice on the part of the Athenian mob, then we find ourselves stopped in our inclination to prefer the government of the few, by some equal atrocity exercised either by the Lacedæmonians against their dependents, or by those rulers, whom the Lacedæmonians had set up, against their fellow citizens. The only firm conclusion is, that all governments, be they of what nature they may, whether monarchical or democratical, or oligarchical, that are founded upon usurpation, or to use a word which it has been the fashion to decri, that are not *legitimate*, that is, not founded upon prescribed custom, ancient law, and hereditary principles, are necessarily prone to violence and oppression. In such governments the supreme power is always in the hands of a faction, who are compelled to seek their safety in keeping down their opponents. Equal justice is here impossible, because the duty of self preservation supersedes all other claims. Every act of violence creates the necessity for some further act, in order to obviate the discontent which the first had produced; this again, entails the necessity of a third; and thus cruelty and oppression go on, in an infinite series, until the force of compression is met by an equal force; and matters are righted by one of those political explosions which are attended with more or less ruin to individuals, according as the character of those by whom the resistance is conducted, are men of violence, or of virtue and moderation. Such was the progress of affairs at Athens, under the "Thirty;" they proceeded in their course of violence, until human nature could no longer endure the weight of their oppression; and until the Lacedæmonians were ashamed to stand forward in their defence; and then by the firmness and virtue of an individual, things were restored to their old foundations, and the legitimate government of her citizens re-established, without a single act having been committed that could stain their triumph.

Measures
pursued by
the Thirty.

The first act to which the "Thirty" proceeded, was dictated to them by the necessity of providing funds for the pay of their Lacedæmonian guards; for this purpose they made a decree, "that each person of the thirty might apprehend one of the sojourners residing in the city, might put him to death and appropriate his wealth."* This is briefly stated by Xenophon, as one of their measures; and the barefaced iniquity of it is so great, that we might be tempted to doubt, whether there was not some error in the statement, if the authority of the historian were not borne out by that of Lysias, who was himself a Metic, or sojourner at Athens, and who, in one of his orations has related the circumstances attending what happened to himself on the occasion.

Lysias.

The father of Lysias, we are told by the orator, in his speech against Eratosthenes, was a Syracusan,

* Xenoph. Heli. lib. ii. 3.

who had been driven from his country by the violence of party; and, had in consequence, migrated to Athens. Being possessed of a large fortune, he had enjoyed the friendship of Pericles and Socrates, and it has been supposed, that his house in the Piræus, is the scene of some of Plato's dialogues. Lysias himself had gone when a boy to Italy, with the historian Herodotus, at the time when Thurium was settled under the patronage of Pericles, upon the ruins of Sybaris. He had lived at Thurium for thirty years, until it became a place in which a person who was not content to live under the Lacedæmonian protection, could no longer remain with safety. Accordingly Lysias collected his fortune together and returned to Athens, where in partnership with his brother Polemarchus, he established a manufactory of shields, in which, the orator tells us, he employed at one time no less than a hundred slaves.

He was, as he relates, entertaining some strangers at supper, when some of the Thirty entered, commanded the guests to withdraw and himself to remain a prisoner. Committing him then to the care of Peison, one of their number, they proceeded to take an inventory of his effects, of which his slaves composed a principal part. He, in the mean while, fearing for his life, began to tamper with his keeper, and had agreed to pay a talent for the promise of safety; when having to open a chest in which he kept his money, in order to pay the price down, the whole contents, to the amount of three talents in silver, with cyclopes and darics, the gold coin current in Greece, in all about £1200. was immediately seized; and he himself with great difficulty escaped with his life to Megara; in this respect more fortunate than his brother Polemarchus, who was executed by order of the Thirty, by being made, after the Athenian manner, to drink a draught of hemlock. Melobius, one of the Thirty, tore from his wife the gold ear-rings which she wore; and other acts of violence are mentioned by Lysias, which even making all allowances for oratorical exaggeration, are sufficient to explain why Theramenes, according to Xenophon, should have made the conduct of the Thirty to the Metics, a ground of particular opposition to their measures.

Socrates.

We learn, however, from a speech which Xenophon puts into the mouth of Theramenes in the senate, that it was not the Metics only who were exposed to the oppression of the Thirty. Niceratus, the son of Nicias, a man of large fortune and always opposed to democratical violence, Antiphon, Leon of Salamis, all three of them men, whose homeless and public spirited lives had, in a particular manner, recommended them to the esteem of their fellow citizens, were also tyrannically put to death. And in the *Memorabilia* (lib. i.) Xenophon has given us a curious account of what passed at an examination of Socrates before the Thirty, in consequence of a saying of his which was noted abroad, comparing the tyrants to keepers of cattle, who instead of preserving the herd entire, took every pains to diminish its number, by putting the animals under their care to death. Being called before them, and having heard the charge, and the prohibition which had been issued, in consequence, forbidding him to teach the art of reasoning, and to discourse, as had been his custom, with the young men of Athens, Socrates begged to know whether he might ask some questions in order to be sure that he under-

stood the sense of this prohibition. Being answered in the affirmative. "I declare myself," he went on, "always ready to obey the laws. But lest I should transgress through ignorance, I would expressly know from you, whether you forbid me to teach the art of reasoning, because you judge it to consist in saying what is right, or what is wrong. For if it consists in saying what is right, then you clearly forbid me from saying what is right; but if it consists in saying what is wrong, then, undoubtedly, I ought always to endeavour to say what is right." Upon this Critias, one of the Thirty, began to be angry, and told him "that the prohibition was so worded, as to make it impossible that he should mistake its meaning, for it forbade him to hold any discourse at all with the young men of Athens."—"But," said Socrates, "in order to prevent the possibility of my falling into any snare, who am I to understand by young men? till what age do you deem men young?"—"Till the age prescribed for entrance into the senate," said Critias, "hold no discourse with persons under thirty years of age."—"Suppose," replied Socrates, "I want something of a tradesman who is under thirty, must I not ask him the price of what I want?"—"Aye, ye, certainly you may," said Critias; "but it is your way, Socrates, to ask questions about points respecting which you do not wish to be informed. You are to ask no such questions as those."

"Suppose, then, a person should ask me where Critias lives, or where Critias may be found, am I forbidden to give him any answer?" Here Critias interposed. "You are to hold no discourse about shoemakers, carpenters, and braziers, for they have been already sufficiently vexed by your perpetually making them the subject of your comparisons."—"Am I," said Socrates, "to abstain also from talking about the conclusions that follow from my comparisons, respecting justice, and piety, and things that are right and proper?"—"Yen, by Jupiter, you must," said Critias, "and also about your *keepers of cattle*, mark me; or beware that you do not become one of those cattle, whom, you say, are put to death." We have selected this anecdote from another work of Xenophon, because it illustrates the spirit of a wicked government, even more strongly than an occasional act of arbitrary power might do. What must that government have been, in which discussions about morals were thought inconsistent with the safety of its rulers.

Conspiracy against Theramenes.

Having thus either imposed silence, or banished, or put to death every one whose virtue or wisdom, it was thought, must reprobate, or whose riches would supply the coffers of this iniquitous council: the next step of Critias and his followers, was to get rid of a man whose power and influence they dreaded even more than his known courage and ability; this was Theramenes. He had constantly opposed the measures of Critias; had on every occasion pointed out the danger and folly, as well as the iniquity, of the line of policy which they were pursuing, and to the utmost of his power had thwarted their designs; he was, however, too powerful, and retained too many adherents, even among the party of the Thirty, to be destroyed by the same summary process, that had been resorted to on the occasion of the other individuals whom we have mentioned. It was resolved, therefore, to proceed, in his case, with more delibera-

tion and precaution. A council having been called, Critias surrounded the place of assembly with a body of men, provided with concealed arms. He then rose in his place, and in a set speech accused Theramenes of treason. He stated no facts, however, but arguing merely as an assassin with his accomplices, proposed that the accused should be put to death, on the ground, not of any alleged criminality, but solely of convenience to the party by whom he was to be judged.

Theramenes, who from long practice in a public assembly, was among the most eloquent men of his time, knew too well the temper of the tribunal before whom he was to speak, to think of defending himself on the score of law or justice; he took the tone of his defence from that of his accuser, and pointed out to the Thirty, the dangerous path in which they were treading; he shewed them how much more prudent had been the measures which he had recommended, and demonstrated not the wickedness but the folly of Critias. Such was the effect which his speech produced, that he had already disposed a majority of the council in his favour, when Critias, who perceived that the critical moment was arrived when either he or Theramenes must be destroyed, left the room, and in a few minutes returned with his armed attendants. He then addressed the council as follows:—"I reckon it the duty of a good magistrate, not to stand by while gross impositions are practising upon his friends; be it my care, on the present occasion, to discharge that duty. There is one here but is ready to admit, that no man should be allowed to escape with impunity who is an enemy to the oligarchy. It is, indeed, enacted by the new body of laws, that no person whose name is on the list of the three thousand shall be put to death, except by the vote of the senate; but that the council of Thirty may put to death any who are not on that list. I therefore, with your entire approbation, strike the name of this Theramenes here, out of that list; and we," added he, "order him to be put to death."

When Theramenes, who perceived what was about to happen, heard these last words, he immediately Theramenes. leaped upon the altar, and keeping hold of it, told the council, "He was well aware that the sanctuary of the altar would avail him nothing in the present emergency, but he was glad to have an opportunity of convincing all men, that Critias and his adherents, were not only unjust towards their fellow creatures, but sacrilegious towards the gods. He then asked those present, if they were prepared to allow to Critias a right which might in the next moment be exercised towards themselves;" but he was interrupted by the erier belonging to the Thirty, who ordered the Eleven, as the public executioners were called, to go and seize Theramenes; and Critias directed them to carry him away to the proper place, and perform their duty. As soon as Critias had spoken, the eleven proceeded to drag Theramenes from the altar: the senate, in the mean while, making no opposition; surrounded as they were by the creatures of Critias, with the area before the senate-house filled with foreign guards, and knowing also that many of those within had daggers concealed under their clothes, they justly considered that resistance would be useless to the victim, and probably fatal to themselves. Theramenes was hurried away across the forum, loudly remonstrating against his fate. He was told to be silent or his cries

Biography. should be turned into groans—*οὐκ αἰνέσεις, εἰ μὴ σιωπῆσεις*—"and shall I not groan," he replied, "if I am silent?" The same spirit he preserved at his execution; when he drank off the poison, he threw the little that remained at the bottom of the cup upon the ground, tinkling the vessel at the same time, (according to the custom of the Greeks at banquets) and saying, "This libation to the woe! Critias!" "I am not ignorant," says Xenophon, who relates these anecdotes, that "such sayings as these are of no importance in themselves; but this I think admirable in the man, that in the very instant when death was immediately at hand, neither his playfulness nor his high-mindedness forsook him." *Καὶ ταῦτα μὲν οὖν ἀγανά οὐ νόμιμα ἀποθνήσκοντι οὐκ ἀδύναται* *εὐνοῖα δὲ κρίνει τοῦ ἀνδρὸς ἐκείνου, τὸ τοῦ θανάτου παρασχεῖσθαι, μὴτε τὸ φέρειν, μὴτε τὸ παρρησίᾳ ἀπολαύειν ἐκ τῆς ψυχῆς.* *Θυράρχης οὐκ ἔστιν ἀδύνατος.*

Such was the end of Theramenes. It now only remains for us to relate the fate which awaited Critias; and this will lead us to the detail of circumstances, and the contemplation of a character, upon which it will be much more pleasant to dwell, than upon any which have been furnished by the particulars which we have hitherto been narrating.

Among those whom the tyranny of the thirty had driven into exile, was Thrasybulus, son of Lycus, whose name we have already had occasion to mention with honour, as one of the ablest and most successful of the Athenian commanders during the latter years of the Peloponnesian war. He had taken up his residence in Boeotia, and was waiting for some opportunity favourable to his views of assailing the tyrants from without, when the news of the death of Theramenes and of the jealousies and discontent which so violent a measure seemed calculated to create, at once decided him to put the plan which he had formed into execution. It was now toward mid-winter; and scarcely six months had elapsed since the establishment of the Thirty, when, attended only by about seventy heavy armed, he entered Attica, and seized Phyle, a fortress near the Boeotian border.

An enterprize which was undertaken with such feeble means, gave at first but little alarm to the Thirty. They concluded that plunder was the only object of it; to prevent this, they marched immediately against the place, and attempting to take it by assault, they were beaten back, and driven to the necessity of commencing a circumvallation. As the weather was fine, and the town only at the distance of twelve miles from Athens, they had come without tents and camp equipage; but the same night a heavy fall of snow so distressed them, that the following morning they hastily withdrew, and, with so little conduct, that a great part of their baggage was taken by the pursuers.

This success increased the forces of Thrasybulus, but did not immediately open the eyes of the Thirty to his ulterior object. Supposing still, that depredation was the end which he had in view, they sent the greater part of the Lacedæmonian troops with a body of their own horse, to keep the invaders in check; but Thrasybulus, whose soldiers now amounted to seven hundred, heavy-armed, surprised the camp of the Thirty at day-break, killed a hundred and twenty of their best troops, and put the rest to flight. In a few days the forces of the Athenian commander were increased to a thousand heavy-armed; and with these

he boldly resolved at once to march to the town of the Piræus, which being dismantled, he entered without resistance; and by this step at once proclaimed, that his intentions extended to the liberation of his country from the tyranny by which it was oppressed. The Thirty led their whole force to the attack, before his numbers should be increased. Finding the extent of the Piræus was too large for his scanty numbers to occupy, Thrasybulus moved to the adjoining suburb of Munychia, which afforded more advantageous ground for defence. The Thirty did not delay the assault; it was now evident to Critias that nothing but victory could uphold the desperate cause to which he was pledged; unless he could secure this, death in the field was the happiest alternative which was left him; and this he was fortunate enough to obtain. Hippomachus, another of the thirty, was also killed. Hardly more than seventy of their followers had fallen, when the remainder took to flight, leaving the victory in the hands of Thrasybulus, who was careful to seize the opportunity of recommending his cause to the favourable construction of his fellow citizens, by abstaining from spoiling the dead.

When the pursuit had ceased, a truce for the burial of the slain was in the usual form solicited by the defeated, and granted by the conqueror. This afforded the followers of Thrasybulus an opportunity of communicating with those within the town; and so strongly did the tide turn against the Thirty, even among the majority of their late adherents, that the next day they were deposed by general consent, and a council of two appointed in their room, one from every ward, for the express purpose of negotiating an accommodation with those in the Piræus. No resistance was attempted by the fallen tyrants, nor was any violence used against them. Two of their number were elected of the ten; the others, who had probably shared too deeply in the wickedness of the late proceedings, and were therefore hopeless to be forgiven, left the city, and retired to Elcæus, (a town which the Thirty had taken the precaution to garrison) waiting the result of an embassy which they had dispatched to Sparta, soliciting assistance, and representing the danger to which the Lacedæmonian interest in Athens was exposed. Instead, however, of fulfilling the duty for which they had been elected, that of negotiating a peace with Thrasybulus, the ten came to the resolution of maintaining the oligarchy; and of resisting his design of restoring the ancient order of things with every means in their power. With this view they determined to remain upon the defensive, until troops could be brought from the Peloponnesus to their support.

Meanwhile, crowds of citizens, and other inhabitants of Attica, of all denominations, gathered themselves round the standard which he had raised. Providing themselves with such arms as circumstances permitted, they soon formed a force which, though not sufficiently strong to attack the city, was yet able to obtain complete command of the open country.

Thrasybulus had so well chosen his season for Policy of enterprize, and had conducted it with so much celerity, that his object of assembling an army at the gates of Athens was accomplished, almost before the Thirty had even been able to interpret his plan. But what he trusted to, perhaps more than to the season of the

Policy of Lacedæmon.

Biography. year, or even to the surprise into which the Thirty were thrown, was his knowledge of the state of parties in Lacedæmon. The great stay upon which the hopes of the tyrants rested, was the influence of Lysander, who, it might naturally be supposed, would be anxious to maintain at Athens the order of things of which he himself may be considered as the author. But, on the other hand, Lysander himself was, to those who were in power at Sparta, an object of great personal jealousy; and as the principal ground of what they considered his undue influence among his fellow-citizens, was founded upon the subjection to which he had reduced the inveterate enemy of their country; those who were at the head of the party opposed to him in affairs, were not sorry of an opportunity for counteracting his views, by endeavouring to take the supreme power at Athens out of the hands in which he had placed it, and to transfer it to a party, who would owe their authority to them.

Pausanias sent at the head of an army. An army was sent, however, to Attica, for the avowed purpose of reducing Thrasybulus; but the command of it was given to Pausanias, the avowed rival, or rather enemy of Lysander; and the eagerness with which the former availed himself of every circumstance that might appear to justify him, in entering into a treaty, clearly indicated the disposition of his politics. This disposition was carefully cultivated by Thrasybulus, whose moderation and equitable views, when contrasted with the violent and iniquitous proceedings of those, whose power Pausanias was commissioned to uphold, were in themselves well calculated to make favourable impressions. Pausanias, was moreover, connected by ties of hospitality with the family of Nicia, of which the head, as we have seen, had perished under the Thirty. The Spartan king, having communicated with the survivors of that family, directed them to come to him, numerously attended, in order to give weight to a declaration of their wish for an accommodation with their fellow-citizens in the Piræus. At the same time he invited Thrasybulus to send commissioners to treat with him; and named the terms which it would be expedient that they should propose. He was readily obeyed by both; and with the concurrent authority of the two Ephori, who had been appointed to accompany him, as his council, he granted passports to the commissioners from the Piræus, and to Cephisophon and Melittas, as representatives of the moderate party at Athens, to proceed to Lacedæmon.

Deputation sent to Lacedæmon. The party in Athens, who had succeeded to the Thirty, were naturally alarmed at these proceedings; and accordingly they dispatched a deputation to Sparta, complaining of the measures which Pausanias was pursuing; declaring, "that they for their part

were willing to surrender their walls and their persons into the hands of the Lacedæmonians; and that therefore, they in the Piræus, if they pretended to be also the friends of that people, should likewise surrender into their hands the Piræus and Munychia." Having heard all that the respective envoys had to say, the Ephori and council of state, determined to send fifteen persons to Athens, with instructions to complete the reconciliation of all parties in the state, upon the most honourable and equitable terms in their power. These instructions were faithfully and liberally complied with. With the exception of the Thirty, and of some other individuals who had taken a particular active part in their oppressive proceedings, for whom an asylum was provided at Eleusis; the citizens of all parties and denominations were restored to their respective rights; with no other condition annexed, than an oath to dwell in peace, and to be true to an universal amity.

All points being now adjusted, Pausanias returned to Peloponnesus, and disbanded his army. His retreat was the signal for Thrasybulus and his followers to march to Athens, which they entered in procession, and with all the solemnity of a triumph. Having entered the city, they first directed their steps to the citadel, in which they offered a sacrifice to Minerva. A general assembly was there held, and by the advice of Thrasybulus, the complete restoration of the republic, to the forms in which the constitution was administered before the establishment of the Thirty was unanimously decreed. All the magistracies were filled up; and from this period the government resumed its ancient course, and Athens herself quickly fell into her old connections and system of policy. But the conduct of the Athenians upon the re-establishment of the state, does not fall properly under our present subject. She never after was able to recover that preponderating influence among the democratical states, from which she fell at the conclusion of the Peloponnesian war; and had Lacedæmon preserved towards her other dependents the same generous line of conduct which she adopted towards Athens, in the case of the late sedition, it is probable that she would have preserved her influence not only there, but in every part of Greece. But moderation in prosperity was a quality unknown to Grecian republics. Every party in the state had too many private quarrels to prosecute, too many private injuries to redress, upon every change of administration, to leave room for justice or generosity to have their course; and Lacedæmon, as we shall soon have occasion to point out, is just as much exposed to ensure for the means which she took in order to secure and extend her influence as the Athenian democracy had been before her.

Seeds of
dissension
in Greece.

At the termination of the Peloponnesian war, there remained no longer any power who could venture, upon disputing the supremacy of Lacedæmon; and although the peace which had been made, effected nothing towards a reconciliation of the parties by which Greece was distracted, yet it insured for a short period a political calm, which afforded at least a temporary rest from war and tumult.

The first symptoms of impending disturbance seem to have shewn themselves in Thebes. Thebes claimed sovereignty over the other towns of Boeotia; but her claims were resisted by Lacedæmon, who was desirous of retaining them in dependence upon herself. Here then were at once the germs of dissension between these states; and the haughty manner in which the latter appears to have asserted her pretensions, gave such advantages to the democratical leaders in Thebes; that very shortly after the conclusion of the Peloponnesian war, we find the aristocratical, which was always in some degree the Lacedæmonian party, completely excluded from power in that city. But a revolution in the government of Thebes was always the signal of a similar change at Coriath; and Coriath, again was so closely united with Argos, that her example was commonly sufficient to induce the like change in the government of this last; so that the Peloponnesian war was scarcely terminated before three of the principal cities, became alienated from the interest, even though they did not dare, or were not able at once to withdraw themselves from under the power of the Lacedæmonians. The generous conduct which had been displayed by these last, on the occasion of the expulsion of the Thirty, would probably, and in fact did, go far to conciliate the gratitude of the Athenians; and from this time her citizens seem to have laid aside their former acrimony of feeling towards the Lacedæmonians; but still it was hardly possible for a democratical state in Greece to continue in cordial alliance with one, which openly professed to rule by means of the aristocratical interest; so that it required no particular foresight to prophesy, that if ever Athens should recover her strength, it would soon be exercised in an attempt to regain her station, as head of the democratical faction.

But although a merely general knowledge of the affairs of Greece, at the period immediately succeed-

ing the Peloponnesian war, is sufficient to enable us to sketch out so far a rough outline of her political system, yet the information is singularly defective as to all the details. There is, perhaps, no age of Athenian history so intimately known to us as this, upon which we are now about to enter. The works of Xenophon, of Plato, of Aristophanes, and of many of the best of the Grecian orators belong properly to this period; and they abound with particulars, that enable the classical reader to make himself as familiarly acquainted with the manners, and feelings, and domestic circumstances of the Athenians during the times in which they wrote, as with the occurrences of the court of Elizabeth or James, in our own country.

Though the writings which remain to us of this period, however, leave us but little to desire in the way of information, so far as Athens is concerned; yet they are entirely silent with respect to every circumstance connected with the internal affairs of the neighbouring states; and we are left almost as much in the dark in regard to the intrigues of parties, at Sparta, and Thebes, and Coriath, as of those at Carthage or Tarentum. That Lacedæmon was distracted by faction at this point of time, may clearly be collected from the account, which Xenophon has left us, of the measures pursued by her in the case of the restoration of the Atheonian democracy; as well as by the instance which he has recorded, of the resistance which her requisitions constantly met with, on the part of several of the other principal states; and which requisitions, as she was entitled by treaty to enforce, she certainly never could have receded from, had not her attention been occupied and her operations clogged, by some difficulties at home, of which it is in vain to guess the precise nature. Her conduct as after events proved, was haughty and intemperate enough, whenever she was able to act with freedom; so much so, that it is hardly possible, to give her the praise of moderation, even when the measures which she pursued seemed to bear that character.

Such being the state of things in Greece at the time upon which we are now entering, it will be readily understood that it could require no very extraordinary combination of circumstances, to light up again the torch of discord, among the several states of the Grecian confederacy; if that connection may be called a confederacy, which was kept together rather by the

History. repulsion of discordant parts, counteracting each other, than by any tie of common interest or affection. The immediate occasion, however, of the first war which broke out among the leading states, after the Peloponnesian war, does not, as we shall soon see, reflect much honour upon the patriotism or integrity of the democratical leaders.

It is mentioned by Xenophon as a singular circumstance, that while the most reasonable demands of Lacedæmon were disputed or disobeyed among the cities of Greece; and among those of Asia Minor, her commands were listened to, and her directions followed, with a degree of unanimity, which enabled her to assume a much higher tone with the Persian satraps, than she could have employed with prudence, towards the meanest of her allies in Greece. Encouraged by the prosperous condition of her affairs in the East, no less than by the secret, which the triumphant retreat of the ten thousand had divulged to the world, of the utter inability of the Persian troops to cope with any regularly organized force of Greeks; when conducted with bravery and common prudence; the rulers in Lacedæmon resolved to commence their operations, for reducing the Grecian states to total obedience, which the treaties they had concluded gave them a right to claim, by consolidating their power and extending their dominions in Asia. Once masters of the maritime force and inexhaustible wealth, which the possession of empire in that part of the globe, would immediately place at their disposal, they concluded, and probably with justice, that it would then be a work of no difficulty to bring their refractory allies in Greece to submission. In the mean time, it was their policy to keep their temper with respect to them, and not allow any provocation or insult to force them into premature hostilities; well knowing that if they should succeed in their designs upon Asia, it would be in their power not only to prevent all danger of future opposition at home, but to punish at their leisure, whatever insults they might think it worth while to put up with in the mean while.

In prosecution of this scheme of policy, of which Agesilaus was the ostensible promoter, but Lysander the real author, a force was equipped with orders to proceed under the command of Agesilaus, to the relief of the Grecian colonies in Asia, the safety of which, it was pretended, was threatened by Tissaphernes, who, it was given out, was making immense preparations in Phœnicia and other parts under his dominion, for the reduction of the Asiatic towns. Gerastus in Eubœa, was the port at which the troops were to embark. In his way thither, attended only by a small escort, Agesilaus having to pass in the neighbourhood of the port of Aulis in Bœotia, went thither to sacrifice; he was induced to do so, because that place had been the spot at which Agamemnon sacrificed, before his departure for Troy. In the midst of the ceremony, the Bœotarchs, at the head of a considerable force, came and rudely forbade the sacrifice; and upon Agesilaus protesting against their rudeness and impiety, they brutally scattered the offering from the altar, and by open force prevented the sacrifice from proceeding. It does not appear that any notice was taken of this unprovoked insolence by the Lacedæmonians; but we may safely conclude, that the affront was not, and was not intended to be forgotten. A day of retribution, they hoped, was at hand; and

Agesilaus continued his journey to Gerastus, merely imprecating the vengeance of the gods upon the conduct of the Bœotians.

We shall not follow Agesilaus in his Asiatic campaign; a detail of battles which ultimately led to no result, and which were marked by no extraordinary circumstances, would convey neither amusement nor instruction; but his success was so marked, and his progress so alarming; and the ultimate designs which he had in view of dismembering the Persian empire, began to develop themselves so plainly, that Tissaphernes, the Persian Satrap, who had succeeded Tissaphernes in the government of Lydia, finding it impossible to resist the Lacedæmonians in Asia, saw no resource, except that of endeavouring to excite a division against them at home.

Tissaphernes was well aware of the dislike which prevailed in Greece to the Lacedæmonian supremacy; and of the insecure state of her influence among the petty republics who there constituted her subjects. Instead, therefore, of pretending to resist the Spartan king in the field, he resolved to protract the war in Asia, and endeavour to procure the recall of the forces which were there employed, by fomenting occupation for them at home. For this purpose he employed a Rhodian, named Timocrates, to proceed to Greece; and by means of bribes, judiciously distributed among the democratical leaders in the several republics, and of promises of support from the great king, to form a coalition against Lacedæmon, which might lead to active measures against her. Xenophon tells us that the sum with which Timocrates was entrusted, amounted to about twelve thousand pounds sterling; and small as this may seem, such either was the corruption of public principle among the Greeks at this time, or such the pre-disposition among them, to fall in with the proposition which Timocrates was deputed to negotiate, that his success more than answered the most sanguine expectations of Tissaphernes. Xenophon has not scrupled to name the party leaders in Argos, Corinth and Thebes, who partook of the Satrap's bounty; but he acquits his own countrymen of any share in the transaction; in fact, whatever may have been the effect of the Persian gold upon individuals, it is clear that the hope of the powerful support which Timocrates was commissioned to promise, combined with the discontented state of the public mind, must in reality have been the cause of the ready acquiescence with which the proposals were every where received.

The first who openly defied the power of Lacedæmon, was Thebes. She did not at once declare war against the state, because for this, no pretence was afforded; but she availed herself of some pretext to attack the Phœnicians; well knowing that the Lacedæmonians would never stand still, and allow the subjection of so important a member of their confederation. Upon measures being taken on the part of Lacedæmon to repress this instance of Theban insolence, ambassadors were despatched from this latter power to Athens. By the advice of Thrasylus, the proposition of the Thebans was accepted, and an alliance between them and the Athenians concluded. The accession of Athens induced Argos to join in the confederacy, which again led to the concurrence of Corinth. The united influence of so many cities soon led Acarnania, Ambracia, Leucadia, Eubœa, together

History. with part of Thessaly and Thrace, into the confederacy. The pressing danger which now threatened the power of Lacedæmon, as Thimistates had calculated, immediately led to the recall of Agesilanus, whose abilities, experience, and commanding weight were wanted at home, even more than any addition of strength which the force under his command could contribute.

From A. M. 3600. This prince was enjoying in Asia, honours and power, and popularity beyond what any Grecian had before obtained among the Asiatic cities; and he had before him the most inviting field of ambition, that had ever yet presented itself to any commander. Having provided, however, for the security of the allies and subjects of Lacedæmon, in Asia, he instantly obeyed the order to return; and marching through Thrace and Thessaly, had arrived in Bœotia, with a well appointed and victorious army; when he was met by aëtes which tended to allay any hopes which he might have formed, of bringing the contest in which he was now about to engage, to the desired result.

Return of Agesilanus. Through the combined exertions of Pharnabazus, and of Evagoras, the Tyrant, as he was called, of Salamis, (and who seems to have been influenced in the part which he was taking in the war solely by regard for the Athenians), a combined fleet was placed under the command of Conon, one of the Athenian commanders, who had fled to Salamis, after the defeat at Ægospotamos, near Chidus. Conon fell in with the Lacedæmonian fleet under Pausanias, brother in law of Agesilanus, and defeated him with the loss of his life: and (if we may take the authority of Diodorus, on a point where Xenophon is silent,) with the capture of no less than fifty of his ships.

Conon gains a victory by sea over the Lacedæmonians. Such was the disastrous intelligence which met Agesilanus on his entrance into Bœotia. Concealing the news from his men, he continued his march towards Peloponnesus, when he was met at Caronea, by the combined army of the confederates, consisting of the flower of the Bœotians, Athenians, Corinthian, Argian, and Locrian forces. Nevertheless, as Agesilanus had been joined in his march by the divisions of Phocia and Orchomenus, as well as some towns in Thrace, the armies were nearly equal. One of the most obstinate conflicts ensued which is recorded in the annals of Greece. The confederates, however, were at length pushed from the field; but Agesilanus, except the honour of a victory, gained no advantage from the contest, beyond the privilege of prosecuting the remainder of his march unmolested.

Battle of Caronea. Conon in the meanwhile gathered much more substantial advantages, as the fruits of the victory which he had gained. Before he returned to Athens, he had persuaded Pharnabazus to allow him to employ the fleet under his command, in re-establishing the dominion of Athens among the islands; after which the generous satrap supplied him with money, and sent him home to Athens, with directions to the crews of the Phœnician vessels, that they should assist in rebuilding the long walls, which Lycus had destroyed. From this period Athens resumed her commanding attitude; and continued until the battle of Chæronæa, to be not only an independent but a leading state in Greece; although, fortunately perhaps both for herself and her neighbours, she never recovered that exclusive power among the democratic republics, which she had formerly exercised and abused.

In tracing the events which followed the return of Agesilanus from Asia, and considering the means which Lacedæmon still possessed, as well as those which her enemies were able to employ, it is difficult not to feel some surprise at the confined operations which ensued on both sides. Though no important victory appears to have been gained, nor any considerable battle to have been fought, yet the weight of the war seems to have distressed the Lacedæmonians. To recover the footing upon which the event of the Peloponnesian war had placed her, was manifestly no longer within the compass of circumstances; she would have been satisfied to retain her dominion over those states within the Peloponnesus, which were directly, and almost by hereditary right, her subjects; but even this seemed problematical; and upon looking round for relief, she saw no quarter in which she could turn with so much hope, as to the event of negotiation with Persia. Enough, it was clear, had been effected by the mission of Timocrates and the assistance of Pharnabazus to satisfy all the ends of policy which that court could have had in view, in lending her assistance to Athens and the other allies. Accordingly Antalcidas was sent to Sardis, in order to negotiate with Teribazus, who had succeeded Pharnabazus in the satrapy; the latter having been removed upon the occasion of his marriage with the king's daughter. The terms proposed were not such as reflected much honour upon the Lacedæmonians; they offered not to dispute the sovereignty of the king over the Asiatic cities, upon condition that Teribazus would withdraw the assistance of his fleet from the Athenians, and re-establish the independence of the islands. As the power of Lacedæmon was still unbroken in Asia, these terms were too favourable not to be readily embraced by the Persians; and upon the confederates refusing to submit to such dishonourable conditions, Teribazus imprisoned Conon, and supplied the Lacedæmonians with money for the maintenance of their fleet.

A war of skirmish and depredation now ensued, and was sustained with much activity, but equally without result, on both sides. In the mean time Teribazus had left Sardis for Susa, and Struthas, who in his absence was appointed to command in his place, instigated by the recollection of the losses and injuries which had been inflicted upon his country, and which he had himself witnessed and probably suffered from, during the period when Agesilanus commanded in Asia, warmly took part with the confederates, and supplied them with every means in his power for prosecuting the war.

Hostilities were thus renewed between Persia and Lacedæmon; and they were prosecuted, on the part of the last, neither with prudence nor success. In Asia Struthas surprised Thimbron, the new Lacedæmonian commander, and cut both him and his army in pieces. In Europe, Thmasybulus was successful by sea, and Iphicrates completely destroyed a Lacedæmonian mora before Coriuth. These defeats were not of a nature materially to cripple the power of Lacedæmon; but they shook that which was the chief foundation of her greatness—the opinion of her invincibility; they threw a damp upon the courage of her allies, and destroyed that alacrity with which she had, at first, entered upon the war.

Seeing then no way of extricating herself from the toils in which she was encompassed, she again

Antalcidas.

directed her views to a negotiation with Persia. That court seems to have been always more ready to enter into treaty with the Lacedæmonians, than with any other power in Greece. The form of her government and the general stability of her councils, seemed to afford more dependance than could be placed upon states whose policy might be expected to veer, with every change of popular feeling or opinion. Accordingly, as soon as Teribazus had returned to his satrapy, and Struthas was in consequence removed, Antalcidas was again deputed to Sardis, in order to endeavour to effect such terms of accommodation, as might put an end, not only to the war in Asia, but also to that in Europe, among the different Grecian states.

Arriving at Ephesus in autumn, Antalcidas immediately proceeded to Sardis, where he found Teribazus not only disposed to him, personally, in the same friendly manner as before; but provided with powers from Susa, to conclude even an offensive alliance with Lacedæmon, in case the confederates persisted in prosecuting the war. But the temper of the principal belligerent republics, all of whom had severely felt the pressure, and none of whom had reaped any benefit from the war, (Athens, perhaps, alone excepted,) seemed to be now much more favourably inclined for peace, than had been the case on the former occasion. By the secession of the king, the command of the sea remained no longer with Athens; Corinth and Argus, whose territory had been the chief seat of the war, had every reason to wish for an accommodation; the Boeotians only remained, who, as they had suffered less by the contest, were, in proportion, less solicitous for its termination.

The proposal for a general peace came from Teribazus; and the terms in which it was made, were such as it might have been supposed, would not be grateful to the vanity of the Greek nation. The congress being opened, Teribazus produced the king's receipt, to which was attached the royal signet. It ran thus:—"Artaxerxes, the king, thinks it just, that the cities in Asia, and the two isles of Clazomenæ and Cyprus, should be his own; but that all the rest of the Grecian cities, both small and great, should be free and independent, except Lemnos, Imbros, and Scelos, to continue in subjection to the Athenians. And whatever state refuses this peace, I myself, with such as receive it, shall make war against that people both by sea and land; both with ships and with money*."

The ambassadors from the several states having

* Xenoph. Hell. lib. v. c. 1.

heard this mandate, sent their report of it home to their several constituents. The Thebans alone hesitated, because they were only permitted to take the oath for themselves, and not as they wished, in the name of all the Boeotian cities. But upon Agesilaus making instant preparation for reducing them to submission, they at length acquiesced; and the peace was signed without further delay by all the belligerent republics.

As to the humiliation of allowing a foreign potentate thus to dictate the terms, upon which the Grecians were to accommodate their differences with each other, this seems to have been a scruple which occasioned no demur. The point of honour, among states as well as individuals, seems to be altogether a modern refinement; and therefore, if the Greeks in general were satisfied with the terms of the treaty, we need not wonder that they should not quarrel about the manner in which it had been proposed. It is something more surprising, however, that the contemporary historian, in relating the transactions which took place during the progress of the treaty, should express no anger at the evident want of generosity in thus formally abandoning to their fate, the Grecian cities of Asia, without even a stipulation in their favour. But the reflection which Xenophon makes upon the effects of this celebrated peace, viewed merely as a measure of policy, are perfectly just. "And thus, at length," says he, "the first peace was ratified in form between the Lacedæmonians and Athenians, and confederates, after the war between them, subsequent to the demolition of the walls of Athens. But though through the whole course of the war, the scale had generally turned in favour of the Lacedæmonians, yet they made a greater figure than ever, through this peace, which took its name from Antalcidas. But now assuming to themselves the task of executing the peace prescribed by the king, and insisting that every city should be free, they recovered the alliance of Corinth; they set the cities of Boeotia at liberty from the Thebans, a point which they had long desired; they had put an end to that appropriation which the Argives had made of Corinth; all these points being accomplished to their wish, they now came to a determination to chastise such of their confederates as had been untractable during the war, and manifested any good will to their enemies; and to order them so now, that they should not dare to be refractory in time to come*."

EPAMEINONDAS.

FROM A. M. 3617. B. C. 387. TO A. M. 3641. B. C. 363.

Biography. EPAMEINONDAS of Thebes, the son of Polymnus, was received from the writers of antiquity, a praise more general, and less divided, than any other individual in the whole range of Grecian story. Nor does he claim our admiration on account of his pre-eminence in only one department. His adversaries, no less than his eulogists,—Xenophon, equally with Plutarch and with Nepos, have borne testimony not only to his skill and valour in the field, but to his prudence and wisdom in the cabinet; and if he is noted for his extensive erudition as a philosopher, he is also so much famed for the moral integrity of his conduct, that his name remains unshaken by the slightest imputation. So strict indeed was his veracity, that, it is related of him by Nepos, he was never once known, even in jest, to verge from the path of truth. In his life is contained all that is memorable in the history of Thebes. Under his guidance that republic rose from a state of dependence, almost of insignificance, to hold the highest rank among the cities of Greece; with his death, her career of glory terminated; and, had he not existed, it is probable that her name would have been untraced by the pen of the historian, except for the purpose of bestowing on her the slender commendation of being the faithful ally of the fickle Athenians, or the humble follower of haughty Lacedæmon. It is thus, that frequently the abilities and exertions of one man, are able to accomplish more than the united efforts of a whole commonwealth.

Before we proceed to the detail of the political life of Epameinondas, it is necessary that we should briefly sketch some of the events which immediately preceded the period of which we are about to relate the principal transactions.

Conduct of the Lacedæmonians after the peace of Antalcidas.

After the peace of Antalcidas, which has been variously termed the glory and the disgrace of Lacedæmon, the imperious policy of the Lacedæmonians created universal alarm. Instead of exerting their powers to promote a general tranquillity throughout Greece, which was the professed object of that peace, they set themselves to inquire into the conduct of their allies, and to punish them for their real or alleged offences. The Mantineans were the first to feel their displeasure. The inhabitants of Argos had been supplied by the Mantineans, with corn; the proportion of troops required of them for the support of the war, had not been sent; the troops that had been sent had served ill; these were the accusations preferred against them, and they were required, as a proof, that these acts were not those of the commonwealth, to destroy and level with the ground the fortifications of their city. As compliance with this haughty command was refused, war was denounced against them. A Lacedæmonian army, under the conduct of Agesipolis, laid waste their territories, encompassed their city, and finally, by impeding the current of the Ophis below the town,

stopped their fortifications. The offer which the Mantineans now made, to comply with the command of the Lacedæmonians, was rejected. The dread of servitude, and the pressure of want, compelled them, at length, unconditionally to deliver up their city. Every house was instantly demolished, the leaders of the democratical party, those that were hostile to the interests of Lacedæmon, sought safety in a voluntary exile; and the rest of the inhabitants retired to those villages, from which their forefathers had originally assembled to form Mantinea into their common capital.

The same proud supremacy was exercised over the inhabitants of Phlius. And the rulers of that city, how much soever disposed to resistance, felt themselves compelled to yield obedience to a decree of the Lacedæmonians, by which they were ordered to re-admit some Phliisian exiles into their city, and to restore to them their property.

These transactions were scarcely finished, when the attention of the Lacedæmonians was directed towards Olynthus. The oppression and misery, which an almost continual warfare entailed upon the smaller states of Greece, had induced the Olynthians to form the project of uniting the neighbouring cities into a confederacy, in order to protect themselves from those evils. In this plan they had so well succeeded, that the confederacy soon became powerful enough to attract the notice of the larger republics of Greece; and its alliance had been, in particular, solicited by the Athenians and Thebans, who looked with jealousy upon the preponderance of Lacedæmon, were dissatisfied with the measures that she was pursuing, and apprehensive of the consequences to which those measures might lead. These circumstances were sufficient to kindle the animosity of the Lacedæmonians; and the imprudent conduct of the Olynthians soon furnished a plausible pretext for commencing hostilities. The Olynthians had, in the prosecution of their views, invited the Apollonians and Acanthians to unite themselves to their party; but, although the well-known inclination of the great majority of the inhabitants of Apollonia and Acanthus had induced the invitation; the hostile disposition of the oligarchical party in those towns had determined the Olynthians to add to that invitation a threat of war, if compliance should be refused. Those in power became alarmed at the danger to which they were exposed, and they sent ministers to Lacedæmon to crave her assistance; and, with that view, to represent forcibly to the Lacedæmonians the injury which their interests would sustain, unless the new confederacy were opposed, and unless the Olynthians were prevented from joining their strength to that of Athens and of Thebes. The ministers met with a favourable audience; and it was decreed that an army of ten thousand men should be sent into Thrace. Eudamidas was, in the mean time,

Reduction of the Olynthian confederacy.

Biography despatched with two thousand Lacedæmonians, and orders were given to Phœbidas, his brother-in-law, to collect and conduct the rest of the army with as much expedition as possible. It is foreign to our present purpose to pursue the fortunes of the Lacedæmonians in Thæce. After a spirited opposition, which the Olynthians offered to Teutimas, the brother of Agesilaus, and in which they were successful, they were finally subdued, and reduced into subjection by Polybidas; and peace was granted to them upon those terms which the Lacedæmonians uniformly enforced, "that the friends and enemies of Lacedæmon should be those of Olynthus, and that the Olynthians should serve in arms wherever the Lacedæmonians should lead.

But long before this event had arrived, Phœbidas had sown the seeds of disorder, which spread ultimately to an extent, of which no one could have then formed a conception. In conducting his army into Thæce, he encamped under the walls of Thebes. Faction, between the democratical and aristocratical parties, had risen to the utmost excess in that city; but, so nearly were the parties balanced, that the two opposite leaders of those factions were colleagues in the office of polemarch. Ismenias headed that faction which was averse from the interests of Lacedæmon; and such at the moment was the influence of his authority, that a decree had been passed forbidding any Theban to engage in the expedition against Olynthus. The subsequent conduct of Leontides may be perhaps justified, from his fear of that violence to which party spirit carried all the Grecian republics; for the consequence of the loss of authority in a popular leader was, in some cases, the loss of life; in many, the loss of property; and, in all, the punishment of exile. As Ismenias avoided all intercourse with Phœbidas, Leontides courted him. He suggested to Phœbidas, the treacherous proposal of introducing a Lacedæmonian garrison into the Cadmea, the citadel of Thebes; and supported it by the specious argument that Phœbidas might then lead with them into Thæce what Theban forces he chose: he easily obtained the consent of that general, to whose weak understanding the possession of Thebes appeared an object greatly superior in importance to the ultimate object of the expedition. To give the less suspicion of the plot, Phœbidas broke up his camp, and proceeded on his march towards the north. It was at that season of the year, when one of the festivals of Ceres were celebrated; and the Cadmea was, according to ancient custom, given up to the women, and the council sat in the portico of the Agora. During the noon-tide heat, when the streets were deserted, Leontides pursued, with his utmost speed, and overtook Phœbidas, conducted him with expedition to the citadel, and placed the keys in his hands. He then proceeded immediately to the council; and informing its members that the citadel was in possession of the Lacedæmonians, he quieted their fears by assuring them that the Lacedæmonians disclaimed all intention of hostilities. He lost not, however, the opportunity of profiting by the situation of affairs. In such circumstances of danger, his office of polemarch invested him with the power of arresting all who were suspected of treason; and he exercised it by ordering Ismenias, his antagonist, into custody. His confinement no sooner became known, than his friends, to

the number of four hundred, fled to Athens, to avoid the massacre which they had too good reason to dread. The whole power of Thebes was thus placed in the hands of Leontides; and a new polemarch, a favourite of aristocracy, was quickly elected in room of the degraded Ismenias. As soon as these arrangements were completed, Leontides proceeded himself to Lacedæmon, to defend Phœbidas, and the revolution which he had accomplished. This task was one of no great difficulty. He found, indeed, the ephors and the people indignant at the presumption of Phœbidas, in disregarding the commission which had been entrusted to him, and in overstepping the powers with which he had been invested. But Phœbidas met with a powerful friend in Agesilaus, whose rooted and inveterate enmity to the democratical party of Thebes, seems to have blinded his better judgment, and to have compelled him, in this instance, to act in contrariety to the equitable principles of his general conduct. When he addressed the assembly, he observed, "that the only subject for their consideration was, whether the actions of Phœbidas had been beneficial or injurious to the commonwealth. If they had been beneficial, both the principles of the constitution, and the practice of former ages justified his conduct, and fully warranted his exercise of a discretionary power." The way being thus prepared for him, Leontides presented himself to the assembly, and enlarged upon those topics, which were most likely to inflame the passions of his hearers: he descanted at length upon the known aversion of the democratical party, from the interests of Lacedæmon; he mentioned, in particular, their recent alliance with Olynthus, at a time when the Lacedæmonians were lending their armies against the people of that city; and he suggested the facility with which the measures of Thebes to hold the Boeotian cities in subjection might now be thwarted, by the maintenance of a garrison in the Cadmea, by which the exertions of the friends of Lacedæmon would be encouraged and supported. These alluring arguments, which nee'ded so well with the interests and prejudices of his audience, completely overcame the better judgment of the Lacedæmonians. Phœbidas was not only acquitted, but praised for his exertions; and it was decreed, that a Lacedæmonian garrison should continue to occupy the citadel of Thebes. But these resolutions were moderate, when compared with the transaction that followed. Ismenias was brought to trial before a partial tribunal of judges; three of whom were appointed by Lacedæmon, and one by every other city of the confederacy. Charges of treason and of bribery were preferred against him; these he only refuted; but he was not able to convince those interested judges, before whom he was tried, of the purity of his intentions; and he was found guilty, condemned, and executed.

Lacedæmon seemed, at this moment, to be possessed of an influence greater, and more secure, than at any former period of her history. The reviving power of Athens was broken; the connexion of Argos and Corinth was dissolved; the plan of the Olynthian confederacy was frustrated; those allies who had displayed an unwillingness to bend to the ambitious and overbearing control of the Lacedæmonians, were punished and brought into subjection: and, lastly, Thebes was thwarted in her favourite scheme of extending

her dominion over the cities of Boeotia. But the ground on which her security rested was fallacious. Every state in Greece was astonished, and alarmed at the audacity of her measures. The pence of Antaleidas had, in terms, secured the independence of every Grecian city; but, as it had been procured, at the instance, and by the means of Lacedæmon, so Lacedæmon had, herself, been the first to violate it. In profession, indeed, she was the supporter of the Persian treaty; but, in practice, she construed its terms in accordance with her own views. To every alliance which she formed with friendly, to every peace which she concluded with hostile, powers, she annexed the condition, that they should assist the Lacedæmonians, as well in her offensive as defensive operations. Her late acts too, shewed, completely, that it was her determination to permit independence only to those cities which favoured her own views; and the fate of Mantinea and of Phlius, the destruction of Olynthus, and the treacherous seizure of the Theban citadel, made each state tremble for her own security, fearful lest she might herself become the next object of Lacedæmonian jealousy or resentment.

Revolution
of Thebes.B. C.
379.

The subjection of Thebes, on which perhaps the Lacedæmonians valued themselves more than any other circumstance, was the event which first shook, and, ultimately, ruined their authority. Although the aristocratical party of that city were well pleased with the revolution, which had been effected by Phœbidas, these formed but a small portion of the inhabitants; and though the democratical faction, which comprised the great body of the people, were for a time overawed, they were not disheartened; they felt with displeasure, and bore with uneasiness, the control of Lacedæmon; they looked with jealousy upon her authority; and they were ready to rise in rebellion, and avenge themselves upon their oppressors, upon the slightest cause, and on the first opportunity. In these critical circumstances, an occurrence, in itself trivial, gave rise to the most important consequences. On an expedition to Athens, Philides, who held the situation of confidential minister to Archias and Philippos, the reigning polemarchs of Thebes, met with Mellon, a noble Theban, who had been driven into exile by the late revolution, and with whom Philidas had formerly been in habits of the strictest intimacy. Mellon, to his astonishment, discovered, in a conversation with Philidas, that the minister was by no means well pleased with the state of affairs existing in Thebes. Communicating together, they formed the plan of a conspiracy, by which they might overturn the present government. In pursuance of it, Philidas returned to Thebes, there to concert measures for its success; and Mellon, proceeding with only six associates, arrived, under cover of the night, within the Theban territories; but it was not till the close of the succeeding day that he ventured to enter Thebes with the last crowd of returning husbandmen. That night and the following day the conspirators lay concealed in the house of Charon, an associate whom the zeal of Philidas had previously secured. In the evening was celebrated the festival of Venus, which was held, at Thebes, immediately previous to the expiration of the annual magistracies; and it had been fixed upon, by Mellon and his confederates, as the proper time for the execution of their purpose. The luxurious

and licentious habits of Archias and Philippos had induced them to employ the latter as the leader of their pleasures; and he had, in execution of his commission, undertaken to heighten the delights of their evening revel, by introducing the most beautiful, and the most elegant of the women of Thebes. The nature of his employment afforded, in Philidas, the easiest means of access; and, at that moment when the polemarchus, in the fullest enjoyment of voluptuous pleasure, were intoxicated with wine, he conducted the conspirators into their presence, three of them habited as ladies, and the rest as their attendants; a suggestion that delicacy, and the respect due to the female visitors required the absence of male attendants, soon procured their dismissal. The plot was now ready for execution; and Archias and Philippos, unattended, alone, and unarmed, fell easy victims to assassination. Leontiades, the projector, the active perpetrator of the recent revolution, was the next object of pursuit with the conspirators. The pretence of urgent business procured for Philidas and his party a ready admittance, and Leontiades was found in an inner apartment, to which he had retired from supper. His wife was seated near him, employed, according to the usual custom of Grecian matrons, in the works of the distaff and the needle. According to the more refined feelings of modern times, in such a place, and in such circumstances, the heart of the most callous might have been touched with pity, and the nerves of the most resolute unstrung; but to the Greeks, the frequency of its occurrence had deprived assassination of half its horrors. The object of the conspirators, the liberation of their country from Lacedæmonian tyranny, was honourable; and, we cannot be surprised, if they should overlook the foulness of the means, and consider their action more worthy of praise, than deserving of execution, when we know that, at an age, by centuries more advanced and refined, the crime of tyrannicide is sanctioned and defended by the great orator and philosopher of Rome. The manners of the age, therefore, as well as the urgent necessity of their situation, must plead the excuse of the conspirators for the merciless murder of the husband in the presence, and amid the lamentations of the wife.

The conspirators, having thus disposed of their enemies, and freed themselves from all danger of opposition, without any further preparation, or any addition of force, except the assistance of a few friends whom they had liberated from confinement, proclaimed the destruction of "the tyrants," and summoned the citizens to assemble in arms. They rested their confidence of success upon the general hatred against the late government. Night, and the uncertainty of information prevented an immediate compliance with the order; but, at the break of day, the whole inhabitants, borne as well as foot, appeared in arms, and ranged themselves on the side of the conspirators.

The Lacedæmonian governor of the citadel had received the earliest intelligence of the revolution, from the proclamation of the night. He had immediately despatched messengers to Plataea and to Thespia for reinforcement. But the Theban horse repulsed and routed the detachment which had marched from Plataea; and as they re-entered the city, they were joined by the refugees from the border, and by a

Biography: body of Athenian auxiliaries, to whom intimation of the proceedings had been previously communicated. The governor now considered his numbers inadequate to the defence of the citadel; and the Thebans gladly accepted of an offer of capitulation, upon the terms that the garrison should be permitted to depart in safety with their arms. Their march continued unmolested, till some Thebans, who had been active in the late revolution, were seen among the Lacedæmonians. The fury of the mob then became ungovernable; the objects of their hatred were dragged from their protection, and they and their children were sacrificed to the vengeance of their enemies. Such was the revolution at Thebes. The means by which it was effected cannot meet with unqualified approbation; but, if we except the revolution of Athens, under Thrasybulus, perhaps there was no Grecian revolution so little stained with blood. And we cannot but admire it, for the justness of its cause, the ability and vigour of its plan, and the secrecy and rapidity of its execution.

That Epameinondas, and his friend Pelopidas, were among the principal advisers and promoters of the Theban revolution, seems to be generally admitted by the historians of antiquity. It is impossible, however, to ascertain, with any certainty, the respective shares which they took in its accomplishment; for Xenophon, the only contemporary historian, has left their actions unrecorded; and the doubt which has, on this occasion, been thrown upon the authority of Plutarch, by the best modern historian of Greece, appears to be too well founded to permit of the adoption of his account of the transaction.

Operations of the Lacedæmonians; and war on Thebes.
B. C. 374.

As soon as the intelligence of the delivery of Thebes arrived at Lacedæmon, she applied herself, with alacrity, to support her authority, and to defend her friends. To allow the Thebans to go unpunished, would be entirely to relinquish all idea of maintaining that supremacy over the Grecian states which she arrogated to herself; and she, accordingly, resolved to act with vigour. Notwithstanding that the season was far advanced, it was decreed that an army should immediately march into the Theban territories. The command was offered to Agesilaus; but, for some reasons, which the historian of his life has been either unable or unwilling to explain, he declined the acceptance of it, excusing himself on account of his great age. Cleombrotus was the next object of their choice: he proceeded immediately towards Thebes, by the road of Platæa, and encamped at Cynoscephalæ. He remained in this position for sixteen days, and then withdrew to Thespiæ. It seems not to have been the intention of the Lacedæmonians to ravage the territories of Thebes, or to overturn the revolution, but only to overawe those who were at the head of affairs, and to afford protection to such as were friendly to the Lacedæmonian cause. For this purpose it was thought that a small proportion of the army would be sufficient; and a third part of it was, therefore, left under the command of Sphodrias. The remainder were reconducted by Cleombrotus to Lacedæmon, and there disbanded. But, although this expedition was bloodless, it was by no means devoid of utility. In Athens, in particular, it produced considerable effect. Those, in that republic, who were averse from the Theban connection, and inclined to peace, represented to the Athenians that, as they had

already seen a Lacedæmonian army pass from Peloponnesus into Bœotia, they might expect, if they continued their support to their new allies, that Attica itself would, next season, be ravaged. The fears of the sickle multitude were roused by the dread of danger so near home; they passed a resolution that no farther opposition should be offered to the Lacedæmonian arms; and to such an extent were they carried by their passions, that of two generals who had given their support to the cause of Thebes, one was condemned and executed, and the other saved his life by flight.

We have now arrived at that period when Epameinondas appears, as taking an active part in the concerns of his country. He is represented as a man rather retiring from public employment than courting it; and as exerting himself in the transactions of Thebes only at those seasons when his services could be eminently useful. At such a crisis had his country now arrived; and she demanded his utmost exertions. It would be a difficult matter for Thebes to contend against the power of Lacedæmon; and Epameinondas could not hope that she would be long able to maintain her opposition; but, on the other hand, there were strong reasons to impel him to prefer a state of war to one of peace. The Thebans had already experienced the miseries of Lacedæmonian tyranny; and they fully expressed their opinion of it by almost unanimously rising in arms in support of the conspirators against the late government. Many of the Grecian states had displayed their jealousy of the Lacedæmonian encroachment; and there was, therefore, good cause to hope, that Thebes would not be long left unassisted: and, although the Lacedæmonians had, beyond all expectation, displayed a great degree of lenity and moderation in the late measures towards the Thebans, yet there existed no hopes that peace would come unattended with the destruction or the banishment of Epameinondas, of Pelopidas, and of their friends; and, in short, of all those who had been instrumental in bringing about the late revolution. The rulers of Thebes had no alternative, and, whatever might be their inclination, they were forced, by the imperative necessity of their situation, vigorously to apply themselves to warlike exertions.

Fortunately, however, an event soon occurred, which changed again the wavering policy of the Athenians. From the most unaccountable cause, so extraordinary, indeed, that it has been ascribed to Theban bribery, and attributed, by Plutarch, to the management of Pelopidas; Sphodrias, the Lacedæmonian general, quitted his station at Thespiæ, and marched into Attica, with the professed purpose of taking the Piræus by surprise. At Thira, indeed, he abandoned his intention and returned to Thebes. But he took no means to conceal the hostility of his purpose; and, on his march he plundered the houses and drove off the cattle of the Athenians. When intelligence reached Athens, that an army of Lacedæmonians was marching towards the city, the inhabitants were thrown into universal alarm; and three Lacedæmonian ministers, who were resident in the place, were immediately arrested and imprisoned. The unfeigned astonishment, however, which they discovered, when the news was communicated to them, soon convinced the Athenians that they were no participators in the

Renewal of alliance between Thebes and Athens.

Biography. designs of the general; and their strong assertions that Sphodrias must have acted without the sanction of the Lacedæmonian government, and that neither the nobility of his connexions, nor the eminence of his rank would screen him from punishment, soon procured their release. To a certain extent, their opinion was confirmed; for Sphodrias was summoned home, and criminal proceedings were instituted against him. But on this occasion, the weak conduct of Agesilaus, in sacrificing public advantage to private feeling, gave beginning to a long train of the most disastrous occurrences. A friendship of the strictest intimacy subsisted between Cleonymus and Archidamus, the sons of Sphodrias and Agesilaus; and the distress of Archidamus for the father of Cleonymus, influenced Agesilaus also, to take too much interest in his fate, and checked the operations of his sounder judgment. So conscious was the Spartan general of the magnitude of his offence, and so fearful he was of the consequences it was likely to bring upon him, that he remained at a distance from Lacedæmon. As was usual, however, among the Greeks, his trial proceeded in his absence. His friends did not attempt the justification of his recent behaviour, but they rested his defence upon the merits of his former conduct: and so powerfully had the influence of Agesilaus been exerted, that upon three slender grounds alone his acquittal was procured. But by his acquittal the friendly disposition of the Athenians, was converted into an active enmity. Those, in Athens, who had supported the Lacedæmonian interest, could no longer oppose the influence of the Theban party, who insisted that it was now apparent, from the decision of the Spartan senate, that the treacherous designs of Sphodrias against the Piræus had been previously arranged by the Lacedæmonian government: and that unstable multitude, which had so lately sacrificed two generals for their support of Thebes, rushed with the same ardour and impetuosity into a war with Lacedæmon.

Agesilaus marches into Boeotia.

Agesilaus could now no longer refuse his services to his country, and he yielded to the public voice by assuming the command. The difficulty of passing from Peloponnesus into Boeotia had been increased by the hostile disposition of the Athenians; but Agesilaus provided against the danger by securing the assistance of some Cleitorian mercenaries, and he arrived in the Theban territory without encountering opposition. The Thebans had already fortified their frontier, as the best means of protecting their territory: but their numbers were so inferior to those of the enemy, and so inadequate to the defence of a long line of fortifications, that many parts necessarily remained open to an unopposed attack. Chærias headed the Athenians, and by his consummate skill he was able to evade a general action. Agesilaus, however, accomplished what was the general object of a Grecian campaign: he broke through the Theban lines, penetrated to the city-walls, burnt and destroyed them, and plundered the inhabitants. Withdrawing then his forces into Peloponnesus, he dismissed them, after leaving under the command of Phœbidas, a force sufficient to protect the friends of Lacedæmon in the parts of Northern Greece.

In spring the Peloponnesian army was again forced to collect on account of the defeat and the death of
VOL. IX.

Phœbidas, and the complete success of the Theban arms. In their wars with Athens, the Lacedæmonians had been taught the use and the advantage of light infantry; and this, more than any other circumstance had given Phœbidas an advantage over the Thebans, who valued themselves upon their heavy-armed phalanx, and disdained desultory warfare. The continual predatory incursions which he made into their territories, roused at length, the activity of the Thebans, and compelled them to collect their whole forces in order to appose and repulse his destructive operations. Thebes was invaded: but Phœbidas, avoiding a general action, so harassed with his light troops, the flanks and rear of the Theban army, that the whole body were thrown into confusion, and they retreated with precipitation and in disorder. A deep gulf impeded their progress, and they were again forced into action. Phœbidas fell in the encounter; the mercenaries, discouraged by the death of their general, betook themselves to flight; and the Lacedæmonians unable to withstand the firm and spirited attack of the Theban phalanx, were completely overpowered. So complete was the victory on the side of the Thebans, that night alone put an end to the slaughter of their enemies. In consequence of this success, the Thebans became entire masters of the country; instead of having their own territories ravaged, they committed ravages upon those of their neighbours; and they so dismayed their enemies, and encouraged their friends that the adherents of the Lacedæmonians were daily deserting to their side. It was the intelligence of these occurrences that had hastened the return of Agesilaus into Boeotia; and a similar, but more extended ravage of the Boeotian territory, than on the former occasion, was the event of the expedition.

This continued warfare had reduced Thebes to the utmost extremity of distress; for two years she had neither gathered any harvest, from her fields, nor had she been able to obtain supplies from the neighbouring states, who were all connected in alliance with Lacedæmon. Before, however, the Theban rulers would make any concession, they were determined to do all in their power to procure supplies by sea. Three triremes were accordingly prepared for commissioners, who were furnished with money for the purpose of purchasing at Oreus in Eubœa: the inhabitants of that part being known to be friendly in their disposition towards the Thebans. For greater security, the commissioners directed their course to Pagasæ, on the opposite coast of Thessaly, in order that they might, the more effectually, elude the vigilance of the Lacedæmonian garrison in the citadel of Oreus. But the governor had received intelligence of the expedition; and allowing the Thebans to load their vessels without molestation, he waited for their return, and seized the ships at such a distance from the shore, that the crews were prevented from making their escape. But this result, apparently so fortunate for the Lacedæmonians, was eventually more serviceable to the cause of the Thebans, than if their ships had been permitted to return in safety to Thebes: for the prisoners being carried to the citadel of Oreus, they found themselves so superior in number and in strength to their conquerors, that they rose in arms upon the garrison. Eubœa, being thus relieved from the control of the Lacedæmonians, was at full liberty to

Biography. display, without restraint, her friendly intentions towards Thebes; and she continued for the remainder of the autumn, and during the ensuing winter, most abundantly to supply that city with corn.

The next spring, an unsuccessful attempt of Cleombrotus, on whom, in the illness of Agesilaus, the command had again devolved, to pass from Peloponnesus into Boeotia, arising from negligence to secure the passes, called forth from the congress of the Lacedæmonian confederacy, expressions of much impatience and discontent. The citizens of the confederated states had now for a long time been subjected to calls for foreign service; and nothing permanent or important had yet been accomplished. The Lacedæmonians possessed a navy greatly superior to that of the enemy; but it was laid up unemployed. Why, they asked, had it not been used for the purpose of transporting the forces into Boeotia, when it was so evident, that by such a plan, all risk of defeat, similar to that which had lately occurred in an attempt to force the passes, would have been completely avoided? Why, by the employment of it, had Athens not been reduced to famine, when it was so well known that she was safely dependent upon her ships for the greater part of her subsistence? These remonstrances produced instant effect. A fleet of sixty triremes, was immediately equipped, placed under the command of Pollis, and finally stationed at Ægina, Ceos, and Andrus.

Nor had the effect, which it was to produce, been miscalculated. Fear of the Lacedæmonian fleet detained the corn ships bound for Athens, at Geræstus in Euboea, a port which they usually made; and the Athenians began to be alarmed by the apprehension of want. But their fears were quickly dispelled. An Athenian fleet was placed under the command of Chabrias, who met and defeated Pollis, near Naxos. In the mean time, the preparations of the Lacedæmonians to transport an army across the Corinthian gulf, had been conducted with slowness; but these alarming preparations were rapidly checked by the exertions of the Athenians. A fleet of sixty triremes, under the command of Timotheus, the son of Conon, was sent to circumnavigate Peloponnesus; and it was so effectual in overhauling the coasts, that it was considered to be necessary that the troops should remain at home to defend their respective territories. As soon as the safety of Boeotia had been thus ensured, Timotheus sailed for Coreyra; and he was in a short time enabled, by the assistance of a friendly party, to bring the whole island into an alliance with Athens.

The moderation and liberality of his conduct attached the inhabitants completely to himself and to the Athenian cause. Five and sixty triremes under the command of Nicochus, were despatched by Lacedæmon to check the alarming influence of the Athenians in the western sea; but the rash admiral, either foolishly despising the Athenians, or thoughtlessly disregarding the small difference of five triremes, scorned to wait for a reinforcement, which was expected from Ambracia, and risking an engagement, was defeated. A subsequent addition of ten Coreyren vessels to the Athenian squadron checked the temerity even of Nicochus, and the Athenians retained their conquest, and continued masters of the sea.

These successes of her Athenian allies by sea, placed Thebes in the most prosperous situation. Her Peloponnesian enemies had been deterred and pre-

vented from invading her small, but fruitful territory; concord and wisdom existed in, and guided her councils at home; and she had not only enjoyed sufficient leisure, to enable her to extend her power over the whole Boeotian towns: the long and favourite object of her wishes: but she had acquired such confidence, that she had carried her arms into Phocia. The destructive ravages which the invading troops committed, threw the Phocians into dismay; they immediately despatched ministers to assure the Lacedæmonians, that Phocia must be completely lost as the ally of Lacedæmon, unless she received the most speedy assistance. These representations produced so strong an impression that it was resolved by Lacedæmon, to send into Boeotia a larger army than any that had, as yet, entered that territory. Agesilaus was still too ill to conduct the Lacedæmonian forces, and Cleombrotus was again placed in command. The Thebans on the arrival of the enemy in their territories, withdrew their troops from Phocia, and placing themselves in a position to defend the strong posts of their borders, displayed a determination of the most resolute defence.

In the midst of these prosperous events, Thebes was again thrown into a temporary alarm, by the secession of the feeble Athenians from the alliance which they had formed. The Thebans had, probably from inability, refused to contribute to the support of the Athenian fleet; and those in Athens, who were inclined towards peace, seized the favourable opportunity, which this occurrence afforded, to enforce upon the Athenian people, the advantages which they would derive from a termination of hostilities with Lacedæmon. When both parties were equally inclined to treat, there were few preliminaries to settle, and a peace was rapidly concluded.

Lacedæmon had, however, hardly entered into these amicable arrangements with Athens, before she began to repent of her hurried movements. She had been always jealous of the influence of Athens in the western sea; and she looked with suspicion upon the authority which that state had lately acquired in Coreyra. An opportunity of a breach soon presented itself. Timotheus returning home with his victorious fleet, set some Zacynthian exiles ashore on their native islands; the Zacynthians in power complained to the Lacedæmonians; and the Lacedæmonian government declared it to be an injury which called for immediate redress. A requisition to supply ships and forces was instantly despatched by Lacedæmon, to all her maritime allies; and so violent were her hostile intentions that she did not neglect to crave the assistance even of Dionysius of Syracuse. War was not openly declared against Athens, but a fleet of sixty triremes was collected and placed under the command of Mnassippus, who was instructed, "to take care of the Lacedæmonian interests in the western sea, and to reduce Coreyra." The Athenians were so little conscious of offence, that they had dispersed their ships, and disbanded their crews. So soon, however, as the warlike dispositions of Lacedæmon became known, they despatched, for the protection of Coreyra, three hundred targeteers, who entered the island by night, and orders were given to Timotheus to collect a naval force with all possible rapidity. The event of some of the recent engagements had taught Timo-

Prosperity
of Thebes
and war
with Phocia.

Biography. thus the danger which he would have to encounter if he ventured out without a sufficient force; and as his cautious anxiety made his motions too slow for democratical impatience, he was deprived of his command, and supplanted by Iphicrates. Before Iphicrates, however, arrived off Coreyra, Mnasippus had been already defeated. At first he had been successful, and had reduced the Coreyreans to such a state of famine; that although he had caused it to be proclaimed, that he would sell as slaves any deserters who should come over to him, the inhabitants still continued to desert. But with his success his caution forsook him. He allowed his troops an unlimited licence of plunder; and they at last became so disorderly, that, not only his men, but even some of his officers, refused his command. The Coreyreans taking advantage of this circumstance made a sally upon their enemies; and although they were repulsed, and driven back to their town, they were so ably supported by Stesicles, the Athenian general, that they renewed the assault, and were finally successful in putting the Lacedæmonian army to flight. Mnasippus was killed, fighting bravely at the head of a small party, who continued to support him. The remainder of the besiegers withdrew to Leucas; and so precipitately had they fled, that they left behind them a large store of corn and wine, equal to supply the immediate wants of the Coreyreans, and a body of slaves sufficient to repair the loss, which had been occasioned by desertion and by famine. Iphicrates arrived too late to support the interests of the Coreyreans; but he made himself master of nine out of ten triremes, which had been sent by Dionysius to assist the Lacedæmonians.

Tyranny of Thebes. Thebes, now freed from all apprehension of danger, began to display that tyrannical conduct, which is so usual a concomitant of prosperity. Her designs were no longer directed against the aristocratical party alone; but even those who favoured democratical views felt the oppression of her conduct. In particular the people of Thespie and Platæa, who had uniformly shown themselves the inveterate opponents of Lacedæmonian usurpations, became the objects of her displeasure and were driven from their country. This conduct of the able leaders of the council of Thebes has been left unexplained by ancient writers; but if, in the absence of such authority, a conjecture may be hazarded, it is probable, that the Platæans and Thespians had not displayed that willingness to accede to the domination of Thebes over the Boeotian cities, which it was so much the favourite object of that republic to promote. The situation of the exiles, from these small states, was highly deplorable. They had long been the avowed enemies of Lacedæmon, and they had lately suffered severely from her resentment; and, although they had been the constant supporters of the democratical party, and had been, formerly, connected by habits of friendship with Athens, yet Athens was now the ally and the vigorous supporter of Thebes. There was, therefore, no quarter to which they could apply for the redress of their wrongs, with any probable prospect of success. But, in the desperate situation of their affairs, it was necessary that they should attempt something for their preservation; and, in the faint hope that the remembrance of the former unity, might incline the Athenians to listen to their petition, they forwarded ministers to Athens.

The representations of the Thespian and Platæan exiles created a much more lively interest at Athens than their most sanguine expectations could have led them to imagine. The Athenian people had already begun to long for peace; for, although the prosperous condition of their naval affairs entitled them to look forward to success, as a circumstance that was almost certain, and not far distant, yet the long continuance of the war and the support of their ships, had nearly exhausted their treasury; and, if they had, at one time, entertained a well-grounded fear of the encroachments of the Lacedæmonians, they had now equal, if not greater, cause to be jealous of the increasing prosperity of Thebes, which was a nearer neighbour than Lacedæmon, and might, consequently, become a much more inconvenient enemy. Thus, the private considerations of self-interest, strongly called into action by the appeal of the people of Thespian and Platæa, turned the thoughts of the Athenians from hostile measures, and induced them to form the resolution of endeavouring to promote a general peace. For the purpose of effecting this desirable object, it was decreed, that an embassy should be sent to the Lacedæmonians, to concert measures for summoning a congress of the different states of Greece; and messengers were, in the mean time, directed to Thebes, to acquaint the people of that city with the measures which have been adopted at Athens, and to endeavour to obtain their concurrence.

The congress, assembled at the requisition of Athens, met at Lacedæmon, and the Athenian ministers were the first to address it. They enlarged upon the benefits which would have accrued to Greece, if the Lacedæmonians had preserved inviolate the peace of Anticidas, in so far as regarded those terms of it, which covenanted for the independence of every Grecian state; and if they had not exacted from all those over whom they possessed or acquired power, the promise, that they would follow the Lacedæmonians wherever they should lead; and they concluded by insisting upon the independence of each state as an indispensable requisite in any peace that should now be arranged. If the Athenians had reason, in the prosperous state of their affairs, to wish to procure peace, the adverse fortune of the Lacedæmonians deprived them of the least inclination to object to terms, which were, indeed, more just and reasonable, but to which, a short period before, in the plenitude of their power, they would not have listened for a moment. The rest of the members of the congress had no cause to refuse their concurrence. It was agreed, therefore, that a peace should be concluded, in which it should be stipulated, that every state should be independent; that the Lacedæmonians should withdraw from all the Grecian cities under their power, those governors who, under the name of harmosts, controlled the operations, and overruled the deliberations of the citizens; that the armies of the belligerent powers should be disbanded and their fleets laid up; that, if any state were injured by any power, a member of the confederacy, the other friendly powers should immediately coalesce, and redress the wrongs of the injured party; and that, neither the Lacedæmonian, nor any other community, should attempt to force any independent state to join in hostilities against those with whom they were united by ties of amity and friendship. The whole congress, and perhaps the deputies of

Biography. Thebes, more than those of the other Grecian powers, were surprised and astonished at the facility with which Lacedæmon acceded to the terms proposed; and this surprise, joined to the general satisfaction which pervaded the assembly, led them, incautiously, into a concurrence, which either their instructions did not warrant, or, more probably, their inclinations did not approve. On the ensuing day, however, they endeavoured to remedy their error; and, for this purpose, they took advantage of an informality, into which, as they alleged, they had been, unconsciously and unintentionally, betrayed. The ministers of the Athenians and those of their allies had each acceded to the treaty in the name of their respective governments; while the Lacedæmonians had taken the oath, as well for their allies as for themselves. It was in the name of Thebes alone that the Theban deputies had sworn to the faithful observance of the peace; and the error which, as they asserted, had, on their part, been committed, was that they had not taken the oath on behalf of the whole Boeotian cities; and they now insisted that they should be permitted to rectify their mistake. This device produced the desired effect; for Agesilaus declared, on the part of the Spartans, that he would not allow of the proposed alteration, but that the Thebans were at liberty, if they should think proper, entirely to renounce the treaty. The Thebans persisted in this determination, and Thebes stood alone, opposed to the united power of the whole of Greece.

Such is the account of the transactions of the Grecian congress, as narrated by Xenophon; who neither mentions the names of the Theban deputies, nor records any particular address that they delivered before the assembly. The account of later writers is considerably different. Diodorus, Nepos, and Plutarch, concur in placing Epameinondas at the head of the Theban deputation; and Plutarch has further related a speech of Epameinondas, full of invective against the Lacedæmonians, and which, he observes, produced the effect of shaking the attachment of their allies. In this discordance of authority, it seems best again to adopt a middle course; and to give credence only to such parts of the account transmitted by Plutarch, as are either not in variance with the contemporary, and consequently, higher authority of Xenophon, or which, being altogether omitted by Xenophon, appear not of improbable occurrence. That Thebes should make choice of Epameinondas, the most able of her councillors, to attend to her interests at an assembly in whose deliberations she was highly interested, and by whose resolutions she might be deeply affected, is such an event as we would most naturally expect. On the contrary, we feel inclined entirely to reject that oration which is attributed to Epameinondas; not on the ground that the attachment of allies is weakened "commonly by private communication, rather than by public harangue," for the history of Greece is copious in instances of similar effects having been produced by bold and spirited address; but, for the reason that the account of Plutarch is at complete variance with that of Xenophon, who narrates that, when the Thebans refused to accede to the treaty unless the alteration, which they proposed, were adopted, the Athenians considered Thebes as lost, and the Theban ministers themselves, reflecting on the imminence of the danger which threatened their

country from the combined opposition of Greece, departed in much dejection.

On the part of the Lacedæmonians and Athenians, the terms of the treaty were most punctually executed: the Athenians ordered Iphicrates to return home with his victorious fleet; and the Lacedæmonians recalled her military rulers from the cities which they governed, and withdrew her troops from the territories of her allies. The army in Phocis, under the command of Cleombrotus, was alone left without orders; and that general, equally fearful of offending, as well by inactivity as by action, despatched messengers to Lacedæmon for instructions. A meeting of the assembly was summoned, and the result of their deliberations was, that the king received immediate orders to prosecute hostilities, if Thebes would not acknowledge the independence of the Boeotian towns.

Epameinondas and Pelopidas had already declared with firmness, their determination not to accede to the treaty, except upon the conditions that they had specified; and their resolution was too strong, and it was founded upon reasons too solid, to be shaken by the hostile measures of the Lacedæmonians. The conduct of that people, which followed the peace of Persia, had given them sufficient experience to make them distrust the sincerity, with which Lacedæmon was inclined to observe the terms of treaties; and to relinquish their dominion over the cities of Boeotia, would be to weaken their powers of defence. Thebes, indeed, stood alone in the contest, not merely unsupported by any Grecian state, but opposed apparently to the whole of Greece; but she had sufficient grounds on which to found her hopes of ultimate success, as well from the excellent condition of her own country, as from the distracted and discordant state of those republics, that constituted the confederacy that opposed her. The Thebans, it is true, had for ages been so notorious for the slowness of their abilities, that, notwithstanding that the splendid genius of Pindar had, in some degree, lessened the opprobrium: the name of Boeotian continued to be throughout Greece, a proverbial expression to denote stupidity; but, at the same time that their mental energies had been depressed, they had been long universally admired for their bodily strength and firmness. Since the death of Pindar, no poet, an orator, no historian, no man of genius in any department of literature, or of science had arisen in Thebes to repel and refute the calumny with which they were assailed; and the Thebans had long neglected the pursuit of mental excellence; but of those exercises, which are, in a peculiar manner, requisite to fit a people for warlike exertions and martial achievements, they had not been negligent. And at the period, of which we are now treating, they were eminently famous for the peculiar care with which they cultivated, and for the dexterity and skill with which they performed, the gymnastic exercises; for the superior condition of their cavalry both in arms and in exercise; and equally for the variety, as for the excellence of the modes in which they ordered and arranged their troops in battle. With such a people there were only wanting, in order to ensure their present success and their future fame, a general of talents and skill to lead and direct their operations, and that emulation of superiority, and that enthusiasm and ardour in the cause in which they were engaged, without which, it may be truly said, no army was

Renewal of the war between Thebes and Lacedæmon.

B. C. 371.

Biography. ever successful. In Epameinondas, and in Pelopidas the first requisite was ably supplied; for those generals were men of such talent, such intrepidity, and such experience, that if they had not surpassed, they had shown themselves fully equal, to any of those great characters, who conducted the councils and led the armies of the other states of Greece. In the latter respect, the late events in which they had been engaged had powerfully operated in rousing among the Thebans, a spirit, which they had not formerly possessed, or which, till now, had lain dormant, in consequence of the want of sufficient excitation. They had spurned the oppression of Sparta, and in desperation, had thrown off the yoke of their oppressors; in defensive war, success had, as yet, crowned their endeavours; and the former disturbed state of their country had bound many of them by the strictest ties and the closest engagements to live and to die in the defence of their national independence. All these circumstances combined to give such energy and activity to their measures, that it might be said without much of exaggeration, that the Thebans now sighed as much for the glory and for the uncertainty of war, as they had formerly longed for the ease and for the security of peace.

On the other hand, the condition of Greece in general, and of Lacedæmon in particular, encouraged the opposition of Thebes. By the extraordinary regulations of Lycurgus, Sparta had been enabled, so long as she continued with strictness to adhere to those regulations, to gain for herself the no small fame, of being the most virtuous and the most warlike of the republics of ancient Greece; but those regulations were evidently of such a kind, they were so connected together and interwoven with one another, that it was impossible partially to receive and partially to reject them. While the Spartans, therefore, continued to remain a poor but independent nation, and strictly to follow the maxim of avoiding war, except in so far as it was necessary for the defence and preservation of their territories, she continued to preserve her eminence; but, when she was seized with the desire of wealth, and the ambition of foreign conquest, she ought either to have adopted an entirely new system of policy, or at least, to have remitted that institution of her ancient lawgiver, which checked commercial intercourse, and forbade the communication of the rights of citizenship to every stranger whatever might be his merits or his claims. But, with the success of the Spartans, their pretensions had increased; and they not only spurned at the idea of conferring equality of rights upon the federal states of Peloponnesus; but they had withdrawn even from the Lacedæmonians their just share in the government, and had confined and limited all exercise of power and authority to the senate and to the people of Sparta. By such conduct, and by conduct similar to this, the Spartans had detached many of those who were now associated with them in appearance, from any sincere concurrence in their operations, and from that cordiality in their interests, which a more liberal policy would have ensured. The Theban leaders were well acquainted with these sentiments of dissatisfaction, which were diffused through the confederated states, and knew that many of them, and that Athens, in particular, would rather rejoice at than deplore the depression of Sparta, and would more wil-

lingly assert than control the endeavour of any state opposed to that commonwealth. They had even grounds for believing, that this spirit of discord pervaded the army in Ætoia; and they knew that there were many who had little confidence in the abilities and zeal of Cleombrotus. Epameinondas had, therefore, no cause to be displeased with the force or the disposition of Thebes; he had no powerful danger to dread from the enmity of a confederacy, more nominal than real, but, on the contrary, he entertained, from these complex reasons, well founded hopes of the ultimate success of that opposition to Greece, in which he had invincibly triumphed.

In order to lose no opportunity of defence, the Theban troops were marched to occupy that defile, by which it was supposed that the Lacedæmonians would enter their territories. But Cleombrotus, instead of proceeding by a direct line into Ætoia, led his army by a circuitous route towards the south, and after taking Creusis, a port in the gulf of Corinth, with twelve triremes, which were lying in the harbour, he proceeded without opposition, and encamped in the plain of Leuctra.

The Lacedæmonian army has been estimated at four and twenty thousand foot, and sixteen thousand horse; the Theban forces did not amount to the half of this number. When the Thebans, then, had been disappointed in their expectation of opposing their enemies in the fastnesses which conducted to their territories, where they might have possessed the advantage of superiority of ground, to counterbalance the inferiority of number, they had nothing to hope for but a recurrence of all those calamities, which had been heaped upon their unhappy country by the late expedition of Agesilaus. But, notwithstanding that the disadvantages under which he laboured were great, Epameinondas was determined to risk the event of a battle. The towns of Ætoia were held in subjection by a very precarious authority; many of them were ready on the first appearance of hostilities, to open their gates to the enemy, and the rest were not only prepared to revolt upon the slightest success of the Lacedæmonian arms, but it was not improbable that even the Thebans would, if hostilities were protracted for any length of time, discover a disposition to yield, rather than submit to suffer the miseries to which want would expose them. With what feelings soever Epameinondas may have been agitated, or how forlorn soever he may have conceived his situation, he was in these circumstances, determined to exert every nerve in the defence of his country, and to omit no expedient which could, by possibility, tend to animate and encourage his troops; and it would have been unpardonable in him to have neglected any device, by which his success could be in the smallest degree promoted. The aid of superstition, that powerful incentive to the minds of the lower orders of all countries, but particularly to the imaginative Greeks, was not forgotten. The little village of Leuctra, which was situated in the plain of the same name, where the Lacedæmonians were assembled, was, as yet, famous for nothing but the tomb of two virgins, the daughters of Scedæus, who, in the remote ages of Greece, had been violated by some Spartan youths, and had at once terminated their existence and their disgrace by a voluntary death. The antiquity of the event had not effaced its remembrance;

Epameinondas.

Battle of Leuctra.
A. C. 371.

Biography: a popular rumour that "a Lacedæmonian army should be defeated at the virgin's tomb," was industriously circulated; and the tomb itself, to augment the effect which such a rumour was likely to produce, was solemnly and ceremoniously decorated. In addition to this, it was reported that all the temples in Thebes had spontaneously opened, and that the priestesses had interpreted the event as ominous of the success of the Thebans; and that the shield in the temple of Hercules, the tutelary deity of Thebes, had disappeared, and that the God himself was to assist the Thebans in the ensuing battle.

— The infantry of the enemy was drawn up in the form of a crescent, the favourite order of the Lacedæmonians.

Along the front of the right wing, which was commanded by Cleombrotus, the cavalry was arrayed in squadrons; and the left wing was composed of the allies, and headed by Archidamus. The Theban cavalry, it has already been mentioned, were the most famous in Greece, well equipped, well trained, and from the late wars experienced in service. Calculating upon the impression which these troops would make upon the Lacedæmonian horse, which were the worst troops in the Lacedæmonian service, Epameinondas placed them in the van of his left wing, which he commanded himself, and which he drew up fifty deep; the more effectually to take advantage of the disorder, into which it was probable that the infantry of the enemy would be thrown, by the retreat of their own horse. Pelopidas, and the sacred band, that body whose members had bound themselves rather to die in the defence of their country, than live under its subjection, occupied the extremity of the Theban right wing. To prevent his troops from being ecompassed by the arms of the long extended crescent of the Lacedæmonians, Epameinondas lengthened, as much as he could with safety, his right wing; leaving it in some parts not more than six deep; and ordering it in an oblique line, so that as they weakened, they gradually receded from the army of the enemy.

The battle commenced with the cavalry, and proved, in its continuance, the most bloody action ever known in Greece, or between Grecians. The Lacedæmonian horse were unable to withstand the well directed attack of the Thebans, and were quickly broken, thrown into confusion, and forced back upon their own infantry. The consequent disorder which ensued in the Lacedæmonian line, afforded Epameinondas an opportunity of performing one of those evolutions which are generally decisive of the fate of battles. Conceiving that the Lacedæmonians would, when they had sufficiently recovered themselves, renew the attack upon his right wing, which appeared, from its oblique position, ready for flight, he formed the least numerous, but the best and most able division of his army into a compact wedge with spreading sides. He was not deceived in the expectation which he had formed, the Lacedæmonians, whenever they had rallied, directed their attempts against the Theban right wing. Their onset was crowned with a momentary success; but Epameinondas immediately seizing the advantage which this occurrence afforded him, rushed forward with his phalanx, and during, says Xenophon, like the beak of a galley upon the Lacedæmonians, swept every thing before him, and was uninterrupted in his course till he reached that part of

the field in which Cleombrotus held his station. The Lacedæmonians rallied in defence of their king; but although they were fortunate enough ultimately to repel the desperate assault of their enemies, they were not able to preserve the life of their leader, who received a mortal wound, and was carried lifeless from the field of battle. When the death of their king became generally known, dismay spread over the Lacedæmonian army. Their feeling was but temporary; anger, rage, and despair kindled every Lacedæmonian bosom, and animated every action; and the contest was renewed with redoubled vigour between the right wing of the enemy and the phalanx of Epameinondas. But the Lacedæmonian left wing composed of the allies, who had never heartily engaged in the action, took advantage of the confusion occasioned by the death of Cleombrotus, and fled in every direction. The Lacedæmonians then no longer able to support alone the firm and steady attack of the Thebans, retreated to their camp, and formed behind its entrenchments. Epameinondas thus checked the pursuit of his enemies; for the elevated site of the camp, and the apparent strength with which it was fortified, afforded no expectation of further success. On the side of the Lacedæmonians the loss was great; and Deceon, the polemarch, who was next in command to the king, Sphodrias, and his son Cleonymus, were among the number of the slain.

The Lacedæmonians had now sufficient time to recover themselves, and leisure to reflect on their defeat; and they looked with mixed feelings of horror and sorrow upon the disgrace which they had incurred. It was the first time since the days of Lyscurgus, it was believed, that a Lacedæmonian army had been vanquished by an inferior force; and, at all events, so rare was the occurrence, that it was universally believed to be impossible. A council of war was summoned to consider of the measures which ought to be adopted. A few, and but a few, whom the courageous spirit of their ancestors had not deserted, declared their willingness to die, rather than to survive their disgrace, and expressed it as their opinion, that the Lacedæmonians ought not even now to yield. It was true, they observed, that they had been greatly reduced, but their numbers still far exceeded those of the enemy; there was therefore yet hopes of victory, and it was unfitting that the Lacedæmonians should crave a truce for the burial of their dead, which would amount to an acknowledgement that they were discomfited; but that, on the contrary, both the dignity and the honour of Lacedæmonians, and the ancient glory of her name, required that they should return to the field and recover their dead by their own valour and by the force of arms. But this bold and spirited measure was rejected by the cautious prudence of the majority of the council. When the surviving polemarchs reflected that of seven hundred Spartans, who had, on the commencement of the day, formed part of the army, only three hundred had returned safe from the field of action; that a thousand of those Lacedæmonians, who were not dignified with the name, nor entitled to the privileges of Spartans, had fallen in the battle; and that the allies, although their loss had been comparatively less, were not only unwilling, but had actually refused to renew the combat, and rather discovered pleasure in the disasters of the Lacedæmonians, than consoled with

Biography their misfortunes; they were compelled to submit to the necessity of their affairs, and to admit, how reluctantly soever, that they had sustained a complete defeat, and that Epameinondas and his Thebans were the victors of the day. A herald was accordingly despatched by the Lacedæmonians to demand a truce, and to request permission of the Thebans to bury their dead. Thus terminated the battle of Leuctra, the most memorable, perhaps, in the annals of ancient Greece: the most bloody in its engagement, and the most fatal in its catastrophe; and, in its consequences, the most important; for, by it Lacedæmon was first seriously checked in the tyranny of her course; the charm of her invincibility, by which her allies had been preserved in their allegiance, was broken; and if we look still farther, we may consider it as the primary and leading cause of the dissolution of that confederacy, by which Greece had been enabled to maintain so paramount a pre-eminence among the nations of the ancient world, and by the dissolution of which she finally became the subject of those, whom she had always styled and regarded as barbarians.

The messengers who conveyed the melancholy news of the victory of the Thebans, reached Sparta at that moment, when the inhabitants were engaged in the celebration of the naked games. The chorus of men were on the stage, when they delivered their dispatches to the Ephors. Without discovering any emotion at the intelligence communicated to them, they proclaimed aloud the names of those who had fallen in the plain of Leuctra, admonished the women to refrain from their usual but useless lamentations, and commanded the festival to proceed. On the morrow, the same real or affected apathy, and the same peculiarity of conduct, which was the natural result of the institutions of Lycurgus, were visible in the behaviour, in the manner, and in the dress of every citizen. The stern legislator of Sparta had left but one alternative to that Spartan whom ignoble flight had carried him from the field of battle: he might either retire into banishment, exposed to all the hardships and all the contumely to which the animosity of offended tribes would expose him; or, he might remain at home, excluded from the public assemblies, incapacitated from holding any office of honour or of power, and driven almost out of the pale of society. The relations of those who had fallen in the cause of their country, appeared in public with countenances beaming with joy, and every action expressed the pride which they felt, and their unfeigned satisfaction, at the conduct of their kinsmen who had yielded up the victory only with their lives. On the other hand, the friends of the vanquished, who had preferred a disgraceful existence to a glorious death, either remained at home, or if they were, through necessity, obliged to walk abroad, their looks were downcast and dejected, their garments disordered and rent, their steps slow and melancholy, their whole appearance indicative of the most deep and contrite sorrow. But, for once, the denunciation of that sentence of perpetual ignominy, which the extreme rigour of the Spartan laws ordained, and which was expected with so much humility and resignation, was suspended by Agesilaus. The criminals were numerous, and many of them of high rank and noble extraction; and Sparta, in her depopulated state, could not well afford to sacrifice

three hundred of her citizens, in vindication of the honour of the laws. The Lacedæmonians omitted not, however, any exertion which could contribute to efface the dishonour which they had incurred; they placed under the command of Archidamus all capable of bearing arms, even of those in office who had been, on the former occasion, exempted from marching under Cleombrotus; and they hastened requisitions to the several allies, to furnish, with the utmost expedition, their respective contingents of troops.

Among most of the other states of Greece, the news of the battle of Leuctra made that impression on which Epameinondas had calculated. They rejoiced at the success of the Thebans, they were delighted that a power had arisen, of strength sufficient to curb the imperiousness of Sparta; and, whilst the more powerful indulged the expectation of revenging their injuries upon the haughty senators, those of less strength and feeble exertions looked forward with the most sanguine hopes to the immediate prospect, which the success of Thebes afforded them, of throwing off the dominion, and being freed from the heavy exactions to which they had been for so long subjected. It was in Athens alone, that the defeat of the Lacedæmonians was heard without demonstrations of joy. Immediately subsequent to the battle, the Thebans had despatched ministers to that city, with the view, the more certainly to ensure, by the promptness of the communication, the interest and the assistance of her citizens. But, although the transactions of the field of Leuctra could not be unawakened intelligence to the republican government of Athens, she shewed herself capable of checking the immediate impulse of revenge, and acted with a moderation which discovered a more deep and far sighted policy. The Theban ministers were not merely received with neglect, but treated almost with insult; and they were dismissed without being even introduced in public: an attention, on such occasions, of the most ordinary and common occurrence. But the feeling of revenge against Lacedæmon had died away in Athens with the depression of that state; and Thebes had risen to an eminence, and might assume an importance among the Grecian states, which excited in the Athenians a cautious but not an imprudent jealousy of her power.

At the same time that the Thebans had sent intelligence to Athens, they had despatched ministers to request the assistance of Jason of Pheræ, in Thessaly, who was perhaps the most extraordinary character of his age. Eminent by birth, superior by the endowments both of mind and body, and powerful from popularity, he soon became famous in the factions of his native city; from the diligence with which he trained the mercenary troops which it was common to employ in those factions, from his courage and skill in commanding them, and from the art that he possessed of attaching them to his interest. In process of time he was enabled to extend his authority beyond the narrow precincts of Pheræ, and succeeded in bringing most of the Thessalian towns under that kind of subjection, which was distinguished by the name of confederacy. But his ambition did not rest here. It had been the custom of the different republics of Thessaly, in times of difficulty and danger, to appoint a common general, under the name of Tagus; and to this distinguished honour Jason aspired. In order to his attainment of it, it was

Biography. requisite that he should procure the assent of every Thessalian state; and in this he had been successful; except in the instance of Pharsalus, where he met with a powerful opponent in Polydamas, whom birth, riches, and hospitality had raised to an authority almost princely. He commanded the citadel of the Pharsalians; he had their revenue at his disposal, and he directed and controlled their councils. But in his opposition to the arduous policy of Jason he had been unsuccessful; for, although his utmost abilities and the whole force of Pharsalus had been exerted to protect the city from the encroachments of the ambitious Phereas, all their endeavours had proved unequal to the task. But the able mind of Jason looked far beyond the renown, which could be derived from the petty warfare of two small Thessalian cities; even the reduction of the whole of Greece was an object too small for his enterprising spirit; and he had conceived the vast idea of subjecting the Persian empire to his control. To reduce Pharsalus by force of arms, if he had any hopes of success, by peaceable means, was an exertion unworthy of his talents; and he accordingly sent messengers to request a conference with Polydamas. After asserting his determination to reduce every Thessalian town under his subjection, but if it were practicable rather by negotiation than by violence, he represented how easy it would be for Polydamas to second his intentions by persuading the Pharsalian people; how difficult it would be to oppose them his experience must have already taught him. It was his resolution to become the first man in Greece, and it was in the power of Polydamas to hold the second rank. So far was his project from being impracticable, it presented few, and those but trifling obstacles. In cavalry, in heavy-armed infantry, in targeteers, Thessaly possessed already a formidable force; and he had under his command a body of mercenary troops, more choice and better disciplined than was possessed by any common-wealth in Greece. With the Boeotian states he was on terms of friendship; and Athens herself had courted his alliance; but he wished not to form a connection with the Athenians, for that people considered themselves the first maritime power in Greece, and boasted their pre-eminence; and it was his design to make Thessaly in this respect her successful rival; a project more easy of execution, and more certain of success, than even his designs by land; for Athens was supplied with timber from Macedonia, which was much nearer to Thessaly; in sailors, she had none who could contend with his Phœnian subjects; and in revenue, Thessaly was far richer, and her tributary estates incomparably more valuable than the scattered islands which acknowledged Athenian dominion.

The force and the justness of the reasoning of Jason were admitted by Polydamas; but Pharsalus was in amity with Lacedæmon, and the integrity of her ruler was inviolable. At the suggestion of Jason, however he consented to proceed to Lacedæmon, to request her assistance. After three days of deliberation, the Lacedæmonians acknowledged their incapacity to protect their ally, and left him and his Pharsalians to consult for their own interest. Polydamas, therefore, on his return, brought the Pharsalians to acquiescence in the appointment of the Jason to the title and dignity of Tagus of Thessaly; and he was him-

self, at his own request, placed in command of the citadel of Pharsalus.

Such was the situation of the citizens of Phære at the time of the battle of Leuctra; and we may form an estimate of the formidable extent of his power from the number of his forces, which amounted to more than twenty thousand heavy-armed foot, eight thousand horse, and a body of targeteers. Large enough, says the contemporary historian of Greece, for war with all the world. The battle of Leuctra was an event of that description most likely to excite in the active mind of Jason the liveliest interest; and immediately upon the arrival of the Theban ministers, he ordered a fleet to be equipped, and putting himself in command of his mercenaries, and a small body of horse, he proceeded with this small force with such rapidity through the territories of the Phocians, with whom Thessaly was at war, that, by his own arrival, the intelligence of his expedition became first known in every town through which he passed. Neither time nor opportunity was given to his enemies to collect a force sufficient to oppose him, and without sustaining loss, he arrived in the territories of Boeotia. But the same motives which had actuated the Atheonians, displayed themselves in the conduct of Jason. Satisfied with the humiliation of Lacedæmon, he was not desirous of her destruction; for it accorded not with his political views, that Thebes should become too powerful. Instead, therefore, of assisting the Thebans to crush their enemies, he set himself about terminating hostilities; and he was successful in procuring a truce. The Lacedæmonians took advantage of the temporary suspension of warfare, and decamping in the evening, they rested out in their march till they reached Argostheni, in the territory of Megara. Here they were joined by Archidamus, and those troops that Lacedæmon had sent to their relief; and as the remnant of the Lacedæmonian army of Leuctra had now rescued a peaceful country, and the object of the expedition under Archidamus was thus accomplished, the troops were conducted to Corinth, where the allies were dismissed, and the Lacedæmonians were marched home to Lacedæmon.

The subsequent life of Jason is foreign to the life of Epameinondas, and to a history of the Theban wars; but the extraordinary mind of the man seems to deserve some brief notice of his subsequent fortune. A premature death prevented the execution of those extensive schemes which he projected. Whether he would have been able, had his life been spared, to realize his splendid designs, it would now be vain to conjecture; but his hopes were evidently not founded upon a mere dream of ambition. The state of Greece was singularly favourable to his project; and his own talents and resources well calculated for the work in which he intended to employ them. But his career was early interrupted; the last military action of Jason which remains upon record, is the revenge which he exercised against the Phocians, by the reduction of Heraclea, on his return from Thessaly. Powerful by the strength of the forces of his own country, and by his numerous alliances, he was acknowledged to be the greatest potentate of his age; and he resolved to display his magnificence at the Pythian Games, by proposing the reward of a golden crown to that city which should produce the finest ox, and by an easy impost, he was enabled to collect from the various towns which

Biography. acknowledged the authority of the Tugus of Thessaly, more than a thousand oxen, and ten thousand smaller cattle. After reviewing the cavalry of Phæra, Jason had retired to give audience to those who wished to consult him. Seven youths approached, and under the pretence of receiving his decision upon some matter in dispute; but they had no sooner gained admittance, than they discovered their real object, and Jason was assassinated. Of the perpetrators of this act, two were slain by the guards, and the rest made their escape: the motives of their act are covered by the veil of obscurity. No revolution ensued to mark it as the consequence of political intrigue; but there was sufficient to evince both the popularity of Jason in Thessaly, and the dread which his talents, and the probable success of his projects had created among the rest of the states of Greece. Of the former we require no stronger confirmation, than that his brothers, Polydamus and Polyphron, were appointed his successors, and that his assassins, unable to secure protection, were forced to fly from Thessaly; and of the latter, the circumstance that these assassins were reviled by many of the other states of Greece with every mark of respect and of honour, is a sufficient testimony.

Convents at Athens. It has been already remarked, that it was the policy of the able leaders of the Athenian councils to hold the balance even between the two contending states of Lacedæmon and of Thebes, and to permit neither to acquire the preponderancy. In pursuance of this policy, Athens had, immediately after the battle of Leuctra, refused to assist the Thebans in their plans of annihilating the power of the Lacedæmonian aristocracy; and, with the same view, she now thought it necessary, in consequence of some recent occurrences among the different states of Peloponnesus, to assemble a congress at Athens. The Peloponnesians had, along with the rest of the inhabitants of Greece, and probably in a more forcible manner, experienced the oppression of Sparta; and many of them had rejoiced at the prosperity of Thebes; but, as soon as they found themselves relieved from the immediate presence of Lacedæmonian tyranny, the remembrance of their former alliances, of their ancient glory, returned upon them in their fullest force; and this disposition was somewhat increased by the fear, lest if Thebes, a state beyond Peloponnesus, should become supreme in Greece, the Peloponnesians would lose that importance which the superiority of Lacedæmon, and their connection with her, had acquired for them, and should sink into a state of insignificance and obscurity. Frequent conferences, promoted by these views, had been, in consequence, held by the members of the different commonwealths of Peloponnesus; and it had been resolved by them, that they would return to their former dependence upon Lacedæmon, and would adhere to their former system of following the Lacedæmonians upon every occasion wherever they should think proper to conduct them. Athens felt alarm lest these measures should revive the now fallen power of Lacedæmon, and raise her to her former stability; and the object she had in view, in summoning the congress, was to renew the terms of the peace of Antalcidas. According to the requisition of the Athenians, a congress assembled at Athens, and it was attended by deputies from almost every state in Greece. The Athenians

immediately laid open their object in summoning the meeting: that of renewing the security of the independence of each state; and they proposed an oath, by which every deputy was required to swear that "he would abide by the terms of the peace which the king sent, and by the decrees of the Athenians and their allies; and that, if any state partaking in the oath, should be attacked, he would assist that state with all his strength." Of all the deputies of the Grecian powers, those of Elis alone refused to needle to the proposals of the Athenians; and they insisted that Elis should be permitted to retain her sovereignty over the people of Megara, Scillus, and Triphylia.

But this congress at Athens, so unanimous in its resolutions, and by which it was intended to secure universal independency, and the general peace of Greece, was the remote cause of a war, which ultimately involved every Grecian state. By the destruction of Mantinea by the Lacedæmonians, after the peace of Antalcidas, the democratical party of the government of that city had been entirely annihilated, while the aristocratical, if it had not been strengthened by the event, had, at least, lost none of its importance or power. In the villages to which they had been forced to retire, the wealthier inhabitants, those constituting the aristocracy, possessed unimpaired the same authority, they had enjoyed during the existence of their capital; but the democratical leaders had been, by that event, deprived of the sole means by which they could either maintain or acquire any ascendancy—that of addressing assembled multitudes, and through that medium inflaming their passions, and inspiring their conduct. With the success of Thebes the hopes of the democracy had somewhat revived; but the resolutions of the congress of Athens, by which provision was again made for a general independency, incited their activity, and prompted them to propose the re-establishment of their ancient city, and the restoration of their assembly. At a meeting which was convened, the proposal met with a favourable reception; and it was decreed by the Mantinians, that the families forming the old capital should collect together, and that the place should be immediately fortified. Even the influence of Agesilaus, who had not thought that the employment of ambassador to a petty city was, on such an occasion, unworthy either of his rank or his character, was inadequate to impede the progress of their operations, or to prevent the destruction of the power of that party which was favourable to aristocracy; and after much of negotiation, probably of intrigue, the final answer which they received from the Mantinians was, "that the decree passed by the Mantinians people could not be rescinded." But, although Agesilaus departed out without feelings of disgust and resentment, yet it was with the resolution that it was neither right nor politic, that the Lacedæmonians should be the first to infringe the articles of the late treaty.

The democratical party of Tegea, encouraged by the success of the Mantinians, resolved next to attempt the restoration of their party, and with it to augment the general importance of their city. But the Tegeans had greater difficulties to surmount; for, as they were ruled by an aristocratical administration, united in its measures, they could entertain but faint

ia and her
state.

Biography. hopes that a proposal, limited to the small territory of Tegea, would meet with success. They therefore extended their views, and proposed the bold and intrepid, but ultimately successful plan, of uniting the whole of Arcadia under one government. It is unnecessary for us to trace, with any minuteness of detail, the means by which this object was accomplished: the rejection of the proposed innovation by the general assembly of the Arcadian states, produced by the influence of Hippius, the leader of the aristocratical party; the events of the war which was waged by Proxenus and Callibius, the heads of the democracy; the temporary success of Hippius, and the death of Proxenus; his final defeat, and the complete success of the popular party; and the erection, under the name of Megalopolis of a new city, a common capital, upon the southern bank of Arcadia, and in the vale of the Alpheus, a site which was highly approved and commended by the Theban leaders, who are allowed to have been the principal promoters of the measure; because its situation in the immediate vicinity of Messenia and Laconia, afforded easy opportunities of either protecting the one, or annoying and harassing the other. It is requisite, however, that we should mention that this revolution was not accomplished without crimes on the part of the Mantineaans, who thus became guilty of the first infraction of the treaty of Athens; that Orchomenus alone, of all the Arcadian towns, from an inveterate hatred of the Mantineaans, and a dread of their influence, refused to give her concurrence; and that the Lacedæmonians, furnished with but too good an excuse for attacking the reigning party in Mantinea, and of supporting their friends of the aristocratical faction, and provided with too good a title to defend their ancient allies of Orchomenus, discovered no inclination to continue their late prudent temperance of conduct, or to remain any longer inactive and peaceable spectators of events. An expedition, under the conduct of Agesilaus, was led to the assistance of Orchomenus; but it performed nothing remarkable. The Arcadians and the people of Elis avoided a general battle; and Agesilaus, pressed at last by the season, found it necessary to retire, after laying waste a part of the Mantinea territory, and gaining the advantage in a few skirmishes.

Epameinondas had, in the mean time, left nothing undone which could tend to strengthen the cause of his country. The interference of Lacedæmon in the affairs of Arcadia had been made use of to represent the Lacedæmonians as infringers of the general treaty of Greece; and by the money of the Elians, and the accession of the Phocians and their allies, a numerous army had been collected, over which Epameinondas was placed in the chief command. With so much secrecy, and with such activity had these operations of the Thebans been conducted, that not only the Lacedæmonians, but even the Arcadians, the allies of Thebes, were ignorant of them; and Epameinondas reached Mantinea, while the Arcadians were actively engaged in the attack and plunder of the Nereans. But, although their preparations had been rapidly completed, the Lacedæmonian army had been, before their arrival, withdrawn from Arcadia, and the Theban leaders considered their winter expedition at an end. By the representations, however, of the Arcadians and Elians, who from their proximity to Sparta, were

better acquainted with the weak condition of that city, than the Thebans, whose situation was more remote, Epameinondas was persuaded, notwithstanding that the season was so far advanced, to listen to a proposal of lending the united forces immediately into Laconia; and the plan met with his decided approbation, when he found the opinions of his allies, fully confirmed by the intelligence of some Lacedæmonian fugitives. It was the ruggedness of the frontier of Laconia, that had presented to the mind of Epameinondas, the most serious obstacle; and the better to ensure success, he suggested that the Peloponnesian and Theban forces should separate and attempt the ingress by different passes. The Peloponnesians proceeded by that defile which led by Ina, at one of the sources of the Eurotas, and in the district of Skiritis; Epameinondas made choice of the difficult passage by Caryæ on the Æneus, a brook whose waters after passing that city, almost immediately mingle with those of the Eurotas. Ischolaus, a Spartan, who had been placed in defence of the pass of Ion, was killed, and his army easily defeated by the Arcadians: and as that entrance which had been chosen by Epameinondas was undefended, the two armies soon joined their forces a little below Caryæ. The combined troops immediately proceeded to the attack of Sellasia, in the vale of the Eurotas; and quickly reduced it to ashes. On the second day of the march from Caryæ, they arrived at the bridge that led to Sparta, which stood at no great distance on the opposite bank: but the passage was so strongly guarded, that the confederate generals thought it prudent not to attempt it, and they continued their march down the river, carrying devastation with them in their progress. These transactions spread such consternation, not merely among the weak and cowardly, but among the wise and courageous of Sparta, that liberty was proclaimed as the reward of these Helots, who should be willing to lend their assistance; and six thousand of them were in consequence enrolled. The urgent necessity of the moment, and the imminence of the danger may have been a sufficient excuse for the adoption of a measure, so apparently pregnant with evil consequences; but, the temporary relief which it afforded, was soon overbalanced by the miseries to which it gave rise; for the Helots having once tasted of liberty, subsequently refused to return to their former state, and the whole body rising in arms against their masters, were the most efficient means of producing that liberation of Messenia, which we shall soon have occasion to mention, as one of the fruits of this expedition. In the mean time the measure was productive of advantage; for by their assistance, and that of some auxiliaries from Corinth, and a few other towns whose interest bound them to support the Lacedæmonian cause, the alarm which had been excited was entirely stilled. Although the confederate army had been forced to desist from its attack upon Sparta, it had not abandoned the plain; and while these occurrences had taken place among the Lacedæmonians, it had proceeded in its route along the left bank of the river, had crossed at Amyclæ, a little below Sparta, and was now advancing against that town. The horse had already proceeded as far as the horse-course and the temple of Neptune in the close vicinity of Sparta; and they were rather encouraged than dismayed by the dimi-

First expedition of Epameinondas into Peloponnesus and invasion of Laconia.
B. C.
370.

Biography, native appearance of the Lacedæmonian envoy. But when the infantry, which had been concealed by the Temple of the Tindarid, marched to their support, such was still the power of the Lacedæmonian name, that not only the allied horse, but even the infantry, though much superior in number to that of the Lacedæmonians, retired with most evident symptoms of alarm. Agesilaus adopted the prudent system of not risking an engagement, but was contented with posting his men in advantageous situations. The allied army withdrew and encamped at a small distance, when a council of war being soon after summoned to consult on the plan of operations which should be pursued, it was resolved that any further attempt upon Sparta would not only be useless, but fraught with extreme danger.

The historians of antiquity have transmitted it as their opinion, that the name alone of Sparta saved her, and that she was so weak in force, that she must have fallen, before an army so numerous as that of her enemies, if their operations had been directed with vigour and with spirit. But the extent of his army, composed of troops from different nations, and consequently difficult of restraint, was the reason which induced Epameinondas, when his enemy seemed so entirely within his power, to retreat without attempting to accomplish the principal object of his expedition. Implicit reliance on his talents, his courage, and his experience had commanded for him obedience as long as the army continued on its march, and had enabled him to maintain that strictness of discipline, which is, to an enemy's country, so essential to the preservation of every army. But the success which he had attended his arms, and the little opposition he had encountered, had diminished the fear of danger, and had made his troops less cautious, and less inclined to obedience. Among the Thebians, indeed, his authority was undiminished, and he could still enforce the same severe order, and preserve the same caution in fortifying his camp, as if he had been in the immediate presence of the enemy: but those troops formed only a small portion of the whole; the rest of the army had appeared to consider themselves free of almost every restraint; and the Arcadians, in particular, refused to relinquish a practice, to which they were habituated, of lying aside their arms as soon as they had encamped, and wandering for pillage. It was in such a situation that Epameinondas found himself when encamped before Sparta; and he felt not merely that it would be hopeless in such circumstances, to make any attempt against a place so well fortified, but that a complete defeat and total ruin to his cause might ensue, from risking his troops in battle against the well-disciplined army of the Lacedæmonians. He had only one course to pursue, that of directing the impetuous desire of plunder which he could not restrain; and he accordingly conducted his army down the Eurotas as far as Gytheum, the only naval arsenal which the Lacedæmonians possessed, giving his troops during the whole line of their march, unlimited licence of plunder. Even the assault which he directed against that port, and to which he persevered for three days, proved unsuccessful; and such at last became the state of his army, so anxious were many of the allies to return home with the booty which they had secured, that desertion became so common that he was obliged hastily to withdraw from Laconia.

The intelligence of the victories and successes of the Thebans, and the extreme danger which threatened Sparta, created in Athens considerable emotion; arising not from any friendly feelings in that city towards the Lacedæmonians, but for fear lest Thebes should obtain such a preponderance as to endanger the independence of Athens and perhaps of Greece. An assembly, was in consequence, immediately called together, to consider of the conduct which Athens should observe. The Lacedæmonian ministers were first heard in support of their cause, and in defence of their country. When they had finished, the minds of the assembly was by no means of one opinion. The aristocratical party, contended, that so soon as Mantinea had broken the late treaty by carrying her arms into Tegea, it became not only the duty of the Lacedæmonians to assist the Tegeans, but it was now imperatively required of the Athenians, in conformity with their oath, that they should aid and assist them with all the power they could command. It was urged by the favourers of democracy on the other hand, that the Mantinea had been guilty of no breach of the late contract, and that by supporting the exertions of the Tegean democrats, they had done no more than enforce that independency, which it was the object of the congress of Athens to ensure to every state of Greece. The opposite parties seemed so evenly balanced, that the issue of the debate appeared doubtful, when the balance was completely turned by the appeal of the Corinthian and Phliisino ambassadors. Epameinondas, in conducting his army to Mantinea had passed through Corinth. Corinth refusing to bear arms against her old allies the Lacedæmonians, had declined to join her forces to the confederate army; and Epameinondas had permitted, or rather had been unable to restrain the allies from committing ravages upon the territories of Corinth. The unpardonable nature of this outrage upon a neutral country was forcibly urged by Cleitias, the Corinthian envoy, and the democratical party found it impossible to efface the impression which was produced by his concluding appeal to the Athenians: "Can the Athenians," he observed, "in such circumstances, without perjury, refuse to any country that assistance to which the treaty entitles the injured?" But the victory was complete, when the minister of Phlius followed on the same side, alternately rousing the fears and flattering the vanity of the Athenians. Irritation and impatience seized the multitude; they would listen to no other speakers; the question was immediately put to the vote, and it was decreed that the whole force of the commonwealth, under the command of Iphicrates, should be instantly conducted to the assistance of Lacedæmon. But, had it been in the power of Epameinondas to preserve better discipline in his army, the mighty preparations of Athens would have been useless, and her assistance would have arrived too late to save Sparta from utter ruin. As it was, the exertions of Iphicrates produced no effect; for, although he arrived in Arcadia in time sufficient to oppose the retreat of the Thebans, and possessed every opportunity of reducing them to the extremity of difficulty and distress, yet for some reasons which remain unexplained, he first withdrew to Corinth, as if with a view of disputing the passage of the Isthmus, and ultimately allowed the Thebans to pass without molestation into Boeotia.

Conduct of

the Athe-

nians.

Bioeraphy. Although by this expedition of the combined forces of Thebes, Arcadia, and Elis, that object had not been accomplished which had been originally intended, yet the power of Lacedæmon received a blow from which she was never able to recover. When the army of the enemy retired, rebellion pervaded the country. The Helots, in particular, having received full proof of the weakness of their oppressors, and feeling assurance in their own strength, determined to make an effort to burst the cords of their bondage, and in a body broke out into revolt. These were circumstances not to be overlooked by Epameinondas and the other sagacious leaders of the Theban assembly. They called loudly upon the relics of the Messenian race to profit by the crisis in the affairs of Lacedæmon, and to return from the several places of their exile, from (Rhegium, in Italy, Messina, in Sicily, and Evesperita, in Africa,) and taking possession of the country of their forefathers, to become again one of the people of Greece. The Messenians were not deaf to the invitation nor blind to their own interests; they flocked in from all quarters; they disdained not to associate with them the Helots; all of Grecian, many of them of Messenian, origin; a new city of Messenæ was, under the patronage of Epameinondas, founded at the foot of Mount Ithome, which itself became the citadel; and Messenæ, the fairest, the richest portion of the possessions of Lacedæmon was completely and finally separated from the Lacedæmonians. But this was not the only effect of the Peloponnesian expedition: the country of Skiritia, that rugged and mountainous district, where the Euristas and Alpheus have their sources, continued in the hands of the rebels who held Sellasia, at the upper end of the vale; while Pallene, which still continued to adhere to the Lacedæmonians, was carried by assault by Lycomedes, the able general of the Arcadians.

The next year a Theban army was again led into Peloponnesus, and surprising the army of their enemies, easily effected a junction with the Peloponnesian allies. But the danger which was threatened to the northern frontier of Thebes by Alexander of Phææ terminated the campaign at a time when all Peloponnesus seemed open to the Theban arms. The Thebans were obliged hastily to retire without being able to effect more than ravaging the lands of the Epidaurians, the allies and supporters of Lacedæmon; and laying waste the territories of Corinth after an unsuccessful attempt to seize the city, from which they were repulsed, with some slaughter, by the Corinthians under the direction of Chabrias of Atheas.

Meanwhile, symptoms of dissension began to shew themselves among the states of the Theban confederacy: and far from being surprised that this should be the case, it is rather astonishing that the confederacy should have subsisted for any length of time; and it is impossible not to admire the abilities of Epameinondas and of those great men by whom the connection had been so long preserved. Thebes, rising suddenly into a supremacy almost as extensive as that which had been formerly exercised by Lacedæmon and Athens, had neither the institutions of the former, nor the local advantages of the latter, to ensure the duration of her power. It was an authority originating solely from a succession of favourable events, ably directed by a few men of extraordinary talent, and such as any state of Greece might, in a short

time, be again able to command. The first appearance of aversion from the control of Thebes discovered itself in the country of Arcadia. Lycomedes of Mantinea, who has been formerly mentioned as the leader of the Arcadians, perceiving that it was the object of Thebes not to promote the peace and general prosperity of Greece, but to raise herself into eminence, was determined to check her ambition; and calling an assembly of the Arcadian states, he so well represented to them the former and present importance of their country, that he persuaded them no longer to submit to a dependence upon Thebes, but to insist upon an equality in command. Arcadia still continued, it is true, the opponent of Lacedæmon; but these resolutions could not but excite suspicion and jealousy in the Thebans; and although no actual breach at this time ensued, yet the friendship subsisting between those states became gradually more cool and more precarious. Nor was this all; Elis had, for years, claimed a sovereignty over the Triphylia; and these latter people, whether really suffering under that oppression which is in such circumstances so commonly exercised by one state over another, or whether desirous to free themselves from a subjection, which is always irksome, applied to the Arcadians to assist them in asserting their independence. Their application was seconded by the inhabitants of Lasion, a strong hold in Triphylia, in which the Eleians had permitted some Arcadian exiles to establish themselves, with a view to restrain the inhabitants. The Arcadians listened to the application which was made to them, and passed a decree that the Triphylia and their countrymen should receive assistance. Thus commenced those hostilities, which gave rise to the contest of Olympia, and ultimately led to the battle of Mantinea, in which Epameinondas lost his life, and Thebes her supremacy, and by which the confederacy of Greece became completely broken.

Just at this crisis, Philistius of Abydos arrived in Greece, charged by Ariobarzanes, the satrap of Bithynia, to endeavour to promote a general peace. The events which followed shewed that this new interference of Persia in Grecian affairs, had been procured by the Lacedæmonians. A congress of the states of Greece was assembled at Delphi; and it was proposed to them by Philistius, that a peace should be concluded, but that as an indispensable requisite to its establishment, Messenæ should be replaced under the sovereignty of Lacedæmon. To this condition the Thebans expressed their determination not to accede; and all negotiation being thus abruptly terminated, war was renewed with equal, if not redoubled, violence.

Events seemed now to be taking an unfavourable course for Thebes, and there was some reason to apprehend that Lacedæmon, notwithstanding that she was, at present, so much depressed, might recover her supremacy. On the earth, the Thessalians had gained some advantage against the Theban arms; for the usual success of Pelopidas had failed him; he had been made prisoner, and although his liberation was procured by the able negotiation of Epameinondas, it had not been obtained without some concessions. Thebes was, therefore, pressed on the north by the Thessalians; in Peloponnesus, Arcadia had become cool in her cause, and dissension had occurred between that state and Elis; Athens was still cordial in her sup-

Dissension of the Theban confederacy.

Interference of Persia to promote a general peace.

Attempt of Thebes to acquire supremacy by the interference of Persia.

Biography. port of Lacedæmon; and, to add to all this, a body of mercenary troops, procured by the influence of Philiscus, and paid with Persian gold, were now opposed to her. But Epameinondas, who had shewn himself superior to events much more adverse than these, discovered that his mind was still fertile in expedients; and as he had already seen the effects which had been so frequently produced in favour of Lacedæmon by means of negotiation with Persia, he was resolved to have recourse to that expedient, and to endeavour to foil Lacedæmon in negotiation, as he had already done by arms. At a congress of the Theban confederacy Pelopidas was chosen as the minister of Thebes, and sent to Susa; and so successful was he in his embassy, that a Persian of rank was appointed to accompany him home, and to bear from the king a rescript of those terms upon which his friendship was to be obtained. By that document it was required, "that the Lacedæmonians should allow the independence of Messenia; that the Athenians should lay up their fleet; that war should be made upon them if they refused; and that, if any Grecian city denied its contingent for such war, the first hostilities should be directed against that city: that those who accepted of these terms would be considered as friends of the king, those who refused them, as enemies." A congress of the states of Greece was summoned by the Thebans to meet at Thebes, to learn the terms of the message of the Persian monarch, and it was generally attended. But, though the summons had been so readily obeyed, yet the Thebans did not gain, from this assembly, that advantage which they expected: for, when they proposed that an oath, swearing to the observance of the terms of the rescript, should be taken by each deputy, the majority of them refused to accede, observing that they came not to take oaths, but to listen to propositions. Nor was this the sole opposition which was offered to the attempts of the Thebans. Pelopidas, for some reasons of policy which have not been satisfactorily explained, had treated Antiphus, the Arcadian minister at the Persian court, with such marked disrespect, that he drew down upon the Arcadian the contempt of the Persians. With whatever view, however, this contempt may have been shown, it was determined that the Thebans should now feel the full effect of it. Antiochus, however unfitted for the delicate management of an embassy, was a man of bravery and of spirit; and, on his return to Arcadia, by rousing the indignation of his countrymen against the Thebans, he prevailed with them so far that they made choice of such deputies as were known to be most opposed to the pretensions of Thebes. When the oath, therefore, was tendered to Lycomedes, he not only refused to take it, but he pertinaciously insisted that Thebes was not the place where the congress should have been assembled: and, upon a remonstrance on the part of the Thebans that he was promoting discord in the assembly, he declared his intention of resigning his seat in the congress, and immediately withdrawing himself from it, he was followed by the rest of the Arcadian deputies, the congress instantly breaking up, without coming to any conclusion. Thebes, being thus thwarted in her object, determined to attempt by private requisition, what she had been unable to accomplish by means of a public assembly: but her hopes of success by this

means were equally frustrated. The Corinthians who were the first to declare that they declined the interference, and wanted no alliance with the king, were followed by most of the cities of Greece: and the attempt of Thebes to acquire supremacy, through the influence of Persia, completely failed.

The next disaster which befel Thebes is to be imputed entirely to the impolitic and intemperate cruelty of her own conduct. That extent of country, which, in ancient Greece, was known by the name of Achæia, was more divided into a number of petty states, under distinct governments, than any other division of Greece: and those states had, for ages, alternately acknowledged aristocratical or democratical dominion, with the preponderance of the power of Lacedæmon or of Athens. Since the time of the destructive defeat of the Athenians, in Sicily, the Achæian states had remained quiet under aristocratical administration; and during the contest between the Thebans and Lacedæmonians they had, as yet, preserved a strict neutrality. But the ambition of those, who were the leaders of the democratical faction in Achæia, had been recently excited by the rise and the success of Thebes; and a deputation from those leaders being accordingly sent to the Thebans, at present dejected by her failure at the congress, they not only easily procured assistance, but it was granted to them with an alacrity which discovered the eagerness of the Thebans to seize upon any occurrence, by which they might, possibly, re-establish their credit. In consequence, an army of the confederacy, under the command of Epameinondas, was ordered to march to the assistance of the democratical leaders of Achæia; and repelling the opposition, which was offered to it by the Lacedæmonians and Athenians in the passes of Mount Onceia, it entered Peloponnesus without much molestation. Here it was quickly augmented by the force of the Peloponnesian allies. The principal men in Achæia perceiving the futility of any resistance which they could oppose to so large a body, determined to rely on the magnanimity, and throw themselves upon the mercy of Epameinondas, rather than either attempt to contend against his arms, or betake themselves to the miserable resource of flight. Nor did they deceive themselves in the expectation of the advantage which they were to derive from this policy. Epameinondas executed, it is true, the trust which had been reposed in him by his countrymen and their allies; he insisted upon the inviolate preservation of the constitution of each city, and he required pledges that the Achæians would be faithful to the Theban confederacy, and that they would support Thebes with their arms: but he did no more; and neither banishment nor confiscation of property, much less the horrors of assassination, the two constant attendants of revolutions in Grecian governments, followed as consequences of his measures. What might have been the effect of this leniency there are no means of judging; but we shall soon have occasion to see, that harshness would not have allied Achæia to Thebes. Although Epameinondas was the able, almost the sole director of the councils of Thebes, and the victorious general of her armies, yet as he was one of those rare and extraordinary men, who have too much firmness of character and integrity of conduct to bend to those mean artifices, by which the hearts of the multitude are usually gained, so he was not always able to

ensure that approbation of his conduct, which his services to his country deserved. In Achaia he had, on this occasion, excited against himself the clamour of all those, who expected to have risen upon the ruins of their opponents; many of the confederates, and particularly the Arcadians, were loud in their remonstrances, that the interest of Lacedæmon, not that of the confederacy, had been consulted in the settlement of Achaia; and such was the effect of this opposition, aided by the influence of a party within Thebes, that in the assembly of the citizens, Epameinondas was unable to support his own measure. Thebes assumed to herself the character of champion of the liberties of Greece: and persons, under the denomination of regulators, were sent into Achaia to reduce the government of every city to that of a pure democracy; a measure by which every man of property was banished from his country. But this sudden prosperity of the multitude was destined to endure but for a season. The exiles were numerous, and all possessed some influence in their respective towns. Directing their united exertions against each separately, their efforts were effectual; they soon recovered that authority of which they had been, with so much violence, deprived; their adversaries were, in their turn, persecuted and banished; and the whole of Achaia, before a neutral power, entered into strict alliance with Lacedæmon, and became the avowed enemy of Thebes.

Policy of
the Lacedæmonians.

It is necessary that a brief consideration should now be given to that policy which was at present pursued by Lacedæmon; and a more correct view of it cannot be displayed than by relating her conduct towards the Corinthians. The situation of Corinth, in peace the most enviable in Greece, became, in war, from the position of that city between the northern and southern states, the most exposed, and the most dangerous of any. Unable, by her own power, to withstand the attacks of the Theban confederacy, if these should be directed against her, she was forced to rely upon the assistance of some neighbouring power for defence; and cut off, as she now was, from Lacedæmon, by the intervention of Arcadia, Elis, and Argolis, she had so entirely reposed for support upon the Athenians, that she incurred the danger of becoming an Athenian dependency. An imprudent speech of one of those popular orators who were, in Greece, so frequently undoing the exertions of her wiser statesmen, had excited her jealousy of the Athenian intentions; and had induced her to relapse, not indeed without every degree of care and caution, the Athenian auxiliaries that defended her garrisons, and to refuse the admission of the Athenian fleet within her harbour. But when Corinth threw off the assistance of Athens, it was necessary that she should provide against the dangers to which such a step might expose her; she accordingly directed her views towards Thebes; and, communicating with that state, and meeting with every encouragement to send ministers to it, she received full permission to give to her allies information of her intentions, that those who were desirous of peace might have an opportunity of becoming parties to the treaty. The Corinthians then dispatched a deputation to Lacedæmon, to represent to the Lacedæmonians, that if they could show by what means they might resist the force by which they had been so long and so severely op-

pressed, they were still anxious to adhere to that alliance with them, in which they were now engaged, and to which they were bound by every tie of old and hereditary friendship. That if the Lacedæmonians could not give them this assurance, their first wish was, that they would join with them in endeavouring to procure, from the Theban confederacy, the best terms they could, as the sole means of preventing that ruin with which both were equally threatened. And that, if the Lacedæmonians were themselves averse from peace, they would release the Corinthians from their obligations, and permit them to make peace for themselves; "for," continued the deputies, "our destruction can bring no benefit to our allies, whereas, if we are preserved, we may still, on some future occasion, be useful to Lacedæmon." The answer of the Lacedæmonians was highly magnanimous, as far as concerned themselves; generous and liberal, with regard to the Corinthians; and displayed, as was fully confirmed by subsequent events, a wise and prudent policy. They allowed the Corinthians to make peace for themselves; they declared their willingness to release from their engagements, not only the Corinthians, but those of their other allies, who might be averse from continuing the war; but "for ourselves," they concluded, "leaving the event to God, we will persevere in arms, and over submit to be deprived of Messenia, our inheritance, received from our fathers." The wisdom of the Lacedæmonian policy was apparent from the subsequent conduct of the Corinthians; for, although they entered into a peace with Thebes, by which it was conditioned that each party should hold her ancient territories as before the war; yet, refusing to take arms against their ancient allies and benefactors, they rejected every proposal of an offensive and defensive alliance. In this recital of the transactions of Lacedæmon with respect to Corinth, is contained a full view of the policy of the Lacedæmonians—a determination not to conclude any peace which should deprive them of their authority over Messenia, and not to force their allies into a reluctant co-operation in the war. To conclude a war, at this time, would be, at once, to deprive themselves of all those hopes of reducing Messenia, which the disposition of Arcadia towards Thebes, of Athens towards themselves, and the disunion among the states of the Theban confederacy gave them just reason to expect. And although by permitting their allies to enter into separate treaties, the nominal strength of Sparta was diminished, yet, whatever advantage Sparta might, in her prosperous days, have derived from a forced service, she could expect little from it in the declining state of her affairs; she could afford her allies no assistance, and she could not hope that the mere obligation of oaths would preserve them in fidelity against the pressure of the Theban arms. If she had insisted, therefore, upon their maintaining their obligations, she might have reduced them to the necessity of becoming enemies; whereas, by the generous conduct of freeing them from those obligations, if she lost their assistance, she prevented their opposition. At all events, Lacedæmon was still supported by Syracuse, now under the dominion of Dionysius the younger, who had determined to continue and to support the plans which had been pursued by his father. When the season of war returned, a body of auxiliaries arrived from that

Bioerzby. state, by whose assistance, joined to that of their own force, the Lacedæmonians recovered the important town of Scellasia, which since the Theban invasion had continued in the hands of the insurgents.

The expectations of the Lacedæmonians, with regard to the probable course which events would take in Peloponnesus, were not fallacious. A dissension between the aristocratical and democratical parties of Elis, gave occasion for the interference of the Arcadians in favour of the latter; and the Eleians, already irritated by the conduct of the Arcadians, with respect to Triphyly, took arms to revenge their injuries, and were successful in making themselves masters of the Triphylian town of Lasion. In consequence, the collected force of Arcadia was marched to the invasion of Elis; after defeating the Eleians in action, it directed its march towards Olympion, and placed itself in a situation to command the Olympian mountain; and it was ultimately successful in besieging Pylus, and in establishing in that town a colony of Eleian exiles. The further progress of the Arcadian arms was stopped by the interference of the Achæans, who saw their own ruin involved in the fall of Elis, which was now threatened by the Arcadians. The Achæans professed their friendly inclination towards Arcadia, but intimated at the same time their determination to protect Elis; and the Arcadians, finding that they gave efficacy to their determination, by sending a body of troops to support their enemies, thought it prudent to listen to an intimation so powerfully enforced, and they withdrew from Elis, after having ravaged the country, and confirmed the democratical Eleians in their possession of Pylus. In consequence of these occurrences, Elis returned to her alliance with Lacedæmon.

Conspiracy in Boeotia. In this distraction of their Peloponnesian affairs, the attention of the Theban leaders had been fully occupied by disorders in Boeotia itself. An inveterate antipathy had, almost from the heroic ages, subsisted between the Thebans and Orchomenians; and, although Orchomenus had been at length brought to acknowledge the supremacy of Thebes, yet, in that city, the aristocratical still continued to be the leading faction. These communicating with the aristocratical party of Thebes, which was still numerous, notwithstanding that its leaders were banished, formed the plan of a revolution; and fixed upon the review of the Boeotian cavalry, which it was the practice of the Theban rulers occasionally to make, as the time best fitted for carrying their plan into execution. But the Boeotians were, in the meantime, informed both of the nature and of the extent of the conspiracy. The Orchomenian cavalry, amounting to three hundred in number, were instantly seized, carried in chains before the Theban people, and executed. Even this cruel measure did not satiate the vengeance of the Thebans. It was decreed by the assembly of Thebes that Orchomenus should be levelled with the ground; an army was, in pursuance of that decree, marched against it; and Orchomenus, being incapable of offering resistance, yielded herself without opposition to the Thebans. Her merciless victors, instigated more by the remembrance of their ancient enmity against the Orchomenians, than impelled by the fear of any danger which they had occasion to apprehend from them, put every man to the sword, and sold into slavery every woman and every child.

After this conclusion of the Orchomenian conspiracy, so fortunate for Thebes, the Theban rulers, prevented by the situation of Peloponnesus, from the prosecution of hostilities against Lacedæmon, directed their attention towards Thessaly, where the oppression of the Tagus, Alexander of Pheræ, had induced new opposition to his authority. Alexander was sufficiently powerful to overbear his opponents; and the malcontents sent to Thebes, with the view of procuring assistance. Pelopidas, the general of their choice, led, in consequence, an army of seven thousand men through the straits of Thermopylæ; but, incautiously risking a battle with Alexander, who had both the advantage of numbers and of ground, he fell in the engagement. Whether the Thebans, notwithstanding that their leader had fallen, gained a victory, or whether, the issue of the battle being doubtful, the Boeotian army was still numerous enough to afford protection to the party that remained in opposition to the Tagus, or whether, on a second occasion, a battle was gained by the Theban arms, remains doubtful; but, whatever may have been the cause, it appears certain, the event of the expedition was favourable to Thebes, and that an alliance was concluded between the Tagus and Thebes, highly advantageous to the latter.

War continued, in the meantime, to be carried on between the people of Arcadia and Elis. A defeat of the Eleians had induced Lacedæmon to interfere in favour of her ally, and she had been so far successful, as to possess herself of Cromnus, and to establish a Lacedæmonian garrison in that town; but she was ultimately defeated; and, at the time of the celebration of the festival of the hundred and fourth olympiad, the Arcadians were in possession of Olympia. They determined not to surrender the city to the Eleians for the celebration of the festival; but, as they could not assume to themselves the presidency, they committed the sacred trust to the Pisians, who had never ceased to claim the right against what they termed Eleian usurpation. The Eleians on the other hand resolved not to yield up what they considered as an invaluable inheritance transmitted to them by their forefathers; and, engaging the Achæans and their interest, they marched to Olympia, surprised the Arcadians in the midst of the celebration of the games, and gained a victory. They pursued them as far as the public and sacred buildings; but the vanquished, having there every advantage for defence, made a stand, and the victors withdrew to their camp. During the interval of the night, the Arcadians had exerted themselves so strenuously in fortifying their position, that the Eleians were afraid to renew the assault; and, as their revenue was not large enough to support them for any time at a distance from home, they were forced to retire to Elis, without having it in their power to reap any advantage from their success.

On the retreat of the Eleians, the Arcadians found themselves entire masters of Olympia, and at liberty to prosecute any measures that they might deem most proper. But the same cause, the want of sufficient revenue, which had prevented the Eleians from pursuing the advantage which they had gained, now impeded the operations of the democratical leaders of the Arcadians, and forced them into a measure of the boldest nature, that of seizing the Olympian treasury. Their aristocratical opponents, who formed no small party,

Biography. did not neglect this opportunity of exciting indignation, and rousing popular superstition. The Mantineaes, who seem to have been, at this time, principally guided by the aristocratical party, immediately dispatched a deputation to make offer of the proportion of pay due from them; and to protest, at the same time, against any sacrilegious use of the Olympian treasury. In consequence of this procedure, the leading men of Mantinea were cited to appear before the general assembly of the Arcadian states, to answer for conduct which was alleged to be treasonable against the united Arcadian government. The Mantineaes, doubting the impartiality of the tribunal, neglected to appear before it; but they were, in their absence, tried and convicted, and a body of troops were despatched for their apprehension. Those against whom they were sent, however, had not proceeded so far without being duly prepared for the result: they closed the gates of Mantinea, refused to admit those messengers who came in the name of the Arcadian assembly, and shewed themselves determined to act with most resolute opposition.

Remonstrance of the Arcadian assembly against Theban interference. During the interval in which these transactions had taken place, time had been afforded for reflection upon the enormity, in the eyes of a Greek, of that crime of which the democratical rulers of Arcadia had been guilty; and not only the whole of those who professed aristocratical principles, but many even of the democratical party, shamed by their superstitious feelings, and fearful of the divine vengeance, and the combined enmity of the whole of Greece, were ready to assist the Mantineaes. Even the Arcadian assembly passed a resolution, that no further trespass upon the sacred treasury should be permitted. The authors of the sacrilege, alarmed at this change in their affairs, and at the near prospect of being deprived of the only resource on which they had relied for the support of their power, sent ministers to the Thebans to request their immediate assistance. But no sooner was this measure, and the favourable answer of the Thebans known to the principal men of Arcadia, than they sent, under the authority of the sovereign assembly, to remonstrate against the march of Theban troops into their country; and, at the same time, passed a decree that the Arcadians had no right to the presidency of the temple; that religion justly demanded that it should be restored to the Eleians; and that there no longer existed any cause for continuing the war against Elis.

Conduct of the Theban commissioner at the congress of Tegea. The Eleians bend with joy of the resolution of the sovereign assembly; they were glad to conclude the war in a manner so honourable to themselves. They agreed to send ministers to meet the deputies of the Arcadian towns at Tegea, finally to arrange the terms of the treaty. At this congress, probably by some preconceived arrangement between Thebes and the democratical Arcadians, a Theban, accompanied by three hundred heavy-armed Boeotians, made his appearance. This occurrence could not fail to excite strong feelings of suspicion and alarm; but these altogether subsided, when the Theban, taking no objection to any part of the treaty, swore to the observance of it, along with the members of the assembly. In the evening joy pervaded Tegea; banqueting and every species of festivity marked the universal delight at the happy termination of hostilities;

and happiness was recorded in the countenances of all, except those who were the guilty perpetrators of the sacrilege. In their ears every peal of gay exultation rung like the warrant of their execution; they pondered in silent sadness over the fate that awaited them, and concerted together the means of their deliverance. They communicated with the Theban; and, learning from him that he had received instructions to afford them such support as circumstances might allow, they shut the gates of Tegea; and, sending parties round to seize the principal men of every Arcadian city, they succeeded in seizing so large a number, that not only the prisoners, but the town-house itself was filled with their prisoners. But the measures of the Theban and his friends were disconcerted by the spirited conduct of the Mantineaes. To Mantinea, distant only twelve miles, intelligence of the violence had been quickly communicated; and heralds were instantly sent from that city to Tegea, requiring that no Arcadian should be executed, nor even imprisoned, or detained in prison, without trial; and intimating at the same time, that the Mantinea state would be security for the appearance, before the assembly, of all those who might be accused of treason against the united government. In consequence of this spirited remonstrance, the Theban, fearful of the evil effects which his conduct might produce, liberated his prisoners; and, on the morrow, assembling at many Arcadians as he could collect, he excused himself by asserting that he had been misled by the false intelligence of a plot to deliver Tegea into the hands of the Lacedaemonians, and of the approach of a Lacedaemonian army. What credit soever his excuse might have met with, it was so far accepted, that he was allowed to depart in safety from Tegea.

But the Arcadians were determined not to allow so great an outrage to pass without a remonstrance on their part; and they sent ministers to Thebes to insist that the Theban should suffer death as the punishment of his crime. Epameinondas held the office of commander-in-chief; and to him the Arcadian ministers were referred. When they returned to Arcadia they reported, with what degree of truth seems not fully ascertained, that Epameinondas had declared that "the Theban minister, at Tegea, had done much better when he seized the principal Arcadians than when he released them; for the Thebans having engaged in the war only to serve Arcadia, any negotiation for peace, without communication with Thebes, was treason against the confederacy; that they might therefore be assured, that the Thebans would march into Arcadia, and with their numerous friends there, who were faithful to the common cause, would prosecute the war." The report of this answer threw the whole of Peloponnesus into agitation; Arcadian, Achaian, and Elis joined in exclamation against the presumption of Thebes to dictate war to them, against their inclination, within their own peninsula; and these states united in sending messengers first to Athens and then to Sparta, to request their assistance. From both they received the firmest assurances of support; but we cannot help remarking how forcibly the false state of the Lacedaemonians is evinced by the terms of the treaty to which they gave their concurrence. It was argued that the combined forces should be commanded by the general under the direc-

B. C. 363. Fourth invasion of Peloponnesus by Epameinondas.

Epameinondas had, in the meantime, been employing himself in making preparations for the execution of that threat, which he had given to the Arcadian ministers: and he had been successful in collecting an army sufficient, both in number and in power, to accomplish his object and to satisfy his utmost ambition. All the Eubœan towns, with those of Thessaly, and Locris were united in his interest, and sent large bodies of auxiliaries to assist him in the promotion of the war. With this army he hastened to cross the Isthmus, in order to prevent, as much as possible, any opposition that might impede him in the prosecution of his ultimate and most important object. At Nemea he halted with the view of obstructing the passage of the Athenians into Peloponnesus; but, learning that the Athenian government had anticipated his intentions by transporting their forces by sea to the coast of Laconia, he proceeded on his march to Tegea, where he was joined by his Peloponnesian allies. These consisted of forces from Argos, the constant and inveterate enemy of Lacedæmon; from Messenia, whose very existence depended on the success of the Theban cause; and from Tegea, Megalopolis, Ales, and Palantium; three cities of Arcadia that were in rebellion against the confederacy of their country, and for whose behalf, and at whose instigation Epameinondas had undertaken the present expedition. His whole force is stated to have amounted to thirty thousand infantry and three thousand cavalry. The army of the Lacedæmonian confederacy, in number much inferior to that of the enemy, assembled at Mantinea. They were composed of the whole of the cavalry of Lacedæmon, a body of mercenaries sent from that city, and a small proportion of Lacedæmonian infantry, Agesilaus having detained the greater part of them, to guard against any attempt upon Lacedæmon; and in these were added the troops of Athens, Achæia and Elis, and those of the most considerable part of Arcadia.

Epameinondas, remained for a considerable time inactive within the walls of Tegea that he might the better preserve his own army from attack, and observe with the more facility the operations, and judge of the intentions of his enemies; that he might afford the longer time for the accession of those hostile or neutral states, whom the terror of his name, and the force of his army might induce to join the Theban cause; and that he might watch the opportunity of some change in the measures of his enemies, who possessed, in their position at Mantinea, so much the advantage of ground, as not only to forbid the hazard of attack, and to remove the hopes of success, even from his superiority of numbers, but to prevent also the usual work of ravage. The opportunity for which he so anxiously longed soon presented itself. The army of the enemy it is true, continued to preserve that advantage of position which they had so ably chosen: but the allies became impatient of rest; the quietness of so large an army, even in the command of a general of such ability and such experience as Epameinondas, gave the suspicion of a depth of plan

which they could not penetrate, and forced them to dwell with awe and fear upon the destructive explosion which must soon ensue; and they felt so dissatisfied that the Lacedæmonian infantry should remain at home, when there was little chance of danger, and should expose them with such inferior numbers to so superior a force; and they became so loud in their remonstrances, that the Lacedæmonian government found it at last requisite to yield; and they despatched almost the whole of their remaining troops to Mantinea, under the conduct of Agesilaus.

As soon as this event became known to Epameinondas, and he was assured that Agesilaus had reached Pallene, he issued orders to his troops immediately to march towards Sparta. So little expectation had his enemies of this measure, that the Theban general found the best and most direct road from Tegea to Sparta completely undefended; and the Lacedæmonian capital must have fallen without opposition, if Agesilaus had not received, from a Cretan, accidental intelligence of the proceedings of the Theban troops.

In consequence of this information, however, the return of the Lacedæmonian troops had been so rapid, that when Epameinondas arrived in front of Sparta, he discovered that Agesilaus had anticipated his intentions, and had made so able a disposition for defence, that he abandoned all hopes of succeeding by a direct attack. He accordingly sent a detachment by a circuitous route, and succeeded in taking possession of a height which commanded the town. But for some cause, so extremely inexplicable that Xenophon has referred it to the interposition of the Deity, when Archædamus advanced to attack the height, with less than a hundred men, the Thebans, without waiting for the assault, fled hastily, and some of their principal men were slain: and, although the Lacedæmonians, in the eagerness of their pursuit suffered some loss, yet Archædamus continued in possession of the ground, carried off his dead, and received from the Thebans an acknowledgment of his victory, by a solicitation, on their part, for the bodies of their slain. This discomfiture convinced Epameinondas of the hopelessness of gaining any rapid success against his enemies; and his want of supplies in a mountainous district, depriving him of all expectation of being able to remain long enough to effect his purpose, he came to the resolution to withdraw from Laconia. But the fertility of his genius suggested to him, on the abandonment of this project, the adoption of a measure which promised ample success. As long as he remained at Tegea, the terror of his arms had kept the Mantinea within their walls, and prevented them from reaping their crops, which were then ripe; and conceiving that they would take advantage of his absence, he determined to proceed by hasty marches to Mantinea, in the hopes that he might be able, by surprise, to possess himself, not only of the produce, but also of the slaves and cattle of the Mantinea.

By the extraordinary rapidity of his march, Epameinondas arrived within the Mantinea territories before the enemy had the slightest intelligence of his movements, and he found them exactly in that situation which he had pre-conceived. The harvest was ready for carrying, and the whole of the slaves, and many of the inhabitants, were in the fields, busily employed in collecting the crops, and unsuspecting of

the slightest danger. But the present adverse fortune of Epameinondas had not yet forsaken him. The Mantinea had desisted the approach of his cavalry in time to procure the assistance of a body of Athenian horse that had just reached Mantinea after a forced march of two days; they represented so strongly to their allies the urgency of their situation, that they consented immediately to remount, and to risk an engagement with the renowned, and more numerous, cavalry of Thebes and Thessaly; and, although the skirmish was for some time obstinately maintained by both sides, yet the victory, on the part of the Athenians was, at last, so complete, that they not only received a solicitation from the enemy's cavalry for a truce to enable them to bury their dead, but they frustrated so entirely the plans of Epameinondas, that the Mantinians were able, with safety, to secure their property.

The affairs of the Thebans had now arrived at such a crisis, that it was necessary for Epameinondas to attempt something important; and, as well the situation of his army, as the limited term of his expedition, the situation of his allies, no less than his own honour, had even his safety on his return to Thebes, demanded that he should risk an engagement. The army under his command had already suffered from want; and, as in an enemy's country he had no means of supplying them with provisions, so the revenues of those states, who had assisted them with their forces, was inadequate to maintain those forces at a distance from home. The period was fast approaching when he must resign his command, and terminate his expedition. Epameinondas, therefore, declared, in public, his resolution to encounter the enemy; and the joy of his army was strongly evinced by the alacrity with which they prepared for battle; while the renown of the Theban name was shown by the flattering application of some Arcadians to be admitted into the corps of Theban clubmen, a body, probably, less renowned from their use of the weapon, from which they took their designation, than from the valour which the remembrance of the deeds of Hercules inspired. At an early hour of the morning, Epameinondas arrayed his troops in order of battle, marched to the foot of Mount Mantalus, and fixing upon a strong position, made preparations as if he intended to encamp. By this feint he completely deceived his enemies; who, conceiving that he had abandoned all intention of fighting, almost entirely dissolved that order of battle in which they had previously arrayed their troops.

Battle of
Mantinea.
B. C.
363.

As soon as Epameinondas perceived that his enemies had been completely misled by his feint, he gave immediate orders for his troops to resume their arms, and to prepare for battle. He arrayed them neatly in that order in which he had placed them on the fortunate day of the battle of Leuctra; and as he had now less chance of being encompassed from the superior number of his army, he was enabled, with more safety, to increase the depth of the phalanx. As it was his intention to direct his principal attack against the right wing of the enemy, he posted the Theban column in front of his left wing; and arrayed his cavalry in squadrons on the flanks of his infantry. By increasing, as much as possible, the strength of

the cavalry of his left, which he intended to commence the charge, he so much weakened those of his right, that he ordered them to retire to advantageous ground, and not to relinquish their position, unless an opportunity of evident success should present itself. Although the enemy had discomposed their order of battle, they had made no arrangements in case of necessity to avoid an engagement, and they were thrown into the utmost confusion when they observed the approach of Epameinondas. But they had time, before the Theban general could commence the attack, to recover their order; and the Arcadians, according to the previous terms of the treaty, occupied the right as the most honourable post; the Lacedæmonians held the apex position, and the cavalry were placed in squadrons on the flank. The action was commenced with the cavalry on both sides. But the Lacedæmonians, being totally deficient in those light troops which were accustomed to act with horse, and in which the Thebans abounded; not being also much inferior in numbers, were quickly repulsed. An engagement then ensued between the Theban and the Lacedæmonian and Arcadian infantry, which was continued for some time with such deterained obstinacy on both sides, that the issue was for long doubted. But the firm perseverance of the Thebans, at length, gave them the superiority; the ranks of the enemy were completely broken; the best part of their line took to flight, and, as had been the case at Leuctra, disunity immediately seized the remainder of the army, and they gave way on all sides. But, at this moment, when victory was complete, Epameinondas received a wound in his breast and was carried from the field. The army of the Theban confederacy, deprived of their general, of the man who alone could command authority over a body composed of troops of so many different states, was seized with consternation, and thrown into confusion. They remained, indeed, in possession of the victory which they had gained; but so great was the panic with which they were seized, that they continued almost motionless, and were rendered totally incapable of pursuing the advantage. The death of Epameinondas is marked with a magnanimity, which was well worthy of the former valour and glory of his life. As soon as he sufficiently recovered, he asked of his attendants if his shield was safe. When he learned from them that it was, he next inquired if the Thebans had gained the victory. And being also satisfied in this respect, he immediately gave orders for the spear, with which he had been transfixed, to be withdrawn, and died expressing the utmost joy at the event of the battle.

The consequences of this engagement have been thus briefly, but concisely detailed by Xenophon. Universal expectation, he observes, was strangely deceived by this event of so great a battle. Almost all Greece being met in arms, there was nobody who did not suppose that the victors would, in future command, and the defeated must obey. But God decided otherwise. Each party gained the victory, and neither gained any advantage, territory, town, or dominion, was acquired by none; but indecision, and trouble, and confusion, more than ever before that battle, pervaded Greece.

THIS distinguished prince, who was destined to act so prominent a part in the affairs of Greece, ascended the throne of Macedon about three years after the battle of Mantinea. On this account, his life will supply a convenient link for connecting together the history of the several states, which, after the death of Epameinondas and the decline of Theban power, strove for that ascendancy over the neighbouring republics, which the illustrious commander just named had placed, for a short time, in the hands of his countrymen. Before, however, we revert to the state of things which arose from the altered relations of the Grecian confederacy, and which ultimately opened a path for the ambition of Philip and the final establishment of the Macedonian dominion, we shall proceed to abridge a few of the particulars which have been handed down by contemporary writers, concerning the education and early character of the remarkable person whose exploits we are to record.

Philip, according to the best authorities, was the third and youngest son of Amyntas, king of Macedonia. The eldest brother, whose name was Alexander, fell, in early life, a victim to the ambitious views or vindictive spirit of a powerful relative, who appears to have aimed at the sovereign power. Perdiccas, the second in order, succeeded to a weak and divided government, and would, in all probability, have sunk under the combined weight of foreign and domestic hostility, had not Pelopidas, that just and prudent general, interposed his prevailing authority, and secured, under the sanction of the Theban name, the hereditary throne which belonged to the son of Amyntas. Relieved from the menaces of his opponents, Perdiccas declared himself the friend and ally of Thebes; and as a security for the performance of every thing required on his part, he committed to the custody of Pelopidas, as hostages for his good faith, the person of his brother Philip, together with thirty youths of the first distinction in Macedon.

Education of Philip.

The confidence thus placed in the noble Theban was not shewed. On the contrary, all the biographers of Philip agree, that to this incident in his history may be attributed no small share of his future eminence, and particularly of that extensive influence which he afterwards exerted over the sentiments and politics of the leading Greeks. The young prince was established in the family of Polydamus, the father of Epameinondas; and the same tutors who had formed the mind of this renowned soldier, were procured and appointed to direct the studies of the interesting stranger. The literature, the manners, and the virtues of Greece were thus rendered familiar to the susceptible genius of Philip; and what was unquestionably the greatest advantage of all, he enjoyed the conversation and example of Epameinondas himself. Spirited and exalted sentiments, and an invincible love of glory, marked, at an early period, the character of the Ma-

cedonian prince; and this bias of his nature was encouraged and confirmed by his habitual intercourse with the son of the high-minded Polydamus. From the great Theban, too, he learned activity and vigour in all military operations; address and activity in improving all opportunities, and in turning to advantage every incident which presented itself amid the various fortunes of war. It has, indeed, been observed by Plutarch and others, that it was only in regard to such qualities as constitute a successful general, that Philip lent a ready ear to the instructions of his preceptors, and shewed an ardent imitation of the example of his illustrious friend. In justice, and clemency, and true magnanimity, says the biographer now mentioned, Philip was not to be compared to Epameinondas.

We have no means of ascertaining at what time or from what change in affairs the royal hostage ceased to have his constant residence at Thebes. It appears certain, however, that he was permitted to travel into other parts of Greece, where, under the direction of able masters, he devoted himself to the study of the manners, views, dispositions, and interests of the several individuals or states which, at that period, engaged most of the public attention. The arts, the learning, and elegance of Athens, he seems to have particularly studied and admired. With the learned men of that city, he formed connections which continued the whole course of his reign. He revered the lofty genius of Plato, and was well received by that philosopher in return. He paid due respect to the rising name of Theophrastus, whilst he enrolled the elegant Isocrates in the list of his dearest friends. Nor was the intercourse which he maintained with Athens exclusively devoted to the cultivation of his talents or the improvement of his taste. The political state, also, of that important capital, the passions, the views, and even the corruptions of its inhabitants, were objects which gained his attention and extended his knowledge of human nature. No man ever knew better than Philip all the weakness and all the strength of the Athenian character: and no one was more ready to esteem their good qualities, to despise their faults, and to derive advantage from their prejudices, violence, and fickleness.

In the course of his travels, he procured for himself the honour of initiation into the grand mysteries of Ceres, at one of the celebrations of which he first met with Olympias, the second daughter of the king of Epirus, and at that time highly distinguished by the beauty and grace of her person. He is also supposed to have accompanied Epameinondas in some of those expeditions which raised to such a height the military reputation of that great Theban, and to have studied under him the practical details of the art of war, which can be learned nowhere but in the field of battle.

The time, however, was fast approaching when the exigencies of his paternal kingdom demanded his

Biography. presence, and gave full scope to the exercise of his natural talents as well as of his acquired skill, in the arduous duties of a commander and statesman. The conflict with the Thessalians, in which Pelopidas lost his life; and the still more momentous struggle at Mantinea, where Epameinondas died the death of a brave soldier, had deprived Macedon of her best friends and most efficient allies, and left her almost single handed to maintain an unequal warfare with Athens, as well as with the barbarians who dwelt on her own borders. Bardyllis, the veteran king of the Illyrians, availing himself of the circumstances now mentioned, and having no longer before his eyes the fear of Thebes, or the terror of her victorious generals, seized the opportunity of renewing upon Macedon a claim for tribute, said to have been paid by former sovereigns, and particularly by Amyntas, the father of Perdiccas. A refusal on the part of the Macedonian led to a trial of strength in the field. The valour of each army was equal; but the Illyrians were better disciplined and better commanded, and found no difficulty in gaining a complete triumph. Perdiccas, who endeavoured to make heavy stand in the place of military skill, fell covered with wounds; whilst the poor remains of his army, of whom more than four thousand were cut to pieces, were obliged to lay down their arms and submit to the mercy of the conqueror.

Ascends the throne of Macedon.

The throne of Macedon being thus rendered vacant, Philip was called upon to succeed his brother at the helm of affairs, either in his own right or in that of an infant nephew, the son of the late king. We are assured by Diodorus that Philip was still detained at Thebes in quality of a hostage, when the news of the total defeat of the Macedonians and the death of their king reached his ears. But it is more probable that, as Athenæus has recorded, he was already in one of the frontier provinces exercising a separate authority, or even possessing a portion of royal power, as was sometimes permitted to the younger branches of his family, when the serious reverses sustained by his countrymen opened a path to the painful pre-eminence of ruling a divided people, and of commanding a vanquished army.

Circumstanced as Macedon was, at this conjuncture, a prince whose only virtue was courage, must necessarily have completed its ruin; and one who possessed less of this virtue than Philip, would not have attempted to re-establish it. The greater part of its forces had either perished in the field, or been taken prisoners by the enemy; and the Illyrians had scarcely gratified their rage for plunder, when the Pæonians, a barbarous and warlike people, who inhabited the mountains of Macedonia, descended into the plains, to complete the work of destruction which the others had begun. Ancient pretensions also to the sovereignty of this unhappy kingdom were once more renewed, on the part of two powerful competitors. Pausanias, whom Iphicrates had set aside, openly asserted his right to the throne, and was now ready to invade the country, at the head of a large army of Thracians, who were induced to support his title. Argæus too, the ancient rival of king Amyntas, had a strong party to some of the principal towns; whilst the people of Atheos, resenting the conduct of the late king Perdiccas, in joining the Theban confederacy, and opposing the Athenian claim on Amphipolis, sent Mantius to second his attempt, with a strong fleet and three thousand soldiers.

Philip was not dismayed at these formidable preparations to dispute his succession. Deriving from nature great strength of mind, and having rendered himself a complete master of human motives, his first cares were exerted to revive the courage of the Macedonian people, and to restore discipline to their broken and dispirited army. On this occasion, as through the whole course of his public life, he availed himself of the superstitious feelings of his countrymen; and either invented or brought to their recollection the remarkable response of the oracle, which portended that Macedon should rise to the very highest pitch of greatness, under a son of Amyntas, of whose family Philip was now the sole survivor. Having thus identified his own person with that of the prophetic hero, this enterprising prince had no difficulty in rousing his subjects to new efforts. Reminding them of their ancient prowess, he set before them the brilliant rewards of military toils; and by the exertion of an irresistible eloquence, he kindled in their hearts at once the love of glory, the desire of revenge, and the animating glow of ambition. The warlike genius of his character displayed itself in a variety of improvements, applied not only to the constitution of his army, but more particularly to the art of employing their energies in the presence of an enemy: and in a short time the forces of Macedon, so lately vanquished and despised by a barbarian general, struck terror into the best disciplined ranks, and snatched victory from the most experienced troops of Greece. The phalanx was long a memorial of the fine talents of Philip, and the means of his greatest triumphs. The weight and valour of its files bore down all opposition among the armies of the east; and even the victorious legions of Rome gave way before the impetuous thicket of spears, and the huge mass of physical strength with which its onset was accompanied.

The Illyrians having retired, or being driven from a territory which they had nearly exhausted, and the Pæonians shewing no disposition to carry on a war merely for the sake of reputation, against so active a leader as Philip; there remained in the mean time only the Athenians, with their ally Argæus, to exercise the vigilance and employ the arms of the Macedonian commander: but the power and opportunities of these antagonists were extremely formidable. The Athenian fleet under Mantius anchored before Methonæ, a city placed on the Thermaic Gulph, and at that time in subjection to the government of Attica. Here Argæus joined with such forces as he had been able to raise, and proceeded forthwith to lay siege to Edessa, or Egæ, the capital of the Macedonian province of Pieria, hoping that the fall of so important a place would immediately produce the submission of the rest of the kingdom. The name of Philip, however, had already given confidence to his partisans, and prepared them for a vigorous resistance; and accordingly, when Argæus appeared before the walls of the devoted town, he saw so little prospect of success, that it became his immediate care to prevent the destruction of the troops committed to his charge; and with this view he adopted the instant resolution of effecting a retreat to Methonæ. But this contingency had been foreseen by Philip, who attacked him on his

march, and after a smart engagement. In which Argæus fell, succeeded in making prisoners nearly the whole of the army. Such of these as were Macedonians, the prince, without hesitation, incorporated with his own ranks; whilst, in the spirit of a liberal generosity, he sent the Athenians home, loaded with kindness, and full of respect for their youthful conqueror, to lay the foundation of that popularity on which he afterwards built his fame and influence as the ruler of Greece.

To deliver his western frontier from the constantly menacing attitude of the Illyrians, Philip resolved to anticipate the movements of that active enemy by making an inroad upon them. The veteran Bardyllis, though now passed his nineteenth year, appeared at the head of his forces to oppose the Macedonians; and in a battle which ensued, he acted with a spirit and activity worthy of his former fame, till he fell fighting, surrounded by seven thousand of his bravest soldiers. A victory so signal was attended with the most important consequences. Illyria became a Macedonian province; and instead of being as formerly, a perpetual source of annoyance, it added greatly to the strength and repose of the rising kingdom of Philip.

Having thus subdued his turbulent neighbours, and extended his sway further than any of his predecessors had done, the active mind of the youthful king was now fixed upon the aggrandizement of his states, and upon the acquisition of a degree of power which might make itself felt in the remotest parts of Greece. Such projects soon brought him into contact with the leading republics of the south, and, in particular, roused against him all the suspicions and military strength of Athens.

To understand, however, the circumstances in which this youthful prince first tried the fortune of war in opposition to the Athenians, we must revert for a moment to the condition wherein the leading states of Greece found themselves placed, immediately after the battle of Mantinea.

State of
Greece.

During the arduous struggle between Thebes and Lacedæmon, the influence of Athens was gradually on the increase; and after the fall of Epameinondas, the supremacy departed from his country; whilst its rival, Sparta, was too much reduced to have the power of securing the prize for which it had spent its best blood and treasure. But the Athenian people were already beginning to feel the subduing force of a more dangerous enemy than even the sword of Theban or Lacedæmonian: they were fast becoming the victims of effeminacy and ostentation; and in proportion as they had less to fear abroad, they allowed themselves to become more licentious, giddy, and extravagant at home. Devoted to public amusements, they spent much of their time in the theatre, and lavished on such places of public resort, together with the baths, the shows, and the festivals, the greater portion of that wealth which should have been employed in strengthening their interests, and creating means of defence. The toils and privations of actual war could no longer be endured by the soft citizen, the lover and patron of the arts; and mercenaries accordingly were sought on all hands to fill up the ranks of the phalanx, and even to occupy those posts of honour in the field, once so ardently coveted by the brave contemporaries of Cimón and Miltiades. The stern eloquence of Demosthenes, and his moving appeals to

their fears and to their pride alternately, produced but weak resolutions or transitory efforts, when the luxurious Athenian, thinking the alarm false, or the danger gone by, returned to his music, his poetry, or theatrical entertainment, leaving the orator to exaggerate, and the multitude to applaud.

Sparta, as we have already observed, had been greatly weakened by the successes of Thebes, and still more by the wise policy of her great leader Epameinondas. He withdrew from Lacedæmon the more powerful of her dependents, by encouraging Argos to turn her arms against her; by exciting the Arcadians to establish their independence, and by enabling the Messenians to rebuild and fortify the city from which their ancestors had been expelled by the unfeeling dictates of Sparta. In this way was she surrounded by many secret or declared enemies, who had felt her oppression, and who therefore were resolved to prevent the restoration of her power; whilst she, regarding them as revolted subjects, shewed the utmost desire to reduce them to their former obedience. Hence arose a spirit of discontent and dissension among the inhabitants of Peloponnesus; which it was Philip's interest to keep alive, and from which he afterwards drew no inconsiderable advantage.

The Thebans again, whose mental qualities were not of the highest order, possessed little hold upon the reverence or submission of Greece. Obstinate and brave, they were equal to every thing under the guidance of Epameinondas, whose talents had rendered them sovereigns of Boeotia, and arbiters of the neighbouring states. But the battle of Mantinea had closed this reign of glory, two summers before Philip ascended the throne; and all that now remained to them of their proud character was only its fierceness and ambition. From them, therefore, the Macedonians had nothing to fear: and it is farther deserving of notice, that the only general they had, after Epameinondas, was Pammenes, the early and devoted friend of the aspiring monarch whose life is now before us.

The Phocians and Thessalians were by no means formidable, either for genius or power. The former, indeed, were brave, determined, and persevering; and in this protracted war with the other states of Greece, they displayed a degree of military skill and fortitude which shed no small lustre over their fall. At the period, however, more immediately under consideration, Phocis presented no serious obstacle to the ambitious views of Philip. The people of Thessaly too, noted for fickleness and the love of change, pursued a line of policy so completely subversive of their independence, as soon to throw into the scale in favour of Macedon the full weight of the power which a clearer view of their own interest would have led them to employ against her. In recompense for the assistance which he lent them to expel the tyrants Tisiphonus, Pitholaus, and Lycophron, they gave to Philip the liberty of using, and even of commanding their ports and shipping. Their cavalry too, the best and most celebrated in Greece, was appointed to accompany him in all his campaigns; and thus, by means of a gentle and affable address, and by affecting the greatest moderation amidst the most splendid success, he secured to himself all the advantages of conquest, while he avoided the opprobrium attached to a selfish policy and ambitious views.

Philip of
Macedon.

Biography. From this brief survey of the several members of the Grecian body, it is manifest that Athens was, in all respects, the most formidable, and possessed of the most extensive influence. The prudence of Philip's administration, therefore, naturally dictated to him the expediency of cultivating peace in the meantime, at least, with this ambitious though degenerate state. To secure the favour of the Athenians, accordingly, it would appear that he offered the assistance of his arms to repress the power of the Olynthians, and to recover for his new allies the possession of Amphipolis, a city which they had formerly held, and the command of which they now most ardently coveted. Amidst much doubt as to the terms and object of this alliance, it is clear that a plan was concerted between the Athenian and Macedonian governments for the reduction of Olynthus by their combined arms. It is also ascertained, that the first movements made to realize their purpose were attended with success. Potidea yielded to the attack of Philip; and Torone, a place of importance, submitted to the confederates; both of which received Athenian garrisons, and owed the Athenian power. Olynthus thus hemmed in, and deprived of the principle means of defence, could not long have resisted the united force of two such powerful enemies; and the fact that it did not fall at this epoch, is to be ascribed to the operation of causes which are not now perfectly understood, but which were probably connected with an increasing feeling of jealousy between the confederated powers themselves.

For the next event, as Mr. Mitford justly remarks, the hinge on which the following history of Athens and Macedonia turns, the historian wholly fails us, and the orators to whom we owe certain knowledge of the important fact, have avoided all detail, and all circumstances. That the purpose of Athens in the Olynthian war was conquest there can be no reasonable doubt; nor have her orators disguised that intention on her part. The views of Philip, however, are less obvious. To circumscribe the power of Olynthus, long a formidable neighbour to Macedonia, or even to root out that power altogether, might seem expedient to this politic commander, but to establish the reign of Athens over the whole Macedonian coast, without any security or compensation to his own countrymen, is a measure which indicates no trace of the wisdom by which Philip's proceedings were on all occasions distinguished. The event, however, above alluded to, and which took place at this period, threw a strong light on the motives of the one party, and determined finally the conduct of the others. Of Methoné and Pydna, the principal seaports in his dominions, the Athenians had long possessed the former, though adjoining to both his capitals, Pella and Ealessa; the other being the only maritime town which had been retained in subjection to Macedonia, and was now in the hands of Philip. Upon this important place also, the insatiable ambition of Athens now darted its views; and sending her fleet thither, encouraged the inhabitants to revolt, promising them the support and protection of the Athenian people.

A more flagrant breach of confidence could not well be committed. It was in vain for Philip to send ministers to Athens to complain of the injury; no redress was obtained; on the contrary, Demosthenes,

in his harangues to the people, congratulated them on this accession to their power, as well as on the loss sustained, by one whom he was pleased to pronounce their enemy. The fact is thus clearly avowed, though no attempt is anywhere made to justify it, or even to set forth the motives which induced the Athenian admiral to violate, by so unambiguous a measure, the alliance then subsisting between his republic and Macedonia.

Having in this manner forfeited the co-operation of Philip, the Athenians, relaxed in their efforts against Olynthus. Confining their views in the meantime to Amphipolis, they sent their general Iphicrates against it with a considerable armament; but as this able officer was superseded at the very moment he was arranging terms for a capitulation, the Amphipolitans refused to close the negotiation, and stood again to their arms. The siege was raised, and the troops, now under Timotheus, were directed against some inferior towns on the coast of Thrace, the capture of which but poorly rewarded the labours, and ill answered the expectations which attended the equipment of fleets and armies.

It was reserved for other means than the sword and the battering-ram to reduce Amphipolis. Charidemus, an Athenian general, who had passed over to the Olynthians with the forces under his command, seems to have induced the leading men of that city to espouse the cause which he himself had appeared to desert. He used his interest so successfully with the Amphipolitans, that they consented to abjure the Olynthian dominion, and to embrace the protection of Athens; but in what manner, or by what argument this revolution was effected, it is now in vain to conjecture, it being a point of honour with the Athenian democrats to conceal and reward every act of treachery which seemed to promote their own views.

Before we proceed to unfold the operations which occurred in the war between Macedonia and Athens, we shall record a few of the more interesting events which diversified the domestic life of Philip. Upon his return to Macedonia, after his successful campaign against the tyrants of Thessaly, when already regarded with admiration as a consummate soldier and statesman, Olympias, the daughter of the King of Epirus, was conducted with all due honours to his court, where their personal were celebrated with much pomp and magnificence. The beauty and liveliness of this princess had struck him forcibly, when he first met her at Samothrace, whilst engaged in the mysteries of Ceres; but the filialty of Philip, as a husband, has been generally called in question; and his irregularities on this head were no doubt the cause of the family quarrels which rendered himself so unhappy, and excited suspicions as to the legitimacy of Alexander's birth. In due time, the birth of an heir gratified the hopes of Macedonia; and the news of the queen's delivery reached the ears of the delighted monarch immediately after he had listened to the account of a victory gained by his general Parmenio, and of a prize obtained by the chariots at the Olympic games.

Philip had from his earliest years affected, or felt a deep respect for learning, and the profounder branches of philosophy; and among the great men to whose precepts he had listened, and from whose fame he had

derived lustre to his court, was the celebrated Aristotle. The letter addressed to this sage, by the Macedonian sovereign on the birth of his son, is familiar to every reader of Grecian history, and has been universally regarded as expressing at once his reverence for the great Stagierite, and his sense of the vast importance of giving a right bias to the mind of a youth who was destined to preside over the fortunes of a powerful kingdom. The epistle runs as follows :
" King Philip, to Aristotle. Health !

" You are to know that a son hath been born to us. We thank the gods, not so much for having bestowed him on us, as for bestowing him at a time when Aristotle lives. We assure ourselves that you will form him a prince worthy to be our successor, and a king worthy of Macedon. Farewell !"

We pass over the absurd anecdotes which have been preserved by several analists, relating to the various dreams and omens which shadowed forth the future greatness of Alexander. These, as well as the monstrous fiction which was invented to connect his paternity with a visit of Jupiter Ammon, to the chamber of Olympius, were no doubt circulated to feed the contemptible vanity of the prince, at the period when, elated by his numerous triumphs, he thought proper to spurn the recollections of an earthly origin, and to lay claim to the honour of a divine descent. The gospel of Macedonian soothsayers, is beneath the notice of history ; and although Bayle has gravely dilated on the letter which the queen addressed to her son on the eve of his departure for Asia, we cannot allow ourselves to believe that the ridiculous story of the serpent was ever countenanced by Olympius.

Social war.

But to return to Philip and the interests of Greece, we may observe, that almost immediately after the unsuccessful attempt made by the Athenians on Amphipolis, a revolt took place among their confederates at home, which led to what has been called the *social war*. Rhodes, Chios, Byzantium, and the newly established commonwealth of Cos united together, to resist a dominion which they considered not only oppressive but degrading ; and they engaged in their alliance Menodorus, king of Caria, who, as well as the others, suffered from Atheonian exactions upon the commerce of his subjects. Measures being then concerted, they joined in declaring to the government of Athens, " that they were resolved henceforward to protect their own commerce with their own fleets, and wanting thus nothing from the Athenian navy, they would of course pay no more tribute for its support." The island of Eubœa, too, actuated by similar motives, was eager to throw off the yoke ; and, for this purpose, invited to their aid a small army of Thebans, who crossed over, in order to establish a footing among their allies, before the people of Athens could adopt any measures to shake their independence. All these precautions, however, were in vain. The Atheonians, under the prudent command of Timotheus, soon recovered their influence among the Eubœans, and reduced the Theban troops to such distress, that, without coming to a battle, they were glad to accept of a capitulation and return home.

The other confederates were not so easily brought to concession. But before any decisive steps were taken against them, and just as the victorious general was listening to the congratulations excited by his re-

turn from Eubœa : lo, messengers arrive from Amphipolis, with the alarming news that Olynthos and Macedonia were united in a confederacy, to carry their arms against that favourite colony of the Athenian people, so recently restored to their dominion ; adding that it must necessarily fall, if not succoured with that speedy support which they were sent to supplicate.

The situation of Macedonia, deprived of sea ports and having her central provinces occupied by Athenian garrisons, dictated to Philip the expediency of this alliance with Olynthos. Pydna had also been seduced from him by the most unjustifiable means ; and he had recently seen Amphipolis transferred to the same people, by the operation of a species of influence which justly excited his worst suspicions. Potidea and Methonê were likewise subject to Athens ; and the remainder of the sea coast was in the possession of the Olynthians, with whom he had waged a hazardous war, for the sake of his Athenian allies, who required his services by the seduction and capture of Pydna. Olynthos and Macedonia, indeed, were not likely to remain long on terms of friendship. Their interests were so diametrically opposed, that the rise of the one almost necessarily implied the depression of the other ; and yet they had both suffered so much injustice at the hands of the Athenian government, had been treated with such barefaced insolence, that they agreed in the meantime to forget their mutual aggressions and individual advantage, and profit by the embarrassment of that people, now engaged in an arduous war with their allies, in order to drive them for ever from the coasts of Macedonia, and the shores of western Thracæ.

Nothing was more unexpected at Athens, than a treaty such as this between Macedon and Olynthos. The possibility of it ever, had never once occurred to the orators nor popular leaders of that aspiring city ; and the tidings, accordingly, that Philip had joined his victorious arms to those of their inveterate enemies, the Olynthians, spread dismay and confusion through all classes of the Republic. This event afforded a fair opportunity for covering with reproach that unprincipled party, who, by advising the nefarious aggression at Pydna, had forced a valuable ally to become a dangerous enemy. Violent dispute and much conflict of oratory ensued between the antagonist members of administration ; of which the result was, according to the mind of the sovereign multitude, that negotiation should be entered into with the Macedonians and Olynthians, and the whole military strength of the state employed for the important purpose of reducing their rebellious allies.

It belongs to the general historian to trace the progress of the war which Athens carried on against the several commonwealths which had dared to throw off her yoke ; we shall, therefore, confine ourselves to the operations of Philip and his new confederates in the north, in pursuing the plan which he had adopted for diminishing the Athenian influence in the Macedonian and Thracian colonies.

In pursuance of the decree passed at Athens, envoys were forthwith despatched to Macedonia ; and commissioners were sent thence in return to treat on the part of Philip and the Olynthians, in the Athenian capital. Various proposals were made on both sides without any success, and perhaps without any sincere desire

Capture of
Amphipolis.

of accommodation on either. In the meantime, the alliance between Macedon and Olynthus was advancing to a conclusion, a measure of which the expediency was rendered more manifest by the negotiation lately attempted with the common enemy. Philip resigned in favour of his allies, the city of Anthemus, which originally belonging to Macedon, had twice changed its masters, and now reverted to a people whose dominion was cherished, and who set a high value on the possession.

But all this arrangement and concession on the part of the Macedonian monarch, was only preparatory to the execution of his settled purpose of wresting Amphipolis from the hands of the Athenians. The siege being formed, the skill which Philip had acquired in the science of attack, availed him greatly in his efforts, to intimidate the townsmen into compliance; and the influence of a friendly party within the walls contributed, it is thought, not less than his battering engines, to dispose the garrison to listen to speedy terms. Dindorus, it is true, informs us that the town was taken by storm; and there can be no doubt that the Athenian faction made a desperate resistance, and lost much blood in defence of their works, as well as in repelling the various assaults which were made, wherever a breach was practicable. At length the determined resolution of the assailants deprived the besieged, at once of the hope and of the means of holding out till relief could arrive from the Athenian territory. A surrender took place; and on this occasion the humanity and liberal spirit of Philip were strikingly set forth, and added much to the reputation for magnanimity which he had formerly acquired. No one was put to death for having opposed the views of the king, or for entertaining political attachments inconsistent with his claims. Only the most violent of the Athenian partisans were banished, because they could not be trusted in a place now held by a different interest, or voluntarily withdrew, as not thinking themselves safe under so complete a change of circumstances. All prisoners of war were freely dismissed. The affability of Philip, and his kind consideration for all, gained every heart; and in uniting Amphipolis to the Macedonian kingdom, he did as little violence to the feelings of its inhabitants as to its municipal constitution.

Capture of
Potidea.

Having settled the affairs of this important station, the conquerors next proceeded to Pydna. Notwithstanding the revolt which had done so much discredit both to themselves and to the Athenians; there still remained among the citizens, a strong party attached to the interests of Philip, and with these adherents, such an arrangement was privately made as opened the gates of the town at the first approach of the Macedonian army. His next object was the reduction of Potidea. This place the reader is aware had formerly belonged to Olynthus; and the oppressive nature of the Athenian government had already prepared the minds of most of the people for returning to their ancient allegiance, which the presence of a garrison within their walls alone prevented them from effecting. As soon therefore as the combined forces of the Macedonians and Olynthians appeared before the town, the Athenian party consulted their safety by retiring into the citadel, where they were almost immediately compelled to surrender at discretion.

With his usual humanity, Philip instantly provided for the personal security and comfort of the prisoners who thus fell into his hands. Giving up Potidea to the Olynthians, he reserved nothing for himself but the right of disposing of the Athenians found within the walls; sensible that his interference was absolutely necessary to protect these unfortunate persons from the rage of the natives, who would have made haste to revenge upon them the tyrannical treatment of which they had some reason to complain. The generous policy of the Macedonian prince did not confine itself to mere personal security. He liberally supplied the wants of his prisoners in the meantime; and without burdening them with the payment of ransom, or in any way restricting their liberty of action, he sent them to Athens at his own expense.

The effects of this campaign made a deep impression on the Athenians. Every dependency of any consequence, on the northern shore of the Egean, from the confines of Thessaly to the Thracian Chersonesus was wrested from them, and added to the strength of their growing enemies. Meanwhile the confederate or social war, engaged their whole attention, and occupied all their means, without affording the most distant prospect of a favourable issue. Philip, eager to profit by this embarrassment at Athens, and to derive some advantage from his conquests, directed his thoughts to the gold-mines of Thrace, where, as being at no great distance from Amphipolis, seem to have given to this colony the great value which it all along possessed in the eyes of the Athenians. At this period Cotys or Sitalces was king of all Thrace; a singular person, and one who affected to exchange the unpolished mode of life habitual to his countrymen, for the soft and enervating luxury of more southern climates. He possessed little of that warlike spirit and savage boldness which had rendered his ancestors so formidable; but appears to have put his chief confidence in the power of Athens, with which he was in alliance, and to one of whose generals, Iphicrates, he had given his daughter in marriage. Indeed, he appears to have laboured under a species of romantic insanity; which led him to forsake the habitations of men, and the protection of cities, that he might plunge into the depth of forests, and build his court amid the wildest scenery of uncultivated nature, exhibiting his state on the banks of rapid rivers, and receiving perfumes from the flowers which sprang up around his tents.

Such was the man against whom Philip conducted his victorious army. The particulars of the expedition, indeed, are not recorded accurately by any historian, whose works have come down to us. It seems, however, perfectly ascertained, that Cotys did not remain to dispute the advance of the Macedonian forces. On the contrary, he fled with precipitation, leaving to the desecration of Philip's soldiers a delightful residence in the woods, called Onocarsis, to which, as the place of his chief enjoyments, the infatuated king had opened several unvenues meeting in a centre. Diffident of his power in the field, Cotys was determined to try the effect of his literary powers on the mind of the invader. He despatched an epistle to Philip, the contents of which have unfortunately not transpired; but as the perusal of the piece produced a smile on the countenance of his brother monarch, the Macedonian courtiers caught the feeling which that smile ex-

pressed, and burst out into the loudest merriment at the very idea of a letter from the wrong-headed Cotys.

Advancing into the country, the king of Macedon found a colony of Thasians situated at Crenidae, in the neighbourhood of the mines; for it appears that the people of Thasus had derived a lucrative employment from working the veins of gold. This colony he instantly dislodged, and settled Macedonians in their place, giving to the new establishment the name of Philippi, so famous afterwards in Roman history for the defeat of Brutus and Cassius. He next proceeded to examine the state of the celebrated mines. His soldiers descended with torches, and soon discovered a vein which had not been wrought for a considerable time. They found, however, that the former possessors had not been deficient either in art or perseverance. Canals had been contrived with infinite pains to drain off the water, which was directed into what appeared to them to be subterraneous lakes; and, on the whole, though the works bore recent marks of neglect or ignorance, Philip saw abundant encouragement for renewing operations on a large scale. Numbers were accordingly employed, and all the contrivances which ingenuity could suggest, were immediately put in action, to draw from this fund of wealth greater treasures than it had hitherto yielded. Nor were his labours untended with success, for the addition which he thus made to his resources was estimated at ten thousand talents, or two millions sterling annually; a sum so improbably large, that we cannot free our minds from the suspicion of a material inaccuracy. Mr. Mitford, without stating his authority, reduces the amount to a thousand talents, a return not only much more reasonable, when viewed in reference to the means used for obtaining it, but also more commensurate with the wants which Philip had to supply, and the military operations which he had to defray.

While the Macedonians were thus successfully realizing their projects upon Thrace, a rebellion was stirred up against Cotys by Miltocythes, a prince of his own family; and, although this absurd king was in alliance with Athens, and had been honoured by the Athenian people with the freedom of their city and a golden crown, his cause was abandoned by the democratic party headed by Demosthenes, and the views of his unnatural relative encouraged and actively supported. The object of this turbulent and unprincipled body was evidently to create in Thrace an occasion for their interference against Philip, the progress of whose arms had excited to small apprehension in the Athenian republic. But their iniquitous plans were not crowned with success. Ergophilus, the first commander employed by them, was superseded before he could perform any thing which deserved a place in history. Anticles, too, who was sent to succeed him, was not only in like manner soon recalled, but was even prosecuted and condemned for want of zeal in this nefarious project. Still unrewarded by any material impression on Thrace, the demagogues at Athens had however the malignant satisfaction to hear that Cotys was assassinated by two brothers, citizens of the Grecian town of Cnoss, whose names were Heracles and Python. The latter forthwith repaired to Athens, where, in the presence of the assembled people, he avowed the murder, and expressing his

satisfaction with what he had done, demanded the reward which the Athenians had been accustomed to give for accomplishing the death of a tyrant.

It should seem that Philip, though not an unconcerned spectator of what was going forward, abstained rigidly from all participation in actual hostility, in favour of either side. He saw the Athenians continuing to prosecute their infamous designs against the infant son of the murdered king, and even stirring up new competitors for the Thracian crown; but neither policy nor a sense of equity, nor even the generous humanity upon which he so often professed to act, overcame his determination to remain neutral. He estimated, with sufficient foresight and accuracy, the effects of protracted hostility as well on Athens as on Thrace; and as the great aim of his ambition was to weaken both, and to extend his influence over the whole Grecian peninsula, he beheld, no doubt, with an inward feeling of satisfaction, the waste of treasure and the effusion of blood, so copiously drawn from the two contending parties.

It belongs to the annalist to detail the sundry movements made by the Athenians to accomplish their ends in the neighbourhood of Macedon, even whilst the confederate war raged in other quarters with unabated fury. These occurrences do not fall under our department, further than they are connected with the transactions of Philip's reign, and his concern in the affairs of Greece: a consideration which induces us to quicken our steps, to pass over the treaty with Thrace, and the settlement of differences with the confederated powers, and to proceed at once to the sacred or Phocian war; an event which opened, in the very heart of the Grecian states, a theatre for the talents, the ambition, and the military skill of this Macedonian sovereign.

The war which we have just designated arose from the deep dislike and envy which Thebes entertained towards Phocis and Lacedæmon. The first of these states was accused of occupying some lands situated on the banks of the Cephissus, which the religion of ancient times had consecrated to Apollo, and thereby consigned to perpetual desolation. The Amphictyonic council, instigated by the intrigues of the Thebans, and professing to act as the guardians of religion and of the rights of the god, whose territory had been violated, found themselves induced to impose on the Phocians a heavy fine for their impiety. A similar punishment was inflicted on Lacedæmon, for a supposed breach of public faith in seizing, at a period of national peace, the citadel of Thebes; but as the decision of the venerable Amphictyons was not in this case so powerfully backed by popular feeling as it was when directed against the sacrilegious Phocians, it seems not to have been very rigidly enforced. These last offenders, however, were pursued with equal zeal and hatred by the partisans of Thebes, and they were on the point of being expelled by their pious neighbours, when the sense of injustice, and a clear perception of the hypocritical motives of their principal persecutors, drove them to extremities, and dictated an appeal to arms. Philomelus, a man of talents and plausible address, was appointed their leader, who by means of certain private resources, and a small donation from Archidamus king of Sparta, succeeded in raising a body of troops, at the head of which he instantly marched to Delphi, took possession of the

A formal decree on the part of the Amphictyons pronounced the people of Phocis enemies to heaven and to Greece; and an invitation was addressed to all who acknowledged the authority of the council, and who retained any regard for religion, to draw the sword against sacrilege, and thereby to discharge the sacred obligations which they owed to the Gods and to this country. This summons produced the desired effect. In a moment, the Locrians, Thessalians, Perrhaeians, Dorians, Dolopians, Athemaneans, Achaean, Phthiot, Magnes, Cnians and some others, influenced either by indignation at the profane conduct of the Phocians, or by the intrigues of Thebes, rushed into the field to oppose Philoetolus and his adherents.

The Athenians employed in watching Philip, or in directing against him the arms of their mercenaries and allies, satisfied themselves with an empty promise to the Phocian general, and with the vain formalities of a treaty. They allowed him to be defeated and killed in a battle by the members of the holy alliance; and soon after this event, their fears were so much engaged by the menaces of the Persian court, that measures of self-defence occupied all their thoughts, and suggested the expediency of a lasting peace with the ruler of Macedonia. A proposal even was made by some of the leading persons in the Athenian administration, to invite Philip to join them in an armed defence against the common enemy of Greece; and it is said, that a deputation was sent to the other states to induce them to acknowledge Macedonia as a member of the Hellenic body. This it is well known, was ardently desired by Philip, and was, there is reason to believe, in order to gratify that monarch, proposed by some one of his partisans at Athens. The suspicions of Demosthenes, however, and a full disclosure of the designs of Persia, which were not directed against Greece but Egypt, frustrated the hopes of the Macedonian faction, and excluded the king from the honour which they had intended for him.

Reduction
of Methone.

In the meantime, says Leland, this prince ever restless and aspiring, ever attentive to the schemes which his ambition dictated, and ever provided with some pretence to justify his hostilities against those who were obnoxious to him, turned his thoughts to Methone as a city which his interests required he should reduce. The Methoneans prepared themselves for an obstinate defence; and the siege which ensued is chiefly remarkable on account of a wound which Philip received in one of his eyes, and which has given occasion to several fabulous narratives. It was inflicted with an arrow, which, on being extracted, was found to have inscribed on it the following label: "Aster to Philip's right eye." This expert Bowman, it seems, had offered his services to the king, recommending himself by the assurance that his skill in shooting was so nice, that he could with his arrows strike down a bird in its flight. "It is well," said Philip, "I shall make use of thee when I wage war with starlings."

The Athenians had sent succours for the relief of Methone; but the siege was pressed with so much vigour, that these only arrived in time to witness the triumph of their active enemy. The city was immediately raised to the ground: the lands were divided

among the soldiers: and thus, instead of a station which the marauders of Athens had long occupied for the annoyance and control of the Macedonians and Olynthians, a colony was planted to watch them, in their turn, and to oppose their machinations against the frontier settlements of either people.

The moderation of Philip on this, as on all similar occasions, added to his character a reputation much more precious and enduring, than the mere fame of conquest. At a time when slavery was the fate of all such prisoners of war, as were not thought deserving of the severer penalty of death, the Methoneans, who had submitted to his mercy, and that too, without any stipulation, were allowed to march out of the city, every individual with one suit of apparel, in search of a new habitation. The spirit of party, from which no man has ever suffered more than Philip, will not allow that even here his motives were pure, or his intentions really humane. The fierce democracy of Athens now began to see to the most pious-worth actions of the Macedonian, on which besides an insidious desire to extend his influence over Greece, and to gain by hypocritical professions, those hearts whom he could not expect to subdue by arms.

Philomelus, the Phocian general, was succeeded by Onomarchus, who, with much talent and address, induced his countrymen to continue the war, and to repair the losses of their army. After various success nearer home, this commander at length courted the alliance and co-operation of Lycophron, one of the Thessalian tyrants whom Philip had deposed, and who seems eagerly to have embraced the present opportunity for recovering some portion of his former power. Troops were sent into Thessaly to further his views, and to establish him at Pherra, the capital of his dominions; where he immediately commenced preparations for securing his independence. Philip could no longer remain inactive. He marched into Thessaly; attacked Lycophron; and, notwithstanding the presence of the Phocian army under Phayllus, inflicted on him a severe defeat. Onomarchus, however, was at hand with a large and well appointed force, determined to revenge the loss sustained by his brother, and to confirm the hopes of Lycophron. Philip made haste to meet him, and to prevent, by a battle, the inroad which the Phocian meditated. The Macedonian phalanx was already an object of dread to the best disciplined troops, and Onomarchus knowing both its strength and its weakness, practised against it a stratagem, which, on this occasion, succeeded in thwarting the consummate generalship of his opponent. The Phocians gained a victory, the effects of which, in the existing circumstances of Macedonia, might have proved fatal to a less determined prince than Philip, but which in his case served only to animate his exertions, and to improve his military tactics, for more successful exertions thereafter.

Onomarchus, after having defeated the Thebans in the heart of their own dominions, appeared once more in Thessaly as the ally of Lycophron, at the head of twenty thousand foot and five hundred horse: being stimulated, it is said, by the promise of undisputed power in that country, and the command of all its defeated resources in prosecuting the war with Boreia and her confederates. The king of Macedonia, unimpaired by the result of the late conflict with the same enemy, instantly took the field to oppose him. The two

armies now advanced against each other, equally eager to engage, and equally animated with the hopes of victory. Glory, ambition, and revenge, were the motives which stirred in the breast of Philip, and glowed through all his ranks. His cause was fair and popular: he fought against tyranny and oppression in the person of Lycophron; against sacrilege and profanation as chargeable upon the Phocians; and in defence of liberty, of Greece, and of Apollo, their injured and favourite divinity. He ordered all his men to deck their heads with laurel, a tree sacred to that god; whilst the emblems and instruments of worship were displayed in the standards which accompanied his troops into the field. Many of the Thessalians too, alienated by the oppression of Lycophron, and abhorring the profane alliance in which he had joined, were found in the ranks of Macedonia, burning with zeal for religion, as well as with a desire to revenge their individual rights, upon the head of this usurping chief. The army of Philip, therefore, regarded themselves as the soldiers of a pious cause; commissioned by heaven to inflict due punishment on the robbers of temples and the profaners of shrines. The Phocians, on the other hand, came into action the champions of a national quarrel; conscious, indeed of having taken a bold step for securing their ancient rights over the structure at Delphi, but smarting at the same time under the sense of injurious conduct, on the part of the Amphictyons, and of all who attempted to enforce their severe decree. The battle which ensued was obstinately contested, and victory remained very doubtful. The infantry on each side equal in number, and fighting with a resolution which nothing could subdue, kept the issue in suspense till the Thessalian cavalry, led on with their characteristic spirit and effect, broke the lines of the Phocians and decided the fortune of the day. Horror and dismay hurried great numbers of the fugitives into the sea, which was contiguous to the field of battle; and among these their general Onomarchus himself. A fleet was seen approaching the shore, as if to lend succours to the vanquished, or to afford the means of retreat. It was the armament under Chares, sent by the Athenians to support the enemies of Macedon, and which arrived just in time to witness their complete discomfiture. More than six thousand Phocians perished in the conflict, or in the precipitate flight which followed it: the body of their chief was sought out and hung upon a gibbet, as a memorial of sacrilegious crime and divine vengeance: and three thousand of their number, who had fallen prisoners of war into the hands of the enemy, are reported to have been delivered up to the dreadful penalty which was denounced by the general laws of Greece, against the violators of sacred things.

Fear, jealousy, and envy were the prevailing feelings at Athens, excited by the news of Philip's victory. Speeches were pronounced, and resolutions were passed, and recrimination between the contending parties was mutually indulged; but no decisive step was taken to check the rising power of Macedon. Unwilling themselves to take the field, the Athenian demagogues attempted to stir up new enemies to Philip in his own neighbourhood; and are said, with this view, to have negotiated with the Olynthians, the former allies of Macedon, and to have promised them assistance in whatever enterprise they might undertake against the

conqueror of Onomarchus. It was, perhaps, at their instigation too, that fresh troubles arose in Thrace; but whatever might be the source whence they sprang, they only added to the credit of Philip, who strengthened the hands of Cersobleptes, the reigning prince, and baffled completely the designs of the leaders.

The obscurity which hangs over the minor events of ancient times prevents us from ascertaining the exact order in which several of the occurrences of Philip's reign took place. For instance, it is difficult to determine what space of time elapsed, and what transactions intervened between the victory gained over the Phocians, and the descent of Philip into the lower parts of Greece, with the intention of joining the Thebans. It was, however, whilst the memory of his successes was still vivid, and the might of his arms still felt, that he yielded to the impetuosity of his Thessalian allies, and appeared at the Straits of Thermopylae. Nor does it appear that Philip was much in earnest in this attempt to penetrate into Greece. When Diophauntus, the Athenian general, refused a passage, no disposition was shewn to force it; and although a slight movement on the part of the Boeotians would have laid open the Straits, by compelling the enemy to retreat, the leader of the Macedonians did not deem it expedient to advance. On the contrary, he quietly withdrew his troops, and after a short stay in Thessaly, on his march homeward, he finally returned to his capital to watch the progress of events, and to prepare new means for availing himself of contingencies.

Philip had now reached the point at which his ambition had long aimed; the power, we mean, of influencing the councils of Greece, and even of controlling the measures of the more prominent states. Thessaly and Thrace being now united to Macedon, either as allies or subjects, his dominion extended from the Egean sea to the Adriatic; and, having in his possession the principal ports on the eastern and southern shores of the neighbouring provinces, he secured the approach to his capital against any sudden inroad, meditated by the naval forces of the Athenians. His army, the best disciplined and effective in Europe, had an unlimited confidence in his talents and courage, and was ready to follow him whithersoever he should lead. By the surrounding republics he was regarded as the avenger of sacrilege; the protector of religion; and as alone worthy to take the direction in the expiation of a crime, which ought to have united the whole world to punish and repress it. Nor was the influence attached to his personal qualities less captivating than the success which crowned his military efforts in the prosecution of a righteous cause. Affable and humane, he tempered the exercise of despotic power with a marked attention to justice, and the feelings of individuals; and whilst he used his subjects and their wealth as the means of gratifying his own ambition, he gave to every one of them so direct an interest in following up his views, that they at once admired him as a hero, and revered him as a benefactor.

Whilst Philip was consolidating his affairs at home, new labours were preparing for him by the restless emissaries of the Athenian democrats. The horror of sacrilege had now lost so much of its force, that the Phocians found several of their confederates perfectly disposed to share with them the treasures of

the Delphian god, and to prosecute human ends by means of divine resources. As long as the sacred gold continued to be drawn from the repositories of Apollo, no difficulty was found in raising soldiers to vindicate the sacrifice; and it is accordingly mentioned by Diodorus, that in the spring, after the defeat of Odomarchus, large reinforcements were seen pouring in from friendly states, to augment the Phocian army, now under Phayllus, the brother of their late commander. Athens, according to his report, furnished of mercenaries no less than five thousand foot and five hundred horse; and yet, he adds, the Athean government from the Delphian treasury, drew pay for a still greater number. Lacedæmon sent one thousand men; Achæia from various towns two thousand; and Lycophra, the former tyrant of Thebes, presented himself at the head of two thousand. Of these forces, so heterogeneous in their materials, and so discordant in their motives, Phayllus, the Phocian, was appointed commander-in-chief.

These extensive preparations were not attended with any material result. The Phocians were repeatedly vanquished by the soldiers of Thebes, but apparently with no considerable loss; the former soon appearing again in the field, and even assailing the posts of their victorious enemies. Phayllus soon repaired his losses, and, by a system of rapid movements and sudden attacks which the more phlegmatic Thebans were not always prepared to meet, made a deep impression on their army, and even reduced one of their principal towns. On the death of this general, however, the Phocians were less successful; for hazarding a battle near Charonea, under the direction of Mnæses, they sustained a serious overthrow, and lost many of their best troops.

Thebes and Phocis, the principals in this sacred war, were about this time diverted from the main object of their hostilities, by the attention which each was called upon to pay to the interest of certain cities placed under their protection. The scene of warfare was accordingly transferred into Peloponnesus, where Sparta, assisted by the Phocians, drew out their forces against the people of Megalopolis, who, on their return were encouraged and reinforced by the presence of the Thebans. It belongs not to the object which we have in hand to trace the operations of this subordinate contest; nor to unfold the cause and progress of the troubles, which, about this time arose in Eubœa, and gave occasion to the interference of the Macedonians. We, therefore, proceed to the third period of the sacred war, which had the effect of bringing Philip into more intimate relations with the leading states of Greece, than had at any former juncture subsisted between them, and during which, Athens and Macedon became the principal belligerent powers.

It had all along been the policy of the Athenian demagogues to create war for Philip among his Thracian or Thessalian neighbours, and to give employment to his arms at a distance from their own territory. The Olynthians, at first the enemies and afterwards the allies of Macedon, were now induced by the popular leaders at Athens to break truce with that prince, and to throw themselves upon the protection of their state. It is not easy to perceive an adequate motive for this revolution at Olynthus. In

former times, indeed, the naval power of Athens predominated all over the Egean sea; and the Macedonians, though victorious on land, had occasionally to endure both insult and loss, from the marauding expeditions which from time to time appeared on the coast, under the flag of that rather faithless people. Unable to protect his own property, Philip could not extend protection to his dependants or allies; but in order to obviate these evils, he had of late directed his attention so successfully to the establishment of a marine, as to be able not only to ward off the piratical assaults of his enemies, but even to carry the war into their own harbours. Ships bearing his authority, had already taken and plundered the islands of Imbros and Lemnos; had forced the sea port of Gæstus in Eubœa, and captured a fleet of merchantmen richly laden; and, what made a still deeper impression at Athens, the coast of Attica itself was visited by a hostile armament, and the sacred ship Paralus was taken out of the very harbour of Marathon. The Olynthians, therefore, had every thing to fear from the power and activity of Philip, as an enemy, when they deserted his interests, and exposed themselves to the fury of his revenge. This politic commander was yet in Thrace, when information reached him of the prevalence acquired by the Athenian party at Olynthus, and the threatened secession of that state from the Macedonian alliance. Without delay he exerted his utmost endeavours to know the cause of so unexpected a revolution; to hear complaints, to remove grievances, if any were felt, and by all means to restore between the governments that unshaken confidence, without which peace could not subsist. This, says Demosthenes, it was the business of the Athenians to prevent; and to effect that end, the measures employed by the popular agents proved in a little time effectual.

Throughout this negotiation, the promises of Athenian aid were so ample, that the Olynthians imagined the war was to be almost entirely carried on by their new allies. A fleet, with a small land force under Chares, was, as donbt, despatched with due expedition to ravage such parts of the coasts as owed obedience to Macedon, and even to extend a predatory war a little way into the interior. No preparation being made to oppose him, the Athean commander succeeded so well in his plundering campaign, that at the end of a short period, he returned home to his employers laden with booty, to feast the multitude and boast of his own exploits.

It was the close of the year, before Philip could collect an army sufficient to chastise the Olynthians, and protect his shores from the incursions of Chares. In the commencement of the following season, the Athenian admiral appeared once more with his ships and light-armed troops, to pursue his wonted exactions upon the defenceless inhabitants of the coast; leaving the Olynthians to fight two battles with their formidable enemy, who, routing them completely, drove them for refuge within the walls of their town. Unable to oppose the progress of his arms, the infatuated inhabitants had recourse to treaty. They sent to him when within a short distance of their gates, expressing their readiness to listen to terms, and to renew the former alliance. Philip replied, that "it was now too late; that he had before abundantly and repeatedly expressed his earnestness to

Capture of
Olynthus.

The town was besieged, and, after some experience of the usual occurrences of assaults and desertions, surrendered at discretion into the hands of the king of Macedonia. The interests of his dominions pointed out the policy which it here behoved him to pursue. He demolished Olynthus, annexing the territory belonging to it to the nearest province of Macedonia; and, according to Diodorus, sold by public auction the whole body of the people, without regard to condition, sex, or age. Philip, it is added, was present at the sale, where Aristotle the philosopher, is accused of assisting, and even of aggravating the misfortunes of a people with whom he had lived in friendship, by pointing out the richest of the inhabitants, and instructing the king how to extort their treasure and procure exorbitant ransoms.

Were we to follow the authorities quoted by Le Land, in regard to the Olynthian war, we should allow ourselves to fall into the error of ascribing the defection of that people to the intrigues and corruptions of Philip; who, notwithstanding, seems to have been taken completely by surprise, and to have made no preparation to profit by a revolution which he himself is imagined to have instigated. Diodorus, in this part of his narrative, has evidently derived his information from Demosthenes; whilst this orator, as is well known, drew his principal charges against Philip, from sources foully tainted by the infusion of party spleen, and pronounced them in language which is more remarkable for its vehemence than its truth.

As every attempt to reduce the power of Philip was found to result in augmented influence, and even in an extension of his territorial dominions, the Athenians were now convinced, that, to render Macedonia harmless, it would be necessary to allow it to revert to the enjoyment of peace. Demosthenes himself gave his countenance to pacific measures. The wiser part of the citizens could not fail to mark the growing power and successful ambition of their great enemy, to be sensible, at the same time, of the increasing corruption and inefficiency of their own countrymen. From the period that they had attempted to recover Amphipolis, no less a sum than fifteen hundred talents had been expended; one hundred ships had been lost; seventy-five tributary cities had fallen into the hands of the Macedonians; Olynthus was destroyed, and Eubœa had revolted; the several Grecian states having harassed and wasted each other by their foolish quarrels, were now completely alienated by mutual jealousy and suspicion; and, to crown all, Philip was more admired, more dreaded, more ambitious, and more warlike than ever.

The desire of peace was further strengthened by the failure of a negotiation which had been entered into with Phocis, now, of course, become the bitter enemy of Athens. The first step, therefore, to be taken in this delicate state of affairs, was to ascertain the dispositions of Philip in regard to peace; and the next was to prepare the minds of the sovereign multitude for entering into terms with a man who they had been taught to believe, laboured all day and meditated all night, to accomplish their destruction. Two Athenians of some note, Stratocles and Eucratas, had

been taken prisoners at the fall of Olynthus; the former of whom liberated without ransom, returned to his native city, full of gratitude and admiration for the generous prince who had set him free; and made known to his countrymen that Philip entertained a sincere desire for a close alliance and a lasting peace with the commonwealth of Athens. A decree had, however, been formulated at no very distant period, denouncing death to any one who should propose peace with that monarch, and forbidding, under a similar penalty, the appearance of a Macedonian herald on the Attic soil. To try the temper of the people, a motion was made to repeal that savage decree. The proposal was listened to with moderation, and, on the whole, the passions of revenge and of pride were now so completely subdued by the love of security, that a commission of ten persons was appointed to convey to Macedonia the wishes of the Athenian people. The members of this embassy were; Ctesiphon, Phrynon, Philocrates, Jatrocles, Nausicles, Cimón, Demosthenes, Dercylus, Æschines, and Aristodemus.

Whilst Athens was thus employed in thoughts of peace, Philip was pursuing his warlike designs within the Thracian territory. He had already circumscribed the dominions of the devoted Cersobleptes, within very narrow limits, and deprived him of several important towns; and, at the period the commissioners passed through Thessaly, on their way to Macedonia, they found the celebrated general Parmenio besieging Halus, a town claimed by the Pharsalians, whose cause Philip had espoused, and attached to the Athenians, whose power in that part of Greece he was determined to undermine.

Arrived at the Macedonian capital, the deputies were introduced to the king, and admitted to an audience. As they had agreed to speak in the order of their seniority, Æschines first addressed the king, endeavouring to convince him of the friendly disposition of the Athenians towards his person; of the justice of their claims upon Amphipolis, and certain other possessions of which he deprived them; and, above all, of the unreasonableness of his hostile views upon the territory of their allies.

Demosthenes being the youngest, was the last to speak, and had certainly the most difficult task to perform. He was now in the presence of a prince, whom in his absence, he had frequently assailed with the most furious invective, to whom he had uniformly ascribed the most impure and selfish motives, and whose actions he had often represented as cruel, treacherous, and unjust. The person whom he was to address, too, was not only a consummate politician but an able orator; a master of the art in which Demosthenes excelled; a persuasive speaker himself, and a perfect judge of eloquence in others. The courtiers of Macedonia stood around, full of expectation and curiosity; the reputation of the great Athenian orator, had prepared them for an extraordinary display of talent and address; and even the ambassadors themselves who had so often heard their distinguished colleague thunder forth from the tribunal his indignation against Philip, were now impatient to witness the effects of his eloquence, and to hear those irresistible arguments and potent remonstrances, with which he had promised to attack, and hoped to confound, the obstinate policy of Philip. All was suspense, and

the most eager curiosity; and every man now waited in silence for some splendid specimen of forcible, dignified, and subduing oratory. But Demosthenes, unaccustomed to such an audience, and such a combination of circumstances, lost courage and presence of mind. He who had so often braved with success the tumult and abuse of an Athenian assembly, was, in this new scene, utterly disconcerted and abashed. His faculties refused their office. He began in a hesitating and ungraceful manner; muttered a few unintelligible sentences, till, at length, his terror and embarrassment increased to such a degree, that his recollection totally forsook him, and he stood before the assembly totally unable to proceed. Philip saw his distress and pitied him. With that politeness and humanity which were natural to him, and with that condescension which he knew so well how to affect, he encouraged him to go on, reminding him that he was not now before an assembly of his countrymen, whose resentment he had to dread in case of failure; begged him to take time to collect again his scattered ideas, and to pursue his intended harangue. Demosthenes, accordingly attempted to resume his speech, but was not able; his confusion continued, his embarrassment increased, and he was once more compelled to take refuge in silence.

The ambassadors being allowed to retire, Demosthenes instantly gave vent to his chagrin and disappointment, by condemning the freedom with which Æschines had addressed the king, and the severity with which he had canvassed his political measures. "What!" exclaimed the baffled orator, "have you forgotten the present state of Athens; how greatly the people have been harassed by war, and how ardently they wish for peace? You have now so irritated Philip, and spoken so harshly, that instead of ending the war by a happy accommodation, you have only to expect the most violent and hostile resentment, in place of the pacific and favourable disposition in which we found him on our arrival!"

Before Æschines could reply to this peevish invective, the envoys were again called into the presence of Philip. This able sovereign, whose command of temper never forsook him, immediately proceeded to reply to their representations in the order in which he had listened to them, with the utmost force and perspicuity. He addressed himself particularly to Æschines, and went over the several topics of his speech with much fairness and accuracy; but in such a manner, as according to the report of this orator himself, did not implicate him in the intrigues of the war-party at Athens, or express any suspicion of his pacific professions in regard to Macedonia. As to Demosthenes, his harangue conveyed so little, either in the way of fact or of argument, that no reply was necessary. Perhaps, too, it might suit with the present views of Philip to treat the Athenian demagogue with some degree of slight. He might choose to affect a contemptuous disregard for his powers, as well to mortify his great opponent, as to remind the world that the man who had ever inveighed with the utmost violence against him in the hearing of a mob, had not been able, on this important occasion when reasoning and not invective was expected by his audience, to offer any thing to their notice which deserved either reply or observation. He then invited them to an entertainment; where, if we may give credit to

Æschines, his colleague conducted himself with still greater weakness and confusion than before. Presiding over the festivities of the banquet, Philip displayed those powers of conversation and wit which at once rendered his society delightful, and gave him a firm hold of the affections of his guests. At table he reiterated his assurances of a pacific disposition towards Athens; expressed his respect and friendship for the government; and declared that as soon as the alliance between them should be confirmed, the Athenian people would have reason to be satisfied with the most substantial marks of his favour.

Demosthenes, sensible that he made a mean figure at the Macedonian court, is said to have conducted himself on the way homeward, with excessive obscurity and adulation towards the other members of the embassy. Immediately on their arrival, too, when their proceedings were reported to the council of Five-hundred, the orator, as one of that body, spoke very favourably of his colleagues in general, and moved that according to custom, when the conduct of an embassy was approved, they should be honoured for their services with a public supper in the Prytæum; and as the business of peace was so successfully begun, he further proposed that they should wear on the occasion crowns of the sacred olive. The motion was acceded to, and the entertainment was given.

When the matter came before the people at large, and the ambassadors were introduced in their turn, to give an account of their proceedings at Macedon, Demosthenes at once relinquished his complimentary tone towards his colleagues, and proceeded so far as to insinuate, that in their transactions with their countrymen as well as with Philip, they had betrayed either ignorance or incapacity. As the youngest he was as usual the last to appear. He began by observing, that all that the other envoys had said was little to the purpose; and requesting that the decree of the people appointing that the embassy might be read, he farther moved, that the king of Macedonia's letter to the Athenians might be read also. "Here then," said he, "is the substance of the business on hand; and I propose that the herald expected from Macedon be received; that the ambassadors who are to follow him be likewise received; and that two days after their arrival, the people be summoned to consult respecting the terms of the peace which is now contemplated with Philip."

A variety of particulars connected with this occurrence have found their way into the biographical sketches of Demosthenes, some of which, although resting on rather doubtful authority, are strikingly characteristic of that powerful orator. Impatient of all allusion to the conference at Macedon and to the personal character of Philip, "you shall see," he exclaims, in his address to the populace, "how I propose to cut off these superfluous matters. Æschines praises the memory and eloquence of Philip. But so far am I from agreeing with him, that I apprehend any other man in the same rank and circumstances, would not be counted inferior to him in these particulars. Ctesiphon praises his person: I think my colleague Aristodemus has a figure no less graceful. Others tell you of his mirth and gaiety at table: I think Philocrates is by far the more joyful companion. One man, says, it was left to me to speak about Amphi-

Biography. polis; but this your orator would not willingly suffer either you or me to speak.—But this is all trifling. I shall draw up a decree for entering into a negotiation with Philip's heralds and ambassadors, who are now expected, &c."

It is well observed by Olivier that it was necessary to collect together all the accomplishments of the several ambassadors, in order to give a just idea of those which centered in the character of Philip: and it is impossible to read the childish personalities of Demosthenes, on this occasion, without disrespect for the man who could attempt to under-rate the qualities of a distinguished prince, by dwelling on circumstances in themselves so extremely trifling, and to which that individual himself would have been the last to attach any intrinsic value.

The herald and the ambassadors from Macedonia arrived in due time. These last were three in number, and bore names which were, even at that period, respected in Greece, and which have since been celebrated over the whole civilized world, Eurylochus, Antipater, and Parmenio. The first was eminent for eloquence and valour, and is known to have rendered effectual services, by each of these endowments to Philip, and to his son Alexander. Parmenio joined the merit of an honest courtier to that of a brave soldier; and we may judge of the esteem in which he was held by his discerning master, from the following characteristic remark. Being told on one occasion, that the Athenians had chosen their ten generals for the year: "Happy people!" exclaimed Philip, "who can every year find ten! In my whole life," continued he, with his eye fixed on Parmenio, "I never knew but one."—Antipater is said to have been the most respected and most trusted of all Philip's ministers. This prince, we are told used frequently to say at table, "come, let us drink deep; it is enough for me, that Antipater is sober!" And when one morning he came into his audience chamber later than usual, "I have been long a-bed," said he, looking around him, "but it is no matter: Antipater was awake."

Discussions now took place at Athens relative to the peace and partly in regard to the extent of the alliance to be entered into with Macedonia. Philip was desirous of confining the treaty to the Athenians, exclusive of their allies, whilst some of the more moderate party in the government insisted that the interests of these should be provided for and secured. On this point, however, so essential to their public credit and individual reputation, the wavering politicians of Athens shewed neither consistency nor steadfastness. To terminate their heartless disputes, it was resolved to send a commission of five persons to Macedonia to bring the peace to a conclusion; in which number was Eschines, now the devoted tool of Philip's designs. Demosthenes, under pretence of ransoming prisoners, contrived to attach himself to the embassy and proceeded accordingly to the head quarters of the Macedonian ruler.

It was at Pella where Eschines and his colleagues obtained an audience of Philip, who amidst these numerous negotiations and embassies, was usually employed in directing the movements of his armies. He was indeed, at that period, on the eve of concluding the conquest of Thrace; an object which he wished to accomplish before he renewed his conferences with the Athenian ministers: and with this view, he allowed them to wait nearly a month in his capital, before

he could be induced to leave his troops in the active season of a successful campaign. On his arrival at Pella, he found ambassadors not only from Athens, as he had expected, but also from Thebes and Lacedæmon, imploring his interposition to settle some difference between these rival states, and to give the aid of his arms to bring to a conclusion the warring warfare which was still going on between the Thebans and Phocians.

After granting an audience to the Athenian deputies, in which some reasonings were made in regard to the warlike attitude in which Philip continued to remain, and some vague explanations and professions on his part were returned to quiet their apprehensions; the king urging the necessity of his presence in Thessaly, where his troops were still investing Halus, proposed to carry the several embassies along with him; in the hope, as he was pleased to express himself, that their mediation might be the means of terminating the protracted contest between the Pharsulians and the inhabitants of Halus.

The treaty with Athens received at length the ratification of Philip. In enumerating the allies of either people, Halus was excluded on the part of Macedonia, and Phocis on that of the Athenians. The Phocians assisted and protected by Athens in the commencement of the sacred war, had it appears given offence to their proud neighbours by refusing to yield to them certain towns which commanded the straits of Thermopylæ, and were at present so much the objects of their displeasure, that they were specially excluded from participation in any benefit of the treaty between them and the Macedonians. This exclusion of the Phocians is, indeed, ascribed by some writers to the policy of Philip, who still found his interest concerned in representing that people as so completely polluted with sacrilege, and so obnoxious to the displeasure of the gods, as to be altogether unworthy of the faith of treaties or the protection of holy arms. It does not appear, however, from an impartial review of his conduct, that the king of Macedonia was actuated by feelings of bigotry or the desire of revenge. He longed for an opportunity to mediate as an armed umpire in the affairs of Greece; and as he had promised to the deputies of the principal states, that their several views and interest should not be overlooked in the settlement of differences between Thebes and Phocis, he found it expedient to leave the consideration of these differences for future deliberation with the parties most intimately concerned.

To bring the Phocian war to a speedy conclusion, either by conference or by arms, appears to have been an object which engaged the attention of Philip both before and after the peace with Athens. Even whilst the ambassadors were at Pella, preparations were on foot, which the king did not disguise, were meant to enforce his mediation with the belligerent states of Greece, and to conduct to a termination the destructive contest in which they had for nearly ten years, employed their armies and expended their treasure. It was probably therefore at the suggestion of this monarch, that immediately after the ratification of the peace, a decree was passed at Athens declaring, that if the Phocians did not duly surrender the temple of Delphi to the Amphictyons, the Athenian people would join in arms against them, and against all who should support them in their contumacy. Philip, indeed, addressed a letter in his own name to his new allies, in-

Biography. viting them in that capacity, and as an Amphictyonic people, to join his other allies, and the whole Amphictyonic confederacy, in a just community of arms and of council, for ending an evil so extensively destructive and still extensively threatening. The wisest part of the Athenians were disposed to accede to this proposal; both because they could not possibly prevent the interference of Macedonia, and also because by becoming parties to the measure of reconciliation, they might secure some advantages in favour of their allies at Phœcis and in the revolted towns of Boeotia, whom, notwithstanding some disagreement, they were desirous to protect from the vengeance of Thebes and of the Thessalians. The faction, however, which had all along opposed themselves to Philip, although they had found it expedient to promote the recent alliance with him, were still suspicious of his intentions, and eagerly disposed to thwart his measures: not exerting their influence with the people, they finally succeeded in procuring a negative reply to be sent to the proposition of Macedonia.

Bent on war, the party headed by Demosthenes appear at this juncture to have renewed their overtures to Phœcis, and to have knit themselves in closer alliance with the Lacedæmonians. The project of occupying the three towns which commanded the pass of Thermopylæ, was again revived; but the Phœcians reposing little confidence in Athenian faith, and doubting the sincerity of Lacedæmon, refused to accede to the arrangement. They preferred the chance of obtaining favour in the eyes of Philip, whose regard for their interests they had been led to believe was cordial and firm, although political reasons had induced him to disguise it, during his negotiations with their enemies. Refusing therefore to surrender the towns in question, and yet unwilling to come to a rupture with the Lacedæmonians, they excused themselves, by observing, that "Sparta had too much occasion to look to her own dangers."

The tranquillity of Greece was now once more exposed to the greatest hazard. The popular faction at Athens, ready to sacrifice every thing for the maintenance of their own power, were fast precipitating their country into war, without the prospect of any rational means whereby to bring it to a prosperous issue. Philip could not be ignorant of their intrigues at Phœcis, and of their tampering with the Lacedæmonians; and as his preparations for advancing into the territory of the belligerent states were already well matured, it was obvious that nothing short of a general combination of the Grecian republics could impede his progress into the heart of their country. It was at this crisis accordingly that Isocrates published his celebrated oration to Philip; which, under the form of that species of address, was in reality an appeal from himself and the moderate party, at Athens, to their fellow-citizens, and to the whole Greek nation. The object of this famous tract was to induce the king of Macedonia to assume such a lead among the states of Greece, as would prevent them from imbruing their hands in one another's blood, and enable them, at the same time to unite in an unanimous and combined exertion against their common enemy, the barbarians of Persia. Taking a cursory view of the actual condition of the several republics around him, he depicts, in lively colours, the

misery and humiliation to which they had all reduced themselves by their foolish jealousy and ill-directed ambition; and then turning his eyes to Philip, he describes that sovereign as in every respect worthy of confidence, and as by far the fittest person of the age to reconcile the Greeks to one another, and to lead their confederate armies against the tyrants of Asia. Encouraging both Greeks and Macedonians with the almost certain prospect of success, the ingenious orator concludes his address to the royal commander in these words—"The sum of what I advise is this; that you act beneficially towards the Greeks; that you reign constitutionally over the Macedonians; that you extend your sway as widely as may be over the barbarians. And thus will you earn the gratitude of all, of the Greeks, for the good you will do them; of the Macedonians, if you will preside over them constitutionally and not tyrannically; and of all others, as far as you relieve them from barbaric despotism, and place them under the mildness of a Grecian administration. Others must have their opinions of what the times want, and will judge for themselves how far what is here written may be adapted to them; but I am fully confident that no one will give you better advice, nor more accommodated to the existing state of things."

We are perfectly satisfied with Mr. Mitford's reasons for placing this oration in the interval between the peace with Athens and the conclusion of the sacred war. And between these two points, as he observes, it farther marks its time as having been put forth, after symptoms of a disposition toward a new breach with Macedonia had been manifested by a party at Athens, and while the Lacedæmonians were apprehensive of an accommodation between the Thebans and Phœcians. By Leland and other authors, the date of Isocrates' performance is placed after the sacred war, and even subsequently to the execution of the Amphictyonic decree, which had been passed against the sacrilegious cities of the Phœcian district.

This cool appeal to the reason of the Greeks, taken in connection with the chances of an unsuccessful struggle against the power of Macedonia, had a very considerable effect in preparing their minds for an accommodation. The disposition among the republics, to co-operate with Philip towards the establishment of peace throughout the country, became very general, and was manifested with nothing of the usual republican violence. It does not appear, however, that this personage himself was at all desirous to assume the office which was thus created for him. So little solicitous, indeed, was he to take the lead in settling the troublesome and invidious business of the sacred war, that we have the authority of Demosthenes for saying he invited the Lacedæmonians to charge themselves with its decision, and declared his readiness to submit entirely to their arrangement. What may have been his motives for this moderation, or whether his declarations were really sincere, are points which history has furnished us with no means for determining. It is probable, that he wasaverse from moving into Greece so long as he had enemies in Thebes still unsubdued: at all events, he did not proceed to gratify the impatience of his allies in the south, until Halus had surrendered to his arms. That town being garrisoned by Phœnicians, in whom Philip could confide, and the Thessalians at large

being devoted to his interests, the warlike Macedonian at length turned his face towards Thermopylae at the head of an imposing force.

The Phocians, commanded by Phalarus, the son or brother of their late general, were still in a condition to dispute the pass with Philip, and even to occasion to him considerable delay and loss. Having, however, no confidence in the Athenian government; being suspicious of the designs of Lacedæmon; finding that the Thebans had joined the invader, and that the greater part of Peloponnesus was ready to rise at his nod, they saw the madness of attempting, single-handed, to arrest his progress; and made haste, accordingly to profit by the disposition towards mild measures, on which Philip still professed to regulate his conduct. Not daring to entertain the hope that they would be allowed to remain at Phocis, they stipulated with him for leave to emigrate unmolested, and to carry with them their personal property. On these simple conditions, the important military stations of Nicaea, Thronium, and Alponus, were delivered to the king of Macedonia; and Phalarus immediately after commenced his retreat towards Peloponnesus, where he found a temporary refuge. Greece was now open to the Macedonians and Thessalians, whose progress into a country, torn by mutual jealousy, occasioned the most painful alarm. The vengeance of Thebes was more dreaded by the Phocians and the Boeotians, who had favoured their cause, than the sovereignty of Philip; and it required all the influence and management of this humane ruler to repress the vindictive spirit which actuated his confederates. He succeeded, it is said, in procuring personal safety for all. The higher class of Phocians were content to quit their native soil; whilst the inferior orders, availing themselves of permission to surrender to the king of Macedonia, exclusively, were received, together with their principal towns, into his protection.

The sacred war was now ended, and the fate of Greece placed almost entirely in the hands of the king of Macedonia. The moderation of this sovereign at the period now under review, is the most remarkable feature of his character; and whatever may have been the motives whence it sprang, it certainly added not less to his influence as an umpire, than to his reputation as a conqueror. Amidst all the invective of Demosthenes, and the more perplexing partiality of Greek historians, we see clearly that the Macedonian prince, in pursuing the brilliant objects of his ambition, never sacrificed the principles of humanity in the case of a vanquished foe, nor aggravated the sufferings of the unfortunate, whatever might be their rank or condition. His clemency was particularly manifested in the pains which he took to temper the penalty incurred by the sacrilegious Phocians. It was expected, and even demanded of him by his allies, that the Amphictyonic law should be allowed to take its course against that unhappy people. According to that constitution, which all Greece had for centuries acknowledged in them, though not always, indeed, reduced to practice, the punishment to be awarded should be determined by the Amphictyons alone. But with a sincere desire to promote the ends of justice, and to obtain a milder sentence, as well, perhaps, as in deference to those states which had avowed resistance to the Amphictyonic decrees, on the ground that the judges acted under undue influence, Philip in-

vented a congress of deputies from all the states of Greece.

Among the representatives nominated by Athens, were Æschines and Demosthenes; neither of whom, however, found it convenient to attend. The former, about this period, deserted the popular side; while his colleague was associated, and went over to the party of Phocion, which numbered in its ranks Isocrates, and all the leading characters, who exerted themselves for the tranquillity of the republic, and a gradual diminution of democratical power and violence. To take advantage of popular feeling in the meantime, Æschines pretended sickness, that he might be allowed to remain at home; and Demosthenes, to thwart the views of his adversary, declined the appointment with which he was honoured, and kept his station in the assemblies of the people.

The congress appears to have met first at Thermopylae. The business before them was of the most delicate nature, involving the interests of all Greece, and the life or death of many thousands whose participation in the crime of Phocis had subjected them to the bar of public law. The two main points to which their deliberation would be invited with the greatest earnestness, were, judgment on the Phocians, and a restoration of the funds belonging to the Delphian treasury: and as prejudice, vindictive feelings, and selfish views, actuated most of the deputies then present, it was wisely resolved to come to no determination in the meantime, but to refer these important points to the authority of the Amphictyons to be thereafter assembled.

Philip found his benevolent and liberal intentions in the congress not a little impeded by the unremovable conduct of his own allies, the Thebans and Thessalians. It became necessary therefore to secure, in the second meeting, such a number of votes connected with a different interest, as would check the preponderance of these, and guide their judgment to a more equitable decision. This object seems to have been attained, and partly perhaps, by the exertions of Athens; which re-appointed her former ministers to represent her on that solemn occasion: but, it must be added that, in regard to the minor details and arrangements arising out of these important transactions, a great degree of obscurity prevails even in the best writers whose works have come down to us.

The contending orators, Æschines and Demosthenes, each giving an account of this interesting meeting, do not, as Mr. Mitford justly remarks, give the clear and full information which might be expected. There appears however to have been a great deal of discussion and warm debating. According to Æschines some of the Amphictyons, those especially from the smaller republics, were very rude uneducated men. The rough mountaineers of Ceta, who also had a seat in the Amphictyonic council, are said to have exceeded the Thebans themselves, in barbarous fanaticism and vindictive demands. Insisting that, in order to appease the anger of the gods against the Greeks, the whole Phocian people should be put to death, by being precipitated from the cliffs of the sacred hills. Against such extreme intemperance the measures already taken would afford a main security: the most guilty or at least the most distinguished of that devoted nation having submitted to a voluntary exile, and thereby removed themselves from the grasp of their

persecutes. Nor did the ferocious bigotry which impelled the Etans to crave the blood of their countrymen, actuate the majority of the congress. On the contrary the decree which was finally passed by the Amphictyons, and sanctioned by the representatives of the Grecian states, although denouncing a punishment that cannot fail to appear excessive in the eyes of a modern reader, was yet much more moderate than the stern spirit of the law required in the case of a sacrilegious robbery. This celebrated document is given at length by several authors; and it was in substance as follows: that the Phocians should in the first place, forfeit all the rights which had belonged to them as federal members of the Amphictyonic council; that the three principal cities of Phocis should be dismantled, and all the other towns destroyed; that the people should live in villages not less than a furlong apart from one another, and none consisting of more than fifty houses; that they should surrender all their heavy armour and their horses, and not be allowed to possess any until the debt to the god should be fully repaid; and that, in order to liquidate the said debt, a rent of sixty talents yearly should be assessed upon the Phocian lands.

The vote of which the Phocians were thus deprived, was enforced on Philip by a decision of the Amphictyonic assembly. The greater part of the Greeks viewed this sovereign as the protector of their civil and political rights, the avenger of the gods, and the restorer of natural purity. He was besides descended from Hercules, an advantage which weighed much with this superstitious people, and he was known to set a high value on the rank of an Amphictyon, and the honour of directing in the affairs of the Grecian confederacy. The double vote, therefore, formerly exercised by Phocis was now transferred to the King of Macedon and his successors for ever.

The proceedings of Philip as arbiter of the disputes so long pending between Thebes and the Phocians, although characterized by much clemency and moderation, and particularly by the absence of all personal animosity against those who had the most exposed themselves to his resentment, excited at Athens an unaccountable degree of alarm, jealousy, and contention. A violent ebullition of democratic fury succeeded the news, either of Philip's advance through the straits, or of his preponderance in the Amphictyonic council, and sundry precipitate resolutions were adopted in the warmth of the moment, by the leaders of the popular party, which would infallibly have drawn on them the power of Macedon and the allied Amphictyons, had they not been recalled to their reason by a letter, in which he pointed out the folly and injustice of their intentions. We are inclined to think the commotion now spoken of was occasioned by the appearance of the Macedonians after passing the ravine of Thermopylæ, and not, as Mr. Mitford supposes, by the judgment pronounced on the Phocians. In truth, the Athenians were so much disobliged by the refusal of Phalaris to put into their hands the three towns which they wished to garrison, as the means of commanding the straits, that they had ceased to promote the Phocian interest, or even to maintain the friendly relations to which they were bound by the terms of the treaty subsisting between them; on which account the penalty inflicted on the violators of the Delphian repository could not, of

itself give them any uneasiness, nor drive them to those hasty determinations which ensued upon the arrival of their messenger Dercyllus.

It happened that their messenger, named Dercyllus, made his appearance at Athens when the people were assembled in Piræus to transact public business; and such was the effect of his tidings on their inflammable and vacillating minds, that a decree was instantly voted, commanding all free inhabitants of Attica to remove without delay their families from the country into some one of the fortified towns, and that these places should be immediately put into the best state of defence. Nay, the alarmed and incensed multitude further decreed, that a sacrifice should be instantly offered up to Hercules, according to the established ceremony usually observed in the commencement of a new war.

The epistle from Philip and the return of reflection, as well, perhaps, as their total inability to oppose any effectual resistance to the measures now in progress, prevented the Athenian populace from having recourse to actual hostilities. The congress was accordingly held as already described, first, at Thermopylæ and afterwards, as is commonly believed, at Delphi; at which latter place the final judgment of the Amphictyons and their assessors was delivered, for re-establishing the religious peace and political tranquillity of the Grecian states.

This weighty affair being settled, and his utmost efforts having been employed in behalf of the unfortunate outcasts of Phocis, Philip returned home: carrying with him the gratitude and respect of the whole Greek nation, if we except the demagogues and their deluded followers in the city of Athens. To this testimony of Demosthenes himself is so strong and explicit as to stand in need of no corroboration. In his oration to the crown, he admits that even at Thebes the voice of those prevailed, who at the time joined the Thessalians in extolling Philip as their friend, benefactor, and preserver: and throughout Greece the people at large rejoiced in the peace, for which they readily acknowledged themselves indebted to the king of Macedon. With this warrant, the praise bestowed by Diodorus, on the same occasion, will be more easily admitted. "Philip," says that historian (lib. 16. ch. 60.) "having concurred with the Amphictyons in their choice for the common welfare of Greece; having provided means for carrying them into execution; and having conciliated good will on all sides by his humanity and affability, returned into his kingdom, bearing with him the glory of piety, added to that of military talents and bravery; and in possession of a popularity which gave him great advantage for the future extension of his power."

Having entered so minutely into the transactions of Philip's reign as connected with that progress of events which gave him the supremacy over Greece, we must confine ourselves to a more general outline of the subsequent part of his life. The people of Athens, violent only in their speeches and resolutions, continued to impeach his conduct, excite enemies against his person and government, and prosecute such individuals as were thought to favour his designs or to enjoy his good opinion. It was at this period that Demosthenes pronounced the most splendid of his orations against that monarch, and concerted measures for the expulsion from Athens of all the creatures

of Macedon, as well indeed, as of all who did not concur in the interperate counsels which it pleased him so much to recommend to the effeminate, vain, and credulous multitude over whom he presided. It was in vain however for Demosthenes to harangue or for Chares to practise intrigue. The democratic party in Greece was now too weak to oppose the influence of Philip's name, or to kindle a war among the exhausted republics which had so lately acknowledged the beneficial interposition of that popular monarch. The smaller commonwealths disgusted with the imperious conduct of their more powerful neighbours, who in their turn had dominated over the rest; and perceiving clearly that Athens, Thebes, and Lacedæmon were no longer able to maintain their own independence, or to extend protection to their allies, gladly committed to Macedon that tutelary ascendancy which had so long been an object of ambition and contest among the Greeks themselves, and which had only passed from one to another to the ruin of the whole. All Peloponnesus courted the alliance of Philip. The Messenians and Argians sent deputies to sue for his countenance, declining the offer of Atheolian protection, and treating with neglect the specious arguments of Demosthenes against Macedonian influence.

We pass over the political intrigues and prosecutions which engaged the attention of Athens for some time after the conclusion of the sacred wars, and proceed to accompany Philip to Macedon. Aristotle was now invited to the court of the Macedonian king, and to him was committed the important charge of instructing the heir of the crown. Receiving from the father, as the object and motive of his anxiety to have his boy well educated, this sole direction "that he may learn to avoid those errors which I have committed and of which I now repent." To engage him more effectually to a faithful and diligent discharge of this great trust, he loaded the philosopher with presents, worthy at once of the generosity of the giver, and the distinguished merit of him upon whom they were conferred. He caused Stagira the city which gave birth to the sage, and which had shared the fate of all the Olynthian towns, to be carefully rebuilt; and the inhabitants who were at that time slaves or fugitives to be restored to their original settlements, and to enjoy their former privileges. In addition to this he made a grant of land for a spacious park, laid out in shady walks and ornamented with seats and statues of marble, for the use of the peripatetic philosophers, who were there induced to pursue those studies which have given so much celebrity to this sect, and immortalized the name of their ingenious founder.

From the unsettled nature of the surrounding governments, and perhaps too from the active character of his own mind, Philip found it necessary to lead an army into eastern Thrace, where a party, adhering to Chersobleptes, were attempting to undermine the influence of Macedon, and to restore that of Athens. The result of this expedition was triumphant to the arms of the Macedonians, and added to their dominions the Grecian townships on the Thracian coast. Provoked, it is said, by Athenian intrigue among the savage tribes which inhabited the shores of the Danube, or desirous to chastise the irregular ambition of those northern hordes which occupied the extreme boundaries of his dominions, Philip felt himself induced to hazard a campaign in the Scythian wilds, at

that time the regions of fancy, and peopled by chimeras springing from the lively imagination of the Greeks. The details of this interesting expedition are irrecoverably lost. It is certain, however, that the Macedonians, overtaken by an early winter, found the roads towards their own country so completely blocked up with snow, that it was impossible to send even a single messenger to announce their state or to solicit assistance. It was reported in Greece that Philip had been seized with a severe illness, and even that he was dead; but his perseverance and constitution surmounted the numerous difficulties with which he was beset, and on the return of spring, he fought his way back into his own kingdom. It is of this memorable invasion that Demosthenes speaks, when he says that "in quest of glory, Philip freely met all kinds of hardship and danger in every shape; undismayed by words, unappalled by sickness, patient under confinement by snow, he was contented to pass the winter, living upon millet and rye, in a Thracian cellar."

The Athenians taking advantage of Philip's absence in Scythia, fitted out ships to cruise in the Ægean, with the view of distressing the commercial towns which were in alliance with Macedon, and also of inducing such of them as were not steadfast in their political attachment, to accept the protection of Athens, and to relinquish that which they now found so little efficient. Succeeding in this plundering and treacherous warfare beyond their utmost expectation, the popular party under Demosthenes, not only defended the piratical conduct of their commander, who in open defiance of a positive treaty, was every where levying contributions upon the maritime states in alliance with Macedon, but even proceeded so far as to concert measures for a confederacy of the leading states of Greece, in order, if possible, to repress the formidable power of Philip, and recover that consequence which they had formerly possessed among the inferior republics of Peloponnesus. With this view Demosthenes pronounced his third Philippic; an oration which produced greater effect by the eloquence which pervaded it, than by the justice of the cause which it professed to advocate, or by the weight of the reasons upon which that cause was sustained.

Too impatient to wait for a regular declaration of war, the sovereign multitude at Athens, having Demosthenes now for their political chief as well as apologist, sent positive orders to their commander on the Thracian station to act against Macedon, whenever a convenient opportunity might be found. Diophanes, accordingly, proceeded to take by storm two Grecian towns of the Macedonian alliance, and sent as prisoners into the Athenian colony of Chersonesus, all the inhabitants who had escaped the sword. Amphilichus, too, a Macedonian of rank, who was commissioned to remonstrate against these hostile proceedings, and empowered to negotiate for the release of the captives, was himself thrown into prison, where he was not set free till a ransom was paid of nine talents, or near two thousand pounds sterling. Nor were the admirals, Callias and Aristodemus, less busy at sea. They stopped all ships bound to a Macedonian port, or to such as were in alliance with that country; condemned all on board as enemies to the Athenian people, and sold them for slaves; not when complaints were made by Philip's ministers of these gross infractions of a subsisting treaty, and the matter

Biography. laid before the ruling mob at Athens, decrees were immediately passed to sanction every thing that had been done, and to convey their approbation to the commanders under whose direction hostilities were carried on.

To prepare for the conflict with Macedon, which such irritating policy could not fall sooner or later to produce, Demosthenes entered into correspondence with the Persian government which had also begun to tremble at the ambitious views of Philip; and so well did he know how to increase and turn to his own advantage the apprehensions of that effeminate court, that a considerable sum of money was remitted to him for the purpose of aiding the Grecian confederacy against their powerful neighbour. By liberal conduct towards Eubœa also, the confidence of that island was once more recovered in favour of Athens. The next object of the great orator was to secure a strong footing in Byzantium, and some other towns, in the entrance to the Euxine; and thereby at once to effect some commercial advantages, and to establish a readier intercourse with the satraps of Persia. In Perinthus, Selymbria, and the city just named, the interests of Athens, aided by the personal pleadings of Demosthenes, obtained a decided preponderancy; and thus both in Europe and in Asia, a formidable coalition was arrayed against Philip, who, in the meanwhile, was still detained amid the snows of Scythia.

As a biographical anecdote, it is not unworthy of mention that when the Macedonians were returning from their Scythian expedition, encumbered with the bulky spoil which they had taken from the enemy, and which consisted of arms, chariots, and 20,000 mares, they were attacked in a defile of the Mæian mountains, by a people called Triballi, who gained so much by the suddenness of their onset that they had nearly discomfited the veteran troops of Philip before it was possible for them to recover from their confusion. In this imminent hazard, the king rushed into the middle of his army, encouraged his soldiers, restoring order, and fighting with the most desperate valour, till at length his horse sunk under him covered with wounds, and he himself fell senseless on the ground, having his thigh pierced with a spear. The young prince Alexander, who was also on this trying occasion performing actions of the most determined bravery, flew with the noble and gallant attendants who were fighting at his side, to rescue his father, who was now at the mercy of the enemy. He himself covered him with his shield; the barbarians were driven back, and the king was removed from the tumult to a place of safety.

Philip's wound occasioned a lameness which continued to affect him through life. He is said to have borne it impatiently; a circumstance which led his son to address to him on one occasion the good-humoured query—"How can you, Sir, be displeased at an accident, which at every step you take recalls your valour to your remembrance?"

Upon his return to Macedonia, Philip directed his forces against Perinthus, and others of the Hæmipontine cities, which, during his absence, had accepted the protection of Athens; but being deficient in naval strength, and having to sustain the opposition of several maritime states on both sides of the Egean, he found it expedient to desist from his un-

dertaking. This disappointment to the Macedonian ruler was unquestionably effected by Demosthenes, who was now at the head of affairs in Athens. Regardless of the treaty which bound the republic in amity with that prince, the great orator employed all the means in his power to annoy Philip, both in his own territory and in those of his allies. He spared no pains, and grudged no sacrifice either of principle or personal consistency, that he might accomplish the two leading objects of his administration, to surround Attica with friends, and Macedonia with enemies.

Greece was again on the eve of being thrown into confusion by an act of sacrilege on the part of the people of Amphissa, who were accused of using the land consecrated to Apollo, not only for feeding their flocks, but even for the purposes of tillage. The matter being referred to the Amphictyons, in whose assembly both Demosthenes and Æschines now occupied seats as Athenian representatives; the Amphissians were punished with a fine, and by the banishment of some of their more guilty citizens. This decision, however, did not at once secure public tranquillity. The war-party at Athens encouraged the men of Amphissa, to set at naught the sentence of the most solemn tribunal of their country, and oppose the execution of it by force of arms; and thus another sacred war would have instantly ravaged the finest portion of Greece, had not the designs of the Athenian demagogues been in the mean time defeated by the ascendancy of more pacific counsels, and particularly by the election of Philip to be general of the Amphictyons. This event, at least, if it did not altogether prevent an appeal to arms, gave a different character to the hostilities which ensued, and led to a result which Demosthenes and his friends could not have anticipated.

Whilst the Amphissians were in open rebellion against the whole Greek nation, and setting at defiance the judgment of this supreme court, the popular faction of Athens, by whom that insignificant people were excited to these irregular and violent proceedings, were most actively employed in forming a confederacy of the principal states and their allies, against the king of Macedonia. Thebes had been induced to unite with her ancient enemy in this coalition; and Coriuth, long disused to martial exercises, and insensible to military renown, showed so much spirit in proposing to encounter the post of Philip, that Diogenes, who was then residing within her walls, ridiculed her unwonted exertions by an incessant rolling of his tub from one spot to another. Being asked why he put himself to this uncommon toil, the philosopher replied, "that for once he would avoid the imputation of singularity, and so would not be the only person in Corinth not absurdly employed."

It was impossible that Philip could be ignorant of the intrigues which Demosthenes was thus practising against his interests, and of the positive injuries sustained by his commerce, from the incessant hostility of the Athenian cruisers. It was not yet, however, advisable to repel force by force, nor to avenge upon the people of Athens the unwarranted infringement of a treaty which had been solicited by themselves. Invited by the Amphictyons, he joined them at Thermopylae, where, in virtue of the office to which he had been lately raised, he issued requisitions to the several

The crisis was now arrived, when the war-party at Athens would find themselves compelled either to relinquish their favourite project against Philip, or to oppose themselves to the Amphictyonic council. They chose the latter. Having ten thousand mercenary troops at their command, they sent them to assist the Amphissians in the conflict with the confederate army; and in this way lifted their hands against the constitution of the great Grecian republic, in a cause which, even if it had been successful, would only have entailed disgrace upon their politics.

Of the actual warfare which followed, no details have reached modern times. It is evident, notwithstanding, that the talents of Philip obtained a complete victory over the Amphissians and their allies, and reduced them, in consequence, to a speedy and unconditional submission to the power of the Amphictyons; and it is further manifest that this wise monarch exerted all the influence which belonged to his high rank and successful services, to alleviate as much as possible the heavy penalty denounced against his sacrilegious foes.

The result of this insurrectionary movement having proved at once detestable and injurious to Demosthenes and his party, the ulterior views upon which all the recent measures had been made to bear, were becoming more and more impracticable. No means were left untried to accomplish the great object of a confederacy to put down Philip. To engage his attention in the meanwhile, two embassies were sent, complaining of his hostile proceedings, and reminding him of the treaty which subsisted between Macedonia and Athens; whilst emissaries on their part were actively employed at Thebes and other neutral states, craving co-operation in the war which the Athenians were preparing to direct against the general of the Amphictyons. The reply of the king to one of the embassies, is worthy of a place even in this outline of his transactions. It was worded as follows: "Philip king of the Macedonians to the Athenian council and people, greeting: What your disposition towards us has been from the beginning, I am not ignorant, nor with what earnestness you have endeavoured to gain the Thessalians, the Thebans, and the rest of the Boeotians to your party. But now you find them too wise to submit their interests to your directions, you change your course and send ministers with a herald to me to admonish me of the treaty, and demand a truce; having in truth been injured by us in nothing. Nevertheless, I have heard your ambassadors, and I consent to all your desires, nor shall I take any step against you, if dismissing those who advise you ill, you consign them to their deserved ignominy.—So may you prosper."

Both Philip and the Athenians exerted themselves to the utmost to gain the Thebans. The democratical form of government which now prevailed among this people afforded simple scope for the eloquence of Demosthenes, who, at length, had the satisfaction of securing them for his purpose, as allies of Athens. The troops of the confederacy were soon after set in motion, and a large body of Theban horse and foot were quartered in Thebes, as being nearer than their own city to the expected scene of hostilities: and

such was the zeal of the sluggish Boeotians, that to accommodate their allies with a comfortable residence in their houses, they themselves marched out and encamped in the fields.

Amidst these demonstrations, the king of Macedonia, still holding his place at the head of the Amphictyonic contingents, had contented himself with occupying Elasteia, a town of great importance as connected with the command of the Thermopylean pass, and consequently with the safety of the small army of which he continued to direct the movements.

It was already drawing towards the close of the year, when no steps had yet been taken by the Macedonians to moderate their desire for war. Philip continued in Phocia with his troops; and knowing that there was a large party, both at Athens and Thebes, who deprecated the fatal tendency of the measures pursued by the popular leaders, was, perhaps, not yet entirely destitute of hope that peace might be preserved. To prevent, however, all possibility of reconciliation, the united forces of Thebes and Athens, broke up their encampment, and proceeded forthwith to occupy a position on the Boeotian frontier, a few miles distant from Elasteia. It even appears that the sword was immediately drawn by these ardent republicans, and that one or two skirmishes, attended with no material result on either side, were provoked by them, in order to prove their arms, before winter should compel them to quit the field, and retire from the presence of their enemy.

After all that had passed in the council, and even in the camp, among the partisans of Demosthenes; after armies were raised and blood was actually shed in battle; Philip, however, thought it became his office, as general of the Amphictyonic confederacy, to make one more effort for preserving the tranquillity of his constituents, and for warding off the dreadful calamity which seemed to hang over Greece. He did not, therefore, allow the season of military rest to pass by without assuring the Thebans and Athenians of his continued desire of peace, and of his great reluctance to have recourse to the extremities. These professions, however, if sincere, had an effect on the popular mind, precisely the opposite of what was intended. The moderation of Philip was ascribed to his fears; and the Athenian multitude, confident in their own strength, and in the number of their allies, loudly proclaimed defiance, and declared that no treaty should be entered into with the king of Macedonia. The Thebans listened to the pacific proposals of the great Amphictyon, with more calmness and deliberation. They even wavered in their resolution in regard to the steps which they had already taken, and still more in relation to the hazardous policy upon which they were about to commence a campaign against the most experienced soldier of the age; but Demosthenes, who was made acquainted with their thoughts, flew to Thebes, ascended the tribunal, and addressing himself to the assembled people, swore by Minerva, "that if any one should dare to say that peace ought to be made with Philip, he would, himself, seize him by the hair, and drag him to prison." He intimated the pacific and roused the warlike; and had, at length, the triumph of counteracting by his eloquence, all the effects of sober reasoning, and of the soundest political views on the Theban public.

Nor were the exertions of this distinguished person either smaller or less successful in preparing an army for the field. From the Eubœans, Megarens, Corinthians, Achæans, Corcyrans, Leucadians, Acarnanians, and the Athenians, he collected a mercenary force of fifteen thousand foot and two thousand horse; besides a liberal supply of money, of which the amount is not exactly known. The Boeotian heavy-armed troops, are reckoned at fourteen thousand. Of the Athenians, the number is not any where given; but it is understood that the total amount of the confederate army, assembled at the instance of Demosthenes, and ready to contend for the empire of Greece, was not less than fifty thousand.

In his choice of commanders for this important war, Demosthenes was less successful than he had been in the enlistment of soldiers. Having little confidence in the abilities of Chares, who had received a variety of defeats, but who was still too great a favourite with the multitude to be entirely superseded; he resolved to divide the chief command amongst several generals, and even to entrust a portion of it to a veteran Theban. On the part of the Athenians, Lycicles, and the above named commanders, assumed the main direction, and appear to have formed the array of battle with considerable skill, according to the ground which they occupied, and the probable designs of their formidable antagonist.

Philip led to the field of Chæronea, upwards of thirty thousand men, the greater part of whom seems to have belonged to the Amphictyonic states. Alexander, now about eighteen years of age, assisted his father in performing the arduous duties of general-in-chief, and is said to have displayed not less valour, whilst fighting hand to hand with the enemy, than consummate knowledge of tactics in directing the movements of the brave Thessalian cavalry which was placed under his immediate command, and which contributed essentially to the fortune of the day.

The issue of this important struggle is well known. Neither courage nor perseverance could balance in favour of Athens, the great advantage of military talent which belonged to the side of the Amphictyons. The genius of Philip and Alexander bore down the obstinate valour of Thebes, and checked the fiery impetuosity of Athens; and, after a most sanguinary conflict, drove the confederates from the field, covered with the bodies of their bravest troops, as well as of the noblest of their youth, who had sworn never to yield. The Athenian confederacy was totally annihilated, and the glory of Grecian independence was for ever extinguished on the plain of Chæronea.

The gossip of biographers has made itself very busy in repeating anecdotes of Philip's immoderate levity on the night succeeding the battle; and about the cowardice of Demosthenes during the heat of the conflict, in which his violent measures had involved so many braver men. That the Macedonian king drank more than enough after the toils of that eventful day; and that Demosthenes, to facilitate his escape, threw away his shield and fled, may be historically true; but it is of more importance to us, to note the political effects of the victory at Chæronea, and to record its consequences in relation to the subsequent proceedings of Philip.

With that rare humanity and self-command, which distinguished the character of this warlike prince, he gave liberty to all the prisoners of war, and even sent to Athens the bodies of the slain, that they might be interred with that honour and respect, which were due to the remains of gallant men. To soothe the Athenians, and to confirm his assurances of pacific views towards them, he appointed his own son, and Antipater his favourite councillor, to repair to their city, now disturbed by faction, and dreading the full weight of the vengeance which the popular party had taken so much pains to provoke. He invited them, in short, to renew the treaty which they had so shamefully violated, and to enjoy again the blessings of peace, which they so little knew how to value.

It is said, that among the commissioners sent to the king of Macedon to ratify the treaty, there was one Demochares, an excessively rude character, and at the same time, a mighty offender of free speaking. When admitted to an audience before taking leave, Philip, in a very obliging manner, asked the embassy if there was any thing particular in which he could further gratify the Athenians. "Yes," cried Demochares, "hang thyself." The indignation of all who witnessed this unpardonable rudeness was loud and violent; but the king, with a very proper feeling of contempt for this brutal republican, silenced their demands for punishment, by exclaiming, "Let the ridiculous hawler depart unmolested." And addressing himself to the other ambassadors, he said, "Go, tell your countrymen that they who can utter such outrages, are much less inclined to peace and moderation than he who can forgive them."

We are now approaching the last public transaction in the life of Philip. Peace having been restored to the Greeks, their thoughts were turned by him to the general enemy of their country, the king of Persia; and inducements were held out to the several states of Greece, to enter into a confederacy against that powerful monarch. The motives which influenced the Macedonian in this undertaking, were not, perhaps, well understood at the time, and certainly have not been distinctly recorded by any contemporary historian. Diodorus, in the following terms, narrates the circumstances merely, in which the sentiments of that prince, as well as the Grecian confederacy, were expressed. "Philip, the king, encouraged by his victory at Chæronea, by which the most renowned states had been checked and confounded, was ambitious of becoming the military commander and head of the Greek nation. He declared, therefore, his intention of carrying war, in the common cause of the Greeks, against the Persians. A disposition to concur in his purpose, and to attach themselves to him, as their chief, pervaded the Grecian people. Communicating then with all, individuals as well as states, in a manner to conciliate favour, he expressed his desire of meeting the nation in congress, to concert measures for the great object in view, which accordingly met at Corinth. This explanation of his intentions excited great hopes, and so produced the desired concurrence, that at length the Greeks elected him generalissimo of their confederated powers. Great preparations for the Persian war were put forward, and the proportion of troops to be furnished by every state, was calculated and determined."

It is recorded that more than two hundred thousand men were raised for this magnificent expedition against the tyrant of western Asia. But Philip was not destined to lead these troops in the victorious career which they then anticipated, and which Alexander afterwards so fully realized. His last military exploit was already performed.

Upon his return to Macedon, Philip had given his only daughter in marriage to the king of Epirus, and was now indulging in those festivities with which royal nuptials are usually accompanied, when a young man, who had thought himself injured or slighted by the king, plunged a dagger into his bosom, and laid him lifeless at his feet. The murderer, whose name was Pausanias, instantly fled towards the gates of the city, where a chariot was ready to convey him to a place of safety; but he was overtaken by some of the king's attendants, who, more desirous to revenge the deed than to ascertain the motives which had led to it, despatched the guilty youth with innumerable wounds.

Conjecture has assigned various reasons, and suggested a variety of views, to account for this atrocious crime; and several of these, as might be expected, have had a reference to the vindictive temper of Olympias, the queen, who had, some time before, been repudiated, to make way for a more youthful consort. The conduct of Olympias, upon hearing of the death of her husband, if it has been at all fairly reported, affords but too much countenance to the suspicions which were entertained, in regard to the share which she had in inflaming the resentment of Pausanias, and even in directing it against the life of the king. It has also been imagined that Demos-

thenes, acting in concert with the Persian court, who had taken alarm at the preparations of Greece, had succeeded in turning a feeling of private revenge, on the part of the young Macedonian, into an instrument by which he might at once gratify his own malice, and render an essential service to his Asiatic allies. The death of the assassin placed a seal on all the secrets connected with his bloody enterprise; and the precise share, accordingly, which any of the leading characters of Macedon, Athens, or Persia, may have in its contrivance or execution, must for ever remain undetermined.

"Thus," says Diodorus, after relating the circumstances of Philip's murder, "thus fell the greatest potentate of his time. With very small resources in his outset, he acquired the most powerful monarchy that ever existed among the Greeks. His great success arose less from the force of his arms and the greatness of his victories, than from his extraordinary talent for reasoning and conversation, and from his obliging and affable disposition towards every class of men. He esteemed mere physical courage and strength of hand in the field as one of the lowest qualities in a superior officer. He set an almost exclusive value on military science, as distinguished from personal prowess, and not less on the talent of conversing, persuading, and conciliating, those over whom a general might be appointed to preside. Upon these last he founded the only favourable opinion which he entertained of himself; for, he was wont to remark, the merit of success in battle he could only share with those under him, whereas the victories he gained by argument, affability, and kindness, were all his own."

HISTORY.

CHAPTER XV.

CONTINUATION OF THE HISTORY OF THE JEWS.

FROM A. M. 3595, B. C. 409, TO A. M. 3836, B. C. 168.

SECTION I.

History With the books of Ezra, and Nehemiah terminates the connected chain of history transmitted to us in the sacred volume of inspiration. A chasm in the records of the Jewish nation then occurs, which Josephus has neglected to fill up, and which it has defied the industrious researches of later writers to supply; hence the lover of history and of antiquity, not less than the practical legislator, has to lament the entire absence of all information, respecting the state and condition of the Jewish nation from the time of Nehemiah to the reign of Alexander the Great. It is not difficult to account for this circumstance if we consider the limited nature of the historian's labours in the early progress of this most interesting branch of literature. At those periods in the existence of nations, when the wants of people are confined to the supply of the necessities of life; and the inhabitants thinly scattered over an extended territory are protected, by the general absence of wealth and luxury, from those feelings of ambition, which are in most cases the causes of great political changes, year after year succeeds in the annals of the people without any distinguishing features of public good or natural ill, excepting those produced by the variation of climate or the unfavourable influence of the seasons upon the productions of the earth. If the nation be unprovided with laws adapted for the preservation of civil happiness and the repression of civil injury, the promulgation of some useful system of law not unfrequently forms an epocha in the history, sufficiently remarkable to be publicly recorded. The introduction of some novel mode of worshipping the divinity, is also an event of such importance as to call for a memorial of the period at which it took place. But whena either of these causes have existed as in the case of the Jewish nation, when private happiness is secured by a regular code of law like that of Moses, when the form of public worship is such as to admit no change, when peace reigns at home, and no foreign enemy disturbs the labours of the husbandman or the regular administration of justice, the duties of the historian almost cease; his task is rather to describe the miseries which men inflict upon each other, than to record the blessings which a gracious Provi-

dence pours forth upon the world. We need not, therefore, be surprised at the silence of Josephus, respecting the transactions of the century succeeding the government of Nehemiah. It would have been an abundant source of pleasure to the true believer in the divine legislation of Moses, had the picture been drawn by some able hand of the peaceful state of the Jewish nation during this period; but the ancient historians had other views, and those who tread in their steps must not presume to supply by the force of imagination the deficiencies of ancient annals. One circumstance alone is recorded by Josephus as disturbing the public tranquillity between the times of Nehemiah and Alexander the Great; it is an instance of the dreadful consequences of anger, and the punishment of ambition, and it may also be considered as testifying such an increase of national wealth, as made the office of the high priest an object worthy the regard of a man who aspired after power.

The Jews were subject to the kings of Persia until the overthrow of that monarchy by Alexander, and paid a yearly tribute, to an extent which does not seem to have been oppressive. A governor appointed by the king held the supreme power in Judea, but the internal administration of the government is considered to have been vested in the person of the high priest.

During the time Bagoses held the office of governor, Johanan the son of Judas was the high priest, whose brother Joshua possessing great influence with Bagoses, obtained from him a promise of the high priest office; but whether the succession only was procured at his brother's death, or it was intended to dispossess Johanan, is not distinctly stated by Josephus. Joshua so conducted himself on the strength of this promise, that, in a quarrel which took place between the two brothers in the Temple, Johanan slew Joshua. As soon as Bagoses received intelligence of this horrible event he came to Jerusalem, and charging upon the whole nation the crime of this sacrilege, he imposed a tribute of fifty drachmas for every laith that was offered in the Temple; which was paid for seven years, but the payment of this imposition did not affect the Jews with anger so much as did the

Murder of
Joshua by
Johanan the
high priest.

History	conduct of Bagoses, who profaned the Temple by entering into that court where none but circumcised persons were allowed to enter.	give him the empire of the Persians; that as soon as he saw the high priest he recognised him to be the same that had appeared to him at Dio, and therefore, in the person of the priest, he adored the God who had thus granted him a revelation of his will. Alexander kindly embraced Juddan, and accompanying him to Jerusalem, offered sacrifices to God in the Temple; and being made acquainted by the high priest with the prophecies of Daniel, which predicted the overthrow of the Persian empire by a Grecian king, he derived from them the greatest encouragement to carry on the war against Darius, not doubting but that he was the person described in the prophetic books.	Of the Jews.
From A. M. 3595.	Juddan, the son of Johanna, succeeded to the priesthood, whose brother, Manasses, marrying the daughter of Sanballat, the governor of Samaria, is related by Josephus to have been the first high priest of the Temple at Mount Gerizim. This Juddan was the high priest who received Alexander at Jerusalem, and so successfully mitigated the conqueror's wrath; the circumstances of the transaction are interesting, and therefore we shall detail them at length.	At his departure these circumstances so effectually recommended the Jews to the favour of Alexander, that when they petitioned him to allow them to live under their own laws, and in the free exercise of their religion, and further to be exempted from tribute every seventh year, because their law forbade them to cultivate the soil in the year of the sabbath, he immediately complied with their request. The Jews further implored his protection for their brethren whom he would find settled in Babylon; and many of them, won by his kindness, enlisted as soldiers in his service, and accompanied him on his expedition.	From A. M. 3595.
B. C. 459.	In the second year after the victory over the Persians at the river Granicus, Alexander having pushed his conquests into Syria, and besieged the city of Tyre, met with so valiant a resistance that he was compelled to employ not less than seven months in the siege. Whilst occupied in reducing this important fortress, Alexander sent to demand the submission of the neighbouring provinces, and to require from the inhabitants supplies of provisions for the support of his army. The Jews alone refused compliance, faithful to their sovereign the king of Persia, they would not desert him, nor break the oath of allegiance they had taken, and accordingly they made answer to Alexander, that so long as Darius lived they were his subjects, and would not own any other as their king. The Samaritans on the contrary, not only complied with all his demands, but anxious to shew their attachment to Alexander, and to testify the perfect sincerity of their submission, sent a body of eight thousand men to assist him at the siege. The fidelity of the one and the disloyalty of the other, met with rewards proportionable to their conduct; the time-serving disposition of the Samaritans being subsequently treated with contempt by Alexander, whilst, under the controlling power of Providence, the firm faith of the Jews gained for them not less the admiration than the protection of the conqueror.	At his departure these circumstances so effectually recommended the Jews to the favour of Alexander, that when they petitioned him to allow them to live under their own laws, and in the free exercise of their religion, and further to be exempted from tribute every seventh year, because their law forbade them to cultivate the soil in the year of the sabbath, he immediately complied with their request. The Jews further implored his protection for their brethren whom he would find settled in Babylon; and many of them, won by his kindness, enlisted as soldiers in his service, and accompanied him on his expedition. History the son of Jupiter Ammon, and to undertake a most laborious expedition to his Temple, which was situated in the midst of the deserts of Libyn, and twelve days journey from Memphis, for no other purpose than that of procuring himself the title of son of Jupiter.

From A. M. 3595. —
n. c. 409. —
to A. M. 3836. —
n. c. 168. —

The transactions with Jaddua, at Jerusalem, may serve to throw some light upon this part of Alexander's conduct. If Alexander was persuaded that he was the king of Greece, prophesied by Daniel, as the conqueror of the East, and that he was under the immediate protection of heaven, as being a man specially marked out to fulfil the destinies of the world, and if as is probable in conformity with the popular religion of Greece, he believed the existence of the heroes of ancient days, those favoured mortals who were descended from the Gods; it would appear almost a natural consequence of such a combination of circumstances on the mind of a heathen man, that he should believe himself to resemble Hercules and Boeubus, not only in their victories over the east, but in their descent from the thunderer of Olympus, and in conformity with this belief should compel the priest of Ammon publicly to declare that divine descent of which himself had already received powerful and convincing evidence. That the governor of the universe would by visions encourage a king to attempt conquests, foretell his success so plainly in the written prophecies of a foreign nation, grant him an almost universal empire, and do all this for one, and not most highly beloved in the courts of Heaven, was a notion that never could enter the mind of the religious men either of Greece or Rome; and however we may ridicule Alexander's conduct, it was still that error which a man in the full career of success, of a warm and sanguine temper, and under the influence of an idolatrous religion, could hardly avoid; an error which every event subsequent to the transactions at Jerusalem served only to confirm, and which was increased by every new success.

Origin of the Samaritan nation, and of the temple at Mount Gerizim.

The history of the Samaritan nation is closely connected with this period in the annals of the Jews, we will therefore pause to give an account of its origin, and to state the leading points of the controversy, which has existed respecting the date of the building of the Samaritan temple upon Mount Gerizim. Under the name of Samaritans are included all the inhabitants of the country which was possessed by the ten tribes before their captivity. The name is derived from Samaria, a city in that part of the land of Israel belonging to the tribe of Ephraim, which was built by Omri, king of Israel, and became the capital of the ten tribes. The kingdom of Israel being destroyed by Salmanasser, and the ten tribes carried into captivity, never more to return, the king of Assyria, repopulated the country with colonies from Babylon, Cathath, and the neighbouring districts, and afterwards learning that the land was infested with lions, sent to punish them for their gross ignorance of the true God, he gave orders for the return of some of the priests whom he had taken captive, and enjoined to teach the religion of the law of Moses to the new inhabitants. A corrupt religion was thus formed by the strange union of the Mosae institutions, with the grossest superstition of the heathen nations. But there is reason to believe that this religion became purer in its form at the time of the return of the two

tribes from captivity in Babylon, under Ezra, and Of the Jews. Zerubbabel; and to this may be attributed in some measure the desire expressed by the Samaritans to partake the benefits of the decree of Cyrus, for the rebuilding of the Temple at Jerusalem. But Zerubbabel refusing their request, as being persons of a different nation from the Jews, though in part professing the same religion; from hence arose the perpetual enmity which even to this day subsists between the two nations; for the Samaritans, in anger, used every endeavour to hinder the building of the Temple and fortifying the city at Jerusalem, and succeeded so far as to hinder the works being completed until the government of Nehemiah. The feud between the two nations seems also to have been increased by the establishment of that part of the ecclesiastical discipline by Ezra and Nehemiah, which compelled those Jews who had intermarried with the nations forbidden in the law of Moses to put away their wives: the enforcement of this law caused Samaria to become the place of refuge for all who were weary of the painful observances of the law, and sought a place where they might worship the God of Abraham, and yet be free from the severities of the Mosae discipline.

We may easily conceive with what feelings of abhorrence the devout Jews, on the one hand, would regard those who had connected themselves by marriage with those idolatrous nations whom God had so frequently commanded them to root out, as being the cause of their apostasy from his laws; and on the other, what a desire of revenge and retaliation for the infliction of injury would arise in the minds of those whom the strict enforcement of the law by the governors of the church compelled either to relinquish their wives or to give up their title of descent from Abraham and the patriarchs. It was natural that the Samaritan who professed himself a Jew in religion, not less than these excommunicated Jews, should desire to have a temple like that at Jerusalem, where they might worship the God of Moses. Accordingly we find that one was built on Mount Gerizim, and in process of time it was held by the Samaritans in even greater veneration than that at Jerusalem.

Much doubt exists respecting the time of the building of this temple, some authors making it contemporary with the excommunication of one of the sons of Joiad, the high priest, in consequence of his having married Sanballat, the Horonite, which circumstance is recorded in the 27th and 28th verses of the last chapter of the Book of Nehemiah. Others, on the contrary, following the authority of Josephus, refer the temple at Gerizim to the time of Alexander the Great. The latter seems to be the opinion most commonly received, but the learned author of the connection of the Old and New Testament, having taken no inconsiderable pains, to support the former hypothesis we shall state the argument on both sides as concisely as the nature of the argument will admit.

Josephus relates that Sanballat being governor of Samaria, under the last Darius, and thinking to acquire influence with the Jewish nation, married his daughter to Manasses, the brother of Jaddua, who had succeeded his father John in the high priesthood. The elders at Jerusalem, unwilling that Manasses, who had thus married a stranger, should share any

part of the high priest's authority, enodmned his marriage, and obliged him either to repudiate his wife, or to suffer excommunication. Manasses was inclined to submit to the dissolution of the marriage, rather than lose the honour of the priesthood; but Sanballat, anxious for the honour of his daughter, persuaded Manasses to accept from him the authority of a high priest at Samaria, promising him, at the same time, the succession to his authority as governor, and engaging, under permission of Darius, to build for him a temple at Mount Gerizim, like that at Jerusalem. Manasses then retired to Samaria, and it occasioned no small alarm, when it was discovered that all the priests, as well as the laity, at Jerusalem, who were similarly married to strangers, and their number was by no means inconsiderable, revolted to Manasses; Sanballat supplying them with the means of subsistence, giving them land to cultivate, and leaving nothing undone to gratify his son-in-law. Josephus further relates, that Sanballat, considering the invasion of Alexander, as admirably suited for the full accomplishment of his plans, revolted from Darius, and joined Alexander with 8,000 men; and then communicating to him his wishes, both sought and obtained his permission to build the temple; that, after the arrival of Alexander at Jerusalem, nine months later, the Samaritans met him, and requested him to honour their temple with his presence. Such is the account given by Josephus. But Prideaux contends that Josephus has erred in placing the building of the temple in the reign of the last Darius-Codomanus, and that he ought to have ascribed it to the time of Darius Nthus; that is, to the age of Nehemiah; that Josephus's account contains in itself a contradiction; for it was absolutely impossible that the temple at Gerizim could be built in the time of nine months, so that Alexander should have been invited to visit it, as Josephus relates he was, by the Samaritans, immediately after his coming to Jerusalem; especially, if it be considered, that during seven months of that time, Sanballat was at Tyre with Alexander assisting at the siege, and 8,000 of his people with him; that since Sanballat died nine months after the commencement of the siege of Tyre, the temple designed to be built by him, could not have been built under Alexander's permission after his death, because the Samaritans were then quite out of favour with Alexander; being, on account of their rebellion, deprived of their city, which was given to the Macedonians, and themselves reduced to the greatest distress.

Thus much as to the internal evidence of the falsity of Josephus's account. Prideaux admits that the temple at Gerizim was built by a Sanballat, who had married his daughter to the son of a high priest at Jerusalem, but contends that this Sanballat, is Sanballat the Hronite, whose opposition to Nehemiah's designs for the restoration of Jerusalem is recorded in the historical book of Nehemiah, and that the person mentioned in the 28th verse of the 12th chapter, is the same with Manasses, whose Josephus relates to have been the first high priest in the Samaritan temple. "And one of the sons of Joiada, the son of Elnishib, the high priest, was son-in-law of Sanballat, the Hronite; therefore I chased him from me." He grounds his proof of the identity of the Sanballat of Nehemiah, with the Sanballat of Josephus, on the similarity of their conduct; both being enemies of

the Jews, and both having married their daughters to the son of a high priest of the Jews. In the same manner, though Josephus places the marriage of Manasses in the high priesthood of Jaddan, the grandson of Joiadin, and says, that he who contracted it was the brother of Jaddan, and son of Johanan; yet Prideaux considers in the same way the similarity of the description of Manasseh given in Josephus, with the person mentioned in the 13th chapter of the book of Nehemiah, in the 28th verse, proof of the identity of the two persons; both being sons of a high priest, both having married a daughter of a Sanballat, and both having been excommunicated for that offence.

The learned dean's argument is certainly plausible; and entitled to its due weight; if Josephus's testimony were contradictory to any single fact mentioned in the Scripture history, it would be conclusive against the historian; but we should always be unwilling to mistrust an historian, unless we are well assured we are justified in so doing; and when we consider how many of the apparent contradictions contained in the page of history, are to be attributed to our partial knowledge of the facts, we should rather desire to obtain a solution of the difficulty, than a plausible argument against the fact. We would therefore suggest, that the temple at Gerizim might have been proceeded upon before the arrival of Alexander in Syria, and even before the permission of Darius had been gained; and that Sanballat made this request to Alexander, as a further proof of his willing submission to his authority. It is not improbable, that in the space of ninety years, there should have been two Sanballats, governors of Samaria, if a family of influence of that name were settled there: or that, at a time when the marriages of Jews with heathens seems to have been a national vice, the sons of two high priests should have been guilty of the same error; an error, which perhaps appeared pardonable as a means of procuring public quiet by the union of the two chief families of the rival nations; and which Manasses might have good reason to hope would escape the severe punishment inflicted as far back as the time of Nehemiah upon a similar offence.

We learn from profane history, that the empire of Alexander was, at his death, divided amongst his generals, who at first assumed no other title than that of governors of the provinces under Alexander, his posthumous son by Roxana, whom they had declared king jointly with Arideus. But this division of the government did not last long: God had foretold, by the prophet Daniel, that four kings should arise and divide the Macedonian empire between them; and it accordingly came to pass, that these generals, disputing with each other, kept up a continual warfare, until, in the space of a few years, their number was reduced to four.—Cassander, Lysimachus, Ptolemy, and Seleucus. Cassander had Macedonia and Greece; Lysimachus, Thracia and that part of Asia which is contiguous to the Hellespont; Ptolemy, Egypt, Libya, Arabia, Palestine, and Coele-Syria; and Seleucus the rest. In the contests which took place between the Ptolemies and the successors of Seleucus, Judea suffered considerably. Lying between Egypt and Syria, the kings of those countries were equally desirous to attach it to their dominion; and by its situation it became,

not only the prize of the contest, but the arena upon which the combatants fought for the victory. In the first division of Alexander's empire, Syria, Phœnicia, and Judea, were allotted to Laomedon of Mitylene; but Ptolemy, soon perceiving how conveniently those countries were situated both for the defence of Egypt, and for any attempt he might be desirous of making upon Cyprus, resolved to make himself master of them. Ptolemy at first tried to purchase of Laomedon his portion of the empire; but not being able to prevail upon him, he determined to obtain it by force, and sent Nicanor to invade the country, who speedily conquered Laomedon, and gained for Ptolemy the entire possession of the territory. The Jews alone refusing to submit to their new master, Ptolemy marched into Judea, and laid siege to Jerusalem, which he took after some time, by storming the place on a Sabbath. Josephus relates that Ptolemy gained admission under pretence of doing sacrifice in the temple, and took the city by treachery. The learned Prideaux supposes that Josephus, in asserting that the city was thus taken, gives a false colouring to this transaction, lest he should expose his nation to the contempt of the Greeks, for so ridiculous a folly as that of not defending themselves when attacked on the Sabbath. But there is no reason for supposing that Josephus would wilfully falsify his narration on such an account; and if we examine attentively the whole passage, we shall see clearly that the Jewish historian means his reader to understand, that had the Jews suspected Ptolemy, they would not have yielded so easily, and that their city was taken through their keeping the Sabbath, in the confidence that Ptolemy would not deal treacherously towards them. "Ptolemy," says he, "took Jerusalem by using deceit; for when he had come into the city, under pretence of doing sacrifice, and the Jews had forbore to oppose his entrance, not suspecting his hostile intention, and through this absence of all suspicion, as well as the sacredness of the day, were in a state of idleness and rest, he without difficulty made himself master of the city." *

Undoubtedly the city was captured, because the Jews were keeping the Sabbath on that occasion; but such an observance of the Sabbath, which would occasion the walls to be unmanned, and the guards released from the strictness of their discipline, would be caused by the conduct of Ptolemy, in requesting to be allowed to enter the city for the purpose of sacrificing in the temple. And so far was Josephus from wishing to hide this transaction, that he seems rather to have gloried in the simplicity of his countrymen, and to have considered it an honourable testimony of their minds being more attentive to their duty to God, than to the preservation of their lives and liberties; for in his book against Apion, in replying to the ridicule cast by Agatharchides on his countrymen, for suffering their city to be taken on the Sabbath, he has this remarkable expression—"Agatharchides may call this transaction one worthy of ridicule, but to those who examine the subject with minds free from evil intention, that conduct will

* Επειδὴν γὰρ Σαββάτου ἐν τῇ πόλει ἦν θύμην, καὶ τὸν λαὸν αὐτὸν ἀνυπόπτους, οὐκ ἠγνοῦσαν τὴν πόλιν, καὶ τὰ τὸ ἀνεπίσταν καὶ τὴν ἡμερὰν ἐν ἡμέρᾳ καὶ παύσει τοῦ γυμνασίου, αὐτοὺς ἐπὶ τῇ πόλει γίνετο τὴν πόλιν.
Antiq. l. xii. c. i.

appear worthy of the highest encomiums, which has Of the Jews. led some men constantly to regard obedience to the laws and piety to God before their own safety, or the freedom of their country." Ταῦτα μὲν Ἀγροῦρχιδης καταλέγων εἶπεν οὕτως. τοῖς δὲ καὶ μετὰ ἐπερχομένην ἐξέτασεν φαίνεται μὲν καὶ πολλὰν εἶναι ἐπαμεινῶν ἐν αὐτῇ, καὶ παρὰ τοὺς ἀνθρώπους τινες νόμους φυλάττειν καὶ τὴν πρὸς ὅσον ἐναρξάναι αὐτοὺς πρὸς τὸν πόλεμον. He does not appear to think it worth attempting any elaborate defence of his countrymen; for if in his history, which was written prior to this book, against Apion, he had furred the story of Ptolemy's treachery for the purpose of concealing the truth, in his subsequent work he would surely have defended his former statement, by asserting the probability of his account; he would have expatiated upon Ptolemy's conduct, and have endeavoured to shew how likely it was to deceive the Jews, and would not have rested satisfied with stating in plain terms a circumstance of which he was ashamed. The city thus captured, Ptolemy at first treated the Jews with severity, and carried above a hundred thousand captives into Egypt; but,

subsequently calling to mind the fidelity with which they had always served their masters, and that a loyal but not a rebellious spirit had ensued their misfortunes, he thought such persons qualified for stations of trust, and therefore, selecting from them thirty thousand for military service, he placed them as garrisons in the most important fortresses of his empire. Some of them he settled at Lybia and Cyrene, and from them were descended the Cyrenian Jews, a tribe for whom we cannot but feel interested, since to it belonged Simon the Cyrenian, who bore our Lord's cross on the way to Calvary, and others, who are mentioned in the Acts of the Apostles. So long as the power of the Ptolemies in Egypt enabled them to defend their frontiers successfully against the descendants of Seleucus, Judea and Coele-Syria remained in their possession; but as their empire declined, the kings of Syria made good their encroachments upon the territories of the kings of Egypt; and Judea fell with Syria under their government. The Jews, however, notwithstanding the frequent incursions made into their country by the contending parties, increased in commercial prosperity: to the Ptolemies they paid a regular tribute; but the internal government of Judea seems to have been confided to their own rulers. The protection afforded to the Jews by the Egyptian princes, but especially by Ptolemy Soter, occasioned many of them to emigrate, and settle in Egypt, and especially at Egypt free-Alexandria, where they still continued to enjoy equal privileges with the Macedonian colonists. By this means it pleased the Divine Providence to prepare the way for the completion of that great and important work, the translation of the Hebrew Scriptures into Greek, in that version, which, from the supposed number of the translators has been called the Septuagint. The knowledge of the true God became more extended, and the Creator may indeed be said not to have left himself without witness in that his favoured nation, who were in those days, as they are at the present time, scattered over the world, and preserved by him as a distinct nation, notwithstanding the natural causes that tended to assimilate them with the various nations amongst whom they dwelt. But Egypt was not the only spot where the Jewish people found protection. When Seleucus

Protection
afforded to the Jewish
nation by the Seleucid.

became possessed of the empire of Asia, 300, a. e. and built numerous cities in Syria, and Asia Minor, in all of them he planted Jews, and gave them equal immunities and privileges with the Greeks and Macedonians, and especially at Antioch in Syria, where they settled in great numbers, and became almost as great a part of the people as they were at Alexandria. In the countries beyond the Euphrates, and at Babylon, they also existed in great numbers; and when we consider what a principle of fidelity to their governors at that time pervaded the nation, it is most likely that they contributed very materially to the establishment of the empire of Seleucus, and his settling them so numerous in his own cities is a proof how mainly he depended upon them for assistance in the further increase and support of it.

And if we may judge from the conduct of Antiochus the Great, the same honourable feelings of loyalty to their kings continued to exist at a still later period; for it is related, that when the state of the country in Phrygia and Lydia was considerably disturbed by intestine commotions, Antiochus the Great, having experienced the great steadiness with which these eastern Jews always submitted to their governors, sent two thousand of their families from Mesopotamia and Babylon into those parts, to keep in check the seditious spirit of the former inhabitants; and from them, thus transplanted from Syria and Babylon, were descended most of the Jews whom we find scattered in great numbers all over the Lesser Asia, at the time of the first promulgation of the Gospel.

We have stated that Coele-Syria and Palestine were continually exposed to invasions from the contending kings of Egypt and Syria, and these wars were terminated in the subjection of that country to the Syrian princes. To pursue this intricate portion of Jewish history through all its minute details, down to the final possession of Judea by Antiochus Epiphanes, and the war of the Maccabees, would be unproductive of any benefit, we shall therefore content ourselves with the relation of those few circumstances of any interest relating to the Jewish nation, which occurred during this period. The most important event we have to record during the whole period of time from the conquest of Alexander to the birth of Christ, is the translation of the Holy Scriptures of the Old Testament into Greek, in the version called the Septuagint. If we were to credit the history of this memorable work, as given by a person who wrote under the name of Aristeas, we should place its accomplishment in the year 277, a. e. during the reign of Ptolemy Philadelphus. For the examination of the controversy respecting the origin of this translation, we must refer the reader to the article Septuagint; we shall here only state that a probable source of this translation is the change of language which naturally took place amongst the Jews at Alexandria; for the bulk of the common people, not preserving their knowledge of the Biblical Hebrew, and the Egyptian or Greek languages in their intercourse with the people amongst whom they dwelt, a translation of the laws, at least, would be necessary, in order to teach them their duty by means of that language with which they were best acquainted. In the time of Ezra, when the Scriptures were read, it was customary to interpret them in the Chaldee, the people being more familiar with that dialect of the

Hebrew language, in consequence of their long residence in Babylon; and in the same manner it is highly probable that the custom of interpreting the Hebrew Scriptures into Greek might have prevailed in the synagogues at Alexandria, many years before a regular translation was effected. We can scarcely conceive that Ptolemy Philadelphus would have neglected to procure some copies of the religious laws of the nation, which formed so great a part of the inhabitants of the capital city of his empire, at a time when he was forming a collection of books from all parts of the world; and it does not appear improbable that, when the Hebrew language was one so little known to any but the Jews, the king should have ordered a translation of them to be made, with the view of informing those learned men who were ignorant of the Hebrew, with the laws of the Jews. This theory would account for all the fabulous stories of the short period of time in which the work was accomplished, which indeed would only be the labour of committing to writing an interpretation which was every Sabbath-day orally delivered in the synagogues. The books of the prophets were not commonly read in the synagogues, till after the time of the Maccabees; and we find in the Septuagint version such a difference in the correctness of the version of the Pentateuch, and the books of the prophets, as would lead us to conclude that the translators of the law were far better skilled in the knowledge of the Hebrew language than those who after them translated the books of the prophets; a circumstance which tends to prove the gradual accomplishment of the translation, against the opinions of those who think it was completed at one time. We may then, not without reason, regard the Septuagint version as a work that gradually came into existence, as the wants of the Jewish church at Alexandria required, the five books of the law, and the book of Job, being first edited in a written translation, at a time when the Hebrew language was accurately understood, and the succeeding books being translated at later periods, and therefore liable to those imperfections which would naturally result from a less perfect acquaintance with the original language.

The next occurrence worthy of notice is a dreadful persecution of the Jews at Alexandria, which arose in the following manner. In the year 217, a. e. Ptolemy Philopator warring with Antiochus the Great for the possession of Coele-Syria, overthrew him with great loss at Raphia, a town lying between Rhinocorura and Gaza, and compelled him to retreat to Antioch. On the retreat of Antiochus all the cities of Palestine and Coele-Syria, and amongst them the city of Jerusalem sent embassies to renew their submission to Ptolemy, for having been long under the government of the Egyptians, they still retained their affection to their old masters. Ptolemy soon after made a progress through the country, and coming to Jerusalem, offered many sacrifices and oblations in the Temple; but being desirous of admission into the inner court he would have pressed into the sanctuary, and into the holy of holies, where the high priest alone was permitted to enter once in the year on the great day of expiation. This occasioned no small uproar in the city. The high priest explained to him the sacredness of the place, and the prohibition contained in the law; the priests and Levites

assembled with the people, and implored him to desist from his purpose, but the king persisting came into the inner court, and was going into the Temple itself, when he was seized with so great a terror and confusion of mind, that he fell down and was carried off apparently dead. Recovering from his sickness he departed from Jerusalem in great wrath, and venting forth many threatenings against the whole nation of the Jews. On his return to Alexandria he began to visit his anger against the Jews of Jerusalem upon those of Alexandria, and published a decree forbidding those to enter his presence who did not sacrifice to the gods whom he worshipped. This decree was in effect a putting the Jewish nation out of the protection of the law, for it prevented any Jews from suing for justice in the king's court. And whereas the Jews of Alexandria ranked equally with the Macedonians, the original founders of the city; by another decree he commanded them to be enrolled in the lowest order, and at the time of enrolment to be branded with a hot iron, the impress of which was an ivy leaf, the badge of his god, Bacchus; at the same time he allowed as many of the Jews as would be initiated into the heathen religion to retain their privileges, and remain in the same rank. Of the many thousands of Jews at Alexandria there were found but 3000 ready to forsake their God in order to secure the favour of their king. The remainder stood firm in the profession of their religion, choosing rather to suffer the greatest evils than to apostatise from the faith. Those who submitted to the king were so abhorred by their countrymen, that they would have no communication with men who were guilty of such great impiety, and this being interpreted as done in opposition to the real authority so enraged Ptolemy that he resolved to extirpate the whole nation, and commanding all the Jews in Egypt to be brought in chains to Alexandria, there shut up great numbers of them in the Hippodrome, (a large place without the city, where the people assembled to see horse races and other shews,) intending to destroy them with his elephants; for two days they remained confined in this place, the execution being delayed in consequence of Ptolemy's drunken carousals, which prevented his thinking of the proposed massacre till too late in each day to accomplish it. But the third day the king himself being present, the elephants were brought forth and made drunk with wine, that they might more fiercely execute his rage against the people; but instead of attacking the Jews, they fell upon those who came to be spectators of the massacre, and destroyed many. Ptolemy considering this a divine interposition no longer dared prosecute his rage against the Jews, but restored them their privileges, and revoked the decrees he had made.*

n. c.
304.

In the subsequent reign of Ptolemy Epiphanes the Jews were quite alienated in their affections from the Egyptian princes, and willingly submitted themselves

* This account is contained in the third book of the History of the Maccabees: this book being of less authority than the two first books of the Maccabees is omitted in our English translation, but it is extant in the Syriac language, and is in most of the ancient manuscript copies of the Greek Septuagint. The name Maccabees was of later origin than the time of this persecution, but because the Jews at Alexandria suffered in the cause of religion, as did the real Maccabees; for this reason, these as well as others, who endured martyrdom for the profession of the truth, were called Maccabees by the later Jews. 138, n. c.

to the authority of Antiochus the Great, who in return bestowed many favours upon the nation and gave them his entire protection. To Antiochus the Great, Seleucus Philopator, succeeded in the kingdom of Syria: during his reign, Simon a Benjamite, the governor of the Temple, quarrelling with Onias the high priest, in revenge went to Apollonius the governor of Cæle-Syria, under Seleucus, and informing him what great wealth was hoarded in the Temple of Jerusalem, advised him to seize it in behalf of the king. Heliodorus, the king's treasurer, was sent upon this information to get possession of it, who came to Jerusalem, and notwithstanding the earnest supplication of the priests and people, persisted in endeavouring to fulfil the king's commands. In the second book of Maccabees, the third chapter, it is related that the hand of God in a most miraculous manner prevented the sacrilege: for upon Heliodorus approaching the Treasury there appeared a vision of a man on horseback, who ran against him and struck him to the ground with such force that he was taken up speechless, and almost without life. Heliodorus recovered, and having offered sacrifice in the Temple for his preservation returned to the king, and being asked by him whether he knew any man who was fit to go again on the business to Jerusalem, he answered—"If thou hast any enemy or traitor send him thither, and thou shalt receive him well scourged, if he escape with his life; for in that place no doubt there is an especial power of God; for he that dwelleth hath his eye on that place, and defendeth it, and he beareth and destroyeth them that hurt it."

SECTION II.

We have now brought down the Jewish History Rise of the to the times of the Maccabees, and the government Maccabees. of that race of princes called the Asmonean princes.

The origin of the Maccabees is so closely connected with the state of religion, that we must trace its varying conduct during the preceding centuries from the time of Nehemiah, in the year 3559, in order to form a right estimate of the circumstances which led to the establishment of the descendants of Asmoneus on the throne of Judea. In this period of time including, according to Prideaux, a space of 290 years from the last visit of Nehemiah to Jerusalem, (mentioned in the 13th chapter, in the 6th verse of the book of Nehemiah,) the death of Simon the Just, forms a distinguishing epocha. The Jews tell us that Simon was the last of the men of the Great Synagogue which consisted of 120 persons, who returned with Ezra from the captivity in Babylon, and was established for two reasons; first for the purpose of restoring the observance of the law according to the practice which existed before the captivity, and secondly to collect all the sacred books into one body, and to compose the canon of Scripture. They pretend that after Ezra, Daniel, and his three companions, Shadrach, Meshach, and Abednego, held the first places in this assembly: that Simon the Just sat at the lower end, and that all these persons were contemporary; but this is quite irreconcilable with their chronology.

The Jews tell us very extraordinary things of this Simon the high priest. Just.

1st. It is said in the Talmud of Jerusalem, that during the whole of his pontificate, the goat azazel, the scape-goat, was dashed to pieces before he could fall half way down the precipice over which he was thrown. Whereas after the death of this great man, the goat escaped into the desert, where he was caught and eat by the Saracens; which was considered as a great misfortune.

2dly. During his whole life, when, on the day of solemn expiation, the high priest drew lots on the two goats, that which he drew with his right hand, had always the inscription, "Pray to God;" and that which he drew with his left hand was always for the azazel, or scape-goat; whereas after his death this varied, and the high priest sometimes drew the lot for the azazel with his right hand; which was taken for an evil omen.

3dly. The scarlet ribbon which was tied to the head of the goat azazel (this was not appointed in Scripture; but, however, custom had given it authority,) always appeared white during the pontificate of Simon the Just; which was looked upon as a proof of the remission of the sins of the people, according to those words of Isaiah (chap. l. v. 18.) "Though your sins be as scarlet, they shall be white as snow." But after the death of Simon this also varied, and the scarlet ribbon appeared sometimes red and sometimes white.

4thly. While he lived, the western lamp of the golden candlestick was always burning, but after his death it sometimes went out.

5thly. While he lived the fire of the altar burned clear; and after a hillot or two was put on it in the morning, there was no occasion for any more wood during the whole day; but when he was dead, the fire languished, and required a continual supply to keep it in.

6thly. While he lived, the blessing of God multiplied, the two loaves of first fruits, offered on the day of Pentecost; and the twelve loaves of shew-bread set upon the golden altar in the Sanctuary, and which were left there the whole week till the Sabbath following, when others were put there in their stead. These loaves, they say, were multiplied so, that when they were distributed to all the Priests that waited in the Temple, as a kind of blessing, each had, at least, a piece as big as an olive, which was enough for their refreshment; and some had to spare. But when he was dead, this blessing ceased, and the shares distributed among the priests were so small that the more modest returned their thanks, and the others still held out their hands.

These stories can have no other foundation than the existence of religion in a prosperous state under his priesthood. The exaggeration must be pardoned, for men even in these days are not exempt from the common error of describing the happiness of former ages in terms, which, as they are beyond credibility, serve no other purpose than that of testifying the existence of prosperity. The truth of the whole is probably this, that Ezra was assisted in his labours by some persons who partook with him his zeal for the reformation of religion, the same spirit which animated them continued for some time to influence those who succeeded them in the government of the church, and that Simon's known attachment to religion, and the exertions he made during his life for the preservation of right principles, among his countrymen, procured

for him the traditional honour of having been one of those who assisted in the early reformation of the Jewish church.

Not to delay any longer upon these Jewish fables, we proceed to notice a change of some importance, which took place at Simm's death, in the ecclesiastical government at Jerusalem. Simon the Just, and probably all his predecessors, had united with the high priesthood the presidency of the sanhedrim or national council; but Eleazar his brother, who succeeded him in the priesthood, yielded the presidency to Antigonus of Socho, a man of great eminence on account of his learning in the law of Moses, and who taught the law to the people. He was the founder of the school of the tannin or mishnah doctors, by which name all the doctors of the Jewish law are distinguished, who lived between the death of Simon and the middle of the second century after Christ, when Rabbi Juchin Kakkodesh composed the Mishna. In the gospels these doctors are called scribes or lawyers, and are described as those who sat in Moses' seat. This is the first notice we have of the establishment of divinity schools among the Jews. The men of the great synagogue only taught the scriptures to the people, but the doctors who succeeded added also the traditions of the elders, and held that they were of equal obligation, as if both had equally been delivered from Mount Sinai.

Antigonus continued in this employment for twenty-eight years, and died; another change was then effected in the constitution of the sanhedrim, and the divinity school, by the appointment of a vice-president, who taught jointly in the chief school at Jerusalem; a fact which shows a considerable increase in the demand made by the people at large for this sort of instruction. As might naturally be expected, the establishment of schools of divinity, and the corruption of the law by the introduction of tradition, would give rise to the promulgation of great variety of opinions. The Jews ascribe the origin of the sect of the Sadducees, to the method of instruction pursued by Antigonus, for having in his lectures inculcated, that God is to be obeyed not for the sake of reward, but from filial love and fear only; two of his scholars, Sadoc and Balthus took upon them to infer the non-existence of rewards after this life, and then separating from the school of their master, taught that there was no resurrection or future state, but that all the rewards given by God were only relative to this life; thus began the sect, which from Sadoc were called Sadducees, who differed from Epicurus only in this, that they allowed the power and the providence of God over the world, whereas, the Epicureans deny both. Whether this account be true or not, of this we can have no doubt, that the establishment of a school of divinity, wherein that noble and most excellent portion of knowledge is taught, more as a matter of science than as a means of progress in all practical obedience and duty to God, has in the nature of things a very great tendency to assist the propagation of false opinions, while men forgetting the object to which alone their minds ought to be directed in such studies, take the principles of religion for weapons to combat for the prize of superiority over an antagonist in argument, and are content if they gain the victory, even though it be by the sacrifice of some portion of sacred truth.

We must keep in mind that in the interval of time between the death of Simon the Just, and the rise of the Maccabees, the opinions of Epicurus began to be broached in the heathen world, and it is not surprising when we consider the great intercourse the Jews then had with foreign nations, that the great enemy of man should succeed in infecting Judea, as well as other parts of the world, with the atheistic spirit of the age. It may seem strange to some, that we should assert the existence of atheistic principles among the Jews at the time of the rise of the Maccabees; but we have good evidence of the fact, in the conduct of Jason and Menelaus, who became high priests at Jerusalem, by the supplanting of Onias a short time prior to the persecution of the Jews by Antiochus; and indeed if this evidence were wanting, the dreadful sufferings of the Jews under Antiochus Epiphanes, would lead any one who is acquainted with the ways of God's providence over the Jewish nation, to suspect that there existed amongst that nation such a sort of apostasy from the law of Moses, as might well bring down upon it the severity of God's avenging justice.

As soon as Antiochus Epiphanes was settled in his kingdom, Jason, the brother of Onias the high priest, being ambitious of the honour and power of that office, offered to Antiochus no less a sum than three hundred and sixty talents if he would dispossess his brother, and make him high priest in his stead. Antiochus could not resist so large a bribe, and by the advice of Jason, summoned Onias to attend him at Antioch, where he was kept in confinement till he was put to death. It was necessary to remove Onias from Jerusalem, for had he remained there, so great was the character of his virtues, and the affection of the people towards him, that Jason's power would have been of little avail against the influence of Onias. Jason having no hope of support from those who were attached to Onias on account of his care of religion, did all in his power to increase the strength and power of the opposite party of those who were already attached to the customs and superstitions of the Gentile nations. He purchased from Antiochus at the further price of one hundred and fifty talents, a license to erect at Jerusalem a Gymnasium, or place of exercise, and an Ephebeum, or place for training up youth in the usages of the Greeks, and at the same time procured authority to make as many of the inhabitants of Jerusalem as he pleased free men of Antioch. By these means he encouraged apostasy from the law of Moses, and induced the people to neglect the manners of their forefathers, and conform themselves to the customs of the heathens. The altar was neglected, and the priests themselves omitted the public worship of the temples, to partake the amusements of the Gymnasium. Not content with changing his religion, Jason changed his name also, for his name was at first Jesus, but when he inclined to the Greek superstitions, he assumed that of Jason, to shew how entirely he desired to be considered no longer a Jew, but a worshipper of foreign deities. The year after his appointment to the high priesthood, the Quinquennial games were celebrated at Tyre, in honour of Hercules the tutelary deity of the country. To them Jason sent some of his friends, whom he had made freemen of Antioch, to be spectators of the games, and to offer a donation to be expended in sacrifices to the heathen deity; but those who carried the offering

had so much fear of their God Jehovah remaining in them, as not to involve themselves in the guilt of this idolatry, and instead of giving the money to the use of the games, they presented it to the Tyrians towards the repair of their fleet.

But it would be wrong to consider Jason as the sole origin of this apostasy, there must have existed already a party at Jerusalem inclined to hethenism, or the propositions of Jason for the establishment of customs so contrary to the spirit of the law of Moses, would have been rejected by the people with indignation. The change from a pure worship of God to the impure services of Paganism is not made in an instant. Infidelity may advance with hasty steps, but yet its approach must be made by the successive destruction and removal of religious impressions; and we may be assured that whenever a public demonstration is made of its existence, it is in fact only the discovery of a fire which has been smothering for a length of time, and is at last blown into a vigorous flame by some sudden change of circumstances. But such iniquity as that of which Jason was guilty, could not remain long in prosperity; he that had so wickedly deposed his brother, in his turn was condemned to experience the ingratitude and treachery of a brother, for in the third year of his priesthood, Menelaus his brother being sent by him to Antioch, for the purpose of conveying tribute to the king, and treating with him upon other affairs, took advantage of the opportunity afforded him by this mission, to supplant his brother in the authority he had unjustly acquired.

An offer of three hundred talents more than Jason had given for the priesthood, easily persuaded Antiochus to depose Jason, and Menelaus returned to Jerusalem with the mandate of the king for his establishment in that office. But Jason's party was too powerful to submit at once to the authority of Menelaus, who returned to Antioch; and there declaring that he would only adhere to the religion of the king, and the worship of the Greeks, obtained from him a sufficient force to expel Jason, and put him in quiet possession of the supreme power. Menelaus kept his word faithfully, and proceeded to encourage the prevalence of apostasy to the very utmost of his power. His name was originally Onias; but following the example of his brother Jason, he had changed his name to Menelaus, in testimony of his reception of the religion of the Greeks.

We may here observe, that the object Jason and Menelaus had in view, was not the mere honor of the ecclesiastical authority, but the temporal power which had for some ages since the time of Nehemiah been united to the office of high priest. And the vast sums of money given by these two men as bribes to Antiochus, would plainly shew that the Jewish nation must have been at this time in the enjoyment of very considerable commercial prosperity, to allow of such large revenues being collected by the high priest, as might remunerate them for paying so great a price for the office. And the circumstance, that the freedom of the city of Antioch was valuable enough to tempt a Jew to apostasy, is also an evidence of much commercial intercourse between Jerusalem and Antioch; for to one resident at Jerusalem the freedom could only be valuable, by reason of the advantage those who possessed it obtained over their fellow-countrymen, in exemption from duties and taxes. History either neglected or was unable to pay the sum he had agreed to give to Antiochus, and was summoned to appear before the king at Antioch; but fortunate circumstances concurring to delay his appearance, in the meantime he contrived to raise the money, partly by selling the golden vessels which belonged to the temple at Jerusalem. So daring a sacrilege caused a great mutiny amongst the people, who fell upon Lysimachus, his brother, whom Menelaus had left in charge, and slew him in the temple. Onias, the high priest, was still in confinement at Antioch, and bearing of the sacrilege committed by the orders of Menelaus upon the vessels of the temple, sent and reproved him for his conduct; which so irritated Menelaus, that he could not rest until he had persuaded Andronicus, the governor of Antioch, to put Onias to death.

Onias put to death. But Antiochus, on his return, avenged the death of this good man upon Andronicus, commanding him to be carried as a malefactor to the spot where Onias was murdered, and there put to death as he deserved. The conduct of Menelaus continued so ungovernable, that the Jews, no longer able to endure his sacrilegious proceedings, sent delegates to Tyre, where the king then abode, to seek redress at his hands; but Menelaus, by means of bribes, procured a friend of the king's so far to interest himself in his favour, as to persuade the king entirely to acquit Menelaus of the charge, and to put to death the persons sent from Jerusalem to complain of his behaviour. So manifest an injustice excited the pity of the people of the city, who took up their bodies, and interred them honourably. Such was the condition of the Jewish nation under the high priesthood of Menelaus; such a man, who was a tyrant in conduct, and an infidel in principle, could never have maintained himself in his authority, without a party to support him of similarly depraved habits and dispositions. We might expect that the God of Moses would not long permit his people to continue in the practice of heathenish customs, and in apostasy, from the strict performance of the law delivered at Mount Sinai, without punishing them in so exemplary a manner, as to convince them of their error, and teach them the value of their religion, by being deprived of the means of continuing the public exercise of it, which took place in the persecution of the Jews by Antiochus, which we are now to describe, and which drew forth to action the valour and the constancy of the Maccabees.

a. c. 170 The times we are now describing were full of trouble and dismay to the Jewish church, and as ominous appearances in the heavens portended the final destruction of Jerusalem, so also a short time prior to the calamities which befell the city in the persecution of Antiochus, similar warnings were given of the approaching desolation. "About the same time (says the author of the second book of the Maccabees, in the second chapter,) Antiochus prepared for his second voyage into Egypt, and then it happened, that through all the city, for the space of almost forty days, there were seen horsemen running in the air in cloth of gold, and armed with lances like a band of soldiers, and troops of horsemen in array encountering and running one against another with shaking of shields, and multitude of pikes, and drawing of swords, and casting of darts, and glittering of golden ornaments, and harness of all sorts. Wherefore every

man prayed that that apparition might turn in good." **Of the Jews.** Antiochus being in Egypt, a false rumour arose of his death, whereupon Jason, thinking this a good opportunity to attempt the recovery of the priesthood, of which he had been deprived by his brother Menelaus, marched against Jerusalem with a force of a thousand men; and being assisted by his party within, succeeded in taking the city, and driving Menelaus for shelter into the castle. In his mad rejoicing at the capture of the city, he committed all kinds of cruelty upon his fellow citizens, and put to death without mercy all who fell into his power, whom he thought to be his adversaries.

Antiochus learned what had taken place; and supposing that all the Jewish nation were in a state of revolt, marched from Egypt into Judea to quell the rebellion; and his anger being further kindled, by hearing that the people of Jerusalem had made great rejoicings at the news of his death, in a rage he laid siege to Jerusalem, and taking it by force, he put to death, in the space of three days, as many as forty thousand of the inhabitants, and sold as many more as slaves. Jason had fled immediately on hearing of the march of Antiochus towards Jerusalem, and took refuge in the country of the Ammonites, but was not suffered to remain there; and being driven from place to place, first into Egypt, then into Lacedæmonia, he there died in exile and misery, without a single friend to provide him with the rites of burial. The fury of Antiochus could not be satisfied by slaughter; he had vented his rage upon the people, but he could not rest without polluting the temple, and thereby offering insult to their God; and in this impiety and sacrilege he found a ready guide in the wicked apostate Menelaus, who conducted him into the inmost courts of the temple, and even into the holy of holies. And still further, to affront the Majesty of the God of Israel, and to shew his contempt of that religion which He had enjoined, he sacrificed a sow upon the altar, and boiling some part of the flesh in water, with it sprinkled the temple, on purpose to pollute and defile it. He thus plundered it of all its valuable utensils, amongst which were the altar of incense, the table of the shewbread, the golden candlestick, and of all the offerings which had been made in it, to the value of eighteen hundred talents of gold; and spoiling the city in the same way, returned to Antioch loaded with the immense treasure which he had collected by plunder both in Egypt and in Judea. Menelaus was left by him in the office of high priest, but separate governors were appointed over Judea and Samaria. These, however, were but the beginnings of sorrows; for two years after, Antiochus returning unsuccessful from his campaign upon Egypt, and having suffered a defeat there from the Romans, visited the whole of his anger upon the Jews, who had given him no fresh cause of offence. In his way through Palestine, he detached twenty-two thousand men to destroy the city of Jerusalem. Apollonius entered the city peaceably; but on the following sabbath, at the time when all the people were assembled in the synagogues for the purpose of worshipping God, he let loose his soldiers upon them, and committed the most horrible massacre, sparing neither sex, nor age, and making the very streets flow with blood. He then plundered the city and set it on fire, and with the

ruins built a castle on the top of an eminence which commanded the temple, establishing in it a strong garrison, and making it the storehouse for their arms and provisions. At such a season the devout Jew would fly to the temple to intercede with his God in behalf of his suffering people; but piety and devotion were no protection, for the soldiers attacked all who came up to worship and shed their blood even in the sanctuary. For the space of three years and a half, the time prophesied by Daniel, (in the 12th chapter, 7th verse,) in the words a time, times, and half a time, the temple lay desolate, the sacrifices ceased until the temple was recovered out of the hands of the heathens by the success of Judas Maccabeus, and dedicated anew to the worship of God, as will be hereafter related.

Persecution
of the Jews
by Antiochus.

The hostility of Antiochus was not confined to the inhabitants of Jerusalem or of Judæa. The religion of the Jews had become his abhorrence, as Daniel says of him, he had indignation against the holy covenant, and therefore, in order to put his wicked designs in execution against the Jews, wherever he might find them, he published a decree, enjoining all the nations subject to him, to worship his gods; thus putting the whole of Syria under the operation of the decree; for he sought nothing less than, by compelling the whole nation to renounce their religion, to extinguish together with it their name and nation. It must be afflicting to every religiously disposed person to consider how low must have been the state of true religion amongst the Samaritans at this time. As soon as they perceived what persecution had befallen the Jews on account of their adhering to the pure worship of God, they lost no time in making their peace with the king. In their petition to him, they excused themselves for their former observance of Jewish rites, on the ground that they had done so on account of some plagues which had infested their country, as was customary with them when the Jews were in affliction; they disclaimed all descent from the sons of Jacob, professing to belong to the Sidonian nation: they set forth their readiness to conform in all respects to the king's religion, and begged his permission to dedicate their temple on Mount Gerizim to the Grecian Jupiter. By these means they purchased their safety at the expense of their religion, and were not molested by the officers commissioned to put the king's decree into effect. Sad to relate, apostasy from the true God was not confined to the Samaritan nation. Many of the Jews sacrificed their principles of duty to motives of fear or of interest; seeking either to avoid the calamities of their country, or to secure to themselves the favour of the king. These apostate Jews proved the bitterest enemies of the faithful and persecuted Israelites, more cruel than even the Syrians themselves; a line of conduct which, if their wishes did not encourage them to pursue, necessity compelled them to adopt as a testimony to the king's officers, of the sincerity of their apostasy from the religion of their fathers.

Dreadful
state of the
Jewish
church.

As soon as the officers of Antiochus came to Jerusalem, every observance of the law of Moses ceased, the Sabbath was profaned, the children were forbidden to be circumcised. Search was made for copies of the law, and as many as were found were destroyed, and any sort of disobedience to the king's commands

met with no milder punishment than death. The light of the Jewish church was almost extinguished, the people were left without a Priest to instruct them, and they dared not read for themselves, or perform even what they knew to be commanded. The temple of the great God of heaven and earth, was polluted by the worship of that impure fiction of the Devil, the sensual God, the Olympian Jupiter. On that altar, from which had ascended for ages, daily incense of those sacrifices which were typical of the one great sacrifice for the sins of mankind, the statue of the pagan God was erected, and a lesser altar built, whereon they sacrificed before the image which they had set up. We may easily judge with what cruelty they strove to propagate the tolerant religion of paganism, when we read of their taking two women who had circumcised their male children, and tying the children to their necks, casting both mother and infant together, headlong from the deepest part of the walls of the city; at the same time, putting to death all who had taken part in the administration of the rite. During this persecution, altars, groves, and idols, were every where erected. The Jews were forced to eat the flesh of swine and unclean beasts; festivals were celebrated in honour of Bacchus, in which the Jews were compelled to take an active and conspicuous part. Thus did God, in the wonderful dispensations of his providence, punish the Jews, by making their crimes the source and instrument of punishment. They had erred in admitting the practice of heathen customs and rites, contrary to the severe injunctions of the law of Moses, and the revelation of God's displeasure which had been made to them by the prophets. They had patiently endured the commands of heathenish priests, and had allowed, without a murmur, the most sacred office in their church, to be bought and sold, and possessed by men who used the authority as the means of withdrawing the nation from the pure worship of Jehovah. They had willingly received the privilege of bringing up their youth in Grecian customs; they had left the services of the temple to witness the sports and games of the gymnasium; and, therefore, it pleased God to deprive them of that power of worshipping him, which they had so carelessly neglected; and to compel them to accept, by force, the practice of those heathenish and blasphemous services, which they had seemed so much to desire. At the time when the officers of Antiochus came to Jerusalem to enforce his decree, there dwelt there a priest, named Mattathias, of the house of Joab, an honourable man, and one who feared God. To avoid the impending persecution, he retired with his family to Modin, a city in the tribe of Dan; thinking to remain hidden there, until the storm of desolation should have passed over.

Mattathias had five sons, Johanan, Simon, Eleazar, Jonathan, and Judas, who was surnamed Maccabeus. But the severity of the persecution would not allow even so retired a town as Modin, to be a place of concealment for the family. One of the officers of Antiochus, named Apelles, soon arrived there, and immediately summoning the inhabitants together, informed them of the object of his mission. The example of Mattathias, he considered, would induce the people the more readily to comply with the king's commands; and, therefore, addressing himself first

to him, he endeavoured to persuade him to submission, promising every honourable distinction that Antiochus could confer upon him and his family. Mattathias answered, with a loud voice, "Though all the nations that are under the king's dominion obey him, and fall away every one from the religion of their fathers, and give consent to his commandments, yet will I, and my sons, and my brethren, walk in the covenant of our fathers. God forbid that we should forsake the law and the ordinances; we will not hearken to the king's word to go from our religion to the right hand or the left."

When he had thus spoken, he saw one of the Jews presenting himself to do sacrifice at the heathen altar, as the king had commanded, and with a holy zeal, like that of Phinehas, he fell upon the apostate and slew him; and, together with him, the king's commissioner and his attendants. Afterwards collecting all his family, and exciting all to follow him who were zealous for the law, he fled from Modin, and retired to the mountains. His example was speedily followed by many, whereby the deserts of Judea be-

came filled with persons who sought refuge from the Of the Jews
 fury of the persecution. From this time began the
 war of the Maccabees. It was at first carried on by
 Mattathias, and after his death, which took place in
 a short time, by his son Judas, surnamed Maccabeus;
 the origin of a name derived from the abbreviation of
 the Hebrew sentence, in the fifteenth chapter of
 Exodus, eleventh verse—*Mi Cumoka Baelim Jehovah*
 —Who is like unto thee among the Gods, O Je-
 hovah; which he took for the motto on his standard,
 and not writing it in words at length, but only by the
 initial letters of each word, he formed the artificial
 word M.A.C.C.B.I. Hence, all who fought under
 that standard were called Maccabees, or Maccabeans;
 and as Judas and his brethren became distinguished
 as martyrs and confessors in the cause of religion,
 the name of Maccabees was in aftertimes applied, not
 only to those who assisted Judas, but also to others
 who in the time before these transactions, as well as
 subsequently, became conspicuous for their valiant
 resistance to persecution.

War of the
 Maccabees.

APPIUS CLAUDIUS.

a. c. 471-448.

Biography. APPIUS CLAUDIUS, the decemvir, was the son of that Appius Claudius whose hostility to the power of the tribunes, made him a favourite with the senate, and odious to the populace. His son, after having constantly maintained a firm attachment to the patrician interests, and a resistance to popular encroachment as severe and unbending, as that by which his father and grand-father were distinguished, seemed suddenly to abandon the principles of his family, and to court popularity by promoting a measure for which the popular party was then extremely urgent. This was the nomination of *ten magistrates* called, from their number, decemviri.

Nomination of the decemviri, About ten years before the period of which we are now speaking, Caius Terentius Arsa, one of the tribunes of the people, had proposed, after a vehement declamation, against the despotic power of the consuls, to commission five men of unexceptionable character, to draw up a code of laws by which the consuls should in future be obliged to regulate their decisions. This proposition, which seemed the more unobjectionable, as the tribunes only demanded that a portion of 'the legislative body' should be chosen from the plebeians, gave great umbrage to the patricians.

opposed by the patricians, The younger part of that body even proceeded to acts of violence, and led on by Cæso, son of Cinna, dispersed the assembly of the people, when, on the point of passing the law. A variety of favourable circumstances, however, concurred to strengthen the popular cause, and after many ineffectual attempts on the part of the plebeians to carry their point, and many struggles on the part of the patricians to frustrate the design, it was at length finally agreed, that commissioners, to be chosen by the senate, should be deputed to Athens, for the purpose of selecting such of the laws and institutions of that celebrated republic, as might appear fitted for the adoption of the Romans. Upon return of these commissioners, the people were naturally clamorous for the nomination of the magistrates who were to draw up the code that was to be compiled from the materials thus collected. The consuls, however, still resisted; and the tribunes in consequence appealed to the consuls elect, Appius Claudius, our present subject, and Titus Genucius. To their surprise, no less than to that of the patrician body, the former immediately stood forward, a strenuous advocate for the measure. Genucius likewise declared himself in its favour, though not so zealously as Appius, and by their joint entreaties they prevailed upon one of the consuls to assemble the senate for the purpose of nominating the decemviri.

promoted by the consuls elect, Notwithstanding a considerable opposition, the eloquence or intrigues of Appius prevailed, and the senate passed a decree for the appointment of ten magistrates who were to be invested, for one whole year, with the supreme power, and supersede

all the ordinary magistracies. During the reign of the decemvirs, the authority of the consuls, tribunes, ædiles, and quaestors was to cease; and an almost unlimited power was vested in these newly created legislators. But the senate, when the time fixed for the election of the decemvirs had arrived, successfully resisted a demand of the tribunes, for the admission of candidates from among the plebeians; and of the ten who were chosen in a full assembly of the people, the first was Appius himself, as might easily be conjectured from the active part which he had taken in promoting this measure, so great a favourite with the people.

Appius Claudius appointed, At the commencement of their reign, the decemvirs conciliated the affection of their fellow citizens, by the utmost moderation and courteousness; and none of them more than Appius, whose former severity and reserve were favourably contrasted with his present mildness and affability. Before the year had expired, the work for which these magistrates had been appointed was completed. Their laws were engraved on ten tables of oak, fixed up in the forum for the inspection of all, and ratified by the unanimous assent of the whole Roman people. But as it was thought by many leading men in the state, that laws sufficient to fill two more tables ought to be added; the government of the decemvirs was continued for another year, and senators ordinarily most hostile to the pretensions of the people, condescended on this occasion to court their favour by every artifice, in hopes of being chosen at the election of decemvirs for the ensuing year. Appius did this so openly, that he excited the jealousy of his colleagues; they appointed him in consequence president of the Comitia, or Assembly of the people, who were to elect the new magistrates, with the intention of excluding him from the number of candidates. But by boldly taking a step upon which they supposed he would not venture, he effected the purpose which they were anxious to frustrate.

Contrary to every rule of decency, according to the sentiments of the Romans, he named himself as the first candidate, and immediately obtained the suffrages of the people. He went, also, still further; and in contradiction to the known principles of his family, and almost of the whole body of patricians, named three candidates from among the plebeians. So far from being defeated by the scheme of his adversaries, it only served to increase his power and influence; for he artfully availed himself of his right as president to nominate the candidates, not only for the purpose of introducing his friends, but of excluding all those whom he could not controul. The consequences of his success were soon felt. The new decemvirs, as soon as they entered upon their office, assumed the authority and ensigns of royalty. Their

Biography. administration was now as unjust and oppressive as that of their immediate predecessors had been equitable and liberal; and the people, to whom these tyrants owed their power of doing mischief, were the marked objects of their contempt and hatred. When the period for which they had been elected had expired, instead of assembling the people, and proceeding to a new election, they produced the two additional tables, which, added to the others, completed the *twelve*, which were ever after held in such estimation by the Romans, as to be considered by them as the basis of all their jurisprudence. The *decemvirs* now threw off the mask, and boldly retained the power entrusted to them, in defiance both of the people and the senate.

Decemvirs complete the tables of the laws, and become unjust and oppressive.

The discontent prevailing in Rome raised the hopes of its enemies; the Sabines and the *Æqui* seized the opportunity to make an incursion upon the Roman territory. It was therefore necessary to assemble an army; but the more respectable members of the senate, when convened by the *decemvirs*, in order to decree a levy of the troops, refused to accede to their proposal, till the consular government should be restored. The arts and creatures of Claudius, however, succeeded in silencing his opponents. A levy was in little made, and this new triumph only increased the insolence and audacity of the *decemvirs*. Appius himself more especially denounced those who retired from the city, in order to be no longer witness of his tyranny, as enemies of the republic, and enriched his own partisans by the confiscation of their property.

Conduct of Claudius.

The war against the *Æqui* was carried on with no advantage; for the troops, who had been levied by the sole authority of the *decemvirs*, were so ill-disposed to their leaders, and to the persons in power, that they made no serious resistance to the enemy.

Appius, in the mean while, who remained with another of his colleagues to overawe the city, was at length hurried by his uncontrolled appetites into one of those excesses, which at length drew down upon him the vengeance which his tyranny had long merited. He conceived a violent passion for a very beautiful girl, whom he had casually seen. Her name was Virginia; her father Virginia had distinguished himself in the army on several occasions; and had promised his daughter to Icilius, who had been one of the tribunes of the people. Appius was unable to gratify his passion by a legitimate union, not merely because he was married, and had no sufficient plea for divorcing his wife; but also because Virginia was a plebeian, and he had himself passed a law prohibiting any alliance between noble and ignoble families.

Thwarted by these obstacles, he devised a scheme the most atrocious; he employed one of his clients, M. Claudius, to seize upon Virginia, and claim her as a daughter of one of his slaves, and therefore his property. The populace, roused by her shrieks, rescued her from the hands of M. Claudius and his abandoned followers; but when cited to appear before the tribunal of the *decemvir*, which she could not refuse, Appius, who was alone upon the bench, would have immediately adjudged her to the claimant, had not the people cried out with one voice, that her relations ought first to be heard. The *decemvir* dared not openly to resist compliance, but, by an artful evasion

of the acknowledged law, contrived to place her in the hands of his own creature till her reputed father could return from the camp to make his claims good. The object of this evasion was too manifest to escape observation. The women present surrounded Virginia, and seemed resolved to shield her from the *decemvir*, when Icilius, to whom she was promised, rushing forward, threw his arms round her and called upon the gods to protect her innocence. It was in vain that Appius ordered his lictors to seize upon Icilius. Finding it inexpedient to attempt force, he had recourse to artifice—resigned Virginia to the care of her friends and relations, and made Icilius give security for her appearance before the tribunal on the following day. It was then that Virginia, with all the dignity of conscious and injured innocence, appealed to his fellow citizens against the claim of his adversary. Icilius inveighed, with all the vehemence which a tumult of passion could inspire, against the tyrannical proceedings of the *decemvir*; add the silent tears of the women who accompanied Virginia, contributed more than even the powerful eloquence of her father and her lover, to move the compassion and rouse the indignant feelings of the multitude.

Appius on entering the forum, was astonished to find Virginia there, for he had spared no pains to prevent the possibility of his appearance at the appointed time. His project, however, was too well prepared to be easily disconcerted. The evidence of the false witnesses, suborned by Claudius, was completely parried by the unexceptionable testimony adduced by Virginia; but when the spectators were looking for a decree in his favour, the *decemvir* declared that, as guardian of Claudius, he had long known the facts alleged by him, but had suppressed the mention of them, as unnecessary, unless his ward should wish to put in his claim. He therefore, on that ground, set aside the evidence produced by Virginia, and adjudged his daughter to the other claimant. Her father again made an appeal to the multitude, whose cries and shouts shewed their willingness to serve him; but the imperious authoritative tone of the judge, and perhaps the number of his known adherents, overawed them. Virginia was left alone, abandoned, as it seemed, to the worst designs of her enemy.

Her father, as his last and only resource, assuming a milder tone, entreated the *decemvir* at least to allow him to question her nurse in presence of his supposed daughter, that he might be completely undeceived as to her birth. This request Appius readily granted, and the neighbourhood, seized a hutchin's knife, as he passed along, and plunging it into Virginia's bosom—"Receive," he said, "thy liberty, my daughter, by this the only method by which I can now ensure it to thee!" and turning towards the tribunal, he added—"By this blood, Appius, I devote thy head to the infernal deities!" He repelled the lictors, who endeavoured to seize him, with the weapon reeking with his daughter's blood, and rushing through the crowd, made his way to the camp. The other friends and relations of Virginia remained near her body, and excited the sympathy of the multitude.

This tragic event led shortly afterwards to the subversion of the *decemviral* usurpation; for the troops,

And character.

animated by the heroism of Virginus, and already irritated against their oppressive rulers, seized their ensigns, and having marched back in a body to Rome, entrenched themselves on the Aventine hill, declaring that they would not lay down their arms till the decemvirate was abolished. They were soon joined by the remainder of the army, and elected out of their own body twenty *military tribunes*, under whose orders they placed themselves. The senators, unwilling to abolish the decemvirate, occupied themselves in useless debates. The army, in the mean time, retreated to its favourite post the *sacred hill*, and was joined by such numbers, that the decemvirs themselves at length offered to resign their authority as soon as consuls should have been elected. This offer enabled the senators who were departed to the army, to make a proposition which was soon accepted. The senate issued a decree abolishing the decemvirate. These magistrates formally laid down their authority, and, after an interval of three years, the consular government was restored.

The tribunate was revived on the re-election of consuls; and the father, uncle, and lover of Virginus were the first upon whom the choice of the people fell. It was not to be supposed that Virginus would fail to use the opportunity, which now presented itself of avenging the memory of his injured daughter. He lost no time in bringing Appius to trial for infringing upon the liberty of a free-born and guiltless woman. He threatened him with immediate imprisonment, if the charge were not directly repelled. "I appeal," said Appius, "to the Roman people, who will not forget the many services they have received from the Claudian family; the many which they owe to me; the zeal for the public good which I have invariably shewn, and most particularly the excellent laws of the Twelve Tables, in the compilation of which I had so great a share. I claim the protection of the laws; and appeal from the sentence of the tribune to the assembly of the people." Virginus could not resist this appeal, which was founded upon a law passed by the newly elected consuls, but he refused to admit him to bail, and caused him to be confined in a prison erected by his own orders. The friends and family of Appius left no means untied to appease the indignation of the people: but before the day appointed for his trial had arrived, Appius was no more. He was found dead in his prison, whether by his own hand, as asserted by the tribunes, or by secret orders from them, it is impossible to determine: though from the conduct and character of the man, the former is, on the whole, the most probable supposition.

Appius Claudius seems to have inherited the prejudices and vices of his family with some of their good

qualities; and though his crimes and atrocities cannot be recorded without exciting detestation and disgust, the more favourable parts of his character, and the real services which he did to the Roman state, should not be passed over unnoticed. In the first year of the decemvirate, before he was intoxicated by success, his conduct was temperate and popular. His talents, which were great and various, were diligently exerted in the performance of his official duties; and he might justly appeal to the laws of the Twelve Tables, as a lasting monument of the care and judgment with which he and his colleagues had used the materials brought to them from Greece.

That celebrated compilation, which is praised by Cicero as containing the substance of all legislative wisdom, was small in compass, but comprehended all the great objects for which laws ought to be instituted. 1. It provided the mode of bringing offenders to trial, and laid down the rules by which impartial justice should be alike administered, both to plaintiffs and defendants. 2. Regarded the law against thefts and robberies. 3. Limited the power of creditors over their debtors. 4. Of parents over their children. 5. Prescribed the rules for the regulation of inheritances and guardianships. 6. Defined the limits of property of every kind. 7. Guarded against the commission of damage and trespass. 8. Made regulations for the security of property beyond the walls of the city. 9. Secured the rights of the great body of the people. 10. Prescribed the legal mode of interment. 11. The rites and ceremonies of religion. And 12, secured the sanctity of marriage and the rights arising from the married state. The publication of these laws may justly be considered as an era in the Roman state. The mutual rights and relations of the different classes of society were from that time strictly defined: the weak and inferior citizens were not only more secure against encroachments from the higher and more powerful members of the commonwealth, but against arbitrary or unjust decisions of the magistrates themselves. The Tables throughout, insufficient when the territory and population, and with them the various relations of society, had increased, were an excellent foundation for that noble superstructure which has survived the wreck of ages; and is, with some modifications, to this day, the dispenser of justice and equity to a very large portion of the civilized world.* Hor. iiii. 11—58. Dion. Hal. x. p. 652-684. xi. p. 684-757. Flor. i. 24.

* The Roman law is more or less embodied in the codes at present used in Holland, Germany, Switzerland, Italy, Spain, Portugal, Denmark, Norway, and Poland. It is also the foundation of our own civil and ecclesiastical law.

MARCUS FURIUS CAMILLUS was born of a patrician family of Rome, about the middle of the fifth century before the Christian era; and soon after the commencement of the fourth after the building of the city, according to the calculation of Varro. None of his ancestors had ever distinguished themselves so as to render their house illustrious; but it was his fortune to give promise of his future greatness at a very early age. When serving under the dictator Posthumus Tubertus, in his celebrated defeat of the Æqui and Volsci, Camillus, who was not more than seventeen years old, though severely wounded in his thigh by a javelin, deliberately plucked it out and continued in the foremost ranks of the combatants. A youth of patrician rank, who could thus early give proof of such undaunted resolution, could not fail to be esteemed by his countrymen; and, accordingly we find that at a later period of his life, the highest honours of the state were not so much obtained by him as forced upon his acceptance, by the admiration and confidence of his fellow citizens. It may be remarked, however, that Camillus never enjoyed the honours of the consulate, because soon after the period of his birth, the functions of that magistracy had been transferred to the military tribunes. The causes which led to the suspension of the consular authority in Rome, at the period of which we are now speaking, were few and simple. As their numbers increased, the people of Rome gradually became more conscious of their own strength; and from resisting the unjust encroachments of the patricians, proceeded to trench upon their legitimate privileges. Concessions had been made to the plebeians from time to time, and as is always the case in concessions wrung by fear or necessity, from a party unwilling to grant them, they only led to further demands and bolder advances. The dispute between the adverse parties seemed, at last, to threaten a commotion; when one of the Claudian family proposed, in order to rescue the consular office from the indignity of being filled by plebeians, to substitute for the consuls three magistrates, chosen partly from either class of citizens, and called 'military tribunes, invested with consular authority.' This proposition was received with applause by both parties: it increased the power of the one, without requiring the sacrifice of any exclusive privilege from the other; and an important change in the form of the Roman government was thus effected without a struggle. Nearly a century elapsed before the office of consuls was again filled, and that is precisely the period in which Camillus flourished.

Of all the measures which tend to produce a gradual and silent revolution in the political condition of a nation emerging from a state of barbarism, none is more powerful than the commutation of personal service in the army for the performance of military

duties by a hired substitute. It at once releases a large portion of the population from an oppressive burden, promotes the discipline and efficiency of the army itself; and gives the executive government a power which it never before possessed. That measure was adopted by the senate and approved by the Roman people, when Camillus was in the vigour of his age, and contributed indirectly to prepare the way for some of his great exploits: for when the senate found that they had no longer reason to apprehend any difficulty, in continuing the war, from the want of new levies or an unwillingness in the troops to keep the field, they resolved at once to extend the dominion of the republic over some of the neighbouring states; and to commence operations by attacking the Veii, whom they justly regarded as their most dangerous rival.

The capital of this people, which bore the same name, was placed in a commanding situation on the summit of a rocky hill, extremely difficult of access. It was, as Plutarch informs us, considered as the bulwark of Tuscany, and was not inferior in power and resources to Rome itself. In the earlier periods of the republic, the Veientes had contended for supremacy with the Romans; but now, humbled by many severe defeats, they relied upon the natural strength of their position, and the fortifications by which that advantage had been greatly improved. They filled their magazines with an abundant supply of stores and ammunition, and fearlessly sustained the attacks of the Roman armies. As long, indeed, as their enemy was obliged to quit the field at the commencement of winter, the people of Veii were not liable to all the evils of a regular siege; but after the senate had acquired a more absolute command of their troops, by making them, in fact, stipendiaries, the Roman army was required to pass the winter as well as the summer in the enemy's country.

Towards the close of the seventh year of the war, so little progress had been made against the enemy, that the commanders were much censured, and the senate recalled them; and, with the concurrence of the people, required them to resign their offices of military tribunes before the usual time. Among those who were elected to succeed them was Camillus, who then the second* time received that distinguished honour. It was his lot during this year to command the expedition against the Capenates, whose principal town lay between Veii and the Tiber, and consequently enabled them to make powerful diversions in favour of the Veientes. Camillus attacked them with so much vigour, that they dared no longer stir beyond their walls. In the same year the lake of Alba, in the midst of a peculiarly dry season, rose above

* The third according to Livy; who dates these events one year later than the Capitoline Tables, which we have followed.

Biography. the rising grounds by which it had been previously confined, and descended in a torrent towards the sea. This singular phenomenon appeared wholly unaccountable, and was universally spoken of; when an Etruscan soothsayer, who had formed an acquaintance with one of the soldiers encamped before Veii, intimated that, if properly understood, it might secure the success of the Roman arms. The soldier imperceptibly drew his friend beyond the reach of his towns-people, took him up in his arms and carried him into the Roman camp. He there made the same declaration; adding, that if the Romans should give a right course to the waters of the lake, it would be fatal to his native city. The senate not trusting entirely to this interpreter of the prodigy, sent a deputation to Delphi, who, after having consulted the oracle, returned the following year, bringing a highly encouraging answer, commanding them to prevent the waters of the lake from uniting with the sea; to continue the siege of Veii with the greatest resolution, and after the termination of the war, to present an ample offering at the shrine of Apollo. In obedience to this command of the god, the people immediately set about diverting the course of the waters from the lake, and formed that remarkable subterranean canal, which still attests their obedience to the injunction of the oracle.*

When the fall of Veii had been thus prepared by compliance with the prescribed condition, the senate determined to commit the completion of their great design to one upon whom they could place implicit reliance, and to invest him with such authority as should prevent any error that could arise from competition. They therefore appointed Camillus dictator. Before he left Rome, he offered up solemn vows to the gods, entreusting them to give prosperity to his arms, and engaging to celebrate games, and consecrate a temple in their honour, if he should return a victor. He then marched against Falerii, and routed the people of that place, together with their allies the Capenates. Having thus secured himself against the danger of a diversion, he turned his whole force against Veii, and finding it impracticable to take that city by assault, he commenced a blockade, opened his works, and caused a mine to be carried on under such a cover as completely concealed it from the enemy. It was a work of the greatest magnitude and labour; but by apportioning the time during which each man was employed, with rigid impartiality and exactness, Camillus was enabled to keep his men at work day and night, till they made their way into the citadel itself. When every thing was prepared, the army from without made a furious assault on the very time that the miners from within secretly made their way into the temple of Juno, which was in the citadel. The inhabitants thus unexpectedly assailed on all sides, and from a quarter where they least expected it, could not long or effectually resist; and the Romans, rushing from the citadel, were soon able to throw open the gates to their comrades. The

slaughter was necessarily great, but it was checked by the dictator as soon as all danger of resistance was past. The Etruscans were a more civilized and commercial people than the Romans, and far exceeded them in wealth. Camillus was so struck when he beheld from the citadel, the treasures which his troops were every where collecting, that he burst into tears; and, when congratulated by his friends on his success, lifting up his hands to heaven, uttered this prayer,—"Jove, most high! and ye gods who are the observers of our good and evil actions, ye can bear witness for us, that we have not attacked this city unjustly, but through necessity and in our own defence, against men who were our foes, and had broken their engagements. But if this success must be compensated by some reverse of fortune, let the severity of it, I beseech you, fall upon my head; but let the people and army of Rome be spared."

The conduct of Camillus soon afterwards was not worthy of the patriotic and disinterested spirit of this prayer. The splendour of his triumph gave offence to the people, his having driven through the city in a chariot drawn by four white horses, a distinction previously reserved for "the sovereign and father of the gods" alone, was considered as highly unbecoming. But probably the more immediate cause of the displeasure which he at that time incurred, was the part which he took in thwarting a proposal of the tribunes of the people to transfer one half of the inhabitants of Rome to Veii; a proposal strongly condemned by the senate, and checked by the delays and evasions of Camillus.

The real foundation of his unpopularity at this period, was, however, his conduct with regard to the division of the plunder. He had, on his march to Veii, made a vow that he would, if victorious, dedicate the tenths to Apollo; but, either forgetting this vow, or unwilling to disappoint his troops, he had, in the sequel, suffered them to carry off the whole. The senate, when the case was laid before them, decreed that each soldier should declare upon oath the value of what he had seized, and produce a tenth of the amount. This decree was warmly resented by the soldiery, who and dis- justly considered it as a peculiar hardship to be deprived of so large a portion of their prize, and that at a time when many of them had already spent the fruit of their hard earned toils. Camillus distressed by their complaints, had recourse to apology, declaring that he had forgotten his vow. The tenths were however collected; and it was decreed that a vase of massy gold should be sent as an offering at the shrine of Delphi. The Roman women gave up their golden ornaments, in order to enable the government to execute this decree, and were, in consequence, indulged with the privilege of using chariots on great and solemn festivals. A deputation of three from the first patrician families was sent to bear the sacred offering to Delphi.

The Falisci were still at war with the Romans, and the command of the army sent against that town was entrusted to Camillus, who had again been elected one of the military tribunes. He immediately marched his forces into the enemy's country, and laid siege to Falerii their capital, well aware that it was likely to occupy him for a considerable time. It was indeed the constant policy of the Roman government to

Treachery
of the
school-mas-
ter of Fa-
lerii.

The inhabitants of Falerii, who, like the rest of the Etruscans, were further advanced in civilization than the Romans, had therefore felt the importance of education, had adopted the Grecian custom of sending their children to one common school, where all might, from their earliest years, be accustomed to the same discipline, associate with the same companions, and form attachments and intimacies which would accompany them through life. The master to whose care these children had been confided, accustomed them to exercise, and amuse themselves outside the town, at no great distance from the Roman out-posts. By degrees he led them further and further, till at length he seized an opportunity of delivering them up in a body to the advanced guard, in order that they might be conducted to Camillus. When carried into his presence, he told the Roman general, that preferring his favour to the interest of these children, he had brought them to him, and, in them, delivered the city of Falerii into his hands. Camillus was astonished when he heard this declaration, and turning to those around him, observed that war is indeed cruel, and productive of much violence and injustice; but that men of honour acknowledge some laws even in war, and victory is not to be purchased at the expense of what is base or unprincipled; that a great general builds his hope of success upon his own courage, not upon the baseness of others. He then ordered his attendants to strip the traitor, tie his hands behind him; and then having furnished his boys with rods and scourges, leave them to inflict punishment on him by driving him back into the city. Its inhabitants had already discovered the treachery, and the walls and gates were crowded with men and women of rank, who were bewailing their loss, like persons distracted; when the boys were seen returning, flagging and driving their naked master before them, and calling Camillus their deliverer, their god, their father! This spectacle filled all the inhabitants of Falerii with admiration; and assembling together immediately, they sent a deputation to Camillus, offering to give up themselves and their city to his clemency and justice. He sent the deputies on to Rome, and, when presented to the senate, they declared that the Romans, by shewing that they esteemed justice more than victory, had taught them to consider subjection as preferable to independence: though they did not consider themselves so much their inferiors in power as in virtue. The arrangement of the terms on which the peace was to be concluded, was left by the senate entirely to Camillus, who withdrew from their territory, after having received an indemnification for the expenses of the war, and concluded a treaty of alliance with all the Falisci.

How pa-
nished by
Camillus.

The Falisci
capitulate.

The common soldiers were not inspired with the equity and magnanimity of their commander; they had calculated upon the plunder of Falerii, and were therefore disappointed at this returning empty-handed. They made no scruple to charge Camillus with designs hostile to the people, and a desire to prevent the poor from having their condition improved. Their feelings were exasperated by his strenuous op-

position to the proposal for transferring half of the inhabitants of Rome to Veil. That measure was soon renewed by the tribunes of the people, and when put to the vote in an assembly of the people, thrown out by a majority of one tribe only: a result as gratifying to the patricians, as it was displeasing to the leaders of the plebeian party; and considered by both as a great measure due to the vehement and persevering opposition of Camillus. So strong was the irritation of the people against him at this time, that a severe domestic affliction with which he was then visited, the loss of one of his sons by a natural death, did not at all mitigate their clamour and hostility. The mildness and goodness of his disposition also prevented him from hearing up against his affliction with Roman fortitude; and instead of appearing in public to counteract the designs of his enemies who had brought an impeachment against him, he shut himself up in his house with the women of his family, abandoning himself to his affliction.

The crime laid to his charge was the embezzlement of a part of the Tuscan spoils: particularly some brazen gates, a part of those spoils, which were said to have been found in his possession. The exasperation of the populace was such, that it was plain they would seize upon any pretext for his condemnation. He assembled his friends, and besought them to use all their exertions and influence to save him from becoming the victim of the false accusations and rancour of his enemies. After due deliberation they declared that they had no hope of succeeding, but promised to assist him in paying the fine to which he might be condemned. Indignant at the thoughts of such treatment, he resolved to withdraw and go into a voluntary exile. After embracing his wife and children, he went in silence from his house to the gate of the city; but stopping there and turning round, exclaimed, as he stretched forth his arms to the Capitol, "Grant, ye Gods! if I am driven out not by any misconduct on my part, but by the passion and jealousy of the Roman people, that they may soon repeat, and make it most to all the world that they have need of Camillus and are anxious for his return!"

Accused by
the Romans.

This prayer might well be considered by the Romans as having been favourably received by the Gods; for in less than two years they suffered the greatest calamity and disgrace which ever befel their country: the invasion and capture of the city by the Gauls. That nation, like the other free and hardy tribes who inhabited the northern parts of Europe, was well calculated by its warlike habits and overflowing population to prove more than a match for the more civilized, but less robust, and enduring people of the South: and as soon as they had once passed the barrier of the Alps, swarms from the Southern or Celtic Gauls, poured down like a resistless torrent, over the fertile plains of Italy: tribe after tribe coming to dispossess the Etruscans who had long been established in the country on each side of the Po, and from the Adriatic to the Tyrrhene sea. One of these tribes, the Senones, who at this time occupied the country upon the Adriatic between Ravenna and Ancona, laid siege to Clusium, one of the chief cities of Etruria, anciently the residence of Porseus, and barely 100 miles to the north of Rome. The appearance of the Gauls, remarkable for their size, light hair and

Rome taken
by the
Gauls.

Biography. fair complexions, so unlike the swarthy nations of Greece and Italy; the ferocity of their manners, and strangeness of the weapons with which they were armed; but more especially their vast numbers and the report of their successes against the Etruscan troops; all contributed to fill the people of Clusium with alarm. Though unconnected with Rome by any former tie of friendship or alliance, and having no claim upon the good will of the Romans, except from their perfect neutrality with respect to their countrymen the Veientes, the Clusini sent an embassy to Rome, entreating its aid against the Gauls. The Romans were willing to act as mediators, though they had no intention to send any men to the assistance of their new friends. The three sons of Marcus Fabius Ambustus, a man of one of the most distinguished families, were despatched to hold a communication with the Gauls, and put an end to the war if possible, by negotiation.

The strangers, when the Roman envoys had delivered their message, replied that all they desired was a portion of the waste lands belonging to Clusium, upon which they might settle; if that were granted, they would immediately make peace; but if it were refused, they would endeavour to shew by their exploits how much the Gauls surpassed all other nations in valour. The Etrurians were highly displeased with this request, and the conference served only to exasperate each party. An engagement immediately ensued; and the Roman envoys, in violation of the common law of nations, took arms in favour of the Etrurians. A principal chieftain among the Gauls was killed by the hand of one of them; and when ambassadors were sent by the barbarians to Rome to demand satisfaction for this unprovoked attack, the intrigue and influence of the Fabian family, together with the perverseness of the people, completely prevented any concession from being made: the Gauls therefore returned to their camp breathing nothing but vengeance and extermination.

The councils of Rome might well seem to the ancients to be influenced by an unhappy fatality at this momentous period; for corruption in the different classes of citizens; ambition and family interest in the higher; turbulence and faction in the lower ranks, had driven able and deserving men from the posts of trust and distinction: and the management of the impending war was left to those very persons, whose rashness had drawn this new and formidable enemy on their country. The three envoys to Clusium were elected military tribunes, before the Gallic messengers returned to their camp; and still no extraordinary preparation was made for a war, with one to any who were not blinded by their passions, must have appeared to threaten no ordinary degree of danger. They had often, on former occasions, when engaged with a much less formidable enemy, appointed a dictator, to give that vigour and efficiency in the conducting of the war which cannot be obtained under a divided command. On this, the guidance and direction of the troops were on the contrary entrusted to a greater number of generals than usual; and unanimity in their councils was therefore rendered highly improbable. But the greatest evil of all, was the absence and disgrace of that very man who, alone, perhaps, was able to save the city from the impending ruin.

The honours lavished upon those of whose conduct

the Gauls thought they had so much reason to complain, turned their arms immediately against Rome itself. They advanced with a rapidity which hardly allowed the Romans time to prepare for their own defence; and it was only with a very hasty and irregular levy that they could meet them near the eleventh mile-stone, at a short distance above the confluence of the Allia and the Tiber. The numbers of the enemy greatly surpassed those of the Romans; their wild songs, discordant shouts, and savage appearance, contributed not a little to spread dismay through the army, ill-qualified by experience and discipline, or the prudence of its leaders, to make up for the disadvantages under which it then laboured. The defeat was so complete, that the left wing was entirely destroyed; the centre, which fled under cover of the night to Veii, suffered severely; and the right wing, which retired to the hills, at the beginning of the contest, was the only part of the Roman army which escaped without very great loss. The day of the Allia was ever afterwards marked by the Romans in their calendars, as one of the most unfortunate days in the whole year.

The consternation of the Romans was such as would have made Rome an easy prey to the Gauls, had they immediately followed up their success; but with the improvidence natural to savages, they stopped to revel in the plunder of the Roman camp, and allowed their enemy time to fortify his strong-holds, and prepare for a steady resistance. The city was not in a condition to be defended against the invaders; the army therefore retired to the Capitol, fortifying it as strongly, and replenishing its stores and ammunition, as much as was possible. Almost all the other inhabitants fled for safety to the surrounding country; but the oldest and most distinguished among those of senatorial and consular rank resolved, if we may believe Plutarch, rather to die than quit the sacred city. Clothed in their official robes, and seated in their ivory curule chairs in the forum, they waited calmly the arrival of the enemy. On the day after the battle the barbarians reached the city, and finding the Collina Gate open and unguarded, entered without any resistance. Every thing was silent and deserted; the very solitude of the place terrified them; and when they came into the forum, and saw so many men, sitting each in the vestibule of his house, and bearing, from his age, his aspect, and his dress, the impression of more than human majesty, they took these venerable men for statues of the gods; nor were they undeceived, till Marcus Papirius, by striking of one of the Gauls with his ivory sceptre, provoked the anger of the savage, and immediately, with his colleagues, fell a sacrifice to their fury. The slaughter of the senators was the signal for universal pillage, murder, and devastation.

The conflagration of their houses, the cries and shrieks of the wounded and dying, the desolation of their temples, of every thing which they held dear or sacred, took place immediately, under the eyes of the Roman army and its commanders, who were shut up in the Capitol: their position was so strong by nature, and so well fortified by art, that the Gauls had no means of biddng them, as long as their stock of provisions held out. The numbers of the invading army, and the small space occupied by the Capitol,

Biography. enabled Brennus, the Gallic chief, to keep up a rigorous blockade; and had his followers been more provident, they would perhaps have for ever extinguished the Roman name; but, elated by their success, and unused to provide for future contingencies, they trusted to their foraging parties for supplies, and diminished their strength by sending out detachments in many different directions. One of these happened to go towards Ardea, a town of Latium, in alliance with Rome, about twenty miles to the south. There it was that Camillus was living in great retirement, "more afflicted," as the historian says, "by the calamities of his country than by his own;" and only anxious to seize some opportunity of raising it again from its fallen condition. When he found that the inhabitants had called an assembly to deliberate upon the best mode of repelling the Gauls, whose approach had created the greatest alarm, he went thither, and entreating them not to give way to their fears, proposed to attack the enemy by night, when they would be overcome by sleep and wine, the fruits of their plunder, and would fall an easy prey to a resolute and vigilant foe. The reasonableness of this plan, as well as the character of him who proposed it, caused its immediate adoption. As soon as night came on, they silently marched out, under the command of Camillus, and found the camp of the Gauls, exactly as he had predicted, entirely open and unprotected; no sentinels at their posts—all drowned in sleep and intoxication. The slaughter was unbounded; and a large portion of the few who escaped, fled into the territory of Antium, and were cut in pieces by the people of that town.

Camillus attacks the camp of the Gauls.

389.

The Romans had now more than ever reason to exult in their conquest of the city of Veii. The Gauls, in their eagerness to attack Rome itself, left the Tuscan cities on their way unattacked; this therefore, now afforded a refuge and a place of rendezvous to most of the Romans who had retired before the arrival of the enemy. Their numbers were recruited by volunteers continually coming in from the neighbouring states, whose lands were plundered by the foraging parties from Rome. All were eager to make a diversion in favour of the party blockaded in the Capitol, and endeavour at least to dialogue the enemy; but they had no leader on whose judgment and authority they could rely. The very place in which they were, was calculated to remind them of Camillus; and they resolved to send a deputation to him, to entreat him to take them under his command, and lead them, as they were confident he would, to victory. He refused, unless recalled by the members of the senate, shut up in the Capitol, for he considered them as the legal representatives of the government, and did not think himself justified in resuming his rights as a citizen without their sanction.

This answer to their request threw them into the greatest perplexity, till Pontius Cominius, a youth of humble rank, but of an enterprising spirit, offered to make his way into the Capitol, and communicate their wishes to the senators who occupied it. Supporting himself on a piece of cork, he was carried down the Tiber by the stream, to the foot of the Capitoline Hill; and landing at a place where the rock was almost perpendicular, and therefore not watched by the enemy, he succeeded in clambering up to the summit;

was recognized by the sentinels, admitted into the fortress, and carried to the magistrates, to whom he declared the object of his mission. The senate immediately issued a decree, authorising an assembly of the people, for the purpose of recalling Camillus from banishment, and appointing him dictator. Cominius had the good fortune to return, as he had approached, unobserved: messengers were instantly dispatched to Camillus, at Ardea, and he returned with them to resume the command of those, who had so lately treated him with such base ingratitude.

The Gauls, in the mean time, were gaining possession of the last strong-hold of Rome, the Capitol itself; for having discovered a path not before tried; perhaps that near the Carmental Gate, by which Cominius had ascended: they scaled it in the dead of a dark night, without alarming the dogs, usually so vigilant, or being discovered by the centinels, who were buried in sleep; and had nearly got a firm footing on the summit of the rock, when the geese, consecrated to Juno, whose hunger had increased their vigilance, heard their steps, and taking alarm, began to cackle and clap their wings. This fortunately waked Marcus Manlius, who had been consul three years before, and was distinguished by his military prowess. He seized his arms, roused his companions, and just reached the rampart in time to thrust a Gaul, who had mounted it, head-long down. This man carried those immediately behind along with himself in his fall; and before the rest of his party could recover, the whole garrison of the Capitol was assailing them with missiles from above, so that the Gauls had much difficulty in making good their retreat.

This was but the beginning of their disasters: the putrid effluvia from heaps of dead bodies, the exhalations from the marshes near Rome, the heat of the climate, to which the Gauls were unused, and their indulgence in the luxuries of Italy, all contributed to bring on a pestilential disease, which swept away great numbers: while the activity and vigilance of Camillus cut off their supplies, and reduced them to great scarcity of provisions. But the besieged were not in a better condition: threatened with absolute famine from within, and ignorant of the success of their friends without, their spirit was at length broken down, and they began to think of capitulation. The siege had already been continued more than six months, and the besiegers were not unwilling to come to terms; so that a convention was soon made between the two parties, by which the Gauls engaged to evacuate the city on receiving solid gold to the weight of a thousand pounds. This was not the only humiliation which the Romans had to suffer; for when they complained that the weights used by the Gauls had been purposely falsified, in order to give their scale the preponderance, Brennus insultingly threw in his sword, adding, when asked what it meant—"What can it mean, but woe to the conquered!" The Romans were so indignant at this fresh insult that, distressed as they were, they felt inclined to break off all further intercourse with their enemies; and were debating the point among themselves, when Camillus most opportunely appeared at the gate of Rome; ordered the conference to be immediately closed, and declared, that a convention made without his authority was illegal, and that, as

Distress of the besiegers and besieged.

Biography. dictator he now annulled it. Brennus resented this interference on the part of the Roman general in the warmest manner; a skirmish ensued on the spot; but as streets encumbered with ruins were ill adapted to the movements of an army, Brennus withdrew his forces to the ensuing night, and encamped about eight miles to the east of Rome on the road to Gaihi. Camillus came up with him early on the following morning, and routed his troops after a short conflict. Many of the fugitives were killed in the pursuit, and many who escaped the swords of the victors were slain by the inhabitants of the towns and villages in the neighbourhood. Camillus returned to the city in triumph, amid the shouts of his soldiers, hailing him, not without reason, as the saviour of his country and second founder of Rome.*

After offering up costly sacrifices to the gods, in gratitude for their assistance, and the restoration of their temples, Camillus urged the people to commence the rebuilding of the city. The vastness of the undertaking, the recollection of what they had suffered from the Gauls, which was recalled by the very sight of Rome, the despondence which so complete a humiliation would naturally occasion, all combined to make the people disinclined to begin that great work, and willing to listen to their factious leaders, who took this opportunity of again persuading them to insist upon being removed to Veii. But that measure was thought so fatal by the senate, that they would not allow the dictator to lay down his office, at the termination of the half year, as all his predecessors had done: and while they secured themselves against the intrigues of demagogues by extending the period of his absolute authority, they left nothing undone to reconcile the populace to the laborious task which they had now to perform, and to offer every possible alleviation of their sufferings. Camillus, finding the people so extremely averse from the undertaking, assembled the senate in order to have the question deliberately put to the vote; and entreated his countrymen by every thing that was sacred not to desert the spot where the ashes of their forefathers reposed, the favorite abode of their gods, the site which had been marked by prodigies as the head of their dominions. Just as they were about to give their votes on the question, while it was yet extremely dubious which opinion would preponderate, a centurion marching a body of soldiers by the house where the senate was assembled, called out to his ensign—"Fix your colours here; this is the best place for us to remain in." The omen was instantly hailed by the senate, and the people willingly assented to a decision sanctioned, as their superstition taught them, by an authority from heaven. The senate granted permission to cut wood and work the quarries without paying the usual charges, to all who would engage to finish their houses in the course of the

year; but they neglected to prescribe any rules for the place of the buildings, so that the new city bore lasting marks of the haste and precipitation with which it was built.

The tribunes of the people, probably in this year, commenced an impeachment which was far more deserving of praise than were most of their suits against the agents of government; it was a charge against Q. Fabius for his breach of the law of nations in taking up arms against the Gauls, who were not at war with the republic. The crime was too notorious to be denied, and the consequences of it had been too serious to leave any hope of an indulgent sentence from the people: it may therefore be reasonably supposed, that the criminal preferred a private and voluntary, to a public and ignominious, death; for before the day fixed for his trial had come, his friends announced that he had been carried off by a short and sudden illness. To the Romans, who looked upon suicide as no crime, and especially to a member of a haughty patrician family like the Fabii, such a termination of life appeared far preferable to the disgrace of a condemnation by the people.

Soon after these events, the nations, who lived on the confines of the Roman territory, seemed as if actuated by one common spirit of hostility, and resolved to crush the republic while rising from her ashes. The Æqui, Volsci, and Latini invaded them from the east and south; almost at the same time that the Tuscans laid siege to Sutrium, a town in alliance with Rome, on the north-west. The Roman camp, near Lanuvium, was surrounded by the Latins; and the military tribunes who had the command there, sent to Rome for immediate succours, to extricate them from the imminent peril in which they were placed. Camillus was, on this occasion, a third time, appointed dictator. He immediately raised a new levy; and divided his army into three parts; one of which, under Manlius Capitolinus, was encamped before the city; another, under the command of Æmilius Mamercinus, was sent against the Etruscans; and the third, led by Camillus himself, marched against the Volsci. They had flattered themselves that all the youth of Rome had perished under the swords of the Gauls, but the very name of Camillus filled them with terror; they therefore barricaded their entrenchments with trunks of trees heaped up, to prevent the passage of the enemy. Camillus, perceiving this, ordered burning torches to be thrown upon their works, and as there was fortunately a very high wind at the time, blowing directly on the enemy's quarters, and the Volsci were so alarmed and overcome by the flames, and smoke, and crackling of the green timber, that the Romans had less difficulty in scaling the rampart and entering the camp, than they had previously experienced in crossing the enclosure already consumed by the fire. The Volsci were completely routed, their camp taken, their fugitives pursued, their country laid waste, and Volsci, their capital town, given up. The Æqui, their neighbours, immediately afterwards experienced a similar fate; they were defeated by Camillus at Bola, and their town, as well as their camp, taken at the first onset.

The successes of the republic in the south and east, Sutrium were counterbalanced for a time by the misfortunes of their allies at Sutrium. They had been compelled

who are defeated by Camillus.

* The appearance of Camillus precisely at the moment when his presence might save the honour of Rome, to any notion of the improbability of his risking the salvation of his country upon a mere point of form—a decree of the senate—which there was so little prospect of obtaining—has so much the appearance of romance, that the truth of this part of the Roman history might justly be suspected, even if we had not something very like an express testimony on the part of Polybius that the Gauls retired un molested, with the ransom of Rome in their hands. Polyb. Proem.

Geography. by the superior numbers of their enemy, the fatigues and losses sustained in a close siege, and the failure of their resources, to evacuate their town on capitulation, and the hard condition of retiring in search of another place of abode with nothing more than the clothes upon their backs. Camillus met them, on his march to Sutrium, going in this wretched condition towards Rome. The whole multitude threw themselves at his feet, bathed in tears, and representing to him in the most moving language the misery to which they were reduced. He desired them not to despair; but to return with him, and they should be avenged upon their enemies. He marched onwards with such expedition, that he took the Etruscans, as he expected, completely by surprise. The gates of

And recap- Sutrium were open, there were no sentinels at the out- tured by Ca- posts, every one was intent upon rifling the houses of the inhabitants, who had just been expelled. The victors had no time to rally, they every where fell into the hands of their unexpected foes, and had scarcely leisure to seize their arms, much less to unite and form themselves into a body which could have made some resistance. Thus was Sutrium taken and retaken in the same day: and Camillus, by a wise precaution, having ordered his men to close the gates as soon as they had entered, completely cut off the retreat of the Etruscans, while by guaranteeing the lives of all who should lay down their arms, he humanely prevented the bloodshed which a contest within the town must have occasioned. The town was restored before the sight to its former possessors.

Insurrection at Antium. The valour, promptitude, and judgment of Camillus were so decidedly the chief causes of the success which attended his arms in these three expeditions, that the malevolence of his enemies was for once silenced, and never was a triumph more unanimously hailed with acclamations than this, the third which he had the honour of celebrating. He seems to have enjoyed his well earned honours with less interruption from the jealousy and envy of his detractors, at this than at any previous period. But his quiet was soon disturbed by an insurrection among the people of Antium, a city of the Volsci, the old and obstinate enemies of Rome. He happened to be then one of the military tribunes, and such was the confidence inspired by his character and exploits, that his colleagues voluntarily resigned the supreme power to him, giving him the authority though not the title of dictator. When the army had reached Satricum, a colony of the Antiates, they found a much larger force prepared to receive them than they had expected. It was not merely the youth of Antium, but a vast body of Latins and Hernici, whose numbers had been recruited by a long period of peace, and who were encouraged by that circumstance to throw off their allegiance to Rome. The soldiers were much discouraged on perceiving the strength of the enemy, but Camillus, seizing the nearest standard-bearer by the hood, rushed with him upon the enemy: when his men saw this, they instantly followed him, ashamed of showing less vigour and alertness than their general, whose age might have excused him from taking so active a part in the contest. The Antiates, who were in the foremost rank, were unable to stand the shock, and the panic was rapidly communicated to their allies. The very name and presence of Camillus struck the

Volsci with terror: and when they had nearly turned his left wing, his coming suddenly up, though ill mounted and insufficiently armed, gave his own men courage to rally, and turned the fortune of the day against the enemy. The battle or rather the carnage was at length stopped in the evening by a heavy storm; and the next day the Latins and Hernici returned home, leaving the Volsci to bring the war to a close, in the best manner they could, without their aid. They therefore shut themselves up within the walls of Satricum; and as they made no effort to interrupt the works carried on by Camillus in order to establish an effectual blockade, he judged that they would not have spirit enough to repel a more direct attack. He therefore ordered his men to scale the walls on all sides, and took the city by storm, without any extraordinary loss.

On his return to Rome, immediately after the capture of Satricum, he proposed to the senate to lay siege to Antium itself, the capital of the Volsci; but when they were on the point of acceding to his proposal, intelligence was received from Sutrium and Nepete of their having been attacked by the Etruscans, and in immediate want of a powerful succour from Rome. He was therefore obliged to abandon his plan for the present, and repair immediately to the towns on the confines of Etruria, which had made such a pressing application for aid. Those towns were considered as the gates and keys of Etruria, and were therefore the first objects of both the Romans and Etruscans, whenever they had designs of invading each other's territories. The latter had already got possession of Nepete and a part of Sutrium, before Camillus and his colleague Valerius came to the assistance of their inhabitants. By a judicious distribution of his troops, Camillus soon drove the Etruscans out of Sutrium, and pursued them till night with great slaughter. Nepete, which was entirely in the power of the Etruscans, was taken by assault; and the tribunes led back their victorious army to Rome, with the glory of having recovered from the enemy two cities in alliance with the republic.

That turbulence and ambition were vices not confined to one class of the Roman people, was clearly proved by a conspiracy against the state soon afterwards discovered. It originated from a quarter whence it was least expected—a man of patrician family and distinguished patriotism, M. Manlius Capitolinus; who, while he held the other leading stations in contempt, was envious of one who, like Camillus, was rendered illustrious by his virtues as well as by his honours. Manlius, by estimating his own merits too highly, was led to depreciate those of Camillus; and not finding the senate willing to favour his pretensions, began to pay court to the multitude, and ingratiated himself with them by arts unworthy of his rank and character. The expenses in which the destruction of the city had involved the poorer citizens, had increased the burden of their debts to an extraordinary degree; and the oppressive power with which the Roman laws invested the creditor, was consequently more than ever felt by the great body of the people. Manlius, therefore, by defending the cause of plebeians, who had been seized for their debts, and taking an active part in all the popular assemblies, promoting, by his vehement harangues,

Manlius Ca-
pitolinus.

Biography. the factious measures of the demagogues, obtained an almost unparalleled share of popularity, and gave such umbrage to the senate, that they thought it expedient to create a dictator. Aulus Cornelius Cosus was the person chosen for that high office, and he appointed T. Quinctius Capitolinus, his master of the horse.

A. Dictator created. The Volsci who, though checked by the victories of Camillus, were far from subdued, were again in arms; the first act of the new dictator, therefore was an engagement with them, in which they were completely defeated and their camp taken; most of the many captives taken on this occasion were Latins and Hernici, and it appeared from the rank of the prisoners, and the confessions extorted from them, that their countrymen had certainly entered into a secret alliance with the enemies of Rome. Cosus therefore reminded in the field, expecting instructions from the senate, directing him to make war on those states; but a danger nearer home soon called him back to the capital. Manlius had proceeded so far as to excite a tumult, and encourage the populace in releasing a debtor from the officers of justice, who were carrying him to prison; and he was continually settling on foot reports of the senate's having embezzled the gold recovered from the Gauls. The passions of the multitude had been so inflamed by the violence of his harangues; and their leaders so emboldened by his daring attack on the ministers of justice, that every thing seemed ripe for an open insurrection.

Manlius excites the popular discontent. In this emergency, the senate recalled the dictator, and the next day, in the place where the popular assemblies were held, the senate being assembled, he cited Manlius to appear before him. He came, accompanied by a crowd of his adherents, to whom he had given a clear intimation that they ought to prepare for a contest. The dictator told him, in a few words, that it was currently reported, that he charged some of the senators with having embezzled a sum sufficient to release the Roman people from the burden of their debts. "So far from wishing to throw obstacles in your way, M. Manlius," continued the dictator, "if you can make such a charge good, I earnestly exhort you to produce your proofs immediately. But if you fail to produce them, or it appear that you were yourself an accomplice, I shall immediately commit you to prison, and not suffer the Roman people to be any longer deluded by your fallacious promises." Manlius, instead of directly producing his evidence, or even engaging to do so, evaded the main point, and dwelt upon all those circumstances which gave the appearance of truth to his assertion; that the war against the Volsci was merely a specious pretence, and that the dictator had been, in reality, appointed solely to keep the people in subjection. Cosus again called upon him to come directly to the point, and prove the charge which he had made; to which he replied, that he should not enter into any proofs where his enemies were to be the judges of their validity. On this, the dictator ordered his officer to carry him immediately to prison; and such was the awe in which that magistrate was held, that not a murmur was heard or so angry look seen. Yet so completely was Manlius become the idol of the people, that a very large number assumed the garb of mourning, and crowded round his prison with every

demonstration of grief. The popular irritation was now too violent to be calmed even by concessions; little effect was produced by a division of some of the public lands among them, and the establishment of a colony of two thousand citizens at Sutrium; but soon after the dictatorship of Cornelius Cosus had terminated, Manlius was liberated by order of the senate, and again became, as might be expected, the leader of the disaffected.

At the close of that year, Camillus was again, for the sixth time, chosen one of the military tribunes, invested with consular authority. The liberation of Manlius had so increased his audacity, that he now openly exhorted the people to vindicate their invaded rights, to level the different magistracies with the ground, and establish the supremacy of the people beyond the possibility of its being violated. He would be their adviser and leader, and the more dignified the title with which they should honour him, the more effectually should he be able to obtain what they desired. This language was too plain to leave any doubt of the intentions of Manlius, and justly alarmed all those who had any regard for the constitution of the Republic; so much so, that even the tribunes of the people felt the necessity of checking such seditious proceedings, and two of them entered a charge of sedition against him, appointing a day for hearing his defence. His guilt was so apparent, that even his own family and nearest relations, did not assume the habit of mourning, or make any effort to obtain a favourable sentence. When brought to trial, he made such a powerful appeal to the great actions by which his life had been distinguished; the many most essential services for which his country was indebted to him; and most especially the salvation of the Capitol, which was solely due to his courage and vigilance, that the tribunes felt it would be impossible for any judges to pronounce sentence against him, while that fortress was in sight. They therefore adjourned his trial to a future day, and fixed on a grove near the Nomentane gate, from whence the Capitol was out visible, where the people, unable to doubt a crime proved by incontrovertible evidence, gave a tardy and reluctant vote for his condemnation. He was thrown by the tribunes from the Tarpeian rock; and the same place became an eternal monument both of his glory and his disgrace. His house was razed with the ground, and a decree was passed that no patrician should in future inhabit the Capitol. The Manlii were likewise forbidden to give the name of Marcus to any of their children. The people soon began to regret the sentence which a sense of justice had wrong from them; and ascribed a pestilence, which raged some time afterwards, to the wrath of the gods, who were indignant at seeing his blood shed, who had saved the Capitol and snatched their temples out of the hands of the enemy.

The fidelity of the Latian States had long been suspected by the Roman government, and in the years immediately following the events just related, even some of their colonies in that quarter showed a manifest inclination to join their enemies; particularly Velitæ, whose inhabitants made head against a Roman army, and were supported by their neighbours, the people of Præneste. The Roman generals abstained from storming a town which was a Roman

Manlius impeached

and condemned.

Biography. colony, but declared war against the Prænestini, who next year, in conjunction with the Volsci, took Satricum, another colony, by storm, and treated the captives with great barbarity. This demanded a prompt and severe chastisement; and Camillus was for that reason not only chosen a military tribune, for the seventh time, but appointed, out of the regular order, commander of the troops sent against the Volsci. He had already reached the age which exempted him from the necessity of undertaking such services, and would have availed himself of that circumstance, had not the people strongly pressed him to take the command. His colleague was Lucius Furius, a member of the same family, but very inferior in character and ability, as soon afterwards appeared. They marched on the following day to Satricum, where the enemy awaited with a considerably larger force, so confident of success from superiority of numbers, that they used every stratagem to draw the Romans into an immediate engagement. The soldiers became extremely impatient of delay; and Furius, who was deficient in judgment and self command, at the same time that he was rash and daring, increased the discontent of his men, by blaming the dilatoriness of his colleague. At length he urged him to consent to their attacking the enemy, and not to oppose his single will to the united wishes of all the others. Camillus replied with the firmness and dignity which became his years, and a gentleness and modesty, which reflect the brightest light upon the great qualities by which he was so peculiarly distinguished. He said, that "he had never had reason to repent of his councils, or complain of his fortune; but his colleague had an equal authority with himself, and the advantage of youth and vigour; with respect to the army he was more used to command than to be commanded; that he would not prevent his colleague from taking the lead, and hoped the gods would be propitious; he only requested that, from indulgence for his age, he might be excused from placing himself in the front rank; and he would not fail in those duties which might justly be required from a man of his advanced years." Furius willingly assented to this proposal, he led on the van, while Camillus in the rear took charge of the reserve, placing it in a strong post in front of their camp, and taking a station for himself on a rising ground, whence he could be an attentive observer of the engagement. The enemy scarcely made a stand at all, but retreated precipitately to their own camp; the Romans, elated with their success, pushed on heedlessly up a rising ground, when a strong reinforcement marched out of the enemy's camp, and joined by those who appeared to be flying, charged the troops of Furius with all the advantage of fresh men and a higher ground. The latter had been completely entrapped by the feint of the Volsci; and were so confounded by their unexpected return to the charge, that they were soon put to flight themselves, and endeavoured to regain their camp in the greatest haste and confusion. Camillus desired his attendants to place him on his horse, the moment he saw the turn in the fortune of the day, and, advancing with the reserve, hastened to meet the vanguard, and encourage them to rally. The sight of this venerable commander, rendered illustrious by so many triumphs,

exposing himself in the foremost ranks, shunning neither labour nor peril, recalled the spirit and resolution of the soldiers, and filled them with shame for their disgraceful flight. Furius, who now gladly submitted to the superior judgment of his colleague—hastened, by his desire, to recover the cavalry from their panic, while Camillus, at the head of the infantry, sustained the charge of the enemy. The dismounted cavalry soon came to their assistance, and it was not long before the Volsci felt what the Romans were capable of effecting under such a general as Camillus. The troops and their commanders seemed all resolved never to be surpassed in energy and valour; and the Volsci, who had fled as a mere feint at the beginning of the contest, were completely routed at the close of it. Their loss was immense, their camp was stormed and taken by the Romans, and great as was the number of the slain, it was exceeded by the number of the captives.*

Among them, there were found some natives of Tusculum, and on inquiry, it appeared that the Tusculans had maintained a secret correspondence with the Volsci, and meditated a war with Rome. The danger from a foe thus near at hand, appeared to Camillus so imminent, that he determined to return to Rome immediately with the captives, leaving his colleague in charge of the army. The senate were of opinion that war ought immediately to be commenced against Tusculum, and entrusted the conducting of it entirely to Camillus; he only asked to have one coadjutor in that service, and was allowed to choose one of his colleagues; when, by naming, contrary to the expectation of all, Lucius Furius; he gave at once the most convincing proof of his own extreme moderation and candour; and, by thus palliating the disgrace of his colleague, added a brighter lustre to his own glory.

When he entered the territory of Tusculum, he found every thing wearing the appearance of profound peace; the fields were full of husbandmen and shepherds, occupied in their ordinary labours; the gates of the town were open, and many inhabitants of the higher classes came to shew their respect to the generals; supplies were sent very readily into the camp, both from the town and country. Camillus encamped his men before the gates of the town, and on entering it, found every thing in a similar state; doors open, shops well filled with goods, tradesmen hard at work, children calling out their lessons in the schools, women and lads going to and fro wherever their business called them; not the slightest indication of fear, or any thing that intimated a thought of war. Though not convinced of the sincerity of the Tusculans, Camillus was so well pleased with the care which they had taken to remove the impression produced by their correspondence with the enemies of Rome, that he encouraged them to go in a body to deprecate the wrath of the senate. They lost no time in complying with his suggestion, and their appearance as suppliants, together with the humble strain in which they acknowledged their offence, had so powerful an effect in appeasing the displeasure of the senate, that they were not only left unmolested

* Flutarch's account of this affair differs considerably from that of Livy, which we have followed as the more probable one.

Biography. for the present, but soon afterwards admitted to the privileges of Roman citizens. The legions were then recalled from Tusculum; and with the year the magistracy of Camillus terminated; a magistracy in which his skill and valour in the war against the Volsci, his happy success in the expedition against Tusculum, and his forbearance and moderation towards his colleague on all occasions, rendered him more than ever remarkable.

After the close of this war against the Tusculans, a very turbulent period ensued. The tribunes, who were ever stirring up the people to make some claim which they were sure the senate would refuse to grant, availed themselves of the distress occasioned by the pressure of the debts owing to the wealthy Patricians, and exhorted the people not to serve in the army till some remedy had been found for the evils under which they laboured. The inhabitants of Præeste, at the same meditated an invasion of the Roman state, and, when they learned that the people refused to enlist, that Rome was almost in a state of insurrection, they expedited their own levies, entered the Roman territory, and carried their devastations to the very gates of Rome. A dictator, as was usual in such emergencies, was appointed, the populace did not dare to resist his authority; the levies were completed; the Prænestini defeated near the river Allia, eight of their towns taken, and their city given up. Titus Quinctius Cincinnatus, the dictator, returned in triumph. These successes served but for a short time to silence the factious and disaffected. The old grievances, real or imaginary, were revived; but a temporary expedient, exemption from the claims of the creditor while the debtor was in actual service, quieted the apprehensions of the poorer citizens for the present, gave then a motive for entering willingly into the service, and enabled the tribunes to lead a considerable force against the Volsci and Latins, again in arms against the Republic. The Romans were successful in this, as in the preceding, wars, and continued gradually, though slowly, to enlarge the bounds of their territory. But, though successful abroad, they were still disturbed by intestine tumults at home.

Rome in a state of dissension.

A daughter of Marcus Fabius Ambustus, who was married to a plebeian, happened to be visiting at the house of one of her sisters, whose husband was a military tribune, and a patrician, when, on his return from the forum, his licitor struck the door of his house with his rod, to announce his master's return. The noise alarmed the plebeian sister, unused to such thundering knocks, and ignorant of their meaning. The other laughed at her for being so ignorant; but "great events" it has been said often arise "from trifling causes;" and that laughter threw Rome almost into a state of anarchy for several years. Her sister's ridicule sunk so deeply into the mind of the one who had thus betrayed her plebeian habits, that, when she saw her father, she could not conceal her chagrin from him. He consoled her by saying, that "she should soon have the satisfaction of enjoying all the honours which her sister could claim." Her husband, Cains Licinius Stolo, was next year elected one of the tribunes of the people; and, urged on by his father-in-law, he, in conjunction with an ambitious colleague, Lucius Sextus, proposed three laws, of

which the sole object was the depression of the higher and elevation of the lower classes. These laws would, in fact, if once established, have completely subverted the constitution of the republic. The first was, that the capital of every debt should be paid off by instalments in three years, the interest already paid having been first deducted from the original capital; the second, that five hundred acres (jugera) should be the largest quantity of land which it should be lawful for any individual to possess; and the last, that no military tribunes should be in future created, but that one of the consuls should always be a plebeian.

These three laws, in the opinion of the senators, struck at the very vitals of the constitution: they therefore persuaded the colleagues of Licinius and Sextus to put a veto on their proposition whenever it was brought forward. The latter, in their turn, threatened to use the same expedient for preventing the election of the magistrates; and for the next five years they realized their threats, by allowing none to be elected, except the aediles and the tribunes of the people. The impediment which this resistance offered to the forming of the military levies was a very serious evil, which the military tribunes elected under an officer called interrex, were not able to stem; and it seemed to demand the interposition of a dictator, whose power was so absolute, as to enable him instantly to check any symptoms of disobedience to his orders. Camillus was again fixed upon to fill that important office.

This was contrary to his own wish, as well as opposed to the inclinations of the people. He felt that he was considered as created merely to silence their demands; and that those who had often followed him to conquest, could with truth affirm, that he was more indebted to their confidence and obedience in war, than to the support and concurrence of the patricians in peace. The jealousy of his enemies might also be secretly at work, endeavouring the more surely to effect his ruin, by placing him in so conspicuous and difficult a station, that it was scarcely possible for him to succeed in repressing the claims of the people without being guilty of great oppression; and if he failed, he would plainly have no friends to save him in either party. In order to disconcert the plans of the tribunes, he summoned all the people to a general muster in the field, at the day and hour fixed for their assembling in the forum to vote upon these laws, threatening to punish disobedience to his orders with a heavy fine. But before that time had arrived, Camillus resigned his office, in consequence of an unfavourable appearance in the auspices*. Publius Manlius, the succeeding dictator, appointed Licinius Stolo his master of the horse; and the second of the three objectionable laws, that which restricted the estate of each individual to five hundred acres, was carried soon afterwards. It is remarkable that Stolo himself was afterwards convicted of transgressing his own law.

which is increased by a very trifling circumstance.

* It was said by some historians, that this was a mere pretence, and that his real motive was the dread of a fine of 500,000 asces, with which the tribunes threatened him, in case he proceeded to prevent their bill from being put to the vote. Plutarch seems inclined to embrace this latter opinion; but Livy argues in favour of the former, both from the known character of Camillus, his having been immediately replaced by another dictator, and the illegality of the supposed threat of the tribunes. Liv. xi. 38.

Biography.

But the great question respecting the election of consuls still remained undecided; and the apprehensions of the senate had not been removed, when intelligence was received that the Gauls were again advancing, from the coasts of the Adriatic, with an immense force. They were desolating the country through which they passed, and many of the terrified inhabitants sought for refuge within the walls of the city. The alarm created by this unforeseen danger arrested the progress of internal dissensions, and some of the more popular senators having proposed Camillus as dictator, he was immediately created as it were by acclamation. Notwithstanding his great age, for he was now nearly eighty years old, he did not hesitate to undertake the office conferred upon him. He would not suffer any personal consideration to interfere with the claims of his country; and, without claiming any indulgence for the infirmities of age, immediately made his levies, and entered upon his official duties. By helmets of polished iron, which would break a sword, or make it glance aside, and by a rim of brass round the shield, which would resist the cut of a sabre, by which the wood unarméd would have been cleaved, Camillus equipped his men with arms peculiarly adapted for warfare with the Gauls, who depended chiefly on their swords and the fury of the onset. He also armed his men with long pikes, which were calculated to check the effect of the enemy's swords, and prevent them from coming into such close quarters.

The Gauls had reached the river Anio, and were only a few miles from Rome, when they first came in sight of the Roman army. Camillus had formed an encampment on a broken and rising ground, where there were many ravines and recesses among the hills, which enabled him to conceal the greater part of his men; while the remainder was posted at the top of an easy ascent, as if afraid to descend into the lower ground and encounter the enemy. In this position the Romans could watch the motions of the enemy, and, by the dictator's command, remained quiet spectators of the depredations and carousals of the Gauls: and when he had observed that part of them were dispersed through the country in foraging-parties, he sent out a body of light-armed infantry, before the day had dawned, to harass the enemy, and prevent them from forming in a line; and as soon as daylight appeared, led his heavy-armed troops into the plain, and drew them up in battle-array upon the plain.

The calculations of Camillus, as might be expected, from so cautious and experienced a commander, all proved correct. The desultory skirmishing of his light-armed troops continually harassed the Gauls in different quarters, and compelled them to advance in great confusion; and when they rushed tumultuously upon the heavy-armed men, in the main body of the army, their swords were bent or broken by the resistance of the Roman shields and helmets, and their targets pierced by the pikes. Finding their own weapons of so little service, they endeavoured to seize those of the enemy; but their naked bodies had no protection against the swords of the Romans, who therefore soon made great havoc. The contest was not long continued: the Gauls fled precipitately over the plain, (for the heights had been secured by Camillus)

and left their camp, open and unguarded, a prey to their enemies. This victory was of importance to the Romans, not merely on account of its immediate consequences, in removing their apprehension of being again overwhelmed by the barbarians; but in as much as it taught them no longer to fear those dreaded hordes, and to rely more upon their own superior skill and coolness. Till after this battle, they had considered the Gauls as almost invincible, and had ascribed their former successes to the prevailing sickness, or other accidental circumstances injurious to the Gauls, rather than any superiority of their own.

A triumph for this victory was decreed to Camillus by the mutual consent both of the senate and people; but a contest awaited him at home which he was less prepared to engage in, than that which he had so happily brought to a termination abroad. The people, presuming upon their late services in the field, insisted more urgently than ever upon having one of the consuls chosen from among the plebeians. The senate were as obstinately resolved not to concede what they considered as a violation of a fundamental principle in the constitution of the republic; and, considering the authority of the dictator as useful in repressing the turbulence of the people, they refused to permit Camillus to lay down his office. At length, as he was sitting at his tribunal in the forum, determining causes brought before him, an officer, sent by the tribunes of the people, summoned him to attend them, and laid his hand upon him as if about to carry him by force. This was resented by the patricians present, as a most bare-faced insult: the populace vociferated against their driving away the tribunes' officer; and the dictator, to allay the tumult, led the patricians away to the senate. On entering it, he turned towards the Capitol, and made a vow he would dedicate a temple to Concord, if the Gods should bring the prevailing dissensions to a happy conclusion.

After a long and warm debate, the patricians at length yielded to the wishes of the people; and, in return, required their consent to the appointment of a supreme magistrate within the walls of the city, the prætor, who was always to be chosen from among the noble families. The people, when these decrees of the senate were communicated to them, received them with great satisfaction, and accompanied the dictator to his house with great acclamations.

Thus was concord at length re-established, after so long a period of endless contests; and the prayers of Concord seemed to have been favourably heard. The people passed a vote, fixing upon a spot opposite to the forum, where they held their assemblies, for the site of the temple to Concord, which the dictator had vowed to consecrate: and the Senate decreed the celebration of most magnificent games in honour of the gods, who had, at length, granted internal, as well as external, peace to the republic.

Camillus, in obedience to the decree of the Senate, called an assembly of the people, for the election of consuls, after the long suspension of that office under the military tribunes invested with consular authority. The latter office was now finally laid aside; two consuls were chosen, one of whom, Lucius Sextius, who had so long persevered in endeavouring to obtain a decree, by which persons of his rank should be rendered admissible to that honour, was the first ple-

One of the consuls chosen from the plebeians.

He defeats the Gauls.

Not in again elected on the approach of danger.

Biography. beian by whom it was enjoyed. This was the last public act of Camillus; for, in the following year, Rome being visited with a dreadful pestilence, which carried off most of the magistrates, and multitudes of the people, he also fell a victim to the malady, not the less sincerely regretted, though his death was so far from premature. His loss was justly considered as irreparable: for he was indeed unrivalled, whether in prosperous or adverse fortune. Before his banishment, he had deserved the highest distinctions; but after his exile, he became still more illustrious, as well by the earnestness with which his countrymen besought him to return, as by the peculiar happiness of being, when returned, the restorer of his country. He not only attained higher honours, and a larger share of glory than almost any one before or since: but, what more rarely happens to those whose eminence and occupations peculiarly expose them to the casualties incident to men, enjoyed the esteem and admiration he so justly merited, through a long course of years; and to the last period of his life was enabled to exert his talents, his virtues, and his influence, in the service of the state of which, even during his life time, he had the glory of being named the second founder.

His character. We have hitherto considered rather the public than the private character of Camillus; but the latter was such as has seldom been rivalled, and never surpassed. His boldness and intrepidity were not alloyed by obstinacy or rashness; his magnanimity made him humble in prosperity, and patient under adverse fortune; his patriotism remained unshaken by the ingratitude of his countrymen; his generosity led him

to conceal the failings of his opponents; and his piety, though strongly marked, does not appear to have been tainted by superstition. Often placed in a trying position, where his own prejudices, and those of his friends and relations, were likely to give a bias to his judgment, he seems always to have kept the middle path, and secured the rights of the patricians without ever oppressing the plebeians, whose intemperate conduct seemed almost to call for severity. His unbroken equanimity, moderation, and candour, added a brighter lustre to all his other great qualities, and commanded a degree of veneration from his contemporaries, which it has rarely been the lot even of the most virtuous statesmen to enjoy.

During the whole of the long period throughout which Camillus had so large a part in the administration of the Roman government, the public peace was disturbed, either by external wars or internal tumults. He had the happiness before the close of his life to usher in the commencement of a brighter era; when mutual concessions allayed for a while the ferment of party spirit, and the republic, already recovered from the severe shock sustained by the Gallic invasion, was secure against the hostile schemes of the petty states around her. In the short period of two and twenty years after the death of Camillus, so much had the fame and power of the Romans been augmented, that their alliance was courted by the Carthaginians; and the people of Campania, placing themselves under their protection, became in fact the subjects of the republic.—*Liv. v. vii. l. PYRRHUS.

—
FLOURISHED FROM 390 TO 373 B. C., 115TH—127TH OLYMPIAD.

Biography. This country which gave birth to this celebrated warrior, is formed by nature to be the land of heroes, though few of its natives have found a place in the page of history; for the same physical causes, which rendered the inhabitants of Epirus hardy and enterprising, made them turbulent and ferocious; little disposed by position or habits to peaceful arts and institutions. In such a country, civilization can only advance by slow degrees; and, though it may produce many an Achilles, will be long before it has a Homer to immortalize his exploits. The whole of Epirus, which stretched from the mountains of Illyricum to the Ambracian gulph, and from the Ionian sea to the borders of Thessaly, is intersected by chains of lofty mountains and insurmountable mountain streams, some of which are considerable rivers, and all present barriers, that, even in modern days, would prove an almost insurmountable obstacle to an invading army. It was principally occupied by two Pelagian tribes, the Thesprotians and the Molossi. The former occupied the northern, the latter the southern, part of the country. Among the latter, according to ancient traditions, Neoptolemus or Pyrrhus, the son of Achilles, established himself, and the sovereigns of Epirus pretended to trace their genea-

logy up to him. Whatever might be their real origin, they appear to have been sunk in the deepest barbarism till Arybas, the grandfather of him whose history we are now relating, introduced among his subjects the more polished customs, together with the laws and learning, of Greece. Arybas was succeeded by his son Æacidas, but, the Molossi, it seems, gave the preference to the cousins of that prince, son of his paternal uncle Neoptolemus. They dispossessed Æacidas, placed his nephews on the throne, and endeavoured to extirpate his branch of the royal family. They did not, however, succeed; for some faithful adherents conveyed his infant son, Pyrrhus, with imminent peril and difficulty, to Megara, a town of Macedonia; and thence to the court of Glaucias, the king of Illyria, whose queen was of the family of the Æacidae. The child, by kneeling in a suppliant posture before the king, and throwing its little arms round the altar dedicated to the household gods, as if imploring their protection, softened the heart of that prince, and made him abandon the thought of giving up the fugitive to his enemies. On the contrary, he rejected an offer of two hundred talents from Cassander, one of the successors of Alexander, and a foe to the Æacidae; for the surrender of the child, ordered

Biography. him to be brought up with his own children, and when he was twelve years old, replaced him on the throne of his ancestors.

u. c. 436. But the life of Pyrrhus was a series of vicissitudes. Scarcely five years had elapsed after his restoration to the throne, when his turbulent subjects taking advantage of his absence to Illyria, pillaged his treasury, and proclaimed his former rival king.

n. c. 316. Having again to seek his fortune, Pyrrhus placed himself under the protection of his brother-in-law, Demetrius, the son of Antigonus, and fighting under his banners at the battle of Ipsus, showed proofs of courage and strength beyond his years. He remained faithful to Demetrius in his adverse fortune, and, in compliance with the treaty between that chief and Ptolemy, went as a hostage to Egypt.

u. c. 453. Thus his many good qualities and powers, both of body and mind, recommended him so strongly to Ptolemy and Berenice his queen, that they gave their daughter Antigone in marriage to him, in preference to many other suitors.

u. c. 301. This marriage enabled him to recover his throne. Through the interest and exertions of Antigone, he obtained resources, together with a force sufficient for a descent upon the coast of Epirus; and when he had reached it, found his subjects ready to receive him with open arms; for the tyrannical conduct of his rival had made them desirous of changing masters.

u. c. 457. Pyrrhus, who well knew the unsteady character of his countrymen, had too much prudence to trust entirely to their present zeal in his favour; instead of endeavouring to expel Neoptolemus he made a treaty with him, by which he associated him with himself in the kingdom.

u. c. 459. Their friendship, however, did not last long.—Pyrrhus discovered that Neoptolemus was secretly plotting his assassination, and being assured that the chief people in Epirus wished to see him sole regent, did not hesitate to despatch his rival at an entertainment to which he had innocently come.

n. c. 295. The removal of his colleague left Pyrrhus entire master of the power and resources of his kingdom, and a wider field soon presented itself for the development of his ambitious views. At the division of the empire among his generals, after the death of Alexander, (see ALEXANDER) Macedonia was assigned to Antipater, and his son Cassander succeeded to the sovereignty about ten years after the death of his father by vanquishing Polyperchon whom Antipater had appointed his successor. His son Antipater who succeeded him, put to death his mother Thessalonica, sister of Alexander the Great, on account of her attachment to the interests of his brother Alexander, and drove that prince out of his kingdom.

u. c. 457. Alexander applied for assistance to Demetrius, the son of Antigonus, who was then sovereign of the greater part of Asia Minor. Demetrius could not immediately give him the aid he wanted: he therefore turned to Pyrrhus, who bargained for all the sea-coast of Macedonia together with Ambracia, Acarnania and Amphibolia; the latter countries not originally belonging to Macedonia. Pyrrhus first secured those places, for the cession of which he had bargained, and then continued to drive Antipater before him, and put Alexander in possession of the conquered places.

u. c. 458. Lysimachus, to whom Thrace had been allotted in the division of the empire among the generals of Alexander, would willingly have aided Antipater, had his

other engagements allowed it. He, however, forged letters from Ptolemy to Pyrrhus, urging him to receive 300 talents and evacuate Macedonia. The latter immediately detected the forgery, but listened to the proposal. The princes met together to ratify the peace by a sacrifice; but Pyrrhus refused to take the oath required, in consequence of the sudden death of one of the victims, which was interpreted by his diviners as foretelling the death of the three sovereigns.

u. c. 458. This prediction was soon verified; for Demetrius, who had now leisure to attend to Alexander's request, came to offer the assistance no longer needed. His presence therefore created suspicion, instead of gratitude; and after a few days had passed, the two chiefs began to devise schemes for the destruction of each other: Demetrius was the most vigilant, or the most fortunate, of the two, and anticipated the blow prepared for him, by putting Alexander to death and proclaiming himself king of Macedonia.

u. c. 459. This was an unpropitious event for Pyrrhus, as he had claims on the gratitude of Alexander, but cooe on that of Demetrius, who was in other respects a formidable opponent, already provoked by his inroads into Thessaly. He was, indeed, the brother-in-law of Demetrius, and had in early life been his faithful adherent, but after the death of Deidamia, the sister of Pyrrhus, the former bond of amity was broken, and Macedonia of which each claimed a part, was the source of unceasing contention. They both set out with the intention of attacking each other, but each inadvertently mistook his adversary's route; and Pyrrhus, falling in with Pantauchus, a general left by Demetrius in command of his forces to Attolia, defeated him after a severe battle, in which the two commanders engaged in single combat, and Pyrrhus gained extraordinary applause for his strength, skill, and resolution.

u. c. 463. Pantauchus, who was the most celebrated of all the officers of Demetrius would have fallen, had he not been rescued by his friends before Pyrrhus could strike the last blow. The subjects of the latter, or rather his soldiers, for they were the only subjects which such princes as Pyrrhus and most of his contemporaries took into account, were delighted by the spirit and enterprise of their sovereign; and called him 'an Eagle' in consequence of his victory over Pantauchus. He modestly, answered; "If I am an eagle it is you who have made me one; for it is on your wings that I have soared."

u. c. 463. A report of Demetrius being dangerously ill, soon afterwards led Pyrrhus to overrun a great part of Macedonia, but it was only a predatory incursion, and did not give him an opportunity of augmenting his territories. Demetrius, almost as soon as his enemy had retired within his own limits, concluded a peace with him, being anxious to turn his whole attention to the recovery of his hereditary dominions. But that unexpected measure, together with the vast preparations made by Demetrius, alarmed the princes whom he meant to attack, and they prevailed upon Pyrrhus to join them in the invasion of his territory.

u. c. 464. Ptolemy, by a powerful naval armament, made a diversion in the maritime states of Greece; Lysimachus invaded the northern part of Macedonia, from Thessaly; and Pyrrhus having marched across the country to Berra, took it and established his head-quarters there. When intelligence of these movements reached Demetrius,

he found that a spirit of disaffection had crept into his army, and fearing to oppose a Macedonian chief, of high reputation, such as Lysimachus was, he changed his course and marching back to the south, prepared to attack the Epirotes: but the emissaries of Pyrrhus were already at work, and the Macedonian army shewed a strong disposition to place itself under his orders. Demetrius, in short, after receiving some intelligible hints of the fate which awaited him, thought it prudent to retire from his camp, concealed in a very humble disguise. His whole army immediately submitted to Pyrrhus without striking a single blow.

But he did not long continue sole possessor of the kingdom of Macedonia. Lysimachus whose claims to the attachment of the Macedonians, had been considered by Demetrius himself as stronger than those of Pyrrhus, was not disposed to waive them, merely because that prince had fled before he came up; and Pyrrhus, who felt the very insecure tenure by which he held his newly acquired dominions, did not venture to provoke the rivalry of such an opponent. They, therefore, by mutual agreement, divided the kingdom of Macedonia between them; and by that measure, for the present, avoided any rupture. Though, as Plutarch justly observes, it was but a temporary expedient; and it was instituted for two men of such ungovernable and unrestrained ambition to remain long, when near neighbours, without cause for mutual complaint and jealousy.

Shortly after the division of Macedonia with Lysimachus, we find Pyrrhus opposing the reviving power of Demetrius, and then soon afterwards concluding a peace with him; when he had regained possession of a part of Macedonia. But no sooner had he returned into Asia, than Pyrrhus, at the persuasion of Lysimachus, again seduced the Macedonians from their allegiance; and continued in possession of Thessaly till the final overthrow of Demetrius in Syria enabled Lysimachus to turn his forces against the ally, who had assisted him in depressing his rival. He found Pyrrhus encamped near Edessa; distressed him by cutting off his supplies; and soon prevailed on the Macedonians to transfer their allegiance from a prince, who was a foreigner, to himself who had been the friend and companion of Alexander. Pyrrhus, having himself experienced the willingness with which the Macedonians listened to such suggestions, withdrew in time with his Epirotes and auxiliaries, and lost Macedonia exactly in the same manner as he had gained it not very long before.

He might now have cultivated the arts of peace; but from those arts, fortune, habit, and disposition, had alike estranged him: and it must be acknowledged that the nature of the country as well as the character of the people whom he was born to govern, were not such as could be expected to suggest pacific views, and circumstances soon opened to him a sphere for the exercise of his warlike talents and inclinations, admirably suited to his enterprising character. In order to understand the events which we are now about to relate, it will be necessary to turn our eyes to Italy, and advert to the transactions which had intervened between the death of Camillus and the time upon which we are now entering. The Roman republic, which a little more than a century before, had been nearly overwhelmed by the Gauls (see CAMILLUS), and had several times appeared to be on the point of

sinking under intestine discord, had now become one of the most powerful of the Italian governments; engaged as a neighbour or an ally, in war or amity, with the remotest of the numerous states which occupied the peninsula. This sudden rise of the republic from the narrow limits and contracted sphere to which her power and influence had been hitherto restricted, was owing, in a great measure to the prudent concessions of the patricians; which strengthened the bonds by which the different orders in the state were united, recoiled the Roman people to their magistrates, and by securing them against internal enemies, enabled them to turn all their energies against their foes from without, who soon yielded one after another to their victorious armies. But it was particularly towards the South that the territories and dominion of the republic were enlarged. Some of the towns in that quarter voluntarily submitted to her authority; and the Samnites sought her alliance. But eleven years afterwards, the people of Campania, having been defeated by the Samnites their immediate neighbours, threw themselves on the protection of Rome: this dissolved the former alliance between the Romans and the Samnites, and involved them in a war which was carried on at intervals for more than sixty years. It was at length terminated by the submission of the Samnites after the loss of Pontius, their able general, and repeated defeats. The terms upon which the Romans granted the peace, which the Samnites solicited, are not known; but the character and condition of the parties, as well as the subsequent events in the south of Italy, clearly show that they were such as secured the preponderance of Rome.

The country to the east of Samnium was occupied by colonies from Greece; and Tarentum, a city in Iapygia, on the coast of what has been called the heel of Italy, was at that time in a very flourishing state. Its inhabitants were originally Spartans; but they had not adopted the rigorous laws of the mother country, they were attached to the arts and luxuries of the more polished states of Greece, and if the accounts of the Roman writers are to be trusted, were immersed in the most wanton voluptuousness. The mountains of Apulia might have long been a sufficient protection to a state separated by them from Campania and the other countries to the west; but the progress of the Roman arms, and probably the severe character of the Roman people, awakened the jealousy and hostility of the Tarentines. Before any direct cause of hostility had arisen, the people of Tarentum endeavoured, by secret intrigues, to involve the Romans in a state of warfare with all their immediate neighbours; and when the Roman admiral accidentally appeared with a fleet before the entrance of their harbour, they attacked him without any provocation, took several of his ships, and made a great slaughter, the admiral himself being among those who fell. The Romans immediately sent a deputation to demand satisfaction for this unprovoked injury; but the Tarentines received them, or rather dismissed them, unheard, with the grossest insults. Posthumus, the head of the Roman deputation, withdrew, uttering these indignant words, "Laugh on now, inhabitants of Tarentum, the time will soon come when your laughter will be changed into tears. It is not a few drops of blood which will suffice to wash away these insults." Conscious of their own inability to avert

Cineas, the Thessalian orator, a disciple of Demosthenes, not unworthy of his master, was despatched by Pyrrhus to Tarentum with three thousand infantry under his command; and twenty thousand more, together with three thousand cavalry, two thousand archers, five hundred slingers, and twenty elephants, were soon afterwards embarked on board a large fleet of transports sent by the Tarentines to receive them. This vast armament was dispersed in the mid-channel by a violent gale of wind from the north. The vessel which carried Pyrrhus himself, with great difficulty made the Italian shores; but was met by an adverse breeze from the land, as she stood in, and was in imminent danger of being again driven out to sea. Pyrrhus, impatient of being thus thwarted, boldly threw himself overboard, and very narrowly escaped, in a stormy sea, on a dark tempestuous night. By break of day, however, he and his friends reached the shore, where they were assisted by the Messapians, inhabitants of that coast, and joined by the crews of a few of his ships, so that he was enabled to march on to Tarentum at the head of a small force, about two thousand foot, some cavalry, and a couple of elephants.

v. c.

a. c.
280.

Cineas, who had not been idle while waiting for his master, but had prevailed upon the Tarentines to give him possession of their citadel and the supreme command of their troops, marched out, as soon as he heard of the approach of Pyrrhus, to meet him. The Tarentines, though rejoiced to receive their great ally, were little inclined to make any considerable sacrifice, in order to insure success in the war; and instead of troubling themselves more about it, were contented with declaiming against the enemy in their popular assemblies or their public walks, leaving the whole management and labour of the campaign to Pyrrhus and his generals. As soon as his scattered ships were pretty well re-assembled, and most of his troops had been safely landed, he began to assume a severer tone with his new friends, whose good will he had hitherto cultivated by an entire acquiescence in their wishes; and finding that they would never be brought to a serious attention to the state of their affairs, so long as they could indulge in the luxurious pleasures to which they were devoted, he caused the public places of amusement to be closed, and even abridged their hours of private relaxation. Musters and reviews were substituted for spectacles and banquets; and the Tarentines found that the orders of the king must be implicitly obeyed. So little were they accustomed to such a rigorous system, that many of them abandoned the place, considering such an abridgement of their habitual indulgences, as a most intolerable slavery.

The Romans, in the mean time, were preparing to punish the insolence and temerity of these Grecian colonists. The consul Lavinus marched at the head of a large army, into Lucania, desolating the country through which he passed. The Tarentines had promised, when they asked for the assistance of Pyrrhus, to collect an army of more than three hundred thousand men; but they seemed little likely to realize these splendid promises. Few, if any, of their confederates appeared; nevertheless, he determined to take

VOL. IX.

the field with the small force he had, rather than suffer the Romans to advance nearer. But before he commenced hostilities, he sent a herald with a letter to the consul offering, in haughty terms, to act as mediator between the citizens of Rome and Tarentum. Lavinus answered, that the Romans neither accepted his mediation nor feared his hostility. Pyrrhus therefore advanced immediately, and cantoned his army on the plains which extend obliquely across the peninsula, from Heraclea on the eastern to Pandrosia on the western sea. The Romans were not far off, stationed on the other side of the river Siris; and when Pyrrhus reconnoitred their camp, he expressed his surprise to Megacles, one of his generals who accompanied him, observing, that "the order of these barbarians was far from barbarous; but," he added, "we shall soon know what they are in deed." He now perceived that it would be necessary to wait for his allies, and stationed outposts on the river, to prevent the Romans from effecting a passage. This, however they succeeded in doing, and the outposts of the army were obliged to retreat upon their main body in order to avoid being cut off. Pyrrhus, when informed of this, advanced with his cavalry, in number about three thousand, hoping to surprise the Romans before they had recovered from the disorder occasioned by their passage over the river: but when he beheld their shields glittering in the sun above the surface of the water, and their cavalry passing the stream in regular order, as if on land, he discovered his error, and immediately commenced the attack. His cavalry was probably inferior in numbers to that of the Romans, and though he himself was in the heat of the engagement, encouraging his men by extraordinary acts of valour and presence of mind, yet his troops began at length to give way. On this he sent orders for his infantry to advance; and after a very long and dubious struggle, having been victorious and repulsed seven times, they turned the fortune of the day against the Romans. They were indebted, in all probability, more to the confusion and alarm occasioned by their elephants, which the horses of the Roman cavalry could not be brought to face, than to any superiority of valour, skill, or numbers. With respect to the latter, Pyrrhus had probably, as was before observed, the disadvantage; and that supposition is corroborated by the accounts of the numbers who fell in this action, where the excess on the side of the Romans, according to all accounts, is very great, and such as could scarcely have arisen, in so hard a fought battle, had not their forces been much the most numerous at the onset.

Pyrrhus, on this occasion, gave abundant proofs of that coolness and intrepidity for which he has been so much celebrated. Though constantly in the hottest of the engagement, he never lost his presence of mind, but gave his orders and changed his station as deliberately as if he were merely a spectator of the action. The splendour and peculiar beauty of his armour rendered him extremely conspicuous, and in the earlier part of the battle he had many narrow escapes. Leonatus, the Macedonian, having observed one of the Italians very intent upon his master, always watching his movements, following him wherever he went, and letting every one else pass unnoticed;—came up to Pyrrhus, and entreated him to be on his guard against this man: and while he

was cautioning the king, the Roman spurring his horse, and coming towards them at full speed, threw a spear, which missed Pyrrhus, but struck his horse: Leonatus, at that very instant struck the horse of the Roman, and both horses fell at the same time. Pyrrhus was immediately removed by his friends, and his opponent hewn in pieces. This imminent peril rendered Pyrrhus somewhat more cautious, and he exchanged his armour and accoutrements with Megacles, one of his favourite generals. The latter now became the great object at which most of the Romans aimed, and it was not long before he was brought to the ground. His robe and helmet were immediately carried to the consul, who had them passed along the ranks, as in triumph. The Roman army was filled with exultation, the Epirotes with consternation and grief, till Pyrrhus, informed of their alarm, rode about uncovered, and calling out to his soldiers, encouraging them by the well-known sound of his voice.

The Romans were obliged to abandon their camp, and make an immediate retreat; many of their confederates went over to the enemy or were plundered by his victorious army; and he advanced to Preneste, within forty miles of Rome; but it was a dear-bought victory, for he lost many of his best troops and most able generals, a loss which he could never replace. Besides this irreparable injury, he was now removed to a distance from the coast, and surrounded by allies on whom little dependence could be placed. The Roman government, on the other hand, was not at all dismayed by this reverse of fortune, but made fresh levies with renewed alacrity, and assumed even a more menacing tone. Pyrrhus therefore was more inclined to terminate the war by a peace, creditable to himself, such as it was likely the Romans would, at the present conjuncture, grant, than to attempt their subjugation, for which his army and actual resources were not adequate. In consequence of these views, he commissioned Cines to proceed, as his ambassador to Rome, and empowered him to enter into a negotiation with the Senate. The terms he offered were extremely favourable: the release of all his prisoners without ransom, and his assistance to the Romans in the conquest of Italy, on condition of obtaining their friendship for himself, and security for the Tarentines. The speciousness of these terms inclined many of the senators to listen to them favourably; the more so, as several of the southern states of Italy had already joined Pyrrhus, and his success was likely to increase the number of his adherents: but the question was decided by the firmness and energy of one man, Appius Claudius. His family and character placed him high in the estimation of his fellow citizens; but his great age and loss of sight had caused him to withdraw from attendance on public business: his appearance therefore in the Senate, into which he was led by the members of his family, raised anxious expectation in the whole body, who listened with eager attention to the sentiments which he uttered. He told them that "he should rejoice, were he now as deaf as he was blind, and unable to hear the shameful reports of their intended measures, so destructive of the glory of Rome. That it was now in vain for them to boast that, had Alexander invaded Italy instead of Asia, his career would have terminated in disgrace, since they were

panic-struck by Chæonians and Molossians, who had always been vanquished by the Macedonians. That it was equally vain to hope for advantage from an alliance with this man, who could not keep even a part of Macedonia by the aid of that force, with which he now talked of conquering Italy.—Nothing therefore could be expected from an alliance with Pyrrhus except insult and contempt; for who would not despise him if she suffered him to escape unpunished for his insolence, and gave up to him the Samnites and Tarentines as a compensation for his audacity!"

This spirited appeal had an instantaneous effect, and produced an unanimous vote for the continuance of the war; Cines was desired to tell his master "that if he wished to obtain the friendship of the Romans, he must first quit Italy; but that he would be opposed with all their force, as long as he continued there in arms, though he should defeat ten thousand Lavinius's." Soon after the dismissal of Cines, they sent Fabricius to treat with Pyrrhus for the ransom and exchange of prisoners: such was his confidence in the honour of his enemies, that he allowed his captives to accompany the envoy back to Rome, on condition that they should return after having celebrated the Saturnalia, if the Senate still refused to enter into terms with him. They proved themselves worthy of his confidence, and subsequently owed their final liberation to that generous disdain of a secret and treacherous warfare, which distinguished the Romans of those days so advantageously from their more polished neighbours the Greeks. Fabricius, soon after, returning from his mission to Pyrrhus, was made consul, and, while in office, sent a letter to that prince, enclosing one from his physician, offering to rid them of their enemy by administering a dose of poison to him, if a suitable compensation should be made. Pyrrhus, who was not wanting either in generosity or gratitude, was now, more than ever, desirous of making peace with the Romans; and again despatched Cines to make a fresh proposition to the Senate. He also delivered up all his prisoners without requiring any ransom. The Senate still refused to listen to any terms till the Greek troops had been withdrawn from Italy, and Pyrrhus had returned to Epirus; but to shew their unwillingness to receive a reward for a mere act of integrity, sent back an equal number of Samnites and Tarentines in exchange for the Romans whom he had liberated.

There is no period, perhaps, in the whole of their history, when the excellencies of the Roman character were more strikingly exemplified than that in which these events took place; and to a prince like Pyrrhus, who was animated by a courageous spirit, those admirable qualities must have shone with a still brighter lustre, when contrasted with the vices which almost universally disgraced the Grecian courts established on the ruins of the Macedonian empire. Policy, as well as curiosity, prompted him to wish for so intimate acquaintance with the government and manners of the Romans; his envoy, Cines, was commissioned to seize every opportunity of obtaining information on those points, and his report only increased the surprise and admiration of his master. "The Senate," said Cines, "appears like an assemblage of kings; and the men capable of military service are so numerous, that the consul has already on foot an army twice as large as that which you defeated, and

leaves multitudes behind him capable of making up for any loss." But the fearlessness and disinterestedness of Fabricius, still further increased the esteem which Pyrrhus felt for the national character of his adversaries. He had been told by Cineas, that this illustrious Roman was as poor as he was intrepid and upright. The king, therefore, hoped to gratify him by the offer of large sums, "as a pledge," he said, "of his regard, not with any sinister design." But Fabricius, proud of his poverty, rejected the offer. On the following day, Pyrrhus, at a conference held with the Roman envoy, caused his largest elephant, concealed behind a curtain, to be suddenly disclosed completely armed, and caused by its keeper to roar, as it waved its trunk over the head of Fabricius. Though he had never before seen one of those huge animals, neither the suddenness nor the novelty of the sight occasioned any emotion, but turning to Pyrrhus, who was aware of the predicament in which he was placed, said, with a smile, "Your gold could not move me yesterday, nor can your heat to-day!" Pyrrhus was so much struck with the judgment and integrity of his guest, that he privately urged him to come, after having concluded the treaty, and settle in Epirus, promising to give him the first command in his army, and make him his most confidential friend. To this Fabricius very calmly replied, "But this would be of no advantage to you, O king; for when they, who now honour and admire you, had known me by experience, they would rather have me than you to reign over them." Pyrrhus received this answer as became a man of a great mind, without the paltry resentment or mortification which a tyrant would have felt, and related it to his friends as a fresh proof of the exalted sentiments of Fabricius. When it is considered in what courts Pyrrhus received his education, and what examples he had continually before his eyes, his own temper and magnanimity in listening (without impatience) to such truths, are hardly less worthy of our admiration than the sublimer virtues of Fabricius himself.

The consuls, to whose lot it fell to carry on the war against Pyrrhus, found him encamped near a small town in Apulia, called Asculum. As each party was equally willing to try their fortune, it was not long before an engagement took place; but historians differ so much in their accounts of this battle, that nothing respecting it can be ascertained with certainty, except its having been nearly a drawn battle, fought with great obstinacy on both sides, but terminated rather in favour of Pyrrhus than of the Romans. His final success in this as well as the former engagement, has been ascribed to the terrors with which his elephants struck the horses of the Roman cavalry. He had not however much cause for exultation, and, when congratulated by his officers on his success, exclaimed, "Another such victory and we are undone!" He had, indeed, a far less cheering prospect before him, than that which consoled the Romans for their defeat. His confederates were cold and heartless; his faithful soldiers and adherents, with the exception of a small number, had fallen; and he was far from his own kingdom, which alone could replace his losses: while the Romans were backed by all the vast resources of the republic, and seemed only to gather fresh strength and ardour from every disaster.

A little so doubtful in its result afforded no encouragement to either party, and both seemed inclined, for a time at least, to suspend hostilities. At that conjuncture, Pyrrhus received an invitation from Sicily to assist in driving the Carthaginians out of that island: a proposal flattering to him in every respect, and the more gratifying, as it would give him a plea for attacking the Carthaginians, whose subjugation, on the first favourable opportunity, he had long projected. He received, at the same time, accounts of the death of Ptolemy Ceraunus, who fell in a battle against the Gauls, and of the defenceless state of Macedonia under the successors of that prince. Sound policy would certainly have prompted Pyrrhus to return immediately to Epirus, where he might have indulged his thirst for glory and power, by adding Macedonia to his hereditary dominions: he could thus have obtained a territory of considerable extent, not far more capable of being preserved entire, than any conquests at a distance from Greece. But his ambition was of too vast and enterprising a character to be checked by the considerations of prudence and expedience; he therefore, not without hesitation, and much regret at being unable to engage in both enterprises at once, gave the preference to Sicily; despatched Cineas to prepare the Sicilians for his reception, and set sail after placing a strong garrison in Tarentum, much against the will of the citizens, who had now discovered their folly in calling in the assistance of a prince perpetually engaged in schemes of conquest and ambition.

Syracuse, the capital of the island, Agrigotum, midway between its southern and western extremities, and the city of the Leontines, a little to the north of Syracuse, had been offered to Pyrrhus by the ambassadors sent to invite him over from Italy. The remaining places, not possessed by Carthage, submitted to him with little difficulty, and he was soon at the head of an armament consisting of thirty thousand infantry, two thousand five hundred cavalry, and a fleet of two hundred sail. With this powerful force he was enabled to drive the enemy before him, and resolved to storm Eryx, the strongest fortress which the Carthaginians possessed in the island. When the scaling ladders were fixed, he was the first who mounted, and, what appears incredible, received no injury, though in the hottest of the assault. The numbers who fell by his hand are said to have been so great as to form a complete rampart around him. The city was taken, and magnificent games in honour of Hercules were celebrated in fulfilment of a vow made by Pyrrhus at the commencement of this enterprise.

This was not the only signal success which attended the arms of Pyrrhus in Sicily. Of all the inhabitants of that island, there were none who opposed a more formidable barrier to the advancement of the Grecian colonies, than the Mamertines established near Messena. The name of this tribe, which was derived from *Mamers* or *Mucors*, indicated their warlike character. After having taken Eryx, Pyrrhus turned his principal force against this people; seized and put to death the agents appointed to collect their revenues; defeated their troops in a pitched battle, and shut them up within the walls of Messena.

The Carthaginians had now only one fortress left in the island Lilybæum, near the western promon-

tory; they were therefore anxious to secure what yet remained by a timely sacrifice; and made no offer of peace on very advantageous terms; but Pyrrhus, who was better fitted for conquest than negotiation, spurned their offers, and answered that no terms would be received short of their entire evacuation of Sicily. His favourite plan of invading the territory of Carthage seemed now on the point of being renounced, and instead ofenders owing to complete the liberation of Sicily from their foreign and domestic enemies,—the object for which he had been invited into the island;—he turned his whole attention to the equipment of a fleet for the invasion of Africa. He had a sufficient number of ships, both wanted seamen; and proceeded to levy mariners from all the maritime towns with extreme rigor, inflicting a severe punishment on those who did not comply with his demands. At his first arrival in the island, he had pursued the same line of policy in Sicily, as he had previously done at Tarentum: charming every one by his pliancy and affability, and earnest desire to second all their views and projects. This produced the effect he intended, and obtained for him an unbounded confidence: but as soon as he thought his power sufficiently established, he threw off the mask, and began to govern according to those principles of military despotism, which may secure the obedience, but can never conciliate the affection of the subject. The Sicilians were little disposed to submit, without murmuring, to such tyrannical conduct. They perceived that he was now pursuing his own measures, not theirs; that their troops were going to fight his battles, and that in case of any reverse, they should be still liable to the evil of being hemmed in between two enemies, as neither the Carthaginians nor Mamertines had been completely expelled. But his conduct towards Theron (or Tanion) and Sosistrates, the two popular leaders at whose suggestion he had been invited into the island, was that which justly raised the suspicion and indignation of the Sicilians to the highest pitch. To the friendship and influence of those two men, Pyrrhus owed all his power in Sicily; but that very influence excited his suspicion, he determined therefore to compel them to accompany him in his expedition against Carthage. Sosistrates withdrew before these intensions could be executed; but Theron, who had been still more servicable, was seized by Pyrrhus as an accomplice in a conspiracy with Sosistrates, and condemned to death. These iniquitous proceedings completely changed the face of his affairs; some of the Sicilian towns joined the Carthaginians; others united with the Mamertines; he was deserted by all but his Epirote troops, and instead of being able to attempt the subversion of Carthage, was glad to avail himself of an application from his allies in Italy for assistance, as a creditable excuse for retiring from Sicily. He is said, when looking back, as he sailed away from the island, to have exclaimed, “what a field are we leaving for the Romans and Carthaginians!”

v. c.

479.

n. c.

275.

His passage to Italy was disastrous: the Carthaginians took several of his ships; and ten thousand Mamertines, posted in the defiles of the mountains through which he had to march, in his way to Tarentum, harassed his rear, cutting off two of his elephants. He hastened back to their assistance, and exposed himself in the most daring manner, though aware of the experience and rancour of the enemy.

Having received a sabre-wound on his head, he was obliged to withdraw from the action for a short time, when one of the Mamertines, remarkable for his bulk and the splendour of his arms, advanced considerably beyond his own party, and dared Pyrrhus, if alive, to engage with him in single combat. The king, incensed in the highest degree, instantly returned with his guards, and with his face crimsoned with blood, and a terrific expression of countenance, rushing through the midst of his men, before the barbarian could raise his arm, aimed a blow at his head with such strength of arm and so excellent a blade, that he severed his enemy's body at one blow, the two halves falling on opposite sides at the same instant. This achievement filled the barbarians with astonishment and terror; Pyrrhus appeared to them like some superior being, and they did not dare to advance a step further. He was, therefore, enabled to pursue his march without molestation. He reached Tarentum at the head of twenty thousand infantry and three thousand cavalry; and having taken the best of the Tarentine troops, marched, without halting, into the country of the Samnites where the Romans were encamped.

During his absence the consuls had several times defeated the Samnites, so that their spirit was almost broken; they likewise resented the treatment they had experienced from Pyrrhus, who left them a prey to their enemies while he was pursuing his schemes of conquest in Sicily: few therefore joined his standard when he returned into their country. One of the consuls was at this time encamped near Beneventum, in the country of the Hirpini; the other was further to the south, in Lucania. Pyrrhus, therefore, sent a detachment from his army in that direction to occupy the attention of the one, while he marched with the main body to attack the other, who was stationed in Samnium.

As the Epirotes and Tarentines could have no chance of final success, unless they made an attack before the consul was joined by his colleague; that was the first and great object which they had to effect. Pyrrhus, therefore, having selected the bravest of his men and his best elephants, and marched forward under cover of the night, in hope of taking the enemy by surprise. But the circuitousness of the rout and closeness of the woods through which it lay, together with the darkness of the night, after the lights were extinguished, so impeded his progress, that the dawn had appeared before he reached the heights surrounding the Roman camp. The sudden appearance of the enemy threw the Romans at first into a considerable alarm, but, as the auguries were favourable, the consul, (Manlius Curios), sallied forth to meet the enemy without delay, attacked his vanguard, and put it to flight. dismay and confusion spread rapidly through the army of Pyrrhus: some of his elephants were taken, and he lost a considerable number of his men. Manlius was encouraged by his success to hazard a regular engagement, and drew up his men in the plain. One of his wings defeated the enemy, but the other was borne down by the elephants; and driven back to the entrenchment before the camp. The consul, in this emergency, called forth his reserve, who, from the heights where they were stationed, pouring a shower of javelins upon the enemy's elephants, in the plain below, compelled them to fly. The retreat of those

Pyrrhus.

v. c.

Biography. vast animals was as fatal to the force upon which they retreated, as their advance had previously been to the Romans. The victorious troops of Pyrrhus were driven back and thrown into disorder; while the Romans, taking advantage of their confusion, pressed onwards till they remained complete masters of the field. The valour and struggle of that day, as Flutarch justly remarks, not only secured to the Romans present victory, but subsequently the empire of the world; for they thenceforward learned to consider themselves, and were considered by others, as invincible.

v. c. By this defeat, the flattering hopes of conquest and
490. dominion with which Pyrrhus had entered Italy, were for ever cut off. His army, after all his losses, was still considerable; and he is said to have returned to Epirus at the head of more than eight thousand men. But the resources of his hereditary states were not equal to the expense of maintaining such an army; he was, therefore, driven to the expedient of engaging in another war, for the purpose of replenishing his treasury. And the circumstances in which the northern parts of Greece and Asia were at this time placed, also afforded him an opportunity of executing his wishes. These fine countries were, at the period which we are now engaged in describing, in a state of much confusion, from large, but scattered tribes of Gauls, who had migrated in that and the preceding age, and while Pyrrhus was employed in Italy, had committed extensive ravages in Greece. He now associated with his troops, one of the largest of these barbarian herds, and placing himself at their head, marched into Macedonia, at that time under the government of Antigonus.

His views, as had often been the case, were altered by the circumstances in which he found himself placed. The conquest of several towns, and the unexpected increase of his army by two thousand men, who deserted from Antigonus, encouraged him to attack the king of Macedonia. He found him in a narrow defile in the mountains; succeeded, after a severe conflict, with a body of Gauls in the Macedonian service, in getting possession of his elephants; engaged the phalanx, the flower of the Macedonian army, to come over to him, by calling upon them as friends and companions in arms, and reduced his adversary to the necessity of flying with the wreck of his army. Thus was Pyrrhus, who had entered Macedonia, solely with the intention of making a predatory incursion, and retiring with his booty, once more unexpectedly master of that kingdom. A few of the maritime towns, which still preserved their allegiance to Antigonus, were soon afterwards taken by Pyrrhus; and he was now more entirely sovereign of Macedonia than he had ever been before. Such were the continual vicissitudes of his fortune, and so frequently were those unhappy countries then exposed to the evil of a change of masters, with all its concomitant train of new favourites to be gratified, new contributions to be raised, new levies to be furnished, and new armies to be maintained.

v. c. The uncertain tenure by which Macedonia was
491. held, and the advantages which its proximity to Epirus afforded, were circumstances which would have led a more cautious prince to turn all his attention to the consideration of his newly acquired dominions, by conciliating his subjects, and repairing the injuries

which they had sustained in so long a period of warfare. But prudent and prospective measures seldom formed a part of the system of Pyrrhus. His expedients were usually such as the exigency of the moment suggested. Thus he draughted some of his Gaulic auxiliaries upon the tow of *Ægæ*, the herial place of the kings of Macedonia—and those barbarians stimulated by their love of gold, plundered the royal sepulchres, and disturbed the remains of the dead. Pyrrhus however, either did not dare or was not able to punish the sacrilege. This apparent disregard of an outrage, peculiarly painful to the Macedonians, was deeply resented; and yet was their new sovereign so elated by his success, so little apprehensive of a reverse of fortune, that he called Antigonus, whom he had dispossessed of the throne, “a shameless fellow for daring still to wear the purple.”

War was to Pyrrhus a game in which he was always eager to take a part; he therefore willingly assented to a proposal from Cleonymus, the Spartan, who, came to ask for his assistance against the people of Lacedæmon. His principal cause of complaint against his fellow-citizens was the preference to which they had given to Areus, whom he considered as not having so good a claim to the throne as himself; but it does not appear that the laws of Sparta had been violated by the rejection of Cleonymus;—and still less is it easy to justify Pyrrhus for taking a part in this quarrel. His real intentions were sufficiently manifested by the magnitude of the army with which he commenced his campaign; 25,000 infantry, 2,000 cavalry, and twenty-four elephants. To the ambassadors from Sparta, who met him at Megalopolis, he gave assurances, that his object was merely to liberate the cities which had been subdued by Antigonus, while he expressed the greatest esteem for the character and customs of the Lacedæmonians; but he spoke and acted in a very different manner as soon as he had entered the Spartan territory. He began by ravaging and plundering the country in every direction; and, when remonstrated by the ambassadors that he was commencing hostilities before he had made any declaration of war, he tauntingly replied, “did we ever know you Spartans to tell any one before hand what you intend to do?”

Sparta, to which Pyrrhus now advanced, was at this time in his most defenceless state. Areus, the king, was with all his best men in Crete, assisting the Gortynians; and the approach of the Epirates had been so rapid, that the Spartans, who remained in the city, were taken quite unprepared. Had Pyrrhus listened to the advice of Cleonymus, and attacked the city immediately upon his arrival, it probably would have fallen into his hands; but his contempt for an feeble resistance as the Spartans could present—made him defer his attack till the following day. He encamped quietly before the city, and the friends of Cleonymus were so sanguine in their expectations of his success, that they prepared an entertainment at his house in honour of his great protector. The other Spartans were not, in the mean time, inactive; and their women, whom they had proposed to remove to Crete, took a most active and effectual part in the arduous work which was immediately commenced. That was to cut a wide and deep trench parallel with the enemy's line, and at each extremity of it, to sink wagons up to the axle-tree, so as to impede the pro-

Biography. gress of the elephants. The trench, which was six feet depth, nine in width, and eight hundred in length, was finished before the morning. The advantage it gave was greater than ever the Spartans anticipated. The Epirotes under Pyrrhus himself could neither pass the trench, nor find a firm footing on the loose earth so lately thrown up on each side of it. The wagons presented an impenetrable barrier to the Gauls under Ptolemy, the son of Pyrrhus: and when they began to drag them out by the wheels, Acrotatus, son of Areus, king of Sparta, marching round with three hundred men by some covered ways through the hills, attacking them in the van, compelled them to wheel round and not upon the defensive. The contracted space and disadvantageous ground on which the troops under Ptolemy stood, were circumstances much in favour of Acrotatus, and enabled him after a sharp conflict, entirely to defeat his enemy. The contest was now severe where Pyrrhus himself commanded, and several of the Spartans showed a spirit worthy of their nation: particularly one named Phayllus, who, after having slain numbers who attempted to force the post which he defended,—when he found himself ready to faint from loss of blood, resigning his station to an officer near him, withdrew, that he might die among his countrymen, and save his body from falling into the hands of the enemy. The combat was continued without intermission till night, and renewed again at break of day. The Spartans fought with the resolution of men determined to save their country or perish; their enemies, with the confidence of superior skill and numbers. While one party was labouring to fill up the trench and the other to defeat their efforts.

But, when the fortune of Sparta seemed at its last ebb, the hope and spirit of her brave citizens were revived by the unexpected arrival of Aminias the Phocian, one of Antigonus's generals, with a body of foreign auxiliaries from Corinth; and almost at the same time by the return of Areus, their king, from Crete, at the head of two hundred soldiers. Pyrrhus, who delighted in struggling with difficulties, and was rather spurred on, than repelled by increasing perils, was now more than ever ambitious to make himself master of Sparta. But a continued series of losses at length compelled him to abandon the siege, and content himself with ravaging the country. It was his intention to pass the winter in Laconia, and resume his siege of the city in the following spring; but events, which he could not foresee, produced an alteration in his plans, and delivered the Spartans from the scourge of his predatory bands. The people of Argos, were then divided, as was usually the case with the Grecian states, by opposite and intemperate factions. Antigonus, who was in possession of Corinth and other places on the borders of Argolis, was suspected by Aristæus, head of one of the parties secretly in correspondence with Aristippus, the leader of the opposite faction. In order therefore to strike a blow before the plans of his rival had been matured, Aristæus solicited the assistance of Pyrrhus, to whom such a proposal must then have been peculiarly acceptable; as it liberated him at once from his unsuccessful warfare in Laconia, and opened a new career for his ambition, in a quarter where he was almost certain of success. He therefore immediately commenced his march towards Argos. But the Spartans did not suffer him to withdraw unpunished. His rear was

harassed by parties posted in the narrow defiles; and he incautiously ordered his son Ptolemy to go with a detachment of his guards to their relief, while he pressed forward to disengage the main body of his army from those dangerous passes. The young prince was encountered by a chosen body of Spartans under the command of Eualcas, and while closely engaged was laid dead by one blow from a Cretan, named Orestus, famed for his strength and swiftness. The death of their leader damped the courage of his party; they fled, and the Spartans in the ardour of exultation, heedlessly pursued them into the plain, where they were met by Pyrrhus himself and the whole body of his army. He had already learned the fate of his son, and stimulated by grief, dreadful and invincible as he always appeared in battle, he now out did his former exploits. He rode at full speed towards Eualcas, who moving aside as he came up, aimed a blow which just missing his bridle hand, cut the reins asunder: but Pyrrhus at the same time that he ran him through with his spear, leaping from his horse, and fighting on foot, spread destruction and slaughter among the hands who surrounded Eualcas.

Pyrrhus having thus avenged the death of his son, marched on to Argos. He there found the heights, commanding the plain, occupied by Antigonus; and for that reason posted his own army near the town of Nauplia. He challenged that prince to a single combat, in allusive terms, to which Antigonus calmly replied, that it was not so much upon his own arms as the seasonable use of them he relied; but that if Pyrrhus was tired of life, there were plenty of roads to death open to him. The Argives sent an embassy to each of these chiefs, entreating them to retire and not to suffer the city to be taken possession of by either, as a measure for which there was no ground, since it was equally well inclined to both. Antigonus yielded to their solicitations, and sent one of his sons, as an hostage. Pyrrhus promised to retire, but as he gave no security for the performance of his promise, was suspected of entreating no honourable intentions.

When it was extremely dark, he drew close to the walls, and finding the gate called Diampere opened for him by Aristæus, advanced with his Gauls, as far as the forum before he was perceived. But as the gate was not high enough to admit his elephants, it was necessary to have them removed, and replaced when the gate had been passed. This occasioned a delay and could not be done in the dark without making a noise and confusion; in consequence of which the citizens discovered their danger; an alarm was given, and some ran to the citadel, called Aspis, and other places of safety, while others sent to call Antigonus to their aid. He hastened into the immediate neighbourhood of the town, and remained there, watching his opportunity, but sent in his son and some of his generals with a considerable body of troops to oppose Pyrrhus. Areus with a thousand Cretans and the most active of the Spartans, arrived just at the same time, and joining the troops of Antigonus, attacked the Gauls and threw them into great disorder. Pyrrhus himself entered by Cyllanibus, a plain outside the city, used for gymnastic exercises: but the shouts by which the Gauls answered those which his men made on entering, appeared to him indicative of alarm and discouragement. He therefore advanced as rapidly

Biography. as possible, but the intricacy of the streets, frequent occurrence of drains, and darkness of the night, made it impossible to preserve any order; and his cavalry, more particularly, was so hampered by these obstacles, that both parties were compelled to wait for the return of day-light.

At the break of dawn, Pyrrhus perceived that the Aspis was full of armed men. This sight gave him considerable alarm, but he was struck with consternation, when, on looking over the forum, he observed, among many other sculptures, the figures of a wolf and a bull fighting together; for it immediately recalled to his memory, an ancient oracle, which declared, that he was destined to die, whenever he should see a wolf and a bull fighting together. Under this impression, and not seeing any thing in the present position of his men to encourage a hope of success, he determined to retire and sent orders to his son Helenus, who had been left with the main body of his army outside the walls to make a breach in them, as the narrowness of the gates might present an obstacle to their progress. These orders were imperfectly heard and erroneously delivered, in consequence of the hurry and confusion of the moment; so that Helenus entered the town, instead of taking measures to facilitate his father's retreat. Pyrrhus in the mean time was coming in an opposite direction through the same narrow street, which led from the forum to the gate. It was in vain that he called out to his men to retire; those who were near enough to hear and obey his orders, were carried forwards by the throng behind them. The largest of the elephants had fallen in passing the gate, and hlocked up the passage; and one of those already within the walls, while endeavouring to recover his driver, who had been wounded and fallen off, turned round upon the retreating party, and drove them back among their adversaries; and, having found the body, he took it up with his proboscis and supporting it on his tasks, carried it away, treading down every thing he met, as if raving with madness. In so great a pressure, heaped as they were upon each other, they moved like a closely compacted body, unable to use their weapons without wounding each other, and falling almost without the power of resistance before the enemy in their rear.

Pyrrhus, to check the progress of the assailants, rode in amongst them, after having removed the ornament by which his helmet was distinguished: and having received a slight wound in his breast from the spear of an Argive, turned to cut down the man who had wounded him. The mother of his adversary, a poor and aged woman, was standing with other women on the roofs of the houses, a spectator of the combat. She was watching her son and terrified at his peril, lifted up a tile with both her hands, and let it fall upon the head of his adversary, Pyrrhus. It struck him just below his helmet, and bruised the vertebra at the bottom of his neck. His sight instantly failed, his hands lost the reins, and he fell from his horse, he was not known by any of the surrounding multitude: but one Zopyrus who served under Antigonus, and two or three other persons running up, recognized him and dragged him into a gateway hard by, just as he was recovering from the blow by which he had been stunned, and there severed his head from his body.

The fact in the interim had become generally known; and Alcioneus, the son of Antigonus, hastening to the spot, asked for the head, as if he wished to look at it, but seizing it, rode off to his father, who was sitting among his friends, and threw it at his feet. Antigonus, when he had looked at the head and recognized it, and reproving his son for his barbarity, drove him from his presence, then covering his eyes with his robe, shed tears, recollecting the fate of his father Demetrius, and his grandfather Antigonus, domestic examples of the mutability of fortune! The remains of Pyrrhus he caused to be consumed, with the honours due to his rank; and when Alcioneus with a kind attention presented to him Helenus, the son of Pyrrhus, whom he had found deeply humiliated, and clothed in mean attire; "This is better, my son," said Antigonus, "than the beginning was, but you have not yet done enough; for you have not removed that garment, which is more disgraceful to us who consider ourselves as victors, than to him who assumes the habit of the vanquished." He afterwards kindly entertained Helenus, and sent him to Epirus in a style suitable to his birth.

Such was the end of Pyrrhus; his person was athletic and commanding; and when the Macedonians compared him to Alexander, it was more in allusion to his mental qualities than any resemblance which he bore to the features or person of that prince. His strength and power of bearing the severest fatigue were such as called forth the admiration of those who knew him. Those qualities contributed to raise him in the estimation of Ptolemy, while he was a hostage with him in Egypt, and often had a large share in securing the success which usually attended his arms. The turn and character of his mind corresponded with such powers of body; and he seemed to be formed for war as much by his spirit of enterprise and resolution, as by his skill in the use of arms, and power of bearing privations. His patience was not merely the endurance of physical evils; it was a moral quality of a much higher value; which showed that he had not naturally an arbitrary or tyrannical disposition; and it was admirably exemplified in the calmness with which he bore the reproaches of Cincas, and the pleasure he took in listening to the rough and homely truths uttered by Fabricius. His admiration of the Romans arose as much from his veneration for their probity, as from astonishment at their resoluteness; and though his policy sometimes partook of the tortuous character of the Greek and Asiatic courts, in action he was always magnanimous. This great quality showed itself even in his domestic intercourse with his friends, and checked that ardent and quickness which, without it, would have made him a tyrant as well as a conqueror. Fierce as he was in battle, he was mild and gentle to his subjects and adherents; not allowing himself to be easily provoked, and more eager to requite a kindness than resent a wrong. "A pecuniary debt," he observed, "may be repaid to the heirs of the creditor; but as a return of kindnesses can only be made while our friends are yet living, a good and upright man will severely regret his having lost the opportunity of requiting them." The whole of his history shows, that he was misled by passions not sufficiently controlled, but that his understanding was powerful, quick, and acute. His rapidity indeed in projecting and executing, hurried him into an

- Biography. excess; and he seldom allowed himself time enough for deliberation and judgment: hence it was, that he might be said to deserve the sarcastic remark of Antigonus, who compared him to a gambler, "who makes many good throws, but never seems to know when he has the best of the game." If his religion was sometimes tainted with superstition, it must be ascribed to the circumstances in which he was placed, the age in which he lived, and the art or credulity of the priests by whom he was attended; for his reply to his friends, who had pronounced a dream which he related to them, to be ominous, plainly shewed how little he was himself the slave of such fears: "Such things as these," he said, "are only fit to guide the idle multitude, and are full of uncertainty: let it be your business to say within yourselves, (parodizing a verse of Homer,) when your arms are in your hands, that,

THE biography of this remarkable person, who occupies so conspicuous a station in the history of the human mind, affords us a convenient opportunity of reverting to a subject, upon which we have already touched, viz. the state of philosophy in Greece, previously to the commencement of the Peloponnesian war; that great political convulsion which unsettled the language and the principles of Greece, which brought nlike to a crisis all that was bad and all that was good, in the civil and moral constitutions of the various states which were engaged in the conflict, and especially in that of Athens.

The earliest philosophy of the Greeks, which was derived to them through Ionia, from Asia, consisted in devising both names and attributes for the various deities, who were supposed to preside over the different departments of the universe; and in conveying to a simple people a system of theology and ethics, in allegorical poems. Many fragments of these were incorporated into the works of Homer and Hesiod; and some are to be found in the more ancient oracular verses which are quoted by the Greek historians. The *Theogonia* of Hesiod was no doubt taken, as to its principal features, from the cosmogony of some more ancient philosophical poet; and it is to be remarked, that this philosophy, such as it was, and from whatever source derived, was coeval with the language in which it was taught; for the names of the deities are not borrowed from the oriental mythology, which probably supplied many of the deities themselves; but are Greek names, significant of the attributes which they were intended to personify. Thus, void space is termed *Xáos*, from the verb *Xáō*, 'to yawn,' *Αἰθήρ*, 'the sky,' is from *αἰδω*, 'to be bright.'

Certain of these poets or philosophers, for the professions were not then distinct, were employed professionally by some of the Grecian states, to compose useful mythological poems and hymns, appropriate to the worship of various deities; in particular we may mention Pausanias, and Orpheus, an imitation of whose hymns was in after ages forged by some falsary.*

These were the masters of wisdom to the earliest Greeks, who for many ages had no philosophical writings in prose. Theognis consigned his moral and political precepts to elegiac verse; and the same kind of composition afforded even to Solon a vehicle for instruction of the most important kind to his fellow

* It is amusing to see so grave a writer as Brucker seriously deducing a summary of the Orphic philosophy from these spurious fragments, many of which are of a date but little, if at all, anterior to the Christian era. An attempt was made in the fifth century before Christ, to revive what was pretended to be the philosophy of Orpheus; and certain mystagogues seem to have made the initiation of votaries a gainful trade. But it appears, from some expressions in Euripides, that the credit of this sect was, even in his time, at a very low ebb.

citizens. It was not till history had descended from the car of poetry, that didactic philosophy submitted to deliver her doctrines in the sober language of common life; and it is very uncertain to what extent those philosophers, who first bore the name, committed the results of their speculations to writing. The verses of Orpheus, and Linus, and Musæus, were undoubtedly preserved by oral tradition. The persons who are commonly known by the name of the Seven Wise Men of Greece, seem with the exception of Thales to have been indebted for that honourable distinction, either to their political sagacity, or to their talent of expressing, with an oracular brevity, the most important maxims of morality. They are known to us chiefly by a few of their sayings; and even of these the individual property is not very clearly ascertained. It may perhaps be contended, that a wise legislator is the greatest of all practical philosophers: and on this account Solon occupies the very highest station amongst those illustrious men, who have applied their wisdom and experience to the great ends of promoting public virtue and happiness. But, in the common acceptance of the term, Thales is the only one of the seven sages, who can be considered as one of the real fathers of Grecian philosophy. And it does not appear that he left any writings behind him. Even *Æsop*, the celebrated inventor of moral apologues, probably committed some of his fables to writing. Many of them were traditionally preserved, and mentioned by later writers; and furnished a basis for various superstructures, which were afterwards raised, and dignified with his name.

Since neither Thales, nor any of the earlier teachers of wisdom in Greece, left any works to posterity, it is obviously very difficult to form any thing like an accurate notion of the state of philosophy in Greece in the period during which they flourished. As from the time of Thales there was a continued succession of philosophers, it would of course happen in after times, that what the scholar had said, was attributed to the master; sometimes perhaps even by the scholar himself, when he was desirous of conciliating respect to his dogmas, by stamping them with the authority of a greater name than his own. The *σπέρμα λόγου* of the Greek philosophical schools, especially of the Pythagorean, was a compendious form of citation, which gave to the founder of a sect the credit of many opinions of which he had never dreamed.

But for the whole account of the earlier philosophers, and for any knowledge whatever of their doctrines, we are of course obliged to trust to writers of a more recent date, who were probably not very careful to discriminate between the claims of different individuals, nor to separate the primitive philosophy of their earliest teachers from the refinements of a later age. Indeed the principal sources from which our knowledge of these subjects is derived, must be con-

essed to be very corrupt. As far as we can collect our notions of the earlier systems from the writings of Plato, we may feel ourselves tolerably secure, although it is more than probable that the outlines are occasionally distorted, or the features too strongly marked, by the brilliant and inventive genius of that wonderful man. Even upon the testimony of Aristotle we cannot depend with certainty; for he was notorious for his misrepresentations of the tenets of his predecessors. It is only in the deficiency of more authentic sources of information, that we can trust ourselves to the accuracy of such a writer as Plutarch; and we can never rely with satisfaction upon the relation of Diogenes Laertius, unless his accounts be either corroborated by less doubtful writers, or bear in themselves the marks of consistency and credibility. Amongst the later authors, Cicero is the most trustworthy source of information concerning the Greek philosophers; yet even he lived at so great a distance of time from the earlier masters of wisdom, that it is more than probable, that their doctrines descended to him much altered and corrupted, through the channels of the more modern philosophy.

It is commonly said of Socrates, that he was the first person who brought down philosophy from the skies, and introduced her into the commerce of civil life. But although in his time the title of philosopher was almost entirely confined to those, who busied themselves in physical researches, or speculated upon abstract notions; yet at an earlier period the wise men of Greece (for the name of philosopher was not then invented) seem to have directed their attention to the laudable objects of improving the science of legislation and government; in pursuit of which, they travelled into the more ancient and flourishing kingdoms of Egypt and the East. It is related by Herodotus (l. 29) that the court of Croesus was visited by all the Sophists,* at that time living in Greece.

Thales, however, appears to have merited the appellation chiefly by his skill in astronomy and geometry, and by his theories upon the formation of the universe. They are the real foundations of his fame; for as to his speculations upon the divine nature and government, it is extremely difficult, from the causes above-mentioned, to ascertain what were really the doctrines of Thales.

One instance will serve to illustrate this difficulty. We read in Aristotle (*de An.* l. 1. §. 5.) that Thales thought the universe to be full of gods. Diogenes Laertius says, Thales taught that the universe was animated, and full of demons. But now comes Cicero, and tells us, that Thales admonished mankind to bear in mind that the gods perceived all things, for that all things were full of them. Valerius Maximus goes one step further, and asserts that Thales, being asked whether the actions of men escaped the notice of the gods, replied, Not even their thoughts; "*nec cogitata*, inquit. *Ut non solum manus, sed etiam mentes puras habere vellemus; cum secretis cogitationibus nostris caeleste numen adesse credidissimus.*" It is obviously very probable, that Thales broached simply the absurd notion, that the universe was filled with gods in every

* *Ἰσοφύται*, 'a contriver.' The Scholiast on Homer *Il.* O. 410. (where it is said of a ship carpenter, *ἡ δὲ τε νόστος ἐκ τοῦ ἰσοφύτου*) that the ancients called all artificers *isophrates*. Herodotus gives this appellation to the mythological philosophers before spoken of, and to Pythagoras. Theophrastus applies it to the teachers of rhetoric and logic.

part, by way of accounting for the various operations of nature; and that the moral deductions were afterwards appended to it by later philosophers. And what renders this still more probable is, that the answer of Thales, recorded by Valerius Maximus, is by Plutarch attributed to Pittacus. We may remark by the way, that a strong instance of the uncertainty, under which we labour generally, as to the tenets of the earlier philosophers, is the confusion which prevails, as to the real authors of many sayings recorded by ancient authors. For example, the celebrated apophthegm, *ᾧ πάντα εὐχόμεθα*, is by some attributed to Chilon of Lacedæmon, by others to Thales, and by some to Apollo himself. *Μυθεῖν ἄγαν* is assigned by Aristotle to Chilon, but by many to Pittacus. This last mentioned philosopher is also recorded to have said to a person, who inquired of him whether he had better marry a rich wife, or one suited to his own condition, *Τὴν κατὰ νοῦν ἄνδρα*; which reply is by others attributed to Solon, and by some to Chilon. Tertullian relates, that Thales, when asked by Cræsus, what he thought of the Gods, after much deliberation could return no answer. Now older and more trustworthy authors relate the same story of Simonides. From these, and from many similar instances which might be adduced, appears the difficulty of ascertaining and marking out the precise property, which belongs to each of the ancient philosophers, in the wide range of physical and moral speculation, which is spread through the writings of many ages.

It is, however, agreed upon all hands, that the leading doctrine of Thales was this, that water was the origin of all things; which some persons have considered to refer to the re-appearance of all things from the deluge. Whether he taught that water was the material, and that the Deity formed the universe out of it, seems to admit of doubt. It is certain that he was not an atheist, and that he believed in the existence of an incorporeal Deity; but as it is justly observed by Bayle, (*Art. Thales*) the opinions of the heathen philosophers were so little connected, that it did not follow as a necessary consequence, from the hypothesis of the existence of a God, that he was the creator of the universe; but many of them believed the gods to be the governors of the world, having been themselves produced from chaos.

It is far from improbable, that both Thales and Pythagoras may have obtained a great part of their mathematical knowledge, and some of their notions respecting the Deity and his operations, from the Chaldean philosophers. It is going too far to suppose, as some have done, that they were acquainted with the Mosiac writings; but they were probably not ignorant of that traditional knowledge, which had descended from the earliest ages of the world, and was preserved amongst the inhabitants of Egypt, Phœnicia, and Assyria. It is observed by Diodorus Siculus (who perhaps had not much better means of knowing the fact, than we have,) that Lycurgus and Solon, as well as the poets Orpheus, Musæus, Melampus, and Homer, and the philosophers, Pythagoras and others, had drawn most of their knowledge from Egypt. And Diogenes asserts, upon the authority, as he says, of Hecæatus and Aristagoras, that the Egyptians had taught, from the remotest antiquity, that the world had a beginning; that the earth was spherical, and the stars of the nature of fire; and that the soul was immortal.

Whoever will take the trouble of considering the passages which Ep. Stillingfleet has collected in his *Origines Sævæ*, h. iii. c. 3. will readily recognise, in the physics of Thales, some traces of the Mosaic cosmogony. The water, which according to Thales was the primitive form of matter, corresponds to the chaotic mass which "was without form and void."

To return to the theology of Thales; amidst the conflicting accounts which later writers have given of his opinions, as to the formation of the world, it seems not unreasonable to conclude, that he delivered no express dogma on the subject; but tacitly supposed the existence of a God.

With regard to his notions on the subject of natural history, we may remark, that he held the moon to be a solid body, like the earth; and to receive its light from the sun, that the earth is spherical, in the centre of the universe; that eclipses of the sun are caused by the intervention of the moon between the sun and the earth. His knowledge of astronomy was sufficient to enable him to predict eclipses of the sun; this we know, upon the testimony of Herodotus: but with what degree of precision, whether to the assigning of the exact hour, we cannot determine.* Ptolemy tells us, and most probably his assertion is true, that Thales derived his mathematical knowledge from Egypt; and that amongst other geometrical problems he discovered the following, which were afterwards inserted in the *Elements of Euclid*: 1. That a circle is bisected by its diameter. 2. That the angles at the base of an isosceles triangle are equal to each other. 3. That two straight lines intersecting one another, make the vertical angles, at the point of intersection, equal. Thales also introduced into Greece an improved distribution of the year, which he divided into 365 days.

Anaximander, who taught publicly the opinions which Thales had breathed in private, was born about the 42d Olympiad. He has been frequently confounded with Anaximenes, and sometimes with Anaxagoras. He was the first person that constructed a geographical map. We find Aristagoras, not many years afterwards in possession of a map of the world, engraved on brass. (*Herod.* v. 49.) He is said to have invented the gnomon, not the sun-dial used to distinguish the hours of the day, but an instrument for determining the times of the equinoxes, and the meridian line. It seems doubtful whether the division of the day into hours was known in Greece till two centuries after the time of Anaximander (See *Ernesti Opusc. Philol.* p. 23.)

Anaximander held that the origin and element of all things was *τὸ ἀείρον, infinity*. What this *ἀείρον* was, he did not determine; whether any thing material, or an infinite intelligence: later philosophers explained it of the former; and in consequence Anaximander has been classed amongst the atheists. According to Cudworth, Thales was a theist; but Anaxi-

mander, Anaximenes, Hippo, and others, were atheistical, who held that matter devoid of life and understanding, was the first principle. But in point of fact so little is really known of the doctrines of these philosophers, that it is not easy to say, whether they were believers in the existence of a God or not. One thing should be remembered, that many of them in all likelihood may have broached opinions concerning the formation of the world, which ultimately conducted their followers to atheism, without being sensible, at the time, of their tendency.

The successor of Anaximander was Anaximenes, who taught that the *ἀείρον* of his master was *αἶρ*; which was in some degree recurring to the mythology of the poets, who identified the supreme Deity with *Æther*, the atmosphere. Anaximenes, however, maintained that the gods had their origin from this eternal and infinite air. We may here remark, that these philosophers, when they spoke of the existence of gods, or rather deities, *θεοί*, did not refer to them as the creators, or original causes of things, but merely as a kind of beings greatly superior to man, and possessing authority over them. So that a belief in their existence was perfectly compatible with a real and philosophical atheism. The grand doctrine of atheism is this: that the substance of matter, or extended body, is the only real entity; and therefore the only unmade thing, which is neither generable nor to be created, but self-existent from all eternity. But it does not follow that every philosopher, who asserted the eternity of matter, thereby intended to deny the eternity of God. On the contrary, some appear to have thought that an eternal cause must have had an eternal effect; as for instance Aristotle, who maintained the eternal existence of the world, says, "If there were nothing but matter in the world, there would be no original cause, but an infinite succession of causes." Others again entertain the contradictory hypothesis, that matter was eternal and self-existent, and that the Deity was co-existent with it; in short, that the artificer of the universe, and his materials, were both self-existent. So that it remains very doubtful, whether the philosophers of the Ionic school, did really intend to exclude a supreme intelligence from their theories of the formation of the universe. "It plainly appears," says Dr. S. Clarke, "how little reason modern atheists have to boast either of the authority or reasons of those ancient philosophers, who held the eternity of the world. For since these men neither proved, nor attempted to prove, that the material world was original to itself, independent, or self-existing; but only that it was an eternal effect of an eternal cause, which is God; it is evident, that this their opinion, even supposing it could by no means be refuted, could afford no manner of advantage to the cause of atheists in our days; who, excluding supreme mind and intelligence out of the universe, would make mere matter and necessity the original and eternal cause of all things."

The great difference between the theists and atheists before the time of Aristotle was, that the former affirmed the world to have been made by God, the latter, by the fortuitous motion of eternally existent matter; and this theory was not the doctrine of the Ionic school.

The Atomic theory is attributed by Plato to Prota-

Socrates.

* It is impossible to reconcile this fact with the account which is given of the notions of Anaximander, that eclipses were caused by the stopping up of the orifices, through which the fire of the sun and moon exhaled. If Thales did really predict an eclipse, he must either have known the obliquity of the ecliptic, and possessed a far more accurate knowledge of astronomy than his scholar, or he must have obtained some information of an expected eclipse from the Egyptian or Babylonian astronomers, which perhaps is not an improbable conjecture.

Biography.

goras : but its real authors (as applied to the purposes of atheism) were Leucippus and Democritus, who lived about 460 a.c. They made the two great principles of nature to be the *Pneuma* and the *Atomum*, the one *ἀήρ*, the other *ἄτομος*. They taught that every thing was made by the fortuitous concourse of atoms, or indivisible corpuses, some of which were round, some angular, some curved and hooked. These were called by Xenocrates *περίχθονες*, "indivisible magnitudes," by Pythagoras *μονάδες*, "units." Fire and the soul, according to these philosophers, consist of spherical corpuses, which Democritus compared to the notes in the sunbeams. According to this hypothesis, all things are materially and mechanically necessary. But the older atomists, (i. e. those who believed in the formation of the world from atoms, but did not exclude spiritual essence, or rather incorporeal substance) were generally theists; as for instance, Pythagoras and Parmenides.

A determined opponent of Democritus was Anaxagoras, the successor of Anaximenes, and the most remarkable of the Ionic school, whose philosophy is a subject of more immediate interest to us, inasmuch as he took up his abode in Athens, and became the instructor of Pericles and Euripides, and the source from which Socrates derived his knowledge of natural philosophy. Anaxagoras discovered that there were inequalities in the moon's surface; and asserted that the sun was a mass of burning matter. He maintained that snow was black; and that the eyes were not capable of discovering the true colours of objects. Of the reasons which induced him to maintain these opinions, the ancient writers give but an indifferent account. It would appear that Anaxagoras had adopted a leading notion of the old materialists, which has been revived by modern philosophers; that the qualities of bodies, which strike our senses, have no real existence without us, but are images and appearances within us. With regard to the opinions of Anaxagoras, we fortunately possess some unexceptionable documents, in the poetry of his disciple Euripides, who, it is well known, was called, the philosopher of the stage; and who introduced into many of his dramas the leading tenets of his master; particularly into his *Chryseis*.

The founder of the Ionic school had taught, that the Deity was the mind of the universe; a notion very nearly if not exactly coinciding with that of the Hylæozoic philosophers, who said that matter was endowed with a kind of reason. But Anaxagoras was the first who taught in express terms a *θεὸς ἐγκosmικός*, a divine creator of the world. According to him, all things were a shapeless and inert mass, which the divine intelligence endued with motion, form, and beauty. Euripides calls the Deity *ἀνθρώπινος*, "self-existent," and says that he "intervene nature with the ethereal circle, or orb." In other passages he represents the Anaxagorean doctrine of the divine mind informing matter, by the poetical union of *Æther*, with the Earth.

*Ὀὐδὲ τὸ ἴδιον εἶναι ἀνθρώπινον
Καὶ γὰρ τριπλὴν ἔχει τὸ ἴδιον ἐκ θεῶν ἄλλων
Τῶν τε κινεῖται τῶν τε, καὶ τῶν ἴστων ἄλλων.*

So't thou on high this vast expanse of air,
Encircling in its liquid arms the earth?
This, this is Jove, reverse the present God.

Hence we find, in the surviving plays of Euripides, frequent invocations to Jove and the earth. This part of the poetical mythology of the Greek drama is fully illustrated by Valckenner in his *Diatrise on the Fragments of Euripides*, who conjectures that Anaxagoras derived his notion of the two principles of animal life from Egypt, the great nursery of Greek philosophy; since Procopius (a very late writer it must be confessed) mentions Anaxagoras of Clazomenæ as one of those, who travelled into Egypt for the sake of acquiring a more exact knowledge of physics and theology.

Another dogma of Anaxagoras was, that nature consisted in the repeated union and dissolution of the same particles; agreeably to what Lucretius says (ii. 1001.)

*Nec sic intermisit mores res, ut material
Corpora conflictat, sed coetum diuopat ollis.*

And Ovid,

*Nec perit in tanto quicquam (michi credite) mundo;
Sed variat, faciemque novat.*

It was upon the strength of this doctrine, that Socrates afterwards asserted, that the souls of men, when freed from their temporary union with the body, returned to their native heaven.

The most curious and abstruse of his notions was that of the *ὑπομικροσκοπία*, or similar particles. He maintained that every body consisted of particles similar to itself; for instance, gold consists of atoms of gold; a house of minute houses, and so on. (This doctrine is detailed and refuted by Lucretius, l. 530.) He considered that every thing was of a mixed nature except mind, which animated and moved the universe. Anaxagoras himself was called *Νῆψ*, "Mind," probably from this dogma. It appears, however, that he supposed certain revolutions (*κύματα*) of the world, or of parts of the universe, which were quite independent of this mind. Moreover he attributed mind to animals of every kind, which he designated by the same appellation as that which he applied to the supreme intelligence.

It being agreed on all hands, that Anaxagoras supposed the chaotic mass of particles to have been reduced into order by the divine intelligence, it may appear strange, that Irenæus should have branded him with the imputation of Atheism. The following passage of that father is quoted by Bayle (Art. ANAXAGORAS, p. 212.) *Anaxagoras autem, qui et Atheus cognominatus est, dogmatizavit facta nimulius decedentibus ex coelo in terram aminibus, quod et hi ipsi in matris sue transulerant semina, et esse hoc semen seipsum statim conflantes apud eos qui senum habent, et ipsos esse quæ sunt Anaxagoræ irreligiosi semina.*

The fact seems to be, that Irenæus confounded Anaxagoras the Clazomenian with Diagoras the Melian, who was called, by way of distinction, the Atheist.

Anaxagoras was sensible of the difficulties which embarrass all the speculations of human reason upon the final causes of things; he complained that all things were surrounded with darkness. In the mathematical sciences he found a greater degree of certainty; and even in this department of knowledge he seems to have indulged in speculations upon abstruse points. He is said to have treated of the quadrature of the circle, of the nature of comets, of the milky way, earthquakes, winds, thunder, eclipses, and the annual overflowing of the Nile: a constant source of perplexity

Biography. to the ancient naturalists. He is related to have foretold the fall of a stone from the sun, which did actually fall into the Goas's river in Thrace, and was there venerated as having come from heaven. This is a curious incident. Of course it is impossible that Anaxagoras should have predicted the fall of the stone: the fact probably is, that having heard of the circumstance, he said that the stone had fallen from the sun, agreeably to his own hypothesis of the sun's being an ignited mass of stone. This, we believe, is the first distinct mention of an aerolite, or meteorolite, which occurs in ancient history; and the account, given by Anaxagoras of the stone in question, is pretty nearly as probable as the theory of La Placé, who supposes these meteorolites to be projected from a volcano in the moon, and having passed the sphere of lunar gravitation, to pursue their course to the earth's surface.

Amongst the opinions of Anaxagoras on points of natural history, the most remarkable are these:

1. That sleep is an affection merely of the body, not of the mind.

3. That the cause of winds is the rarefaction of the air by the sun's rays. His successors not contented with this simple and true account of the matter, had recourse to much more complicated and improbable causes.

3. That earthquakes are caused by air confined in subterraneous caverns.

4. That the rainbow is occasioned by the reflection of the sun's rays in a dense cloud, opposite the sun. (Brucker says, "by the refraction," but the word in Plutarch is *ἀντανάκλασις*, which Aristotle uses of the reflexion of light.) The philosophers of that age knew nothing of refraction; and when Ptolemy speaks of the rainbow, although he uses the word *refringi*, he seems to mean reflexion.)

Anaxagoras committed to writing some of his lectures; Socrates is represented by Plato as expressing the dissatisfaction which he experienced, upon the perusal of a work of Anaxagoras, at finding that he proceeded no further, to accounting for the actual state of things, than mechanical causes; instead of assigning moral causes, such as the fitness of things, the principles of order, &c. Bayle defends Anaxagoras, upon the ground, that, having once admitted a first moving cause, he had no occasion to recur to it in his explanation of the separate phenomena of nature. It appears from this account, that Socrates was not a scholar of Anaxagoras.

The principles of Anaxagoras were taken up by Diogenes Apolloniates, the next philosopher of the Ionic school, who made, however, this important change, that he supposed the air not only to be the first principle of all things, but also the efficient and moving principle.

Diogenes was succeeded by Archelaus, both of them having been hearers of Anaxagoras. Archelaus was called, by way of eminence *ῥητορικός*, "the natural philosopher." Some writers have attributed to him the honour, which is most commonly assigned to Anaxagoras, of having been the first to import philosophy from Ionia into Athens. It is not unlikely that

Archelaus might have been the first who established a regular school of philosophy in that city; for Anaxagoras perhaps only taught some occasional disciples. But the method by which Bayle endeavours to reconcile the two accounts, is this: The ancient writers say nothing more, than that Archelaus first transported the Ionic school of philosophy from Ionia to Athens; which is strictly true: for during the temporary residence of Anaxagoras in Attica, the chair of philosophy in Ionia was not vacant; whereas, when Archelaus came to Athens, he left no successor behind him in Ionia.

Where Archelaus altered the dogmas of Anaxagoras in physics, it seems to have been for the worse: and the same may be said of his moral philosophy; since he maintained the dangerous position, that there is no such thing as natural right: that all actions are in themselves, indifferent; and that their moral quality depends solely on the decrees of human laws; *τὸ δίκαιον εἶναι καὶ τὸ ἀδίκαιον ἀφ' ἑστέρας, ἀλλὰ νόμῳ*, 'that justice and torpidity are not such by nature, but by law.' This sentiment is nearly the same as that which was put by Euripides into the mouth of one of the characters in his *Æolus*.

οὐκ ἔστι δίκαιον, εἰ μὴ τοῖσι χρηστοῖσι βούλῃ;

'What is base, which does not seem so to those who do it?'

For there is nothing either good, or bad,

But thinking makes it so.

Shakespeare. Hamlet.

In opposition to this sentiment, Diogenes the Cynic is related to have said,

ἀδίκαιον οὐδ' ἂν ἀδίκαιον, ἀλλὰ καὶ καὶ καὶ καὶ καὶ.

'What is base, is base, whether it be thought so or not.'

Possibly, however, Archelaus intended merely to deny the existence of a moral sense; and consequently of any distinction between right and wrong, independently of the will of the legislation: we cannot pronounce him guilty of impiety, till it can be determined whether by *νόμος*, he meant human laws, or the declared will of the Deity.

In closing this brief account of the Ionic school, we have one remark to make, which will throw light upon some transactions in the life of Socrates. It was a leading principle of the received mythology of those times, that all the different operations of nature were performed by the agency of genii, so inferior class of deities, at whose will the lightning flashed, the earth quaked, the stars withdrew their light. Earth, air, and sea were peopled with these imaginary agents, who were subject to the order and control of the superior gods. All the phenomena of the heavens were referred to their respective powers; and when any portent alarmed an ignorant people, it was attributed to the anger of some offended deity.

Now the new philosophy, which pretended to assign natural and material causes for these various phenomena, went to pluck up by the roots this superstition (emphatically termed by the Greeks, *ἑρμηνεία*, 'a fear of the genii'). The attributing of a solar eclipse to the periodical interposition of the moon between the sun and the earth, instead of considering it as a portent sent by some superior power, for the purpose of announcing some approaching calamity, was, in the eyes of the vulgar, nothing less than depriving their deities of a legitimate privilege. And besides, there

* We ought perhaps to except the *ῥητορικός* *ῥητορικός* of the Tauric Diana, and the *ῥητορικός* *ῥητορικός* or *ῥητορικός* of Naxos; both of which were probably aerolites.

Bioḡraphy. was a numerous tribe of people in Greece, called *ἑγγυροί*, or expounders, whose trade it was to explain portents, omens, and presages of every kind; and it was an art productive of no inconsiderable gains to its professors. He, therefore, who undertook to show that these phenomena, which resulted from the established and unerring laws of nature, could never be the prognostics of contingent events, (inasmuch as they will certainly happen, whether the events themselves happen or not,) aimed a deadly blow at the lucrative calling of the whole tribe of *εἰρηγῆται* and soothsayers.

The example of Nicias, as represented by Thucydides in his account of the Athenian expedition against Sicily, affords a striking proof of the hold, which this superstition had obtained, upon the minds even of the higher classes in Greece: while, on the other hand, Pericles was a remarkable instance of the advantage which a man of powerful mind acquires over his contemporaries, by divesting himself of the superstitious notions of the age in which he lives. The following is the observation of Plutarch. "Pericles not only derived this benefit from his intercourse with Anaxagoras; but he seems to have been rendered superior to that kind of superstitious fear, which astonishment at the phenomena of the heavens excites in those who are ignorant of the causes of them, and by reason of their inexperience, are disturbed, and like persons possessed, in religious matters: from which superstition natural philosophy emancipates a man, and inspires him with a firm piety, accompanied by pleasing hopes, in the room of this terrifying and feverish superstition." The same author, speaking of the eclipse of the moon, which induced Nicias to defer his retreat, says, that eclipses of the sun were then pretty well understood by the common people to be occasioned by the moon; but an eclipse of the moon itself was much more incomprehensible, and a subject of great alarm. For Anaxagoras, the first philosopher who had written clearly on the subject, had not publicly divulged his opinions; but his scholars kept them close amongst themselves, through fear of the people, who could not endure those philosophers who treated of natural causes, but called them in contempt *ἀστρονομῆες*, or "persons who prate about things in the sky;" being jealous of their attributing to natural causes, that which belonged to the gods alone; for which reason Protagoras was banished from Athens, and Anaxagoras put into prison; from which he was with great difficulty liberated by Pericles.

It was obviously the interest of all the expounders and soothsayers abovementioned, to foment the popular jealousy of these studies, and to raise the cry of atheism against the new philosophy. Anaxagoras was accused of impiety, because he asserted that the sun was a mass of ignited stone, thereby degrading that luminary from the order of gods; and when Aristophanes, some years afterwards, endeavoured to fix the popular odium on Socrates, he represented him as a minute philosopher, prying into the secrets of nature. It was well observed by Justin Martyr, "Those persons before the Christian era, who endeavoured, by the strength of human understanding, to investigate and ascertain the nature of things, were brought into the courts of justice as impious, and overcurious."

We have before observed, that the name which was applied to these persons who inquired into the secrets

of nature, or studied political economy, was *Σοφιστῆς*, "sophist." It is said by Isocrates, that Soion was the first who assumed this title; that is, probably, the first Athenian. About the time of Socrates this appellation began to be applied to those professors of wisdom, who dogmatized with confidence upon every subject, and taught philosophy, as a perfect science, for pay; while the modest inquirers after truth contented themselves with the title of *φύσιολογοί*, "lovers of wisdom," after the example of Pythagoras. By degrees, these two classes of men became distinct from, and opposed to, each other, chiefly through the influence of Socrates; but, in his time, the distinction was not established. About that period, however, the sophists began to assume a tone of greater confidence, and professed to teach the principles of natural and moral philosophy as matters, not of investigation, but of certainty; and, seeing the success which had attended the lectures of Anaxagoras, by whose advice Pericles had been enabled to obtain the control and direction of the Athenian republic, they joined the arts of logic and eloquence to the study of morality and natural history, and pretended to be masters and teachers of the whole circle of human knowledge. In reading the history of those times, as it regards the progress of philosophy, we must be careful not to confound the sophists of the Socratic age with those of a later period, who confined themselves to the art of rhetoric: such were the sophists whose lives were written by Philostratus. That the sophists at Athens combined natural philosophy with eloquence and politics, appears from the following sentiments of Socrates, as reported by Xenophon. "No person ever saw or heard an irreligious or impious action, or word, of Socrates: for he was not accustomed to discourse concerning the nature of all things, as most of his contemporaries did, considering how that, which the sophists call the universe (*κόσμος*), is constituted, and by what necessity each of the heavenly phenomena happens; but he used to prove the folly of those who busied themselves about such things; and he used to inquire, in the first place, whether they applied themselves to these pursuits, having previously obtained a complete knowledge of every thing relating to man; or whether they could reconcile it to their notions of propriety and duty, to omit all consideration of human affairs, and study only divine things. And he expressed his surprise at their not clearly perceiving, that these things are not discoverable by the human intellect; since even those who most prided themselves upon discoursing on these subjects, did not think alike, but differed with one another like so many crazy people; for some crazy persons are not afraid, even of things which are really formidable; while others see fear where there is none: some again make no scruple of saying or doing any thing, even in a crowd, while others cannot bear even to appear in public: some respect neither temple nor altar, nor any thing pertaining to the gods, while others worship sticks and stones, and beasts. So amongst natural philosophers; some think that there is only one entity, others an infinite multitude; some hold that all things are continually in motion, others that nothing can be moved; some assert that all things are generated and destroyed, others that nothing can be generated or destroyed."—"The older sophists," says Philostratus (i. e. those of the age of Socrates), "discoursed largely

wards was, of corrupting the youth of Athens by inculcating irreligious opinions, and was condemned to drink "the cold Socratic draught."*

Another celebrated sophist was Hippias of Elis, who boasted at the Olympic games, that there was nothing, in the whole range of the arts and sciences, which he did not know; and that he was not only a perfect master of the liberal arts, geometry, music, poetry, &c. but that the ring which he then wore, his robe, and his huskins, were all manufactured by his own hand. Plato has introduced him as a speaker in the two dialogues which are entitled *Hippias Major*, and *Hippias Minor*; the first of which throws so much light upon the character and practices of the sophists, that we shall here present our readers with such parts of it as may serve to place in the clearest point of view the mode of philosophising, against which Socrates waged unceasing war. The two persons of the dialogue are Socrates and Hippias.

So. Why Hippias, worthy† and wise Sir, what a long time is it since you visited us at Athens!

Hi. Very true; for I have had no leisure, Socrates. For the state of Elis, when it wants to negotiate any thing with another city, always comes first to me, to choose me for its ambassador, thinking me to be the most competent judge and interpreter of the proposals made on the part of the respective cities. I have therefore frequently gone as ambassador to other cities, but most frequently, and upon affairs of the greatest moment, to Lacedæmon; for which reason, that I may answer your inquiry, I don't come very often into these parts.

So. Such a fine thing it is, Hippias, to be a truly wise and perfectly accomplished man. You, for instance, are able, in your private capacity, while you receive large sums from the young men, to give them in return more than their money's worth; and in your public character, to benefit your country, as every man must, who would not be despised, but thought highly of by people in general. But pray tell me, Hippias, what can be the reason, why those ancient worthies, who are so celebrated for wisdom, Pittacus, and Bias, and Thales of Miletus, and his successors down to Anaxagoras, all, or most of them, appear to have kept aloof from political transactions?

Hi. What other reason, d'y'e think, Socrates, than their inability, and incompetency to master, by the force of their understanding, the arts, both of public and private life.

So. Do you mean to say then, that as the other arts have advanced, and the ancient professors of them have been far surpassed by those of our days; so the art which you sophists profess, has improved, and that the old philosophers are nothing compared to you?

tutor has understood the precise meaning of this parenthesis. See the preceding note. Philostratus says, that Gorgias ridiculed Prodicus for repeating the same discourse, or lecture, over and over again, and professed himself to speak extemporaneously.

* *Σωκράτης ψυχὴν πόρην.* Tassus Philonian ap. Sert. Emp. p. 319.

† To make us all capable. Heinendorf has shown that *καλὸς* does not refer to the personal appearance of Hippias, as Sydenham, the translator of Plato, supposes. It answers perhaps most nearly to the *belles* of the Latins, and to our *fine*.

‡ Socrates says this in compliance with the common opinion of the sophists of his time, who laid claim, or the invention of managing the state by philosophy; and said that Pittacus, and others of the same stamp, interfered in politics not as philosophers, but as tyrants and intriguers.

Hi. You have exactly hit upon the truth.

So. I am ready to testify with you, that what you say is true; and that in fact your art has so far improved, as to combine the management of public with that of private affairs. For Gorgias, the sophist of Leontium, came hither, on a public embassy from his native country, as being the best qualified of the Leontines to manage the affairs of the commonwealth; and he had the credit of being an excellent speaker in the assemblies of the people; and in private gave lectures, and associated with young men, and by that means made a great deal of money out of this city. Again, if you prefer this instance, our old companion Prodicus, has often come hither in a public character upon other occasions, and upon his last visit, which was very lately, having come from Ceos, he acquired great credit by a speech in the council; and giving lectures in his private capacity, he got a prodigious sum of money. But not one of those ancient gentlemen ever thought of exacting money as a price, nor of making a display of his wisdom to all sorts of people, so simple were they, and ignorant of the great value of money. Whereas, each of those moderns makes more money by his wisdom, than the professors of any other art whatever; and the same was done by Protagoras before them.

Hi. The fact is, Socrates, that you know nothing of the fine things I could tell you on this subject. If you knew how much money I have made, you would indeed be surprised. To mention no other instances: having arrived in Sicily upon a certain occasion, Protagoras being at that time residing there, in high reputation, and somewhat advanced in years; I, being much younger, made in a very short time more than 150 minæ; and more than 20 out of one very small town, named Iapyxum. This I carried home and gave to my father, to the great surprise and astonishment of himself and his fellow citizens. And I rather think I have made more money, than any two whatever of the other sophists.

He then goes on to tell Socrates, that in Lacedæmon, where he had been most frequently, he had made no money at all; and when pressed for a reason of this, he says, "It is not the custom of that country to disturb the existing laws, nor to introduce any novel practice in the education of their sons." He confesses that the Lacedæmonians would not listen to any discourses on astronomy, geometry, nor arithmetic; nor upon grammatical questions; but "concerning the genealogies of heroes and men, and the original foundation and colonisation of towns, and upon antiquarian subjects. And I got great credit by discoursing upon the different pursuits which a young man ought to follow. For I have a very charming little work on this subject, well drawn up in all respects, but particularly in point of language. The subject is this. Troy being taken, I suppose Neoptolemus to ask of Nestor, what are the most becoming pursuits for a young man who wishes to gain credit by them? Then Nestor speaks and suggests to him a great many very orderly and honourable precepts. This discourse I delivered there, and intend to do the same here the day after to-morrow, in the school of Phædrastus, and to add to it a great deal more worth hearing.

These extracts afford a fair specimen of the vanity and ostentation of the sophists, and of the effect which they produced upon the tone of society at Athens,

Socrates.

with respect both to literature and morality. Multitudes of young men attended these peripatetic teachers; and paid them every kind of honour, struck with astonishment at the facility and splendour of their eloquence, as well as at the dialectic subtlety of their reasoning; and what was far worse, captivated by the easy morality which confounded all the limits of right and wrong, and placed the *summum bonum* in the attainment of political distinction. We have given an account, somewhat minute, of these misnamed philosophers, because it is impossible to understand the character of Socrates, or to appreciate his excellencies, without being previously acquainted with the state of society in which he found himself upon his entrance into life. The example of Pericles had inflamed the ambition of the youth of Athens; and to obtain, like him, an unlimited influence over the people, was the one great object of their desires. To the pursuit of this, all other studies were made subservient. The sophists saw this ruling passion, and took advantage of it; and in the course of their instruction, having run through a certain system of natural philosophy, founded upon the principle of materialism, they directed their chief attention to those arts of reasoning, or rather to that abuse of reason, which they called by the name of dialectics. By the help of this instrument, the youthful catechumen was enabled readily to perplex the understandings and judgments of a popular auditory; to argue plausibly on either side of a question, as might be most agreeable to his hearers, and therefore most conducive to his own purposes; in the accomplishment of which, he would be restrained by no feelings of honour or moral delicacy, having been taught that there was no inherent nor essential difference between right and wrong.

"That might made right," says Mr. Mitford, the able historian of Greece, "especially in public transactions, was a tenet very generally avowed; the incalculable mischiefs of which were checked only by the salutary superstition, which taught to respect the sanction of oaths, in the fear that immediate vengeance from the gods would follow the violation of it as a personal affront to themselves. It appears, however, in the remaining works of the great comic poet of the day, that this salutary superstition was fast wearing away. It is evident from the writings of Xenophon and Plato, that, in their age, the boundaries of right and wrong, justice and injustice, honesty and dishonesty, were little determined by any generally received principle. There were those who contended that, in private as in public affairs, whatever was clearly for a man's advantage, he might reasonably do: and even sacrifice was performed, and prayer offered to the gods for success in wrong."

Such was the state of things at Athens, when Socrates appeared upon the stage of public life. Before we proceed to detail his biography, a few words must be said concerning the sources from which we derive our information respecting him. It is well known that the two authors from whom this information is principally drawn, were his scholars and admirers. Of these, Plato has rather been studious to raise an immortal monument to his own wisdom and eloquence, than to give a faithful delineation and portraiture of his illustrious master. He has made Socrates the principal personage in his truly dramatic dialogues; but he has rather employed him as the organ of his own philoso-

phical opinions, than represented, in their native simplicity, the doctrines of the great teacher himself. We are assured by Aristotle, that Plato was addicted, in his earlier years, to the notions of Heraclitus; and Socrates complained that even during his lifetime, Plato corrupted his doctrines by mixing with them the tenets of other philosophers. This conduct gave great offence to the other disciples of Socrates, and especially to Xenophon, between whom and Plato there appears to have subsisted a considerable dislike. It is very plain, from the style of Plato's dialogues, that they are not to be depended upon as faithful records of the life or sayings of Socrates. Athenæus relates, that Gorgias, upon reading the dialogue inscribed with his name, exclaimed, "How well does Plato understand the art of lampooning!" He added, that he had never heard Socrates utter a syllable of what Plato puts in his mouth. Timon of Philus, the writer of *Silli*, who lashed all the philosophers, had a verse to the following effect; "How skillfully did Plato invent his admirable fictions!"

Some of the persons, whom Plato introduces as conversing with Socrates, could never have seen him; and Xenophon says, that as it was perfectly well known that Socrates confined himself wholly to moral philosophy, those writers who put into his mouth long discussions upon subjects relating to physics, were guilty of a palpable imposture. This remark was evidently aimed at Plato. The Abbé Garnier has endeavoured to exonerate Plato from these charges, but without success.

The genius and ambition of Plato having thus disqualified him for the office of a faithful historian of the philosophy of Socrates, we must be cautious how we impute to that extraordinary man any opinion or practice, upon the authority of Plato, unless we have the concurrent testimony of Xenophon, whose amiable candour and simplicity irresistibly claim our belief. His *Ἀπομνημονεύματα*, or *Memoirs** of Socrates, are our text book, in investigating the opinions of his master.

The life of Socrates was written by Aristoxenus, Demetrius, Phalerus, and several others, whose works have perished; but we find notices from them in the writings of later authors; in some instances contradicting one another, and requiring the judgment of sound criticism to decide upon their comparative credibility.

Socrates was born in the fourth year of the seventy-seventh Olympiad, on the sixth of the month Thargelion, at Alopecæ, a demus or borough, of Attica. His father, who was a statuary, was named Sophroniscus; his mother, who was a midwife, Phænarete. Socrates was instructed by his father in his own art, which he exercised with some skill and success: Pausanias says, that he made the statues of Mercury and the Graces, which stood at the entrance of the Acropolis. His father having died, left him an inheritance of eighty minæ, which he lost by the treachery of a relation, to

* This book is usually called the *Memorabilia*. Gellius describes it as "a treatise concerning the actions and sayings of Socrates;" *de moribus* is "to remind," *de moribus*, "any thing of which one is put in mind;" therefore, *de moribus* seems probably *Memoirs*. Boswell's *Life of Johnson* would be exactly designated by this word. We must here observe, that some critics have doubted whether the *Memorabilia* be the genuine production of Xenophon or not.

Biography, whom he had lent it upon interest. Being thus reduced to the necessity of working at his profession, he contented himself with doing just enough to bring him in a bare subsistence, and employed his leisure time in the study of philosophy.* Cræus, a rich Athenian, is said to have furnished him with the means of procuring for himself such instruction as he desired. At the age of seventeen, he became a hearer and favourite scholar of Archelaus. He received lessons to music from Damon, a celebrated professor of that science; but did not learn to play on the lyre till he had arrived at a much later period of his life. For the precepts of eloquence he had recourse to Prodicus; for those of poetry to Eueus, of Paros, a celebrated elegiac poet; geometry he learned from Theodorus. To these graver studies, he sought to add an acquaintance with the delicacies of language and of thought; and with that view, he frequented the society of the most accomplished females at Athens, particularly Aspasia, the mistress, and afterwards the wife, of Pericles; and Diotima, from whom he professed to have imbibed the philosophy of love.

He pursued these methods of obtaining knowledge, in preference to the course which had been followed by most of his predecessors, who had thought it necessary to visit Egypt and the east, *θεωπεῖν αἰεὶ*, as Herodotus says, for the sake of seeing what was to be seen, and of obtaining some insight into the recondite wisdom of the priests and magi; whereas Socrates used to boast that he had never left Athens, except on the service of the state. When he was called upon, in his civil capacity, to discharge any of the offices imposed upon him by the laws, he was active, conscientious, and disinterested. He served as a soldier in the siege of Potidaea, (O_l. lxxxi. 3.) and Alcibiades, who was his comrade, testified that he surpassed all his fellow-soldiers in his endurance of labour, hunger, and thirst; and that he united the most perfect sobriety with great convivial cheerfulness. Alcibiades himself, when wounded, was rescued from the most imminent danger by his friend and preceptor. After the conflict, the prize of valour having been adjudged to Socrates, he prevailed upon the umpires to transfer it to Alcibiades. His second campaign was in O_l. lxxxi. 1. when he distinguished himself at the battle of Delium in Boeotia (where the Athenians were defeated) by his valour in defence of Xenophon; who having lost his horse in the flight, and lying wounded on the ground, Socrates, who was on foot, carried him on his shoulders to a considerable distance, walking deliberately and firmly, and displaying a courage which deterred the enemy from attacking him. He served again, the same year, in the expedition against Amphipolis. Athenæus endeavours to deprive Socrates of the credit of these military achievements, taking for his text a saying of Democritus, "that one could as easily make a hoose of a stalk of savori, as a perfect soldier of a Socrates;" and he attempts to prove, partly by chronological

computations, and partly on the ground of improbability, that the account given by Plato is untrue. But Plato is supported by the testimony of Xenophon and Antisthenes; all of whom lived so near the time when these occurrences are said to have taken place, as to render it in the highest degree improbable that they should have ventured to impose a false account upon persons who knew the real state of the case. The civils of Athenæus have been satisfactorily refuted by Isaac Casaubon, in his annotations upon that learned, but injudicious writer.

Socrates, partly from a dislike of politics, and partly, perhaps, from the obscurity of his station, did not fill any civil office till he was considerably advanced in years, when he was elected into the council; and being one of the Prytænes when the six generals were tried for having neglected to rescue from the waves those who had been wrecked, and the dead bodies of those who had fallen in the sea-fight at Arginæuse, he resisted singly the iniquitous attempts of their accusers, and the fury of the people, and refused to put the question to the vote. Afterwards, under the rule of the Thirty, being deputed one of five to arrest Leon of Salamis, for the purpose of putting him to death, he resolutely declined the office, at the hazard of his own life, which would probably have been sacrificed to the resentment of the tyrants, had they not shortly afterwards been deprived of their power.

Socrates is said to have taken advantage of a law of Solon, which permitted an Athenian citizen to have two wives; and to have married first Xanthippe, and afterwards Myrto, the daughter of Aristides (not the Just,) whom he is related to have taken into his house from motives of pity, when she was a widow and in distress. This story rests upon the authority of Plutarch, Demetrius Phalereus, Aristæus, and Satyrus the peripatetic. But there are many reasons for doubting the fact. In the first place, there is no good authority for asserting that there was any law of Solon which permitted bigamy. In the second place, neither Plato nor Xenophon make any allusion to such a circumstance in their master's life; nor Aristophanes, who certainly would not have let slip so fair an opportunity of a joke against Socrates. And lastly, Plutarch, who is the earliest author extant, that mentions the story, says that Panætius, in his book on Socrates, "has abundantly refuted the assertions of those writers who propagated the story." The fact probably was, that Socrates did receive Myrto into his house from motives of charity and kindness, and that hence originated a report of his having married her. The reader may see the question discussed at length in Bentley's *Diss. on the Socratic Epistles*; Mahne's *Diatribæ de Aristotelo*.

With regard to the character of Xenophon, his undoubted wife, there is a great diversity of opinion. She is commonly believed to have been a woman of loose manners, and of violent temper. For the first of these charges, however, there seems to be no good authority. Neither Plato, Aristotle, nor Aristophanes, make any allusion to it; and it is inconsistent with the account which Plato gives of the kind and affectionate behaviour of Xanthippe towards her husband in his last moments. But it is quite clear that she was of a violent and untractable temper; for Socrates professed to have married her because he knew that if

* Brucker makes a ludicrous mistake on this subject. He says "quærit necessitatem compulsionis, non. Atheniæ tantum, sed et *Darius* statuasque exercebat." He found in the Latin version of Diogenes these words; "Πορὸν Δῆριν σερβίειν ἱλλανσὶν, ἐν σκῆπτρῳ λαβὼν." i.e. "Darius also makes that he was a slave, and cut statues." Whereas Brucker, not consulting the Greek, where there is the nominative *Δῆρις*, mistook *Darius* for the relative, and fancied it to be the name of a place.

Socrates.

Ringraphy. he could put up with her caprice and passion, he would be able to bear with patience the ill humour of others. Lamprocles, the son of Xanthippe, declares, in Xenophon, that the fierceness of a wild beast would be more tolerable than the temper of such a mother. At the same time, however, he confesses that she had performed, towards him, all the offices of a kind and careful parent.

Socrates appears to have been at all times in a state of great indigence; nor was he solicitous to increase his means. He was wholly intent upon correcting the gross defects which he perceived in the religion, the morality, and the government of his country; and made the pursuit of this object the sole business of his life. He was gifted with an extraordinary share of sagacity and common sense, and a great facility of expressing his sentiments in easy and perspicuous language. Instead of following the example of the sophists, who proclaimed their readiness and ability to communicate to others every kind of knowledge, he professed himself, what, in fact he was, a sincere and ardent inquirer after truth; and imparted to others the wisdom which he seemed to be seeking, not in the way of a dogmatic lecture, nor of precept, but by proposing questions, which led his hearers insensibly to just and indisputable conclusions.

As Socrates was well aware that the most effectual way of producing a reform in the opinions and habits of his countrymen, was by communicating a proper bias to the minds of those young men, who were likely to have a share in the management of public affairs, he took every opportunity of mixing, but in an easy and natural way, in the company of the opulent and popular Athenians, of those who sought to distinguish themselves by their eloquence, their elegance, or their manly pursuits. With this view he was continually in public. No man, perhaps, ever lived so long and so much in the eyes of the world as Socrates. Early in the morning he went to the public walks and gymnasia, or schools for athletic exercises; and when the Agora (i. e. the public bazaar or exchange) was most thronged, which was about noon, Socrates was always one of the crowd; and he generally accepted of some invitation to pass the rest of the day where he was likely to see the largest company. In these parties he was usually the principal speaker. Although a very patient hearer, he most assiduously gave the conversation a turn to some interesting and important subject, which he enlivened by his ingenuity and cheerfulness, and concluded by convincing his hearers, without even distinctly asserting the opinion which he wished them to embrace.

When his reputation was established, and he was followed by great numbers of young Athenians, he could never be induced to relieve his poverty by accepting any reward for his instructions given in public; and in private, properly speaking, he gave none.

He did not, however, confine his peculiar method of philosophising to men of rank and property; but took frequent opportunities of conversing with those artists and mechanics who were most eminent in their respective departments. He judged that it was an important service to his country, to inspire every class of citizens with just and correct notions of the best method of practising their callings, and of discharging

giving the duties incident to them.* Indeed this was an object of which he never lost sight; rightly thinking, that upon the conscientious and diligent behaviour of each individual in his particular station and calling, depended the safety and prosperity of the whole commonwealth. In the same strain he taught his hearers, that he who was the best manager of his own affairs, was likely to be the best administrator of the affairs of the republic.

We have before us, observed, that Socrates did not deliver lectures like the sophists, but conducted his discourses upon subjects of practical philosophy in the way of question and answer. His usual method was, to apply to the person, whom he wished to bring over to his own opinion, with a pretended ignorance, as one who desired to obtain information ; and without asserting any thing himself, he would put to him, in succession, a series of questions, which admitted but of one answer; and so, by degrees, would bring him to acknowledge the truth which Socrates wished to establish. He always began by gaining the assent of his adversary to some unquestionable propositions : these he artfully connected with some of a more dubious kind, and then, by tying down his opponent to his former concessions, he proved his own point.

This Socratic mode of disputation the Greeks called *εἰρωνεία*, 'irony,' from *εἰρῆναι*, 'n person who dissembles his real knowledge or opinions; one who pretends to know nothing of what he really does know.' Horace calls a person of this sort *dissimulator* *quique proprie*. To this ironical or bantering mode of disputation the Athenians in general seem to have been partial; in the case of Socrates it gave so much offence to some, that they called him "the Attic buffoon, or jester." Aristotle contrasts the boasting pretender, who, for the sake of fame or profit, affects accomplishments which he does not possess, with the *εἰρων*, him who dissembles his powers, and disparages his own qualifications, "for the sake of appearing more amiable and pleasing; for," he observes, "persons of this description seem to speak, not for the sake of gain, but from a wish to avoid ostentation. And in particular, they reject all pretences to fame; as was the case with Socrates."

Being well aware that the sophists were a principal cause of that deterioration in the character of his countrymen which he so often complained of, he applied himself to undermine their credit, and to open the eyes of their disciples. With this object in view, he pursued a line of conduct, in all respects, the reverse of that which distinguished the sophists. Instead of appearing in the places of public resort, in a gorgeous robe, he wore a simple and unassuming dress, and he appeared in the most unassuming manner, instead of professing the talent of haranguing copiously and elegantly, he declared himself wholly ignorant of such arts, and instead of delivering at length lectures

* He carried this custom so far, as not only to give advice to Parrhasius, the celebrated painter, and Clito the sculptor, upon the best method of communicating to their representations of the human form an expression of moral sentiment; but he conversed with Theodote, a courtesan, upon the most efficacious methods of alluring lovers.

† Aristoph. Av. 1209. Κατὰ πόλιν πόλιν κλειθῆτες ἐς τὸ εὐ-
χεῖσθαι, ὃ μακρόν ἐστι; 1. Οὐκ οἶδα, καὶ Δὲ θύμῳ κατὰ πόλιν πόλιν,
πρ'. ἤκουσας αὐτῆς, ἄλλο εἰσπείρεται; 1 By what gates did you get
into the city, you baggage? 2. I protest I don't know by what
gates. P. D' ye hear how the lanterns are!

Biography. upon given subjects, he conversed in the way of short questions and answers. He used to make his appearance, as it were by accident, amidst the numerous tribe of Athenians who were listening to Gorgias, or some other famous sophist; and professing his admiration of such talents and eloquence, lamented the straitness of his means, which debarred him from the advantage of becoming a scholar of so able a master. He would then, with seeming diffidence, propose a simple question to the sophist, to which an eloquent but diffuse reply would be given. Upon which, Socrates requests him so far to humour his infirmity and slow comprehension, as to proceed step by step. When this was done, he soon manifested the clearness and justice of his own ideas, and the confused and inconsistent notions of the sophists; reducing him by a series of simple, but closely connected questions, to admit the truth which Socrates desired to prove. It was in vain that the sophist ridiculed or found fault with his opponent, for descending to minutiae, and arguing in detail, to the exclusion of all eloquence and common place; in vain did he treat with contempt the maxims of common sense and of plain downright morality, which were at variance with his own notions as to the best methods of prospering in life. Socrates returned with coolness and temper to the charge; and by a series of such attacks, closely followed up, he exposed the shallowness and inconsistency of those pretenders to wisdom.

It does not appear very clearly, at what period of his life Socrates began to attract public notice as a teacher of philosophy, nor how long a period of time he continued his attacks upon the sophists, before he produced a strong impression upon the public mind. For some time he was himself considered to be one of that class of teachers; and when Aristophanes introduced him upon the stage, he was probably just risen into eminence, although it should seem, from the representation given of him in *The Clouds*, that his real character and mode of philosophising were not known to the great comic poet. Socrates was then about forty-six years of age. To this subject we shall revert presently.

We may probably refer to his ironical mode of teaching the celebrated *εὐρησμός*, or genius of Socrates, which, he said, in various emergencies, admonished him what course to pursue, and enabled him to predict, in many cases, what was about to happen. It was, in fact, neither more nor less than common sense or right judgment; a faculty which he possessed in an eminent degree, and which he made the guide of his life. Other philosophers called this 'Opinion'; Socrates chose to speak of it as his attendant genius. At the same time, it must be confessed, we are told by some authors that this *δαίμων* made itself heard only in those questions which were not determinable by human prudence. It is evident that most of those who have mentioned the genius of Socrates, including his immediate scholars, have understood it literally to have been a being of a superior nature; a very natural opinion for those who were acquainted with the doctrines of the older philosophers, who maintained the existence of a race of spiritual beings, intermediate between the gods and men. Socrates, who had full confidence in the conclusions of that judgment which he had cultivated with so much care, and was convinced that it would

not mislead him in matters cognisable by human reason; yet studious at the same time to avoid an appearance of laying down the conclusions of his own reason, as the sophists used to do, for infallible truths; chose to speak of them as the suggestions of this invisible friend; being at all times very careful not to exalt too highly the powers of the human mind; and being aware, that even the dictates of right reason might, without impropriety, be referred to the inspiration of a superior power. It is even possible, that, convinced as he was of the existence of a supreme intelligence, and accustomed to find, that when he acted upon the suggestions of his reason, without having sought for them by laborious induction, he was always in the right—it is possible, we say, that he might have referred them to the immediate influence of a spiritual adviser, as the enthusiasts of modern days are too apt to do, oftentimes with less reason. But it is truly surprising that any Christian writer should have been found, to ascribe the genius of Socrates, in order to prove the truth of the Scripture doctrine of angels. It appears, that the great master himself would never vouchsafe to his most intimate friends any explanation touching this *δαίμων*. And it is very probable, that the few instances which they record, where Socrates appeared to have determined rightly rather from divination than from the inductions of reason, are not related agreeably to the real facts. Every explanation which has hitherto been given of this curious subject has its difficulties. It appears to us, that the most probable solution of the knot is that which we have proposed in the last place. We cannot, at any rate, coincide in opinion with Brucker, who thinks that Socrates enjoyed "a certain faculty or presentiment, approaching to divination." But, on the other hand, it will not be enough to conclude, with Plutarch, P. Simon, and others, that this genius was no other than common sense; unless at the same time we suppose that Socrates himself, struck by the justice and promptitude of his own conclusions in emergencies, which gave no scope to deliberation, did actually refer to the inspiration of a divine monitor, what were in fact the dictates of his own singular natural good sense. For many years he had been an attentive observer of human nature, and had narrowly scrutinised the motives and watched the consequences of actions; the result of which was a matured and solid experience, and a degree of sagacity, which seemed at times to be almost more than human. The oracle which is said to have been delivered by the Pythian priestess, declaring Socrates to be the wisest of mankind, is well known: but there is good reason to suspect that it was a forgery, probably invented by Chærophron, or by some other disciple of Socrates, after his master's death. It was, however, reported very soon after that event, and at any rate serves to show the prevailing opinion in Greece respecting the superior wisdom of the deceased philosopher. Great, however, as that wisdom was, it was not greater than his modesty. The following observations, which Cicero has put into the mouth of Varro in his first Book of *Academic Questions*, place in a strong light the good sense and modesty of Socrates. "It is agreed on all hands, and I think, justly, that Socrates was the first person, who called away philosophy from the study of occult things, purposely concealed by nature herself, in which all the

philosophers before him had been occupied, and introduced her to common life: making virtue and vice, good and evil, the objects of his inquiry; but esteeming the higher branches of natural philosophy (*celestia*) far removed from our cognisance, or at all events, if they were ever so well understood, of no importance towards living well. In all his discourses, which have been committed to writing by those who heard him, with great variety and copiousness of language, his method of disputing is, to affirm nothing himself, but to refute others: he professes to know nothing, except the fact itself of his knowing nothing: and says that in this respect he excels other men, who fancy that they know that which they do not know; whereas all his own knowledge consisted in the consciousness of knowing nothing; and he supposes that Apollo had pronounced him to be the wisest of mankind,* because the whole of true wisdom consists in a man's not thinking himself to know that, of which he is ignorant. This being the constant tenor of his discourses, and his fixed opinion; all his eloquence was expended in praising virtue, and in exhorting all men to the study of virtue; a fact sufficiently evident from the writings of the Socratic philosophers, and especially of Plato.† It need hardly be remarked that this confession of ignorance, on the part of Socrates, was very different, from the universal doubt and uncertainty professed by the sceptics; his object being simply to inspire mankind with a distrust of that intuitive kind of knowledge, to which the sophists laid claim, and to teach them that the road to true wisdom must be pursued through all the successive steps of patient investigation.

With regard to his religious opinions, Socrates appears to have been firmly convinced of the existence of a Supreme Being, and of his superintending providence over the affairs of men. He was never heard, says Xenophon, to say any thing which savoured of impiety; but every part both of his conversation and his conduct was such, as might be expected from a man, deeply sensible of the truth and importance of religion. Upon these subjects, however, he found it necessary to speak with a certain degree of caution and reserve; and even with all his care he did not escape the charge of impiety. It need hardly be proved, that he disbelieved the popular mythology of his time; and he appears to have admitted the existence of an intermediate race of spiritual beings, between the supreme Deity and men. It is, however, not unreasonable to suspect, that when Socrates referred to his friends, in questions not to be resolved by human sagacity, to auguries and divinations, he complied with what he considered to be a harmless superstition, without intending to assert his own belief in it. At the same time that he maintained the purity and spirituality of the Supreme God, and strongly denied the weaknesses and vices imputed by the poets to the deities of the Pantheon, he practised himself, and recommended to others, a regular compliance with the established forms of worship, and even consulted oracles. At the same time, he seems to have intimated his sense of the impropriety of addressing the Deity by

any particular name, by his custom of introducing into his colloquial asseverations sometimes the name of Heré (Juno) and sometimes that of a dog, or a goose. The last words which Socrates uttered before his death, were to put his friends in mind, that he was indebted to *Asculapius* a cock, which he had vowed, but never sacrificed. Such an expression, used at a moment, when he was perfectly aware of his approaching dissolution, might seem to indicate an actual belief in the existence of the inferior gods. But it has been conjectured, and not improbably, that when those words were uttered, the poison which he had taken, had affected his reason. Whatever may have been the language which he held in his public discourses, the sagacity of Aristophanes did not fail to perceive, that he rejected in fact the popular superstitions of his country.

His firmness of mind, in refusing to act contrary to the dictates of his conscience; his temperance and frugality, have been already mentioned. The concurrent testimony of all antiquity proves him to have been one of the most irreproachable characters of the heathen world. And the virtues, for which he was most remarkable, will appear more worthy of admiration, if we reflect, that he was destitute of those lights and helps, which are possessed by the Christian moralist. "The singular merit of Socrates," observes Mr. Mitford, "lay in the purity and usefulness of his manners and conversation; the clearness with which he saw, and the steadiness with which he practised, in a blind and corrupt age, all moral duties; the disinterestedness and the zeal with which he devoted himself to the benefit of others; and the enlarged and warm benevolence, whence his supreme and only pleasure seems to have consisted in doing good. The purity of Christian morality, little enough indeed seen in practice, nevertheless is become so familiar in theory, that it passes almost for obvious and even congenial to the human mind. Those only will justly estimate the merit of that near approach to it which Socrates made, who will take the pains to gather, as they may from the writings of his contemporaries and predecessors, how little conception of it was entertained before his time; how dull to a just moral sense the human mind has really been; how slow the progress in the investigation of the moral duties, even where not only great pains have been taken, but the greatest abilities zealously employed; and, when discovered, how difficult it has been to establish them by proofs beyond controversy, or proofs even that should be generally admitted by the reason of men. It is through the light diffused by his doctrine, enforced by his practice, with the advantage of having both the doctrine and practice exhibited to the highest advantage, in the incomparable writings of disciples, such as Xenophon and Plato, that his life forms an era in the history of Athens, and of man."

Our readers are well aware that one imputation has been cast upon the moral character of Socrates, of the most disgraceful kind. but it has been by writers of an age much more recent than that of Socrates, and chiefly by Porphyry, and some Fathers of the Christian church. The authorities upon which it rests, have been collected by Mr. Cumberland, in the *Observer*, or rather by Dr. Bentley, whose papers his grandson is now known to have pillaged without scruple. But these authorities may justly be considered as destitute of

weight, when put in competition with the total absence of any aspersion of the kind in *The Clouds* of Aristophanes, and with the direct and united testimony of Plato and Xenophon to the purity and integrity of Socrates. These changes, as Mr. Mitford justly observes, carry every appearance of having originated in the virulence of party-spirit; and they have been propagated by writers in the profligate ages that followed—a propensity to involve men of the best report, in former times, in the scandal of that gross immorality which disgraced the fall of Greece and Rome, is conspicuous among some of the writers under the Roman empire. There cannot be a stronger negative argument to rebut the charge of scandalous immorality, than the silence, both of Aristophanes, (who scrupled at no ineffectuality of expression or of representation*) and of the accusers of Socrates, who were not deterred from calumniating the object of their hatred, by any regard for truth. (The reader may see this question discussed more at length in a dissertation by the Abbé Fraguier, *Choir des Mémoires de l'Académie Royale* t. iii. p. 29.) The wisdom of Socrates, his benevolence, and the purity of his morals, were so remarkably superior to those of his contemporaries, that some Jewish and Christian writers have maintained, with more zeal than judgment, that he derived his knowledge of divine things from an acquaintance with the Scriptures of the Old Testament. While some of the defenders of natural religion affect to contrast the ethics of Socrates, with those which are inculcated in the Gospel. But even if we admit the justice of those commendations which are bestowed upon his moral precepts, we find the great and pervading deficiency, which revelation alone could supply, that of motive; necessarily resulting from a state of uncertainty as to the retribution of a future life.

Socrates taught that the divine attributes might be inferred from the works of creation; a notion asserted also by St. Paul. He maintained the omniscience, obliquity, and providence of the Deity; and from the existence of conscience in the human breast, he inferred that man is a moral agent, the object of reward and punishment; and that the great distinction between virtue and vice was ordained by the Deity. This is the sum of those theological doctrines which Socrates taught with plainness and simplicity; but which Plato expanded and corrupted with his own refined and abstruse speculations. It is easy to perceive how far superior, both in point of reasonableness and in their moral tendency, these doctrines were, to the metaphysical speculations of the Ionic school.

The soul of man, according to Socrates, is given him by the Deity, whom it resembles in its powers and properties; consequently it is immortal, and will receive, after the death of the body, the rewards of virtue. If Socrates expressed any doubt on this head, it related to the place of the soul in another life, not to its existence or happiness.

The justness of his notions, upon these important subjects, ostensibly exalted and purified his moral system. The chief happiness of life he placed in a practical knowledge of virtue, of the ends which man is intended to answer, and of the right methods of pur-

suing them. This knowledge, when complete, teaches him that in every case that which is just, is expedient; and that the purest pleasures are those which spring from an habitual rectitude of conduct. The great secret of obtaining this desirable wisdom, is to know ourselves, a secret which Socrates, in his daily conversations with those who had the greatest reputation for wisdom, proved to be little understood.

Socrates taught that "to obey is better than sacrifice;" that the most acceptable service to the gods, is to perform their commands: that man ought simply to ask the gods to give what is good for him; for that they know, far better than he does, what is really to his advantage; that the gods are to be worshipped, according to the institutions of our country; a precept which is also attributed to Pythagoras. He said that besides the written laws of men, there are certain unwritten laws,* ordained by the Deity, such as those which enjoin the worship of the gods, and the reverence due to parents; that it is reasonable to conclude that these laws have the divine sanction, because the violation of them carries with it its own punishment, a provision surpassing the wisdom and power of a human legislator. (This argument is insisted upon by Bishop Butler, in the second chapter of his *Analogy*.)

In the course of a life spent in disseminating the principles of truth and morality, as discoverable by the light of nature, Socrates delivered maxims and rules for the conduct of men in every relation of civil and social life. Those which are recorded by Xenophon, are marked by that sound and practical common sense, which was the leading feature of his philosophy. With regard to politics, the peculiar constitution of the Athenian polity, and the temper of the times, made him cautious in delivering his sentiments. Yet he said enough, at different times, to make his countrymen suspect, that he disliked the existing constitution of Athens. He remarked, (at least Ælian tells us that he remarked) that democracy is tyrannical, and abounds with the evils of monarchy. It was urged by his enemies, that he rendered his hearers disaffected towards the democracy; and indeed, although he was too good a citizen to promote seditious and political violence, it was not possible that he should approve of the manner in which the Athenian government was conducted. He wished, as Mr. Mitford has remarked, for wholesome changes by gentle means; and it seems to have been an object which he never lost sight of, in all his teaching, to infuse those principles into the Athenian youth, which might insensibly produce the wished-for change. Although he took no part in politics himself, he endeavoured to obtain an influence over those young men, who were most likely, from their wealth, their talents, and their ambition, to bear away in the popular assemblies. Thus

* *Ἀγασσάμενος*. This notion was not first entertained by Socrates. We find it expressed by Sophocles, in his *Antigone*. v. 453.

οὐδὲν ὁμολοῖται νομοθέτης ὅτι καὶ ἐκ
ἀποφασίας, ὅτι ἡ ἀρετὴ ἀποφασίᾳ τῶν
νόμων ἡρώδης ἔστιν ἡ ἀρετὴ.

† Nor judged I thy decrees of such avail,
As that a mortal might transgress the gods'
Unwritten and immutable behests."

Thucydides, in the funeral oration spoken by Pericles, distinguishes between the laws enacted for the common good, and the unwritten laws, the violation of which brings with it acknowledged disgrace. See also Demosthenes de *Coro.* p. 83.

Socrates

Biography.

employed, and courted as he was by many of the richest and most powerful of the Athenian Youth, it is no wonder, if the vulgar demagogues considered him as a dangerous rival, and were desirous of exciting popular jealousy against him.

Socrates was about forty-six years of age, when he was introduced by Aristophanes in his comedy of *The Clouds*, and held up to public derision. It is well known, that what is called the *old comedy*, the leading writers of which were Eupolis, Cratinus, and Aristophanes, introduced, without scruple, living personages upon the stage, not only exhibiting the peculiarities of their moral and political characters, but representing, by means of masks and dresses, their personal appearance.

The great object of the comic poets was, to please a popular audience, and to obtain their suffrages for the prize awarded to the most deserving. But they not unfrequently had a higher object in view: Aristophanes in particular directed his wit against the mischievous, but too popular demagogues of his time, with the truest patriotism; and with a courage, which nothing but a confidence in his own surpassing abilities, and the justice of the cause which he espoused, could have inspired. Whatever he conceived to be at variance with that free and manly spirit, which had once distinguished his countrymen, but which in his time was nearly destroyed by political chicanery, and the flagitious doctrines of the sophists, he assailed with all the powers of ridicule; and although in many cases, as was to be expected, the innocent suffered with the guilty, and defamation usurped the place of legitimate satire; yet, upon the whole, it is evident, that the object of Aristophanes was, to bring his countrymen to a right way of thinking, and to open their eyes to the artifices, by which they had been so long imposed upon. It is not easy to assign a satisfactory reason for the injurious representation, which Aristophanes has given of Socrates, in the comedy before mentioned. But we may probably conjecture, that wishing to attack the sophists in general, of whom Socrates at that time was considered to be one, he took him as a representative of the whole body, and attributed to him that species of philosophy, which it was the constant object of Socrates to decry and discredit.

The object of the comic poet in *The Clouds*, is to show how the sophistry of the schools may be employed to the perversion of justice and morality. He ridicules, by the way, certain new and fanciful notions touching the relation of children and parents; and introduces the clouds, as the deities of the new philosophers, who acknowledged no such divinity as Jupiter, or his associate gods. Mr. Cumberland has justly remarked, that although Socrates is exhibited in a very ridiculous point of view, as hoisted up in a basket, to pursue his astronomical studies, and measuring the space over which a flea can skip, yet he lays down no principles of fraud or injustice, as parts of his own system. It is not the teacher who recommends, but his disciples who pervert his instructions to the evil purpose of defrauding their creditors. The son in the play beats his father on the stage, and he quotes in his own justification the maxims of Socrates; but he does not quote them as positive rules and injunctions for an art so atrocious; he only shows that sophistry may be turned, to defend that or any other thing, equally violent and outrageous.

It is undoubtedly true, that the schools of the so-

phists, which the government of Athens thought it necessary to put down by a public decree, were no unfit subjects for dramatic ridicule; but still the great difficulty recurs, why should Socrates have been selected by the poet, as the representative of that mischievous tribe, rather than Gorgias, or Hippia, or Polus, or some well-known member of the fraternity? Perhaps it was, as some modern critics have supposed, that some of the disciples and friends of Socrates, rather than the philosopher himself, were the real objects of dislike to Aristophanes; and that he introduced the teacher himself upon the stage, for the purpose of ridiculing his school. Three, at least, of the followers of Socrates, were just objects of satire: the rapacious Simmon, the cowardly Cleonymus, and the disolute Theorus; of whom Aristophanes says "O Jupiter, if thy bolt is aimed at perjury, why has it not consumed Simmon, nor Cleonymus, nor Theorus, all perjured as they are?" An intimate friend of Socrates was Euripides; against whom, as the inculcator of an ambiguous morality, and the debaser of genuine tragedy, Aristophanes entertained a peculiar antipathy. And besides, accustomed as the Athenians were to see their public men ridiculed and reviled in the grossest manner upon the stage, it did, perhaps, no great harm to the character of Socrates, that his philosophy should be jocosely burlesqued; for, be it remembered, there is little or nothing of calumny and ill-nature in the delineation which Aristophanes gives of Socrates himself. It must have been so exceedingly and palpably unlike the original, that one is almost tempted to suspect the poet of having made it so on purpose, that the spectators might at once perceive it to be intended for a good-natured caricature of Socrates, with whose real mode of life they were all perfectly well acquainted; and whose prosing discourses, most of them probably thought, as Eupolis did, very tiresome. The singularity which Socrates affected in his manners and dress, going barefoot, and, at times, standing for a whole day together in the same attitude of meditation, rendered him a tempting subject for ridicule. The poet says in *The Clouds*, "We could not think of attending to any other of the sophists of the present day, except Prodicus, to him, on account of his wisdom and good sense; but to you (Socrates) because you swagger in the streets, and roll your eyes about, and go barefoot, pretending to put up with many annoyances, and wear a solemn countenance towards us." Aristophanes represents Socrates as taking a fee for his instructions, although the contrary was notoriously the fact. It appears, however, that at the first representation *The Clouds* did not take with the audience, but was condemned, owing, as it is said, to Alcibiades, and a party of the friends of Socrates. The following year it was reproduced, in an amended state, with better success. The story told by Ælian, of the poet's having been bribed by Anytus and Melitus to write *The Clouds*, in order to pave the way for their criminal accusation, has been long ago exploded: this comedy is known to have been acted more than twenty years before the trial and condemnation of Socrates. Yet it is far from impossible, that the ridicule cast upon him in that play, may have contributed to the popular prejudice, which, many years afterwards, became so fatally strong. We are not informed by Xenophon or Plato, whether Socrates had given any cause of offence to Aristophanes; indeed, Plato represents them

Biography. as becoming familiar companions, at a subsequent period. Upon the whole, our readers may still be disposed to adhere to the notion first suggested, that Aristophanes, when he wrote *The Clouds*, knew but little of Socrates, whom he, perhaps, imagined to be a quibbling sophist, like the others of that profession.

B. C. 469. About two or three-and-twenty years after the first representation of *The Clouds*, a young man, named Melitus (or rather Meletus) delivered to the archon an information against Socrates, to the following effect: "Melitus, son of Meletus, of the borough of Pitthos, makes this charge upon oath against Socrates, son of Sophroniscus, of the borough of Alopece: Socrates is guilty of reviling the gods acknowledged by the state, and of preaching other new gods; moreover, he is guilty of corrupting the youth. Penalty, death." Melitus, who was a poet, and a man of no consideration, was associated in this affair with Lycon, an orator of eminence, and Anytus, a man in high esteem, who had commended with credit in the Peloponnesian war, and was afterwards an ally of Thymaeus, in restoring the democracy. It was urged against Socrates, by his prosecutors, that he was disaffected to the democracy, and that he had instilled similar principles into his followers, especially Critias and Alcibiades. Indeed, it seems very likely, that his intimacy with Alcibiades was one principal cause of the suspicion and dislike, with which he was viewed by the popular party. Socrates himself, as Plato makes him speak, did not deny his disapprobation of the existing government: the whole of his defence, as reported by his illustrious scholar, was calculated to irritate, rather than to conciliate, his judges.

No advice of his friends could persuade him, when put upon his defence before the Heliasts,* to say a word in the form of supplication. He told his judges, that he was pleading for them, to save them the guilt of an unjust condemnation. Being persuaded of the soul's immortality, he considered the prospect of a dismissal from the body, at his age, to be a subject of rejoicing. Death might be an introduction to the highest degree of happiness; it could not bring any thing worse to a good man than a cessation of being; and therefore he looked with no apprehension to a sentence, which would consign him to the easiest of deaths; for such the Athenian mode of execution, by a draught of prepared hemlock, was reputed to be.

The judges were so much incensed by the tone which Socrates took in his defence, that they refused to hear Plato, who would have spoken in his behalf, and immediately found him guilty. It being then permitted him to say what fine ought to be imposed upon him, he would not suffer his friends to contribute any thing towards a pecuniary mulct; but told the court, that he considered himself worthy of the highest honours and reward. Still further irritated by this reply, a majority of the judges, still greater than the former one, condemned him to death; and he was accordingly conducted to prison, after having shown the injustice of his sentence. He concluded his address to the judges with these words: "But it is time that we should depart; I to die, you to live: but which for the greater good, God only knows."

* The largest court of judicature at Athens was the *Heliasts*, consisting of from 1500 to 500 judges, called *Heliasts*. Before this tribunal were tried questions concerning religion.

The condemnation of Socrates happened on the eve of the day, appointed for the ceremony of placing a sacred chaplet upon the ship, which carried the annual offerings to the gods worshipped at Delos. And no execution could take place at Athens from the crowding of the galley till its return from Delos. Thus the death of Socrates was respite for thirty days. His friends took advantage of this delay, to concert means for his escape. The jailer was bribed, and a vessel prepared, to convey Socrates to some friends in Thessaly. But no persuasion could induce him to use the opportunity. Having all his life recommended obedience to the laws of his country he would not now set an example of the breach of them; arguing, that unjust as his sentence was, wrong would not justify wrong. Plato has given us a beautiful representation of the manner in which Socrates employed himself during this painful interval, in discussing subjects of the highest nature with his favourite disciples. But there is too much reason to apprehend that these representations are more striking than faithful. It is, however, agreed on all hands, that when the sacred ship returned, (of which he professed to have been forewarned by a dream,) he drank the fatal cup with perfect composure, and died with a degree of tranquillity, which would have been still more admirable, had it not been alloyed by a mixture of ill-timed facetiousness. He was, at his death, which happened *OL. xciv. 1. in the 70th year of his age.*

The disciples of Socrates, after having paid the last honours to their departed master, and testified their grief and indignation in the most public manner, quitted Athens for some time, for fear of the faction which had procured his condemnation. A general sentiment of indignation prevailed in the Grecian states, at the news of this event; and it was not long before the Athenians themselves, being made sensible of the injustice of their proceedings, turned their anger against the accusers of Socrates; of whom Melitus is said to have been condemned to death, and Anytus banished from Athens. The friends of the murdered philosopher were recruited, and a statue erected to his honour. A pestilence which happened not long afterwards, was considered to be a just punishment for their gross violation of justice; and it is not a little remarkable that from that time, the affairs of Athens grew continually worse.

The grammarian who wrote the argument to that oration of Isocrates, which is called the *Encomium of Boetis*, relates, that when the *Palamedes* of Euripides was acted at Athens, and the chorus uttered the following words: "O Greeks, ye have killed the wisest, sweetest songstress of the muses, who injured no one, the best of the Greeks," the whole theatre shed tears, perceiving the allusion to Socrates. But Diogenes Laertius, after having observed, that Euripides intended, in the words above quoted, to reproach the Athenians with their injustice towards his illustrious friend, adds, "but Philochorus, (a writer on the antiquities of Attica,) says, that Euripides died before Socrates;" which is perfectly true; for the poet died, *OL. xciii. 1.*, the philosopher in *OL. xciv. 1.* But as the *Palamedes* was brought upon the stage nine years after the first representation of *The Clouds* of Aristophanes, Valckenner thinks it probable that Euripides might intend to shadow out, in the

Biography. story of *Palamedes*, the ingratitude and injustice of the citizens of Athens towards their illustrious teacher, and to point to the probable result of the popular outcry against him. As to the story of the commiseration expressed by the audience at the lamentation of the chorus, if it ever took place at all, it was, perhaps, at a second representation of the *Palamedes*, after the death of Socrates.

Socrates never committed any of his speculations to writing; those which have been attributed to him have been abundantly proved not to have been his productions; especially the epistles, which go by his name, but which Bishop Pearson and Dr. Bentley have shown to be the forgery of a sophist of later times. He is reported to have assisted Euripides in writing some of his tragedies, for which rumour there was, probably, no foundation but the intimacy which subsisted between them.

The person of Socrates is so well known to our readers, that it need hardly be described. Its resemblance to the representation usually given of Silenus, in the works of ancient art, is so strong, that he was called, with an allusion to the convivial excesses of his friend, the Silenus of Alcibiades.

As Socrates, instead of addicting himself to any set of philosophical principles as a system, with which every moral and political phenomenon must be made to square, passed his life in the investigation of truth, and delivered, in plain and unaffected language, the result of patient observations and inquiry; it is not

to be wondered at, if some of his followers, who were not superior to the ambition of system-making, instead of treading in the footsteps of their master, struck off in different directions, and became the founders of different sects in philosophy. Such were Plato, the father of the Academic sect, Aristippus of the Cyrenaic, Phædo of the Eliac, Euclid of the Megaric, and Antisthenes of the Cynic: all of whom, widely as they differed from one another, pretended to ground their notions upon the authority of their master.

In the foregoing account of Socrates, we have endeavoured to observe a just impartiality. It is not to be denied, that in some parts of his conduct there was an affectation of singularity, unworthy of so wise a man; and that he sometimes bestowed much unnecessary labour upon the elucidation of a very common and obvious truth; but he was undoubtedly the author of a far more genuine and practical philosophy than the Greeks had before been masters of; and taught a system of morality, which, with a very few exceptions, was defective only in its motives. And it is a strong argument of the necessity which existed, before the time of our Saviour, of a divine revelation, that a philosophy, so pure and rational as that of Socrates, enforced as it was by the ablest and most eloquent writers of antiquity, had but little effect in improving the religious or moral character of the most acute and ingenious people of the heathen world.

Biography. At the time when the state of eloquence and the arts among the Greeks shewed most strongly the extraordinary powers of their minds, they were employed in forming and advancing the singularly beautiful and intellectual structure of the GREEK GEOMETRY. This science, associated in its birth with their earliest philosophy, generally continued combined with their favourite speculations; and in its progress was more rapid, or at least more certain, than any of them. In the school of PLATO it had already engaged in the most intricate and difficult researches; and when transferred to the college of Alexandria, it produced those profound investigations, in which the first intellects of later times have been content to employ themselves without hoping to add to his discoveries.

Among the names which the history of this subject offers, that of ARCHIMEDES has been, by the suffrage of all judges, considered as standing highest; and possessing the same pre-eminence in the ancient world with that of Newton in modern times. It will, therefore, be natural to combine with what can be collected of his biography, some account of the history, about that time, of the sciences which he cultivated. This sketch of what was then known, may be considered as the only view which we can give of that which is generally the most interesting part in the life of a mathematician, his education: for it is clear that Archimedes was familiar with all that had been done in mathematics up to his time. Without such knowledge, few have been fortunate enough to extend, as he did, the limits of their province in the world of science.

THALES of Miletus, the first of the Greeks who is mentioned as having turned his attention to geometry, is to be looked on as the father of their mathematical science, as indeed he appears to have been of the rest of their philosophy. The discoveries attributed to him are of the most elementary kind; but enough was done to give an impulse to the subject; and his followers in the Ionic school imitated him also in these researches. ANAXIMANDER is said to have written an *Introduction to Geometry*. PYTHAGORAS was a scholar of Thales; and did much for the progress of mathematics, besides the discovery of his celebrated theorem, for which he is said, it must be acknowledged with little probability, to have sacrificed a hecatomb. The theories of which he was the author, and the reception which they met with, shew the strong tendency of the Greeks to such inquiries. In his hands and those of his successors, music became a mathematical subject; the properties of numbers were pursued with an inquisitiveness which led to a curious spirit of mysticism; and the doctrine of the sphere was applied to the explanation of astronomical phenomena.

Under these circumstances geometry and its related sciences soon became of considerable extent. We have the titles of several treatises upon a variety of its branches by DEMOCRITUS and others of the times before Pericles; and at the period of the Peloponnesian war, geometers had not only travelled over most elementary problems, but had, in some instances, struck against those limits which they have been ever since vainly struggling to pass. According to PLUTARCH, ANAXAGORAS, the friend of Pericles, employed

Biography.	himself in his prison in investigations on the <i>quadrature of the circle</i> ; and steps of the same problem were also attempted by Antiphan and Bryson, whose reasonings Aristotle calls paralogisms, though it would seem undeservedly with respect to the former. Hippocrates, who was originally a merchant of Chio, and became a geometer at Athens, whither he had gone in consequence of pecuniary misfortunes, entered upon a train of research, which at first seemed to promise success, in measuring the circle. He went so far as to find the area of a space comprehended between two circular areas, and called a <i>lune</i> , from its resemblance to the horned moon; but it was found impossible to extend this to a whole circle. Another problem, now also known to be impracticable by plane geometry, namely, the discovery of <i>two mean proportionals</i> , excited much interest about this time. It is identical with the problem of <i>doubling the cube</i> , said to have been proposed by the oracle at Delos; though this story is probably only one of those fictions in which mathematicians used often to present their questions. However that may be, it is certain that we have several solutions of this problem, purporting to be of the time of Plato, given by Eutocius in his commentary on Archimedes. ARCHYTAS, a Pythagorean, the master of Plato, solved it by a somewhat complicated construction, in which a conical and cylindrical surface are made to intersect. MENECMUS, a scholar of Plato, obtained the result by the intersection of two conic sections. EUDOXUS, another of Plato's scholars, is said to have applied to it curve lines invented by himself. Plato himself devised a kind of parallel ruler, by means of which it might easily be mechanically executed. Indeed the Greek geometry seems sometimes to have had a rather curious tendency to solve its problems by mechanical contrivances: of which practice, according to Plutarch, in his account of Archimedes, Plato strongly disapproved; notwithstanding the instance we have just given of his adoption of it.*
Plato.	The admiration of Plato for geometry is well known, from the inscription which he is said to have placed over the door of the place where he taught: "Let no one enter who is without geometry." The acquisitions which are attributed to him and his school shew how rapidly the science advanced; for the discoveries which we have now to ascribe are no longer particular propositions, but general methods, and long trains of investigation. We shall consider them in order.
Conics.	It appears by what has been just said of Menecmus, that the conic sections had already been discovered. They are sometimes ascribed to Plato himself, and many of their properties were known soon after his time.
Analysis.	Plato is said to have invented the <i>geometrical analysis</i> ; the method by which, assuming a problematical result to be true, we reason backward to the other propositions which its truth presupposes, till we arrive at something which is known to be true or to be false; and thus establish or overturn the proposition assumed.
Loc.	Another invention of this illustrious mathematical

* Plutarch, in Marcellus. Plutarch obviously confounds, as it was easy for a writer to do who was not a mathematician, the solution of problems by mechanical contrivances, (*μηχανικα*), with the application of mathematics to problems concerning machines, (*μηχανισμοι*.)

school was the doctrine of geometrical loci. By this proceeding, when a required point cannot be found by the intersections of straight lines and circles, some new curve is constructed, consisting of the places which the point might assume by leaving out one of the conditions; and in this curve the remaining condition enables us to determine the point demanded. The *quadratrix* (*τετραπλευροειδης*) of Deionastus, a curve so called from the scholar of Plato, who invented it, or discovered its properties, and from its use in squaring the circle, was one of the first of these loci. It may also be used in another celebrated problem, the *bisection of an angle*. This problem, and that of the duplication of the cube, gave rise also to the loci constructed by succeeding mathematicians, and called the cochoid of Nicomedes, and the cissoid of Diocles. Besides these, which were called *loci at a line*, similar considerations led afterwards to the invention of *loci at a surface*, when the possible positions of a point lay in a curved superficies.

To the active minds of Plato and his school we may attribute also the prosecution of *Solid Geometry*. We have a treatise by ZECHOONAS, who is supposed to have lived somewhat about this time, in which it is proved that the content of the sphere is greater than that of any other solid of equal surface. This is preserved by Theon in his commentary on the *Elements*, and is the oldest work on geometry extant. But the Platonists pursued this subject, and investigated the properties of the five regular solids, called from that cause the Platonic bodies. This branch could not previously have been much attended to, for Plato (*Rep. lib. 7.*) "notes it defective," to use Lord Bacon's phrase in his *Sarety of Human Learning*.

In the passage of Plato just referred to, he divides mathematics into the doctrine of planes, or plane geometry; the doctrine of solids; and the doctrine of solids in motion. This last division is meant to describe the mathematical part of *Astronomy*; viz. the doctrine of the appearances presented by the revolution of a sphere. Thales, or his immediate successors, had mistaken, the spherical form of the earth, and imagined and named the most important circles in the sphere of the heavens. After this, the application of geometry to determine the risings, settings, and motions of the stars was an obvious step, and seems to have been early made. It does not appear to have led to any very remote consequences; and may be adequately judged of from the ancient and curious treatise on the sphere still extant, and written by AUTOLYCHUS, who lived about the time of Alexander. For an account of this work, and of other early Greek astronomers, see the HISTORY OF ASTRONOMY in the SECOND DIVISION. Of EUDOXUS, one of the most eminent of them, we may further notice Delambre's opinion, that he possessed an artificial globe, such as we may conceive the skill of that time able to produce; and that having marked upon it the places of the stars, with no great exactness, he determined their risings and settings by means similar to what is now understood by "the use of the globes." The results of this method he published in a work which we may consider of great importance, as having given rise not only to the poetical paraphrase of ARATUS, but to the valuable commentary of Hipparchus.

The other astronomical opinions of the Greek philosophers were less precise and correct. The true

Loci at a surface.
Solid geometry.

Astronomy.

Biography. system of the universe had indeed been maintained by Pythagoras, but the minds, even of philosophers, were not yet ripe for it; and except that it was occasionally revived, as for instance by Aristarchus of Samos, a little before Archimedes, it slept till the time of Copernicus. Aristotle pretended to confute it; and Plato's opinions, though often borrowed from the Pythagoreans, have no tinge of that part of their philosophy. Yet he is said to have adopted in his old age the system which places the sun in the centre of the universe. He had also the merit of having recommended mathematics to the more particular attention of astronomers; but apparently this was done with the hope of discovering imaginary relations among the parts of the universe: such, perhaps, as afterwards haunted the mind of Kepler; and though unfounded in themselves, led him, by singular good fortune, to the true laws of the solar system. Eudoxus, already mentioned as the disciple of Plato, appears to be the author of that cumbrous hypothesis of crystalline spheres, which generally, but erroneously, has the name of Ptolemy attached to it. It is not to be found in the works of that great astronomer, though it was adopted by Aristotle and others of the ancients.

The most important practical result of the astronomy of those times was the invention of the cycle of nineteen years, (*sextus idus Augusti*) for the purpose of making the solar and lunar year coincide. It is said (Gemini, c. 6.) to have been produced for the approbation of the Athenians, by METON and ECTEMON, and adopted a. c. 433; and it so far answers its purpose, that it is still in use, under the name of the *golden number*, to determine the new and full moons, on which moveable festivals depend.

Arithmetic. The Pythagoreans had paid much attention to arithmetic, i. e. to the properties of numbers; indeed, they attributed to them a mystical meaning, which is not very intelligible. The Platonists also pursued this subject, and invented arrangements of numbers into various classes: thus they were called odd or even, perfect or imperfect, polygonal, which included triangular, square and pentagonal, pyramidal, &c. Besides these speculations, which are not of very material consequence, the practical art of performing arithmetical operations had been carried to a considerable extent, as we shall see hereafter.

Music. It has already been mentioned, that, from the time of Pythagoras, music had become a mathematical science. Though there seems to be some error in the account of the inferences which that philosopher drew from the notes struck by the hammers on a blacksmith's anvil, the general fact is probably true, that he made the discovery that two musical strings which gave the most perceptible concord to the ear, exhibited also remarkable mathematical relations to each other in their lengths and tensions. This curious fact, connected with the great importance which the Greeks attached to music, soon led to a variety of speculations, derived from these mathematical proportions, which were assumed to be perfectly exact. This accuracy, however, though a proper subject for theory, is not the foundation of practical music: and though a mathematical exactness in concords is susceptible of being appreciated by the ear, it is rejected by the practice of modern music. Indeed the unalterable properties of numbers, thus curiously connected with one of the most exquisite gratifications of the senses,

make it impossible to preserve the perfect exactness of chords in every part of the musical scale. Therefore, though the ancients reasoned upon their concords as *perfect*, it is probable that in practice they used these imperfect. The latitude which this allows gives rise to the different expression of the different keys, as they are called, which probably correspond, at least to a considerable extent, with the various modes, Phrygian, Dorian, &c. of the ancient music. It was also probably this capacity of the ear to adapt itself to concords slightly imperfect, which caused the separation into two sects of the ancient theorists on this subject: of one of which sects Pythagoras was the founder, as Aristoxenus, a cotemporary of Aristotle, was of the other. While the former made the simplicity of the arithmetical relations regulate, as it were, the musical ones; the latter appealed more to experiment, and placed the tones at equal intervals in the scale; perhaps making, much in the same manner as is done in modern keyed instruments, their defects compensate each other. It seems requisite, to speak of ancient mathematics, to say something of this difficult, and perhaps uninteresting portion of the science, as it was by them considered a most important branch; and many of their greatest mathematicians have written upon it treatises which are still extant. Their principal researches consisted in determining the value of the intervals between different notes of their scale, and arranging them into systems of four contiguous notes, which they called *tetrachords*; which, however, do not make the successions of the notes so clear as our arrangement of them in octaves. Any further discussion of this subject might be considered out of place; we shall only notice, that the scale above referred to was called the *diatonic*; that besides this they had the *chromatic*, in which all the half notes were introduced; the *old enharmonic*, which, according to Dr. Burney, resembled the Scotch scale; and the *new enharmonic*, which contained all the quarter notes, and to which we have nothing exactly corresponding. It appears certain that the music of the Greeks was confined to *melody*, or the pleasing succession of sounds; and that it was left for modern times to produce what we now call *harmony*; that effect of simultaneous sounds which may almost be considered as having a rightful claim to the reward offered for the discovery of a new sense of pleasure.

In the view of the state of mathematics in the time Mechanics. of Plato we can hardly censure the two sciences of mechanics and optics, which had scarcely then begun to exist, though they soon afterwards engaged some attention. The doctrine of motion indeed was not destined for the Greeks, for they never had any but the vaguest notions on the subject, and continued ignorant of the first law of motion, "that a moving body will go on uniformly, except so far as it is acted upon by external causes;" nor was any light thrown on this subject, till the time of Galileo, as has already been mentioned in the HISTORY OF MECHANICS in the SEVENTH DIVISION. The reader may there see the speculations of Aristotle; and a fragment on this subject, which is attributed to Euclid, contains nothing more definite or important. The doctrine of equilibrium, in which Archimedes made such extraordinary progress, seems to have been little better before his time. In ARISTOTLE'S mechanical problems, he thus accounts for the fact that, by means of the lever, a small weight

Biography. may move a larger wheel is at the end of a shorter arm. The extremities of the arms describe circles, and the motion of a point in a circle is twofold; viz. a motion perpendicular to the radius, which is according to nature, and a motion towards the centre, which is contrary to nature. This unusual motion is smaller in a larger circle, if the space described be the same; and hence in a larger circle a force will with equal ease move a body through a larger space. It is manifest that such reasoning as this can lead to nothing, and we do not know of any thing better till the time of Archimedes.

Optics. Optics was in a similar imperfect state at this time. The vagueness of Aristotle's speculations on the subject has been mentioned in the history of it given in the Sacco Division, and the reader will there find an abstract of the remarkable treatise of Euclid; the earliest which we have on this science. The hypothesis of vision which is there attempted to be proved is, that it does not take place by images coming from the objects and entering the eye, but by rays proceeding from the eye to the different points of the objects. It is evident that the mathematical results would be the same on either supposition.

The subjects which we have mentioned, geometry, plane and solid, and arithmetic, in the department of pure mathematics; astronomy, music, mechanics, and optics, in that of their application; formed the exact sciences cultivated by the ancients. To this division some of their authors added logistics and geometry; the former indicating the application of arithmetic to questions respecting material objects; the latter, the mensuration of land by geometry: for which separation, however, there seems no necessity. At the time of Plato, some portion of these sciences seems to have formed a common part of a liberal education: see the dialogues *Meno*, *Eraste*, and *Theætetus*. It is not probable, however, that any extensive information on such subjects was popularly diffused. Thucydides seems to have been ignorant of the cause of a solar eclipse; and Aristophanes ridicules the geometricians and natural philosophers, under the character of Socrates in *The Clouds*, and of Meton in *The Birds*.

The preceding sketch shews how flourishing was the condition of the mathematics among the Greeks at the time when almost every other department of literature and art was at its greatest splendour. Their poetry, eloquence, and sculpture soon began to decline: but to the usual progress of the human mind the sciences continue to advance after these arts have become retrograde. In most countries a short period only of original excellence has been allowed to the literature which depends upon the imagination. The exercise of that faculty, like the liberty of a turbulent republic, seems to last, after a few generations, to its slavery; but the reason, a better governed kingdom, goes on making acquisitions which are imperishable and perpetually accumulating. The sciences and literature, of which Athens had been the metropolis, were transferred to the other coasts of the Mediterranean, and particularly fostered by the successors of Alexander. The encouragement of the Ptolemies produced no poets who are now considered as great; but royal patronage may be more successfully extended to men of science; and the mathematical school of Alexandria, exhibited an extraordinary succession of

remarkable men. The clustered walks, and public halls, and ample libraries of this Egyptian college, were for nearly a thousand years, the resort of the most eminent of the men of science among the ancients; in whose hands the exact sciences, though often stationary, were sometimes advancing and never going back.

One of the principal founders of this school was Euclid, whose *Elements* form a grand work of geometry, which the mathematical world has hardly yet been able to improve upon. Of his history we know little. Pappus, contrasting his character with that of Apollonius, describes it as kind and unassuming, and particularly disposed to encourage mathematical merit in others. He is said to have been attracted to Alexandria by the patronage offered to learned men under the first Ptolemy; and to that monarch, who he had expressed some dissatisfaction at the prolixity of the reasonings, through which the study required him to proceed, Euclid is reported to have represented, that "there was no royal road to geometry." Besides the celebrated *Elements*, he was the author of mathematical works upon almost every branch of the science which we have mentioned. He wrote four books on *conics*; a treatise on *loci ad superficies*; and one on *porisms*, a species of geometrical proposition, which, after being long involved in obscurity, was elucidated by Robert Simson, and after him by professor Playfair. We have his data, and a *Treatise on Divisions*, that is, on dividing a figure in a given ratio by lines drawn under certain conditions. Another work which Pappus praises much, was an arrangement and analysis of mathematical paralogisms. We have already referred to his optics, of which science, mathematically considered, it is by no means improbable, from the nature of the treatise, that he was the inventor. We possess also a work on music attributed to him, but which, Montucla thinks, consists of two parts, written the first by an Aristoxenian, and the second by a Pythagorean. In the latter capacity, Euclid is said to have been the person who first demonstrated that the Aristoxenian method of proceeding by tones and half tones, would necessarily give the octaves out of tune. We have already mentioned the fragment, referring to mechanics, which is ascribed to Euclid; and arithmetic may be considered as the subject of the 7th, 8th, 9th, and 10th books of the *Elements*. In astronomy we have a work of his upon the doctrine of the sphere, entitled *Phænomena*. This last science was one of those which occupied most, and most successfully, the Alexandrian mathematicians. Above all, the importance of observation began to be better understood. ARISTILLUS and TIMOCHARIS for a long course of years made observations on the stars, many of which are preserved by Ptolemy. The poem of ARATUS, so popular among the ancients, and which was translated by men of no less name than Cicero and Germanicus, was about this time written at the court of Antigonus Gonatas. And ARISTARCHUS of Samos, besides his method of determining the distance of the sun by the dichotomy of the moon, mentioned in the HISTORY OF ASTRONOMY in the SACRO DIVISION, made an observation of the solstice 381 a. c. and is remarkable as having attempted to revive the true doctrine of the universe which places the sun in the centre. This we learn from Archimedes, of whose life we shall now collect what is known, and examine the improvements of which he was the author in the different branches of science.

This extraordinary man is said by Plutarch to have been a relation, as well as friend, to Hiero, king of Syracuse, and flourished under the long and peaceful reign of that prudent monarch. Though the Sicilian prince reigned at the time when the contests of the Romans and Carthaginians were becoming a struggle for existence, and in the situation where the rival nations most naturally came in contact, he kept himself pretty well out of the vortex of wars and calamities, into which the violence of his neighbours might have drawn him; and the warlike machines, which the great mathematician constructed, to prove to the king the resources of his art, found no employment during his reign. Archimedes appears to have been born a. c. 287, a little before Hiero's accession to the crown. His youth corresponded with the time of Ptolemy Philadelphus, under whom Alexandria, then the principal seat of science, contained several of the mathematicians whom we have already mentioned. To this school he travelled, but at what precise time does not appear. He was probably too late to be a personal scholar of Euclid, but among the other mathematicians, with whom he became acquainted, he frequently in his works mentions CONON, with particular expressions of attachment. Conon is known to have resided in Egypt, under Ptolemy Evergetes, in honour of whose queen he formed the constellation of Berenice's Hair. It is said to have been for the purpose of raising water out of the canal of Egypt that Archimedes invented the machine, which yet has the name of his screw; and the Arabian historian attributes to him the mounds and bridges, which are rendered necessary by the inundations of the Nile.

The greater part of his life, however, appears to have been spent at Syracuse; and his mathematical researches are given in "his beloved Dorian dialect," as one of his ancient commentators calls it; the form of Greek which was spoken in Sicily, and with which the pastoral poets have made us associate something of picturesque simplicity. It was there that he pursued his investigations, and carried forwards the mathematical knowledge of his time by those wide advances, which we shall shortly mention.

It would appear that then, as in later times, mathematicians used to announce their discoveries in part, in such a manner as to challenge the ingenuity of their contemporaries by what they kept concealed. Archimedes had sent to Conon a long list of propositions on various subjects, of which he required the demonstrations; and, it would appear, that he employed the artifice of stating some false theorems along with the true ones; "In order," he says, "that if any assert themselves to have discovered the whole, and produce no demonstrations, they may be convicted, as pretending to have done what is impossible." These discoveries refer to the area of the parabola, the surface and solidity of the sphere and cylinder, the properties of spheroids, and of that spiral, which is called indifferently the spiral of Conon or of Archimedes. Conon, however, died before he had obtained the demonstration of these propositions, to the great grief of Archimedes. "If he had lived," he says, "he would have found out these, and invented more, and would have done much for the advancement of geometry; for I well know his uncommon talents, and his indefatigable industry in these studies." When Conon was dead, years elapsed without any one attempting the

proposed theorems. The demonstrations were sent by Archimedes himself, at different times, to Dositheus, an Athenian, whom he knew, as he tells him, to be both a friend of Conon and a lover of mathematics; and who, after receiving a part, had pressed him much for the remaining portions. These successive epistles form his treatises on the quadrature of the parabola, on the sphere and cylinder, on helices or spirals, and on spheroids and conoids.

The *Treatise on the Quadrature of the Parabola*, was the first instance in which a geometer had been able to determine the exact space bounded by a curve line; for though several before him had pretended to assign the area of the circle and of portions of it, their assumptions, as Archimedes asserts, were inadmissible: and their conclusions must have been false, since the problem, as we have already observed, is not soluble. The method which he employs is most remarkable for its ingenuity and novelty. He divides the parabola into an endless series of decreasing terms; and we may observe in his process a tendency to that passage from finite to infinite, by resolving a curve into its smallest portions, which, after assuming various forms in the hands of Barrow, Cavalieri, Newton, &c. produced at last the differential and integral calculus. And though by means of these modern methods, a more scholar in mathematics may now obtain the answers to such questions as that of which we are speaking, we cannot but regret, in the facilities of our technical rules, the elegance and evidence of the ancient geometry. Difficult as the problem appears to the way in which Archimedes has treated it, his only axiom is, that of two unequal spaces, the excess of the greater above the less, may be multiplied so as to exceed any given space; and from this he proves, by the strictest reasoning, that a parabola can be neither greater nor less than two-thirds of the parallelogram described about it.

The speculations respecting the sphere and cylinder are those with which the author appears to have been most delighted, for he wished to have his grave marked by these solids, as some more recent mathematicians have had their discoveries engraved on their tomb-stones. Indeed all who have the perception of geometrical beauty, must be struck, both by his results and his methods. As he had been the first to find the area of a plane curve, he here finds the surface of a corolline solid; and determines the sphere to be two-thirds, both in content and in surface, of the cylinder which circumscribes it; with many other remarkable properties of these solids compared with each other and with the cone.

The subject of spiral lines, was also, so far as we know, altogether new. In the one which he has examined he has discovered many remarkable properties with respect to its area, tangent, &c.

The conoids and spheroids are solids described by the revolution of a conic section about its axis. These he considers, as also the sections which are made in them by planes, the solid content of the paraboloid conoid, &c. This subject appears to have given him more trouble than the rest, for he informs his correspondent that he long kept back the proofs of his theorems on it, because he found some difficulty and doubt; "at least," he says, "going over them more carefully, I satisfied my scruples."

Numbering
the sand.

Besides these works which are addressed to Dositheus, we have his measurement of the circle; in which he determines the circumference to be between 3 and 3½ times its diameter. The method which he uses might easily be extended to greater accuracy by the assistance of a proper system of arithmetic.

The Greek arithmetic is the subject of his *Pisamites*, or *Numbering of the Sand*, of which he thus explains the purpose to Gelo, the son of his king Hiero, and associated with him in the throne: "There are persons, king Gelo, who think that the grains of the sand are infinite in number; I mean not merely the sands about Syracuse and the rest of Sicily, but those of the whole earth, inhabited and uninhabited. Others think that they are not infinite, but that no number can be expressed which shall exceed this multitude. Now, I shall attempt to show by geometrical proofs, which you will be able to follow, that among the numbers which I have expressed and published in my books to Leucippus, there are some which exceed, not only the multitude of the sands which would fill the earth, but of those which would fill the universe. You understand that by the universe is meant, by most astronomers, the sphere of which the centre is the earth, and the radius the distance of the sun from the earth." He then proceeds to some reasonings to establish that this distance is less than 10,000 of the earth's radii; and to shew that if we conceive a globe of this magnitude to be formed of grains of sand, the fortieth of an inch in diameter, their number may be reckoned. With our present mode of notation, there is no difficulty in increasing numbers to any magnitude whatever. But the Greek system, less perfect than the Arabic, though much superior to the numeration of other countries, required some contrivance to carry it to the requisite extent. The Greek geometer answered this purpose by dividing the figures into periods, the unit in each period being a myriad myriad, or ten million times the unit in the preceding. The Greeks could thus go on with their numbers as far as they might choose, though still their method did not afford them the same facilities which we derive from ours, in arithmetical operations.

Astronomy.

Of the astronomical labours of Archimedes, none have reached our times, if we except the method of determining the sun's apparent diameter, which has already been extracted in the *HISTORY OF ASTRONOMY IN THE SECOND DIVISION*. (p. 469.) The accuracy of his result is remarkable, if we consider, not only the imperfection of his means in other respects, but that he does not appear to have known any way of observing with one eye at a time, and is obliged to make allowance for the double vision of his two eyes. He was, as were all the mathematicians of that age, a diligent practical observer; and we are told, that he thought he had discovered the distances of the heavenly bodies from the earth, and from each other; but that his measures were rejected by the Platonists, as not following that imagined perfection of mathematical proportions, which, they asserted, must necessarily exist. Cicero speaks of an orrery, as we

should call it, made by Archimedes, and exhibiting the motion of the sun, the moon, and the planets; which he uses as an argument against those who deny a Providence. "Shall we," says he, "attribute more intelligence to Archimedes for making the imitation, than to nature for framing the original?"

Perhaps the most remarkable part of his discoveries were those which he made in mechanics, and his applications of them to practice. We have already seen, that before his time, this branch of science did not exist. In his work on the equilibrium of bodies, he gives a proof of the fundamental properties of the lever, which has never yet been surpassed in simplicity and evidence; and applies his principles to find the centre of gravity of various spaces, with great ingenuity. In his work on the *Floating of Bodies in Fluids*, he shews a complete insight into the nature of fluid equilibrium; and determines the position in which bodies float in some cases, which can, by no means, be considered as easy, even to modern mathematics. Indeed, without any addition to the principles of Archimedes, the doctrine of equilibrium was enabled of being carried to its utmost extent, though among the ancients it appears to have stopped with him. We are told by Pappus, that Hero, a little after his time, proved in what cases there could be an equilibrium in the five mechanical powers; viz. the lever, the wheel and axle, the pulley, the wedge, and the screw; and that he reduced them all to one in principle; but we cannot be certain that these proofs were strict, for there is nothing satisfactory in the demonstrations given by authors before the time of Stevinus and Galileo; and an attempt made by Pappus himself to determine the mechanical advantage of the inclined plane is remarkably erroneous.

We read of many mechanical contrivances of Archimedes, some, probably, merely attributed to him from the celebrity of his name. For instance, an invention something like what are now called Chinese puzzles, in which certain angular pieces of ivory are to be put together, so as, by different arrangements, to produce the resemblance of various objects. But he seems to have turned much of his attention to the construction of machines of extraordinary powers; and he boasted of the unlimited extent of his art in the well-known expression, "give me a spot to stand on, and I will move the earth." The mechanicians of that time employed themselves, not merely in proving the possibility of making a given force move any weight, however large, but studied to combine the best material means for carrying it into effect. Athenæus describes a ship of extraordinary magnitude, which Hiero caused to be made with twenty ranks of rowers, and containing so enormous a space, as to have on board gardens, baths, walks, a gymnasium, a large library, &c. This unwieldy mass, Archimedes is said, by means of some mechanical power, to have enabled Hiero to push into the sea, by his individual strength. We have already mentioned the screw of Archimedes, which is said, also, to have been used as the pump of this vessel.

Though the study of mathematics is generally considered dry and repulsive by persons not engaged in it, there seem to be few pursuits which have the power of exciting so strong and engrossing an interest in the student. Like our own Newton, when

Mechanics.

**Mechanical
inventions.**

His labors.

* It is, in fact, about 24,000 of the earth's radii; but this difference does not affect the reasonings of Archimedes. He founded his calculations on the supposition made by Aristarchus of Samos, that the sun's diameter was not greater than thirty times the earth's.

Crown.

absorbed in the current of discovery, Archimedes is said to have required to be reminded of the common duties of eating and drinking by those about him; and while his servants were placing him in the bath, he employed himself in drawing mathematical diagrams in the ashes which were spread on the floor, or in the oil with which his skin was covered. "So that this abstraction made people say, and not unreasonably," Plutarch tells us, "that he was accompanied by an invisible siren, to whose song he was listening." A lively fancy might easily imagine a discoverer, in the enthusiasm of his speculations, to be absorbed in his attention to the voice, audible only to his ears, which reveals to him truths concealed from all the world beside.

Another story told of Archimedes, is that of Hiero's crown. King Hiero sent to a goldsmith a certain weight of gold, to be made into a crown. The crown was sent home of the proper weight; but it was suspected that some silver had been substituted for a part of the gold, and Archimedes was asked to detect the quantity of the fraud. He had sought in vain for some time, the means of doing it; when one day, going into the bath, the rising of the water as his body became more immersed, suggested a method, which he instantly saw to be infallible, and he immediately sprang out, exclaiming, "I have found it, I have found it," (*εὕρηκα, εὕρηκα*). Vitruvius explains the process by which he is said to have solved the problem. He placed the crown, and a wedge of gold, and one of silver, each of equal weight, in a full vessel of water. In each case the quantity of water which ran over, gave the size of the mass; and by comparing these, he found the quantity of silver in the crown. The principles explained in his *Equilibrium of Bodies in Fluids*, afford the means of a more accurate and scientific solution, which we should have been disposed to attribute to him, but for this testimony to the contrary.

Siege of
Syracuse.

We now come to the last and most remarkable events in the life of Archimedes, those connected with the siege of Syracuse, which ended s. c. 212. Hiero the friend of Archimedes had closed his reign a few years sooner. Gelo his son, and apparently the pupil of the mathematician, had died before his father. Hieronymus the son of Gelo succeeded to the throne but not to the popularity of his grandfather; he shortly fell the victim of a conspiracy, and Syracuse became a prey to contending factions, who soon engaged her in a quarrel with the Romans. Marcellus by sea, and Appius by land, laid siege to the city, and it would probably have been soon taken had it not been for the extraordinary resources of mechanical skill which Archimedes produced in its defence. We have an account of them in Polybius, one of the most intelligent and scrupulous of historians, and who was born a few years only after the time. He says that when the Roman fleet appeared sailing towards the city, it was assailed at a distance from the walls by powerful machines, which threw darts and stones: that when it got too near for the range of these, others were used so actively that Marcellus was obliged to approach the city, under protection of the night: and that when they were near it, such an artillery of arrows and other missiles was played upon them, that they were unable to make the assault and suffered great loss. To protect the besiegers from such attacks in their

approaches, they built upon vessels, certain machines in use among the ancients, and called *sambucæ*. When these came near, there suddenly started above the walls large cranes carrying stones of ten talents and heavy masses of lead: these were brought over the *sambucæ* and then let fall, so as to break through the whole structure and nearly to sink the ships on which it was carried. Large levers were also made, to project over the walls, from which iron claws were suspended; by these the vessels were seized by the prows and hoisted half way out of the sea, and then let fall, with such violence, as to be sometimes dashed under water: so that, as Marcellus observed, Archimedes used his ships like buckets. By these contrivances the Roman soldiers suffered so much, that at last, the appearance of a rope or a pole above the walls, threw them into a panic, for fear of some new instrument of annoyance.

There does not seem to be any reason to doubt these statements, which are confirmed by the universal consent of historians. In fact, while modern artillery was unknown, much greater attention was paid to improving those instruments which were used; and the effects produced exceeded, in many cases, any thing that we should think possible, without the use of gunpowder. The powers which were employed, were sometimes the elasticity of large beams of wood, of which a gigantic bow was made, and worked by machinery; and sometimes the forces of cords of different substances, which being violently twisted, were allowed to untwist, and thus to give motion to a lever inserted in them. We have descriptions of such machines, by Hero of Alexandria, who lived not long after Archimedes. With respect to the latter kind, he says that the best materials for the cords, are the muscles of the shoulders of various animals, of the legs of stags, and the necks of hulls. He also observes, that long female hair, having been saturated with essences, possesses a powerful elasticity for this purpose. And, in considering the effects ascribed to the other machines, we must recollect how much smaller the Roman vessels were than ours.

Another of the inventions ascribed to Archimedes in this siege are the mirrors with which he is said to have burnt the Roman fleet, of which relation the authenticity is more disputed. In the History of Greece, in the Second Division, some account is given of the ancient authorities and modern experiments on this subject. The silence of Polybius and Livy on this point, while they give as other details of the siege, would lead us to imagine that if Archimedes did execute something of the kind, it was not very important or decisive. And at the same time the distinctness of the later evidence, and the demonstrated practicability of the fact, hardly allow us to suppose that it is entirely without foundation. Lucian in the second century says, that Archimedes by his mechanical skill burnt (*κατέφλεγε*) the Roman ships. Galen, a little later, alludes to it as a known fact. Anthemius the architect of Saint Sophia in the sixth century, says that it is undeniable, and mentioned by numerous historians; and explains the method in which it might be executed as was afterwards done by Buffon and others. And the later authors, Zonaras and Tzetzes, mention it with an unusual distinctness of reference to the earlier historians Dio Cassius, Diodorus, &c. as if to remove any doubt which might exist. So that per-

mirrors.

Biography. haps we may come to the conclusion of Gibbon who says, "Since it is possible, I am more disposed to attribute the act to the greatest mathematician of antiquity: than to give the merit of the fiction to the idle fancy of a monk or a sophist."

By the ingenuity of Archimedes the siege of Syracuse was protracted for some time; but at last the fortune of the Romans prevailed. They discovered a weak place in the fortifications; made an attack when the citizens had relaxed their vigilance in the celebration of a feast to Diana; and soon became masters of part of the city. Marcellus is said to have wept at the approaching ruin of this populous and opulent state, which, old in prosperity, and rich in historical recollections, was now tending to a catastrophe so different from that of its former great siege by the Atheosians.

After some difficulties and fluctuations of success, the unfortunate town was taken by the Romans, and given up to be plundered by the soldiers. Archimedes, who had so long been its safety, perished in the confusion of the capture. It is said that Marcellus had given strict orders to preserve a person of whose genius he had had such extraordinary proofs; but that these were disregarded in the licence of war. While the Romans were plundering from house to house, Archimedes, unaffected by the violence which surrounded him, was absorbed in the contemplation of a mathematical diagram; and when a soldier burst into the room, refused to attend to him, till he had finished his demonstration: on which the man, with the carelessness of human life which such scenes produce, killed the venerable philosopher upon the spot. According to some, when about to be put to death, he pleaded, like Lavoisier in modern times, for a short respite to finish the philosophical inquiries on which he was engaged, which, as in that case, was also refused.

Thus died, at the age of 75, one of the most extraordinary mathematical geniuses of any age or nation. Marcellus was grieved at the fruitlessness of his attempt to save him, and honoured his memory by liberality towards his surviving relations. A sepulchre was built for him on which was placed a sphere and a cylinder, figures which had been the subject of some of his most beautiful discoveries. But neither his mathematical fame, nor his defence of Syracuse, seem to have kept him long in the memory of his countrymen. When Cicero, travelling in Sicily less than 140 years afterwards, inquired for his tomb, he was told by the Syracusans that nothing of the kind existed. "I recollected," he says, "some verses, which I had understood to be inscribed on his monument, which indicated that on the top of it there was a sphere and a cylinder. On looking over the burying ground, (for at the gate of the city the tombs are very numerous and crowded,) I saw a small pillar just appearing above the brushwood, with a sphere and a cylinder upon it, and immediately told those who were with me, who were the principal persons in Syracuse, that I believed that to be what I was seeking. Workmen were sent in with bills to clear and open the place, and when it was accessible we went to the opposite side of the pedestal: there we found the inscription, with the latter portions of the lines worn away, so that about half of it was gone. And thus one of the most illustrious cities of Greece, and one formerly of the most literary, would have remained ignorant of the monu-

VOL. IX.

ment of a citizen so distinguished for his talents, if they had not learnt it from a man of a small Samnite village."

Archimedes was incomparably the most inventive and original of ancient mathematicians, and seems to have possessed the power of applying his geometry to a greater diversity of subjects, and of overcoming difficulties of a more various kind. If he had had one or two successors of equal genius with himself, it is not easy to see to what extent or in what direction the science of the ancients would have advanced; but it must certainly have anticipated some of the discoveries of modern times, though probably by methods a good deal different from ours. The mechanics of equilibrium, hydrostatics, and estroptics might have been brought nearly to perfection, for they were in possession of the principles on which these depend. In fact, however, no advance of consequence was made in mixed mathematics. In astronomy alone had they adopted the only source of knowledge, assiduous and accurate observation. And the discoveries of mathematicians from that time were made almost entirely in pure geometry, and even these are very limited, if we except what was done by Apollonius; and of his propositions it is said that he owed some to Archimedes, whose results were left unedited and fell into his hands.

In practical mechanics the ancients appear to have gone somewhat further than we have yet mentioned. Hero seems to have been well acquainted with the effects, if not with the theory, of the elasticity of the air; and we have a treatise of his called *Pneumatica* or *Spiritualia*, describing divers machines depending upon that property, and most of them containing the principle of the syphon. We have also a treatise by him on automata, which are principally toys moved by very simple machinery. And besides several mechanicians who are remarked for their inventions of warlike machines, Ctesibius, the master of Hero, who lived apparently about 150 a. c. invented a pump which is yet considered of a very efficient construction.

In order to finish what relates to the great age of Greek geometry, we shall notice some of the eminent characters who flourished with or immediately after Archimedes. These all seemed to have belonged to the college of Alexandria. ERATOSTHENES was a contemporary of the Sicilian mathematicians, and was a remarkable instance of great acquirements in very different branches of knowledge. He is generally called by the ancients Eratosthenes the grammarian or philologist; and though he comes under our notice as a great geometer and astronomer, he was also a poet and an antiquary. It is seldom that one person attempts to master so many subjects, without incurring the charge and perhaps the danger of being superficial. His enemies gave him the name of Beta, as occupying only the second place in his pursuits: his admirers called him the Pentathlete, thus comparing him to a person who at the public games had been victorious in all the subjects of emulation. He was appointed superintendent of the library of Alexandria, under the third Ptolemy (*Geographes* 246—251 a. c.): and he had the merit of inducing that monarch to place in the vestibule of the museum the *arsilla*, or combinations of graduated circles which were the principal instruments of observation among the ancients. These instruments were about 20 inches diameter, and the observations made with them are quoted in the *Almagest*. The

Eratosthenes.

Biography. mode of observing was by placing a small pin on one limb of the circle, so that its shadow might fall upon another at the opposite extremity of the diameter, and thus indicate the position of the sun. By this means Eratosthenes is said to have found, that the interval between the tropics was $\frac{1}{4}$ of the circumference, which makes the obliquity of the ecliptic $23^{\circ} 51' 19''$. 5. His measurement of the earth is remarkable and celebrated, and has been described in the *HIST.* or *Astron.* in the *Second Division*. He also gave determinations of the magnitude and distance of the sun, which appear, from their discordance with each other, to be erroneously reported to us. Besides his astronomical merits, he was an eminent geometer. He turned his attention to conic sections; and we have his description of a mesolabium or instrument for finding any number of mean proportionals, which is ingenious, though it is said to have been ridiculed by Nicomedes; who, probably soon after, invented the conchoid for a similar object. He is said to have written *De locis ad medietatem*, the subject of which treatise can only be a matter of conjecture; and he is also known for what is called his *Sieve*, which is a method of finding prime numbers. We possess likewise his *Catasterism*, which is a description of the constellations. After living to the age of 83, he found his eightieth year his health decay, and came to the resolution that life was not worth preserving under such circumstances. He died by voluntarily abstaining from food, a. c. 194.

Apollonius The principal remaining name which offers itself to our notice in the Alexandrian school, is the illustrious one of APOLLONIUS, whom antiquity distinguished by the name of the *Great Geometer*, and who has been considered with corresponding admiration by some of the most profound of modern mathematicians. He was born at Parga in Pamphylia, in the time of Ptolemy Evergetes: was instructed in mathematics by those who had been the disciples of Euclid: and flourished at the museum under Philopater (221 to 204 a. c.) We learn from Pappus that he employed himself in what has been a favourite, but not very profitable, speculation of the most acute mathematicians, an attempt to prove the elementary axioms on which geometry is founded. The works of his which remain are a treatise on conic sections. The four first books of this, which were all that were known in Europe till 1658, contain the properties observed previously to his time; but the three following ones, which were brought from the east and translated from the Arabic, give his own discoveries. They are principally on the greatest and least lines which can be drawn from any point to the curve of a conic section. They shew wonderful powers in the management of the ancient geometry, and though it might be imagined that the instrument was scarcely capable of such results, they lead to the borders of the modern theories of evolute curves and centres of osculation.* Besides this treatise,

* The history of the recovery of these books is remarkable. Upon the syllabus given by Pappus of the lost books of Apollonius's conics, several persons had attempted to form a conjectural restoration, or *disinvention*, as it was called. In particular, Viriani had been for some time silently and laboriously engaged in this in-

tise, Apollonius wrote others on several very general and difficult problems of geometrical analysis, which he pursued into all their detail of cases. Their titles and subjects are given us by Pappus. Many of them have since exercised the ingenuity of the most skilful of modern mathematicians. For instance the problem of *tactions*, of which the most difficult case is to draw a circle touching three given circles, has been solved by Vieta and Newton. The *section of ratio* and the *section of space* have been restored by Halley. This problem is to draw a line through a given point, cutting segment from two given straight lines: in the first place so that they may have a given ratio; in the next place so that they may contain a given rectangle. In the *determinate section* it was required to find a point in a straight line, such that the rectangles of its distances from given points should have a given ratio: this was resolved by Dr. Simon. The problem of *inclinations* proposed to draw through a given point a straight line, so that a given portion of it should be intercepted between two given straight lines. Some of these problems had been solved by Euclid, and Pappus blames Apollonius for the harsh manner in which he speaks of the solution of his predecessor, which did not pretend to be complete.

Like the other mathematicians of his time he also applied to astronomy, as we learn from his having, like Eratosthenes, a *scholium* derived from a Greek letter. He was called *epiton* (ε) from his perpetual attention to the moon, which resembled the form in which that letter was written. After his time, the principal progress of Greek mathematicians was made in astronomy, and will be related hereafter. Either that the powers of the Greek geometry had reached their limit, or that inventive genius became more scarce, succeeding generations contented themselves almost entirely with commenting upon what had been done by the giants in geometry who were the first race. Thus Hypatia the daughter of Theon, Pappus, Serenus, and Eutocius wrote commentaries upon Apollonius; Eutocius also upon Archimedes; Theon upon Euclid: and it is from such of these as are still extant that much of the preceding information is derived. They had means of knowledge which have since been lost; and we might have been able to give a much more complete and accurate account of the extensive series of inventions which the old mathematicians exhibited, if time had spared the histories of this science by Theophrastus and Eudemus, from which later writers seem to have drawn the light whose scattered rays reflected from them we have been attempting to collect.

investigation, when it was discovered by Borelli (in 1658) that the 6th, 6th, and seventh books existed in Arabic in the Medicean library. Viriani saw himself on the point of losing the credit due to several years of research by this unexpected discovery. He however obtained from the Grand Duke, an attestation of the state of forwardness in which his own MSS. then were, signed by his hand: and an injunction to Borelli to keep secret his translation until Viriani's book had been published. The *Liberatio in V. Apollonii Conicorum* appeared in 1659, and the translation from the Arabic in 1661. The comparison of the conjectural with the actual Apollonius is to the credit of both. Viriani's propositions are more varied and extensive, but perhaps those of the ancient astronomer are more recalcitrant and difficult.

HYPERIDES	DIBO B. C. 322.

Biography. If we take an extensive view of ancient and modern literature, and compare their several departments, in order to form an accurate estimate of their relative merit, the palm of oratory seems confessedly conceded to the former. In the prosecution of scientific researches, in developing the principles of political economy, in the cultivation of various arts which contribute by their utility to national greatness, or adorn by their elegance the social intercourse of domestic life, the moderns have a manifest superiority. The same pre-eminence may be found in our didactic and descriptive poetry; and even in those more lofty and sublime efforts where the grandeur of the subject is calculated to display the full strength and brilliancy of poetical talent, the competition has not been inglorious. The ancients may, perhaps with justice, claim the prize; but we at least have proved ourselves no unworthy rivals.

In eloquence the case is widely different: a review of modern history presents to our observation "few who deserve the name of orators, even among those nations whose government would seem likely to facilitate the growth of eloquence, by admitting to a share in its legislature such assemblies as may be supposed to lie under the dominion of its influence. There have been men of information and talent who have assisted at the councils of princes, or shared in the deliberation of popular assemblies, but the authority which they exerted seems to have arisen more from an opinion of the extent of their experience, or the sagacity of their understanding, than from any peculiar power which they possessed of affecting the passions, or persuading the judgment of their audience. Their speeches seem to have been framed with little premeditation or study, and preserved by others with as little care." (*Hume's Essays*.) Indeed the slightest acquaintance with the records of antiquity is sufficient to teach us that the style and character of their eloquence is essentially different from our own: and before we proceed to give any account of the works of the Greek orators, or to introduce a sketch of their respective lives, it will not be amiss to make some preliminary observations on the causes of their vast and acknowledged superiority.

Without inquiring into the extent of that influence which climate may exercise over national character, it may be remarked, that the geographical situation of Greece was eminently favourable to the development of intellectual power, and to that peculiarly fine organisation by which delicacy of feeling is refined, even to fastidiousness. That the Athenians did possess this exquisite susceptibility, we know as well

by several historical anecdotes, as by the direct and explicit testimony of Cicero. Speaking of this extraordinary people he says, "Sincerum fuit sic eorum iudicium ut nihil possent nisi incorruptum audire atque elegans." Theophrastus was discovered to be a foreigner, by using the Attic dialect too correctly; Demosthenes was hissed in one of his earliest speeches for a false accent; and Euripides offended the ears of his audience by repeating too frequently the letter *e* (sigma) in a single line. (See Bowdler's *Remains*.) Longinus, in his *Treatise on the Sublime*, speaking of the proper collocation of words, brings a passage from Demosthenes, the harmony of which he says would be entirely destroyed by adding or removing a single syllable: τοῦτο τὸ ψήφημα τὴν τόνῃ τῇ καὶ περιουσίᾳ κίνησιν παραδίδωμι ὡς ἂν ὅτις ὅσον ὅσον: doubtless the observation of the critic was suggested by the delicacy of his own taste; and the audience whom Demosthenes addressed were also able to feel and appreciate the music of the sentence: but it is probable that no modern, though possessing the finest ear, would originally have made the remark; and we receive it from respect paid to the authority of Longinus, rather than from any very clear perception of its truth.

A tribunal then whose discrimination was so keen, whose taste was so fastidious, and from whose authority there was no appeal, would, by the very severity of its decisions, call forth productions of finished excellence, from those who were conscious of talents which deserved approbation, and stimulated by ambition to pursue it. Such a tribunal, though it might intimidate and abash minds of inferior calibre, would urge to active industry, and unwearied perseverance, those more eminent abilities which no difficulty can alarm, and no disappointment effectually retard.

Accordingly we find that among many of the ancients, the study of eloquence was the occupation of life, and the splendour of their success is only proportionate to the vigour of their exertions.—The laborious diligence of Demosthenes, his careful correction of natural defects, his seclusion from society, and earnest zeal in preparing himself for the career of a public speaker, are familiar to every one. The moderns may have the same powers of genius, and the same indefatigable application, but at least they are not often directed to the attainment of the same object.

Cicero, in his *treatise de Oratore*, has left us much valuable information respecting the Greek orators: from them he learnt the graces which eloquence is capable of assuming, and the deep and durable impression which it makes on the minds both of the

Biography. learned and the illiterate: his estimate of what an orator ought to do, was formed by what the Greeks had actually done; and therefore from his precepts we may, in some measure, learn the nature and the extent of their exertions in the prosecution of their favourite pursuit. After enumerating some exercises, such as speaking extempore, and from memory, or in repeating Latin orations which had been read in Greek—exercises, the habitual practice of which was necessary to the attainment of eloquence, he adds, "Legendi etiam poete, cognoscenda historia, omnium bonarum artium scriptores ac doctores et legendi, et pervolvendi, et, exercitatiois causa, laudandi, interpretandi, corrigendi, vituperandi, refellendi; disputationumque de omni re in contraria partes, et quicquid erit in quaque re quod probabile videri possit, eliciendum atque dicendum. Perdiscendum jus civile, cognoscendum leges, percipienda omnia antiquitas, senatoria consuetudo, disciplina, reipublice jura, sociorum fœdera, pactiones, causa imperii cognoscenda est. Litandis etiam ex omni genere urbanitatis facturi quidam lepos, quo, tanquam sale, perspergatur omnis oratio."—*Cic. de Oratore*, lib. i. 34. "Besides these exercises, the poets must be studied, and an accurate knowledge of history obtained: the works of all those who understand and teach the liberal arts, must be read repeatedly, and, by way of practice, their opinions should be either commended and explained, or corrected, refuted, and condemned. Opposite sides of the same subject should also be defended, and, whatever seems worthy of regard, should be extracted and enforced. Civil law must be thoroughly learnt, and an acquaintance formed with the records of antiquity, the customs and arrangements of the senate, with the rights of the republic, with the treaties and compacts of the allies, and the whole system of the government. The various kinds of elegant mirth must furnish wit and pleasantry, with which the whole speech must be seasoned, as it were, and interspersed."

If then such was the earnestness or zeal with which the ancients cultivated the art of eloquence, and so wide the range of learning which they brought to bear upon it; if the audience to whose judgment their speeches were submitted, were so alive to the perception of beauties, and so keen in discovering defects; we need not wonder that the superior excellence of the Greek orators is so vast and indisputable. As the prize for which these intellectual gladiators contended was valuable, so the weapon they employed combined the highest polish with the greatest strength. Those who are familiar with the Greek language need not be reminded of its unrivalled copiousness of expression, its majesty, elegance, and compactness, its unlimited range of compound words, and the flexible ductility with which it lends itself to convey every variety of meaning. The power of such an instrument was only to be surpassed by the skill of those who wielded it. The democratic government of Athens, its foreign wars, and domestic discord, furnished the Greek orators with ample materials for the employment of their eloquence; and successful exertions were crowned, not only with the pleasing tribute of popular applause, but the more profitable reward of political power.

Such, then, were some of the causes which promoted the growth and secured the celebrity of eloquence in Greece, or, to speak more properly, at

Athens. Oratory, in fact, flourished only at Athens; and while other states arrest attention by occasional periods of military glory; while Sparta excites astonishment by the extreme austerity of its national manners, and the singularity of its political institutions, history does not inform us that these republics produced any individual whose eloquence elevated him to importance during his life, or secured his posthumous renown.—*Cic. Brut.* 13. Velleius Paterculus, i. 18.

At Athens, where the favour of a wild and lawless democracy was the sure nod, perhaps, the only avenue to honour and to opulence, it is obvious that there would always be an abundant supply of men who would flatter the caprices of the people, with a view to their own aggrandisement: all those who were eager to rise to eminence as distinguished statesmen, or whose ambitious views tended only to make them the idols of a party, would naturally find in the cultivation of oratory the readiest means of success. To attempt an account of all these characters is evidently inconsistent with the limits of this article; their rise and fall will find a more appropriate place in the more minute details of Grecian history: the greater part of their speeches were, probably, forgotten, when the circumstances from which they arose had ceased to excite interest, and even of those whose works have partially escaped the ravages of time, many are rather consulted for historical information, than studied as models of style: the attention of the general scholar is judiciously fixed on a few pre-eminently individuals, who have expressed in the language of the sublimest eloquence, the sentiments of the purest patriotism; while the rest are consigned to the industrious labours of the professed critic, or to him who has opportunity and inclination to acquaint himself familiarly with all the remains of Grecian literature. In fact, the comparative value of the Greek orators is very unequal; nor did this escape the learned commentator, Reiske, the unwearied activity of whose research was only to be equalled by the acute sagacity of his discernment: six volumes of his great work are devoted to the orations of *Æschines*, *Demosthenes*, *Isæus*, and *Lysias*, while a part only of the last volume is sufficient to comprehend *Antisthenes*, *Alcidamas*, *Gorgias* of *Leontium*, and others, together with Latin versions of speeches by *Antipho*, and *Andocides*. To Reiske we would refer those readers who are desirous of particular information respecting these minor orators: for us, it will have been sufficient to give, first, a general account of the rise and progress of eloquence at Athens, and, secondly, to combine, with a sketch of their domestic lives, some observations on the style and peculiarities of those few, whom the judgment, both of contemporaries and posterity, has proposed to our imitation as models of oratorical excellence.

Cicero, in the admirable treatise which contains instructions for the attainment of that eloquence, of which he was himself so great a master, was naturally led to speak of the several periods of Grecian oratory. Each of these produced its peculiar style: the first comprehends *Pericles*, *Alcibiades*, and *Thucydides*. In the time of Cicero there were some fragments which went under the name of *Pericles*, and there is reason to suppose he himself considered them genuine.—*De Oratore*, lib. ii. cap. 21. See also *Cic. Brut.* 7.

Quintilian, on the other hand, deems them spurious:

Biography. the question is of very little moment, as the compositions themselves, whether genuine or spurious, are lost. Nothing of Alcibiades remains; but we know, from the unexceptionable testimony of Demosthenes (*Adv. Med.*) and others, that his accomplishments as an orator, were little inferior to his talents as a statesman.

Among those of the Greek orators, whose writings have been handed down to us, *Lysias* is the first in chronological order who arrests attention by the extent of his works, or the celebrity of his reputation. Others had existed in abundance, but the only knowledge of them which we possess, is their names, and the few scanty memorials of them which have been diligently recorded by Reiske. *Lysias* was born at a period when the cessation of war abroad, and the consequent establishment of internal tranquillity, left Athens at liberty to seek and find in the cultivation of literature, a distinction and delight which she had hitherto derived from military success. Sophocles and Euripides had touched the passions, and Aristophanes ridiculed the follies of the people; and philosophy, quitting the study of natural phenomena, had already applied itself to the investigation of moral truth. He was born at Athens, *Oc.* 80., his father, Cephalus, having migrated thither from Syracuse; others say the orator himself was a Syracusan by birth. At an early period of his life he accompanied a colony to Thurium, in Italy, nor did he return till the disasters of the Athenians in Sicily had alienated the attachment of the Thurians, who now dismissed with indignity the colonists whom they had sought with zeal. During the reign of the thirty tyrants, and the revolution which vested the management of the state in the council of four hundred, *Lysias* endured his full share of national suffering: when, however, Thrasybulus united those whom the cruelty of the thirty had expelled, and again restored the democracy, a bill was introduced to make *Lysias* a citizen. He died at the advanced age of eighty, having passed the latter years of his life in composing orations for the use of others, and in giving instructions in rhetoric. Quintilian mentions this custom of the orator, and adds, that in framing these speeches, he had the art of adapting them with peculiar propriety to the circumstances of those for whom they were written. Socrates thought his style too effeminate, as we learn by an anecdote preserved in Cicero.—“Cum ei scriptam orationem disertissimus orator *Lysias* attulisset, quam, si ei videretur, educeret, ut ea pro se in judicio uteretur, non inavitus legit, et commodè scripturam esse dixit: sed inquit, ut, si mihi calceos Sicyonios attulisses, non oterer, quamvis essent habiles et apte ad pedem, quia non essent viriles, sic illam orationem disertam sibi et oratorium videri, fortem et virilem non videri.”—*De Orat.* lib. i. 54. The circumstance of many of these speeches being composed on occasions of private rather than public interest, renders an enumeration and analysis of them less important: it had also a manifest effect on the style of the author, and hence he aims rather at neatness, elegance, and precision of language, than the more sublime beauties of oratorical excellence. (See *The Preface to Taylor's edition of Lysias.*)

In some of his speeches there is much interesting information respecting Athenian finance, and the immense burthens which were laid by the state on the

fortunes of the wealthy citizens. Vast sums of money were collected by forcible contribution, and laid out in ministering to the amusements of the people: the *χαρτηρία* and *λευσουργοί* *εργασίαι* provided games and spectacles, and theatrical entertainments, in which troops of singers and dancers displayed their musical skill, and performed their evolutions. The writings of *Lysias* are conceived in the spirit of determined republicanism, a spirit which delighted in arbitrary confiscation, and which seized on the fortunes of the rich to replenish that exchequer, from which the amusements of the mob were to be supplied: hence arose, on one hand, the most anxious desire to conceal wealth, and, on the other, unwearied acuteness in detecting it. This introduced bribery and falsehood into the Athenian courts of justice; while those whose opulence was proved, and consequently plundered, endeavoured to indemnify their own losses by the corrupt administration of the city magistracies. In short, the speeches of this orator display such a system of public and private rapine as may diminish our admiration of Athenian government, and teach us to receive with caution the praises which are lavished on the advantages of Athenian liberty.

The great merit of the style of *Lysias* is its purity: in this, which may almost be esteemed the first excellence of an orator, *Isocrates* only equalled *Lysias*, and no one ever surpassed him. Secondly, he has a peculiar art of giving his subjects an air of dignity and importance, while at the same time, he uses none but the simplest and most unostentatious phraseology, alike free from the mixture of barbarous expressions, and the display of ambitious ornament. This most valuable art Gorgias, of Leontium, entirely missed: he, when he wished to elevate and adorn his subject matter, found no other method than the use of metaphors without number, pompous words, and poetical figures, which both spoiled the value of his own composition, and vitiated the popular taste. The writings of *Lysias* are pure without feebleness, and perspicuous without prolixity: he combines, with the greatest knowledge of human character, the happiest skill in adapting his speeches to the several ages, pursuits, and stations of individuals: the arrangement of his words is always clear, and the language itself uniformly elegant. His power of inventing, and judgment in selecting, appropriate arguments, was eminent; but *Dionysius of Halicarnassus*, thinks him defective in their arrangement. His exordia are singularly good; especially the opening of that speech, in which *Diogenes* is accused of having treacherously applied to his own use, property entrusted to his care: the same oration furnishes a fine model of narration. *Lysias* is not successful in attempting to excite the passions: he is not “a mighty master of the human mind:” he raises no intense feeling; he does not expand and amplify his subjects, but is content to state them with clearness, elegance, and brevity. For further information, the reader may consult *DIONYSIUS HALICARNASSENSIS*.

ISOCRATES was born at Athens, five years before the commencement of the Peloponnesian war: his father, Theodorus, was not wealthy; but he gave his son such a liberal education as awakened in his mind an early love of literature, and induced him to devote the efforts of maturer years to the careful and continued cultivation of philosophy. He attended the

Biography. lectures of Gorgias, of Leontium, and there imbibed a desire to combine the qualifications of a statesman and an orator; but his natural timidity and weakness of voice were impediments to public speaking too great to be overcome, and he therefore turned his attention to the more tranquil task of composition. Abandoning to the sophists of the day all subjects connected with private concerns of minor importance, his object was to teach moral virtue to individuals, and political wisdom to states. His own pure taste led him to reject the perplexing casuistry of Protagoras, and the ostentatious ornament of Gorgias: his school became the favorite resort of the studious, and spread through the various cities of Greece, men who were afterwards eminent in history, politics, and law. He died in his ninety-eighth year, unable to survive the blow which the liberty of his country received at the fatal battle of Chæronæa.

The style of Isocrates approaches that of Lysias in purity and correctness; we find there the same careful and judicious selection of appropriate words, the same habitual avoidance of obsolete ones, and the same consequent perspicuity. The periods, however, have not the same roundness or fulness, nor are they equally adapted to forensic disputation: at times they are too prolix, and deficient in natural simplicity. Isocrates studies too much the harmony of his cadences, and his sentences are often comprehended in a rhythm which is almost poetical. The selection of his terms is admirable; their arrangement capricious and affected, and his figures are frequently so pompous as to make him liable to the imputation of frigidity, ψυχρότης. The sweetness of Lysias's style is natural, that of Isocrates, affected: the latter, however, has a manifest superiority in dignified elevation and majestic sublimity. Lysias is neat and dexterous in the management of minute points; Isocrates excels in the management of great ones. In the invention of arguments he is a match for Lysias; in the arrangement and application of them, superior: Isocrates also has the advantage in the general management of his subjects, and the philosophical adjustment of their several parts, and also in the moral beauty and political truth of his sentiments, particularly in his famous *Panegyric*. In this speech he enumerates the merits of the ancient Greeks, their military prowess, their noble ambition, their disinterested patriotism, their attachment to their constitution and laws, their fidelity to oaths, their private integrity; and he dwells with energy on other topics, calculated to check the progress of depravity, and awaken the love of virtue.

If a military man might derive instruction from the orations which Isocrates addressed to Philip of Macedon, all the several states of Greece might have been benefited by that spirit of unanimity and concord which is taught by the *Oratio de Pace*: its object is to prove that honesty is the best policy; and to persuade the Athenians to curtail their ambitious schemes of naval dominion, and make peace with the Chians, Rhodians, and their allies. Some of the ancient critics have esteemed this the best of the speeches of Isocrates, yet is it not faultless: it is too concise, and at times not sufficiently elevated and dignified, neither are the rhetorical figures sufficiently bold; and there is a want of vehemence and ardour which might awaken corresponding sentiments in his audience.—See *DIONYSIUS HALICARNASSENSIS*. Quintilian, speaking

of Isocrates, says, "Omnes veneres cætas est." and Cicero begs permission to admire the orator, and supports his own judgment by the authority of Socrates and Plato: "Me autem qui Isocratem non diligunt una cum Socrate et Platone errar patiuntur.—Cic. *Orat.* § 13.

Little is known of the private life of *ISÆUS*: one circumstance however has been recorded which is in itself a title to immortality.—Isæus was the instructor of Demosthenes.—The model he proposed to copy was the style of Lysias, and his imitation is so close that it requires an accurate knowledge to discriminate the two. In Isæus there is the pure, perspicuous, and concise diction; but perhaps his figures are more artificial and his expressions less natural.—If his style is inferior to Lysias in eloquence, it surpasses him in majesty. The use of interrogatory sentences gives to his speeches an animation and vehemence like that which delights the reader of Demosthenes; and many indications of the sublimity which under that orator acquired maturity and vigour, may be traced in the writings of Isæus. The narrations of Lysias are made with so much simplicity and candour, so much apparent love of truth, that they invariably engage the reader's assent. In Isæus, on the contrary, there is so much visible art, and such appearances of preparation and design, that even when the facts communicated are true, we feel inclined to deny him credit.

The speeches of Isæus which are preserved relate chiefly to private causes; and the minuteness of the subjects discussed may render them uninteresting to the general reader. Nevertheless, he gives us insight into many points of ancient jurisprudence, which, but for him, posterity would have wholly missed.—On the important subject of hereditary and testamentary bequests; on the laws of heirship by proximity of blood, and on heirship by appointment; on desolate heritages; on the Athenian customs relative to the adoption of children; the forms under which such adoption took place; the manner in which the fortune of the person adopted was affected, both as to the house from which he was emancipated and that into which he was received; on all these, and other similar points, Isæus supplies many interesting particulars which no other writer of antiquity affords. From him also may be collected all the Athenian laws relative to the rights of women, and more particularly of heiresses: many of them curious in themselves, and most of them evincing that the chains which society laid on the females of Athens were not at all lightened by the institution of law. Isæus has been translated by Sir William Jones, and the speeches are accompanied by a valuable commentary. In that the reader will find much information on ancient jurisprudence. See also *Quarterly Review*, No. 51, on Dalzel's *Lecture on the ancient Greeks*.

We have thus concisely explained some of those causes which in the early period of Grecian history might have facilitated the progress of eloquence; and we have subsequently combined, together with a few biographical notices, some remarks on the peculiar style of those under whose hands it gradually acquired the maturity of elegance and force.—We are now arrived at the history of one, whom the voice of general opinion has designated as the most complete model of an orator; of one whose compositions were sufficiently perfect, to satisfy even the fastidious delicacy of Cicero

himself. This writer, the wisdom of whose opinions on the ancient orators, is proved by his own extraordinary success, never speaks of DEMOSTHENES but in terms of the highest commendation.—“*In Græcis vero oratoribus quidem admirabile est, quantum inter omnes unus excellat. Cic. Orat.*” again he observes, “*Planc quidem profectum et cui nulli admodum desit, Demosthenem facile disceris. Cic. de Clar. Orat.*” Again, “*Viduo profecto illum multa perficeret, nos multa conari; illum posse, nos velle quocunque modo causa postulat, dicere. Cic. Orat.*” Recordecim nos longe omnibus auctem antefere Demosthenem, qui vim accommodaret ad eam quam sentiam eloquentiam nos ad eam quam aliquo case agnoscerim.” Nothing can be conceived more noble and disinterested than the spirit which dictated this panegyric; nothing more decisive than the language in which it is expressed. Cicero here represents his great predecessor as having not only surpassed all the actual and existing models of eloquence, but effected all that taste can desire and imagination fancy, and as having embodied and expressed the best ideal of oratorical excellence.—Demosthenes was equally eminent as an orator and a statesman, and in the latter capacity he was concerned in most of the public transactions of his own eventful times: it is obvious, however, that any detailed account of his political career would both exceed the proper limits of this article, and repeat unnecessarily, those circumstances, which are introduced with more propriety, in the regular history of the affairs of Greece.

The father of Demosthenes was a citizen of rank and opulence: he died when his son had completed only his seventh year, and left in the hands of guardians the administration of considerable property. The orator's early studies were impeded, partly by the over-anxious fears of maternal tenderness, and partly by infirmity of health. When he was about sixteen, his curiosity was attracted by a trial in which Callistratus pleaded, and won a cause of importance. The eloquence which procured, and the acclamations which followed his success, so inflamed the ambition of Demosthenes, that he determined to devote himself thenceforward to the assiduous study of oratory. He chose Læus as his master rather than Isoerates (either because this plan was least expensive, or because the style of the latter was not sufficiently nervous and energetic): from Plato also he imbibed much of the richness and grandeur which characterise the writings of that mighty master. His first attempts at oratory were made to vindicate his own claims, and recover property which his guardians had appropriated to themselves. In this he succeeded; but his early endeavours to obtain distinction as a public speaker entirely failed on account of the weakness of his voice, and indistinctness of his utterance. These impediments however, served only to animate his zeal; and by studious seclusion, and the habitual exertion of declaiming on the sea-shore, he in time overcame them all. The energy and force of his action were admitted to be pre-eminent, even by his rivals. When the Rhodians expressed their admiration of the oration “*Fur the Crown*,” Æschines said to them, what if you had heard the monster himself, *τί δὲ εἰ αὐτὸς τοῦ ὄφιδος ἀκούετε*.

The indefatigable industry of Demosthenes gave his enemies an opportunity of denying his natural talents: this malicious opinion would easily find credit; and in fact a similar mistake is very frequently made;

for since it is acknowledged on all hands, that all successful men who are naturally dull must be industrious, the converse of the proposition grows into repute, and it is inferred that men who are industrious must necessarily be dull. The accusation against Demosthenes seems to have rested chiefly on his known reluctance to speak without preparation; the fact is, that though he could exert the talent of extempore speaking, he avoided rather than sought such occasions, partly from deference to his audience, and partly from apprehending the possibility of a failure. Plutarch, who mentions this reluctance of the orator, mentions at the same time the great merit of his extempore speeches.

Before the time of Demosthenes, there existed three distinct styles of eloquence; that of Lysias, mild and persuasive, quietly engaged the attention and won the assent of an audience: that of Thucydides, bold and animated, awakened the feelings, and powerfully forced conviction on the mind; while that of Isoerates was, as it were, a combination of the two former. Demosthenes can scarcely be said to have proposed any individual as a model; he rather culled all that was valuable from the various styles of his great predecessors, working them up, and blending them into one harmonious whole: not, however, that there is such a uniformity or mannerism in his works, as prevents him from applying himself with versatility to a variety of subjects; on the contrary, he seems to have had the power of carrying each individual style to perfection, and of adapting himself with equal excellence to each successive topic.—In the general structure of many of his sentences, he very much resembles Thucydides; but is more simple and perspicuous, and better calculated to be quickly comprehended by an audience.—His clearness in narration; his elegance and purity of diction; and (to borrow a metaphor from a sister art) his correct keeping, remind the reader of Lysias. A particular instance of this similarity is selected by Dionysius Halicarnassensis, from the speech against Conon. He considers the resemblance so complete, that a critic might be at a loss to determine, from internal evidence alone, to which orator to ascribe the composition. But the argumentative parts of the speeches of Lysias are often deficient in vigour, while earnestness, power, zeal, rapidity and passion, all exemplified in plain unornamented language, and a strain of close business-like reasoning, are the distinctive characteristics of Demosthenes. The general tone of his oratory was admirably adapted to an Athenian audience, constituted as it was of those whose habits of life were mechanical, and of those whose ambition or taste had led to the cultivation of literature. The former were captivated by sheer sense, urged with masculine force and inextinguishable spirit, and by the forcible application of plain truths; and yet there was enough of grace and variety to please more learned and fastidious auditors. “His style (as Hume well observes) is rapid harmony, exactly adjusted to the sense: it is vehement reasoning, without any appearance of art: it is disdain, anger, boldness, freedom, involved in a continued stream of argument; and, of all human productions, the orations of Demosthenes present to us the models which approach the nearest to perfection.”

The perusal of Isoerates produces a calm, easy, and agreeable tranquillity of mind: Demosthenes agitates

the feelings with various and conflicting emotions; fear, hatred, pity, benevolence, chase each other in rapid succession. If a comparison be instituted between the famous oration of Isocrates de Pace, and that part of the third Olynthiac, where Demosthenes contrasts his own times with preceding periods, the advantage is manifestly in favour of the latter: it has more majesty, more energy, and, above all, more power in affecting the feelings.

Something similar may be said respecting Plato: if we contrast his funeral oration with a part of Demosthenes's speech "For the Crown," where he awakens in his countrymen the love of virtue by commemorating their former renown. This latter has all the vivid distinctness of reality, as opposed to fiction; the glow of robust and vigorous health, as opposed to the delicate flush of sickness. The one is a beautiful parterre, where the eye is delighted by abundance of cultivated flowers; the other a tract, where every thing, both for use and ornament, springs up spontaneous and plentiful.

Another very remarkable excellence of Demosthenes is, the collocation of his words: the arrangement of sentences in such a manner that their cadences should be harmonious, and to a certain degree rhythmical, was a study much in use among the great masters of Grecian composition. Plato passed the latter years of his life in correcting his dialogues; and that very simplicity remarkable in the structure of the periods of Demosthenes, is itself the result of art. In the course of this article, the reader has often been referred to the works of Dionysius of Halicarnassus, an author who is less studied than his powers of original composition, and his critical sagacity deserve. We here translate a passage in which he coarsely sketches the character of Demosthenes, and we earnestly recommend to general perusal the treatise from which it is extracted.—"Demosthenes then, finding the system of public speaking so artfully arranged, and succeeding as he did to such eminent orators, did not deign to copy any single model, deeming all his predecessors half-artists, as it were, and imperfect. But having selected from these all their respective excellencies, he blended them together, and combined from many sources a style of composition magnificent yet polished; full, without overflowing; refined, yet unaffected; adapted to popular assemblies, yet natural; severe, yet animated; concise, yet flowing; gentle, yet keen; moderate, yet passionate: like Proteus, celebrated by the ancient poets, who could easily assume in succession every variety of form. Whether he was some deity or genius deluding the eyes of men, or, what is the more probable conjecture, some mortal prodigy of eloquence and wisdom seducing the senses of his audience; some such opinion I entertain respecting the style of Demosthenes; and this is the character I give of it, that it is made up of every kind."

Although the writings of Cicero do not fall within the scope of the present subject, yet a comparison between the two greatest orators of antiquity will scarcely be deemed irrelevant. The following passages, translated from Longinus and Quintilian, are introduced by Young in his *History of Athens*.

"Demosthenes is more lofty and compressed in style; Cicero more diffuse: the former, with strength, brightness, and velocity, so inflames whatever he touches on, that he should be compared to the tem-

pest, which hurries all before it, or to the lightning, which strikes at the moment. Cicero's oratory shoots not forth so impetuously, but as a lambent flame plays round its subject, and with the copious matter feeds itself as it winds over the soil, till its fuel is exhausted, and its force is spent. But I must further observe, the reason of the Demosthenic style soaring bold and impassioned, is when the hearer is to be carried away, and hurried into the sentiments of the speaker; and that the proper occasions of diffusive rhetoric is when it is necessary to calm and soften the feelings of the audience.

"I allow," says Quintilian, "that the works of Demosthenes should first be read, or rather gotten by heart: the excellencies of either are equal, as to political knowledge, strength of argument, method of arrangement, and as to all other points that come under the head of invention. In eloquence they differ; that of the one is more compressed, that of the other more copious; the one is more pointedly, the other more fully conclusive; the one is more keen and forcible, the other sometimes keen, yet always with dignity; from the one nothing could be taken, to the other nothing could added; more art is in the one, more nature in the other. In the witty and the tender, which most affect the taste and feelings of men, we have the better of the comparison; perhaps the usages of the Greek commonwealth precluded such sort of appeals; and, on the other hand, much that the Athenians admired, might not have been admissible by a Roman audience." *Inst. Orat. lib. x. ch. 1.* The political character of Demosthenes must be gathered from the history of his own times, and from the careful study of his own speeches; these display in glowing colours his devoted attachment to his country; his zeal and perseverance in opposing the designs of Philip; his bold defence of the rights of Athens—a defence which neither flattery nor fear could induce him to relinquish; and they form the sources from which the historian collects his most valuable and authentic memoirs. Indeed we may say with Young, "Is there a fact in the history of his own times which escapes him? or is there a deduction from those facts which does not denote his knowledge of business and political sentences? Does not each speech term with reference to the laws of his country, to public letters, to embassies, and documents of state? Does not every oration stand an example against the frivolous pretensions of those who seek to be public speakers, without a knowledge of public business?"

The courage, however, of Demosthenes was political rather than military. At Chæronea he fled from the field of battle, though in the Athenian assembly no private apprehension could check his eloquence, or influence his conduct. Another stain was cast on his character, by the imputation of having accepted a bribe from Harpalus. This man having embezzled some public money, fled from the court of Macedonia; he sought refuge at Athens, and by a present of a gold cup, prevailed on Demosthenes not to oppose his admission. When Alexander the Great demanded that the orator should be given up, Demosthenes was compelled to save himself by flight: he was subsequently recalled from exile, and received with honour; but when Antipater came into power, and enforced the demand which Alexander had made, Demosthenes

ÆSCHINES was not a man of rank or fortune, and the early part of his life was devoted to the assistance of his father, who kept a school: from this occupation he betook himself to act plays, and afterwards began to take a share in politics: here he soon distinguished himself, and the violence with which he opposed the party of Demosthenes created a suspicion that he had been bribed to support the interests of Philip. This prince and the Athenians becoming mutually tired of war, an embassy was sent from Athens to propose conditions of peace. After the preliminaries were adjusted, and terms stated, the same set of men, among whom were Demosthenes and Æschines, were again sent to exact of Philip the necessary oaths. Demosthenes accused Æschines of betraying his trust in this important embassy; of having been suborned to forward the king's interests; and of circulating at Athens false reports, in consequence of which no exertion was made to prevent Phocis from falling into the power of Philip. The accusation and the reply are both preserved, and rank among the best specimens of Grecian oratory: yet some obscurity hangs over their history. Some say they were never delivered; others that Æschines escaped by thirty votes only, and that he owed his acquittal to the interest of his patron Eubulus, rather than to his own innocence. After the death of Philip, Æschines made his celebrated speech against Ctesiphon: the charges in the indictment were three: the first, that Ctesiphon had proposed a bill unlawfully decreeing a crown to Demosthenes: the second, that Ctesiphon had acted illegally in proposing that Demosthenes should be crowned in the theatre: the third, that the character of Demosthenes himself was such as to render him unworthy of any public honour. This trial produced from Demosthenes the most elaborate, and one of the finest of his speeches. He gained his cause triumphantly; and Æschines, not having a fifth part of the votes, was banished from Athens, and retired to Rhodes.

Cicero, in his treatise de Oratore, does not make very frequent mention of the works of Æschines: but his name, whenever it appears, is enumerated among the first masters of Grecian oratory, and the testimony to his merit is distinct and decisive.—“Aspicite nunc eos homines atque Intemini quorum de facilitate quesimus, quid intersit inter oratorum studium atque naturas. Sanvitatem Isocrates, subtilitatem Lysias, acumen Hyperides, sonitum Æschines, vim Demosthenes habuit: quis eorum non egregius? tamen quis ejuisque nisi sui similis?”—“Examine now

and observe those men whose oratorical abilities we are discussing, what variety there is in their acquirements and powers. Isocrates was distinguished for his sweetness; Lysias for elegance; Hyperides for keenness; Æschines for a sonorous style; and Demosthenes for force. All these are great orators, yet each has his peculiar merits.” Cic. de Or. lib. iii. c. 7.—And again, “Si qui send causas contulerunt, et Demosthenes, Hyperides, Lycurgus, Æschines, Dinarchus alique complures, etsi inter se pares non fuerunt tamen sunt omnes in eodem virtutis imitandæ genere versuti: quorum quamdiu mamit imitatio tamdiu genus illud dicendi studiumque vixit.” De Or. lib. ii. c. 23. In these two extracts mention is made of Hyperides: Longinus speaks highly of his powers; and Leland thus expresses himself with respect to this orator and Demades:—

“DEMADES, by his birth and education, seemed destined to obscurity; but as the Athenian assembly admitted persons of all rank and occupations to speak their sentiments, his powers soon recommended him to his countrymen, and raised him from the low condition of a common mariner to the direction of public affairs. His conduct as a leader was not actuated by the principles of delicate honour and integrity; and his eloquence seems to have received a tincture from his original condition. He appears to have been a strong bold speaker, whose manner, rude and daring, had often a greater effect than the more polished style of others.

“HYPERIDES, on the contrary, was blessed with all the graces of refinement; harmonious, elegant, and polite, with a well-bred festivity, and delicate irony; excellent in panegyric, and naturally powerful in exciting the passions. Yet his eloquence seems rather to have been pleasing than persuasive: he is said not to have been so well fitted for a popular assembly, and political debates, as for private causes, and addressing a few select judges.” Leland's Preface.

We have thus directed the reader's attention to a few of the most distinguished of the Greek orators, and endeavoured to point out and discriminate some of their respective excellencies. The name of many others are recorded by Cicero, whose admirable treatise on Oratory cannot be too much commended: time, however, has totally destroyed the works of several, and the fragments of others which survive are, comparatively, few and unimportant. But he who studies with interest all the remains of the Greek orators, however scanty, or however mutilated, will find in Reiske's learned work such information as the subject admits, collected with industry, and arranged with skill.

MENANDER.—MIDDLE AND NEW COMEDY.

FROM A. M. 3662. A. C. 342. TO A. M. 3711. B. C. 293.

Bibliography. THE literature of Athens, always most strongly developing itself in the theatre, existed, at that period of its history, at which we are now arrived, in the comic drama alone. The subject of the present article,—the writer who left for Terence no ambition but to imitate, and no praise but that of having imitated successfully, may be taken to represent all that it remained for the country of Æschylus and Aristophanes to produce, after she had yielded to the arts and arms of her Macedonian conquerors. But how is it represented? The name of Menander, and of the other less celebrated writers of the middle and new comedy, (for the present we adopt the distinction,) with a few dates, tell all that we must aspire to know of the artists; whilst some unconnected and misanthropic fragments of moralising common-place, convince us, by their strange opposition to all that antiquity has told us of their art itself, of the utter fruitlessness of any attempt to form, for ourselves, an extended estimate of its tendency and spirit. The scenes of Terence, indeed, familiar to every scholar, may serve as a specimen of the plot and conduct of the comedies of the new school—a school which Marmontel, writing in the spirit of French criticism, has characterised as having called comedy from coarseness to simplicity and nature. But, judging from the terms in which ancient writers have conveyed to us their encomiums of the dramas of the Athenian comic poets of this period, and above all of Menander, we cannot avoid believing, that Terence, the “dimidiatus Menander,” as Julius Cæsar called him, without having incurred the blame of a parsimonious enomist, has not presented to us the better half of his original. Where do we discover in the elegancies of the Roman poet, the traces of him who is described by Pliny as “omnis luxurie interpres”? Where do we recognise the traits of that author, whose enjoyment seems to have shewn itself in his verses, no less than in his life? Ill, however, as Terence may express much of the delicate luxuriance of this “Priest of Love,” (so his unqualified admirer, Plutarch, has designated him,) to him we owe, at all events, a gayer portrait of the comic muse, than the few morsels which time and bigotry have spared, would have allowed us to depict for ourselves. Why we ascribe to bigotry a share in causing our loss of the entire works of the new comedians, must be explained by Demetrius Chalcondylas, who assures us, that the Greek emperors, burnt the works of our author and his brethren, at the instigation of the priests, who felt, or feigned scandal, at the amatory plots of which they were framed. The relics which have been preserved to us, we chiefly owe to the taste and reading of some of the early Christian writers, in whose works there are frequent extracts, (frequent with relation to the subject of the treatises where they are found, though scanty, indeed, if

referred to the number of the plays from which they are taken,) from the moral and general reflections which the comedies supplied. “It may well be supposed,” observes Mr. Cumberland, in his learned and judicious remarks on the Greek Theatre, in the *Observer*, vol. v. No. xv. 8., “that they would naturally take the most moral and sententious from amongst the comedies they quoted, and such as afforded grave and useful remarks upon life, harmonising with their own doctrines and instructions.” Hence such passages as that which the same ingenious writer has translated in the following lines, form the amount of all that we now have of the gay and amiable Menander. The original is preserved in the commentary of Eustathius.

“Suppose some God should say—Die when thou wilt,
Mortal, expect another life on earth;
And for that life make choice of all creation
What thou wilt be; dog, sheep, goat, man, or horse;
For live again thou must; it is thy fate:
Choose only in what form; there thou art free—
So help me, Crato, I would fairly answer—
Let me be all things, any thing but man.
He only, of all creatures, feels afflictions;
The generous horse is valued for his worth,
And dog, by merit, is preferred to dog—
The warrior cock is pampered for his courage,
And even the bawdy brood.—But what is man?
Truth, virtue, valour, how do they avail him?
Of this world's good, the first and greatest share
Is fustery's prize; the informer takes the oxt,
And bare-faced knavery garbles what is left.
I'd rather be an ass than what I am,
And see these villains lord it o'er their betters.”

The man in which comedy flourished under Menander, succeeds immediately to that of Alexander the Great. He was the cotemporary of Demetrius of Phalerus, and had been instructed by Theophrastus in philosophy; but in his manner of thinking he approached nearer to the Epicureans. There is an epigram of his, in which he says, “That as Themistocles had preserved the political liberty of his country, so had Epicurus preserved its freedom of reason.” He was, in his private habits, a refined voluptuary. The picture which Plutarch gives of his exterior, is sufficiently characteristic.

“Veniebat greco delicto et linguado,
Unguento delictus, vestitus adulescens.”

The intimacy of his connexion with the courtesan Glycera, has been often recorded; and furnished Alciphron, the letter-writer, with some of his most elegant and amusing epistles; (which, by the way, are mentioned by Cumberland, as if they were the authentic productions of the poet—a curious error in the grandson of Bentley, whose most successful labours were directed against the supposititious letters of the sophists.) It would not, perhaps, be fair to ascribe to the character of the poet, or of his philosophy, the licentiousness which some of the ancient writers have described as colouring his dramas. The

Biography. political state of the stage at the period in which he wrote, may, without any excess of liberality, be allowed to form a better apology with such tenacious moralists as deem an apology needful.

An Athenian, living under the domination of a foreign power, might well be pardoned if he showed too ready a propensity to those perversions of the seducing but dangerous doctrines of Epicureanism, which place the highest happiness of life in the gratifications of sense, without ever awakening the desire of noble exertion. The sentiments which this indulgent morality inspires, seemed made to console the mild and serene disposition of the Greeks for the absence of glory. And as such a doctrine is perhaps most suitable to the spirit of the comic poet, because it only produces moderate impressions, and never seeks to excite violent indignation against the weaknesses of human nature, so the stoic philosophy is more conformable to the sentiments by which the tragic poet is animated. It is therefore easily to be understood, why in these times of political oppression, the Greeks were inspired by so passionate a taste for comedy; since by turning their thoughts from public affairs and the interests of human nature, it fixed them wholly on their domestic and personal circumstances.

It is a question with us how far a parallel can fairly be instituted between comedy in this and in its earlier stage; between what we know of Aristophanes, and what we are told of Menander; between the wild and fantastic web of the imagination, in which the one envelops his generalisations of the intellect and politics of his own age, and the accurate portraits of life and character which were drawn on the tablet of the other. Such parallels, however, the critics from Plutarch downwards, have indulged in; and nearly the whole tribe have agreed with him, in attributing to the old comedy nothing but gross and monstrous irregularities; whilst, for the new, they have claimed the praise of all that is pure in conception and execution. We speak particularly of the critics of France; of Marquettel, of La Harpe, of Voltaire, even of Barthélemy, whose familiar acquaintance with the writings and manners of Athens, should, it may be thought, have induced a juster estimate of the writers of the old comedy, than is found in such sentences as the following.

“Les auteurs de ces satyres (and it is the comedies of Aristophanes from which he derives his acquaintance with them) recourent à l'impudence, pour satisfaire leur haine; à de sales injures, pour satisfaire le petit peuple. Le poëme à la main, ils parcourent les différentes classes de citoyens, et l'intérieur des maisons, pour exposer aux yeux des horreurs qu'ils n'avoient pas éclairées. D'autres fois ils se déchaînent contre les philosophes, contre les poëtes tragiques, contre leurs propres rivaux.”

A critic, however, there is, of our own day, to whose accurate and profound learning, and his original and philosophical views of the objects which that learning has set before him, we owe a just and adequate exposition of the transcendent merits of Aristophanes; of his rich and imaginative humour; his creative control over language and versification; his masculine sense, and his unflagging energy. We refer to the celebrated German critic, Augustus Schlegel, whose course of lectures on dramatic literature, delivered at Vienna in 1808, contains at once the most brilliant and the most

accurate pictures of this, as of every other portion of the ancient and modern drama.

Mr. Schlegel has rejected, and, we think, very justly, the old division of the post-Aristophanic comedy into middle and new. It is well known that the comic writers were prohibited, by a specific decree, from introducing real characters on the stage. It has been customary to assert that, on losing this privilege, the middle school, as it is termed, resorted to the evasion of representing actual individuals under feigned names; and that the new comedy, properly so called, which consisted of personages, fictitious in fact as well as name, was of a later period, commencing about the era of Menander. It is, however, easy to comprehend, (and this is the point of view in which Mr. Schlegel has contemplated the subject) that there was an intermediate space of doubtful duration, in which comedy oscillated, before it settled into the form, which it finally assumed. We may, then, follow the example of many learned men, in admitting different kinds of middle comedy, or rather different shades between the ancient and modern. All these distinctions may find their place in the history of the art; but, in a theoretical point of view, a connecting link does not constitute a distinct species.

It is to the new comic drama of the Greeks, that we must refer the origin of comedy amongst the moderns; of that branch of the dramatic art, the end and merit of which consists in the liveliness and truth of the pictures which it offers of human nature, under the varied modifications of society. The union which subsisted under the first writers of comedy between ridicule and imagination, was here divorced,—and for ever.

The serious interest which they had felt and expressed, and the influence which they had been allowed to exercise in the public transactions of the day, were forbidden; their gaiety and vigour were driven to pour themselves through other channels; and that change was effected, so well described by Schlegel, in his seventh lecture, from which we transcribe the following words.

“The new comic authors, deprived of the free exercise of their pleasantry, sought a compensation for this loss, in borrowing one of the serious elements of tragedy; they introduced it in the form of the composition, in the knot of the intrigue, and in the impression they sought to produce.”

The history of tragedy, as Schlegel has drawn it in his earlier lectures, shows the gradations by which that art descended from its ideal height; whether in approaching reality by the close delineation of character, and by the more conversational tone of the dialogue, or by manifesting a tendency to practical instruction; namely, to the end of teaching mankind how best to arrange their common and domestic life, as well as all the details which compose it. Aristophanes, indeed, often jeered Euripides on this direction towards utility. This last poet was in effect the forerunner of the new comedy; the authors of this class have extolled him above all others, and the greater part are his acknowledged disciples. Euripides bore so great a resemblance to them, that several sentences drawn from his works have been attributed to Menander; and we find, in the fragments of Menander, speeches which rise fully to the dignity of the Euripidean tragedy.

Biography. Menander, by a fatality which seems to have reigned over the destinies of many of the literati, (a whimsical catalogue of whose sudden and extraordinary deaths, forms a part of Mr. Bland's lively preface to his "*Translations from the Greek Anthology*,") was doomed to end his days, (D. 122.) after a literary career of less than thirty years, in which he produced upwards of an hundred comedies, "by cold submersion in the waters of the Piræus."

"Comicus ut liquidis perit dum natat in undis."

Of the adventures of his life we know nothing. He appears, however, to have been patronised and courted by Ptolemy, the son of Lagus: a fact, we believe,

* Ovid. *Ibis*.

proved only on the authority of the epistles to which we have already referred.

We have adverted to Mr. Cumberland's papers in the *Observer*, on the history of the Greek drama, and to Schlegel's *Lectures*, (*Lectures* 6 and 7.) And we do not know that we can refer our readers to any sources from which they will obtain more complete and satisfactory views of the subject, which has presented itself to us in the present article. Mr. Cumberland has moreover, executed translations of several of the most interesting remains, with singular fidelity and spirit; and a pleasing and scholar-like collection of the original fragments of the oew comedians (as well as of the minor writers of the old school) was published a few years ago by Mr. Robert Walpole.

ALEXANDER THE GREAT.

FROM A. M. 3648. B. C. 356. TO A. M. 3681. B. C. 323.

Biography. We concluded our biography of Philip with a brief account of his death, as inflicted by the hand of Pausanias. As the assassin was almost instantly dispatched, no certain information was obtained, either in regard to the motives which could induce so detestable an act, or as to the number and quality of the persons who were privy to the intention of perpetrating it. The reputation of Olympians, and the second nuptials, for which that event paved the way, are supposed by some writers to have so deeply irritated the minds of Alexander and of his mother as to have prepared them to take a part in the vindictive counsels of the young Pausanias, and even to have encouraged him in his meditated attack on the person of the king. There is no good reason, however, for admitting the operation of views and motives so highly discreditable to the character of the Macedonian conqueror. It is, on the contrary, much more probable that the murder of Philip was connected with a conspiracy, of which the object was to change the line of succession, and to transfer the crown, under the sanction of the Persian monarch, to Amyntas, the son of Antiochus; a member of that branch of the royal family which had formerly laid claim to the throne.

Accession
of Alexander
to the
throne.

His generosity. Whilst these things are confessedly matters of mere conjecture, it is clear that the behaviour of Alexander was equally generous and noble on his accession to the kingdom, thus unexpectedly deprived of that rare wisdom and courage, by which its affairs had been so long directed. No feeling of animosity or deed of violence stained the commencement of the brilliant career which he was about to run. The able and faithful men who had served his father in the cabinet or in the field, were retained by him in their several offices. Neither minister nor general was displaced; and no one had the slightest reason to imagine that Alexander cherished a grudge or remembered an injury, even where he had just ground of complaint; and in cases too, where measures of severity could only have been regarded as salutary

examples or merited punishment. His forgiveness and confidence were extended to all who had endeavoured enough to acknowledge their misdoings, and generosity sufficient in their own hearts to rely on the exercise of it in that of their prince. Even Alexander, the son of Atropus, who had shared in the treasonable counsels of Amyntas, was received into favour and employed in offices of trust, merely because he shewed a reasonable interest in the rising fortunes of his royal kinsman, and confided his life to the noble clemency which marked his character. The first step he took was to reënt from exile the young friends, who, on his account, had incurred the anger or suspicions of Philip; and when we find among these the names of Harpalus, Laomedon, Nearchus, and Ptolemy, son of Lagus, we shall be ready to do justice not less to his benevolence than to his singular discernment. It is remarked, however, that no new man, no personal favorite, no person strange to the army or people of Macedonia, was raised, in the beginning of the new reign, to any place of power, honour, or responsibility.

According to the custom of his country, Alexander was conducted with much military pomp to the throne, immediately after his father had expired, and consequently while the most painful apprehensions still prevailed, concerning the political motives which might have occasioned that catastrophe. When presented to the assembled Macedonians, the young monarch, relying not less on the popularity of the late government than on the strength of his own character, assured them that no change would take place injurious to their interests or reputation. "The king's name is changed," said he, "but the king, you shall find, remains the same;" a pledge which he fully redeemed, not only by retaining his father's friends, and pursuing his father's system, but by surpassing, in the course of his splendid victories, the most exalted ideas that the other ever entertained of Asiatic conquest and Macedonian ascendancy.

The confidence and sanguine hopes of Alexander

Alexander.

Biography. were not, however, we may presume, widely spread among the most experienced and intelligent of his followers. The power acquired by the late king, had excited no small degree of envy and dislike in the minds of the democratical leaders at Athens, and had awakened in some of the other states a lively apprehension, that their independence could not fail to be exposed to hazard, by the predominating influence of their ambitious neighbour. The sceptre of western Asia, too, was at that period venerated by a sovereign, who had already gained some reputation as a soldier; and who, by his negotiations with the secret enemies of Philip, had afforded ample proof that he was acquainted not only with the quarter whence danger was to be feared, but also with the most effectual means by which it might be averted. The accession of a young king, moreover, encouraged the hopes and favoured the intrigues of all who wished to humble the power of Macedonia: and we find, accordingly, that, in concert with the faction of which Demosthenes was the head, the political agents of Darius were every where creating such obstacles to the invasion of Asia by the confederated Greeks, as no genius inferior to that which now directed their arms, could have successfully opposed and overcome. The rapidity and decision which characterised all the movements of Alexander, were fully required to baffle the designs which were now openly contemplated on both sides of the Ægean: and when he did at length take the field, to accomplish the arduous task which, with the crown, he inherited from his father, he found greater opposition to surmount, on the part of the Greeks, than on that of the barbarians.

The first attention of the new government was directed to Thessaly: the oldest and most important ally of Macedonia. There the ambassadors of Alexander had the satisfaction to find on all hands the utmost willingness to continue the friendly relations which had, during the reign of Philip, subsisted between the two powers; and accordingly, the civil and military authority, which had been exercised by the father, were, with equal confidence and alacrity, extended to the son. Nor was this all; for the trusty Thessalians farther assured the successor of Philip, that they would exert themselves to the utmost in order to secure his succession also to the chief command of the Grecian army, destined to act against the Persians; an appointment which they were well aware could not but gratify the ambition, and give play to the warlike spirit of their young protector.

Having secured the good-will and co-operation of his immediate neighbours, Alexander proceeded to Thermopylæ, where the Amphictyonic council was assembled; in which he was readily allowed or invited to occupy the seat, which his father had been raised as the head of that august body. The next step was to obtain the office of generalissimo of the combined army; an object on which it is natural to suppose he set a much higher value than on his mere civil rank among the Amphictyons; and which, moreover, he had the best reason for believing was meant to be bestowed elsewhere, if not altogether abolished. Opposition on the part of Athens could not be concealed; for it was not without much difficulty that the democratical faction in that city, could be induced to pay to the king of Macedonia, the customary and very simple compliment of sending an embassy to congratulate him on his accession, and to

express their readiness to renew with him the treaties into which they had entered with his father.

In due time, a meeting of the Grecian states was announced, for consulting on their common affairs, and for deciding on measures relative to the projected invasion of Asia. The place chosen for this important congress was Corinth; a situation which recommended itself both by its local convenience to those within as well as to those without the isthmus; and also by its being at such a distance from Macedonia, would remove all apprehension of improper interference with the freedom of election. Arrian, whose narrative commences with this occurrence, briefly informs us that Alexander, when he had ascended the throne, marched into Peloponnesus, where, in a grand council of the Greeks, he requested to be made general of the intended expedition against the Persians; and that this was granted by all except by the Lacedæmonians, who alleged that they were bound by an ancient custom, handed down from their ancestors, to yield obedience to none, but rather to claim the command of whatever forces should be sent by Greece to serve in foreign countries. It is certain, at all events, that the king of Macedonia was chosen by a large majority of the republics; the opposition of Sparta having no other effect than to make manifest her pride and her weakness; and to place on record the impotent jealousy towards the successor of Philip which she could no longer suppress. The dissent of this celebrated commonwealth answered perhaps another purpose. It showed that deliberation was free, and suffrage uncontrolled; a state of things altogether irreconcilable with the assertion of Plutarch, that the royal candidate carried with him an overwhelming force into Peloponnesus, and thereby rendered certain his election to the high office which he affected to solicit.

Whatever might be the difference of opinion as to the wisdom of confiding to a youth, not more than twenty years of age, one of the most important expeditions ever meditated by the Grecian states, there seems to have been perfect unanimity with regard to the expediency of the war itself. Asia had long been a favourite field of adventure to the enterprising republicans of Achaia; and events comparatively recent had enlisted amongst them against the Persians, the powerful passions of jealousy, fear, and revenge. As soon, therefore, as the assembly at Corinth was dissolved, preparations were resumed for the armament, of which Alexander was appointed to guide the motions; whilst he himself having effected the object of his journey into the south, returned home to equip his hardy Macedonians for the numerous perils and toils into which he had resolved to conduct them.

The intrigues of Demosthenes, meantime, and the restless disposition of the barbarous tribes by whom the dominions of Alexander were surrounded, had prepared a field in which to try his troops before he should cross over into Asia. In the spring of the year, when he was preparing to assemble his army for the great expedition, the young generalissimo was informed, that his own kingdom was threatened with an assault, on three different points at once: on the west, by the Illyrians, on the north, by the Thracians, and on the east, by that ambiguous class of men, who coited in their characters the qualities of merchantmen and pirates, and infested during troublesome times, the whole of the

Ægean sea. This intelligence roused the active spirit of Alexander; who, leaving the defence of his western borders to Parmenio, hastened with a body of forces against the freebooters and rebellious Greeks, who dwelt on the coast; and, coming upon them suddenly, he not only defeated their views on some of his ports and strong-holds along the shore, but forced them to take refuge in the mountains, among their barbarian allies. The ardent genius of the king, impelled him to pursue the fugitives even into the rocky defences of Mount Hæmus, and to engage in a species of warfare which was altogether new, even to the veterans who had followed the fortunes of Philip.

Arrian, who takes pleasure in narrating the exploits and contrivances of his military hero, gives a detailed account of the battle, which took place in the wild district where Alexander overtook his enemies. The barbarians, he informs us, seized the tops of the mountains, and occupied the only pass through which the Macedonians could advance, with the firm determination to prevent their further progress. Placing themselves on the summit of a rapid declivity, where the road was confined on either side by lofty precipices, the insurgents formed their chariots in front, so as either to use them as a rampart against the attack of the phalanx, or, should an opportunity present itself, to hurl them down the slope, in the face of the advancing enemy. Alexander, perceiving their intention, prepared his men for the worst. He ordered them to take every advantage which the nature of the ground afforded for shelter and escape; and directed that the moment they perceived the enemy's machines put in motion, such of them as could, should open their ranks and allow the wagons to run freely through, whilst the rest who were confined by the narrowness of the approach, should close their shields artfully and full flat on the earth, so that when the vehicles passed over them with their utmost velocity, they might receive as little injury as possible. The event, we are told, fully answered his expectation; for by adopting the expedients thus pointed out to them, the Macedonians received the shock without losing a single man. The pass being immediately carried, victory was no longer doubtful; for the barbarians unable to cope with the discipline and perfect armour of the phalanxites, sought safety in flight, leaving on the field about fifteen hundred of their number, together with all their women and children, and a large quantity of rude spoil.

Determined to inflict a suitable chastisement on the Triballians, Alexander followed their steps northward of Hæmus into that extensive country which stretches to the right bank of the Danube. Syrmus, the king of the people now named, satisfied that he could not successfully oppose the warlike troops of the invader in the open plain, had recourse to the protection of those immense forests which intersected his territory; having previously adopted the precaution of sending the women and children to a strong island called Pence, in the river Ister, where great numbers of the Thracians had already taken refuge. Alexander, after defeating a large body of the Triballian forces, advanced to the Danube to attack the above-named island, whither Syrmus and his people had now likewise fled for shelter; but commencing the assault with very inadequate strength, he found himself unequal to the tumultuary army of the barbarian chiefs,

now fighting for every thing they held dear in the world, and was consequently obliged to retire with some loss.

Foiled in this attempt, which he did not think proper to renew, the Macedonian commander directed his attention to the Getæ, a people who dwelt beyond the Danube; great numbers of whom were seen flocking down to the bank of the river, apparently busy in concerting means to oppose his landing, should Alexander resolve on entering their territory as an enemy. The Getæ, however, although evidently more civilised than their neighbours the Triballians, were yet comparatively ignorant of the numerous resources and expedients which a warlike nation can employ against the simple members of an agricultural community. Confident in the defences supplied by the mighty river which washed their southern boundary, they were not aware that the king of Macedon had, at his command, the means of conveying over it, not only his phalanx, so formidable to the most expert combatants, but also that active cavalry, against whose rapid and overwhelming charges, no rude people had yet learned to stand. Ships from the Euxine, enabled Alexander to transport, in one night, a large portion of his army, and thereby to carry a complete and speedy conquest among the Getæ; whence, after destroying their capital, and reducing the inhabitants to a nominal subjection, he returned to the south side of the Danube, to pursue his hostile views against the Triballians and their Thracian confederates, whom he had left behind.

The terror of his arms, however, rendered their farther employment unnecessary. Syrmus sent an embassy to solicit peace, or rather to ask on what terms he might secure that benefit for himself and his people; and shortly after, similar messages arrived from all the neighbouring states, charged with professions of friendship and expressions of respect. Among these, according to Arrian, appeared envoys from the Celts, who inhabited the country near the Ionian bay, a people strong in body and of a haughty spirit; and the same historian informs us that Alexander, addressing himself to the members of this interesting embassy, desired them to tell him what was the principal cause of their apprehensions; expecting, no doubt, to be assured that the terror of his name, and the dread of his arms, had made a very deep impression on their minds, and had thereby suggested their present act of homage and reverence to his person. Their reply, however, could not fail to convince him that the Celts were not finished courtiers, and that, if they had fears, it was not in him they were disposed to reveal them. The ambassadors proudly informed him, that "they were afraid of nothing but that the sky should fall upon their heads!" The king suppressed his disappointment, received the Celts into the number of his allies, and satisfied himself with hinting to the envoys, that their countrymen were a proud people.

All things being now adjusted, Alexander was about to return homeward, when intelligence was brought to him that the Antariæ were making preparations to oppose his march through their country, and also that the Illyrians, joined by the Taulantians, were meditating a hostile movement on the western borders of Macedonia. Relieved from all fears of the

Revolts of
Thebes.

first mentioned tribe by the seasonable interposition of Langarus, king of the Agrians, the Macedonian prince directed his forces against the revolted Illyrians; and conducting his inroad with his usual rapidity and holdness, he reached Pellion, the capital, before measures could be taken to oppose him, and before the contingent of the Thaulantian army had advanced to their aid. As, however, the combined powers, placing their chief confidence in the strength of their ground, acted solely on the defensive, some time elapsed before the Macedonians could bring them to action; and when a battle did take place, the Illyrians and their allies were rather dispersed than benten, spreading themselves over the mountains, and seeking safety in fastnesses which heavy-armed soldiers could not approach. But it was not the policy of either party to prolong a war, from which neither could reap any advantage; and Alexander, hearing of commotions in Greece which more deeply affected his interests, readily withdrew his troops from the mountains of Illyria; whilst the insurgent chiefs, left to reflection on their weakness and danger, appear to have returned to their duty, and to a renewal of their former relations with Macedonia and its young king.

The commotions just mentioned, were occasioned by the revolt of Thebes; one of the most important and melancholy occurrences in the reign of Alexander. Whilst this youthful commander was in the north, Demosthenes was most actively engaged in exciting against him, not only the powerful hostility of the Persian government, but also every feeling of jealousy and revenge, which continued to lurk among the Grecian republics themselves. Among no people were these bad passions more active than among the Thebans; who, long accustomed to aspire to command and influence over the other states, were, since the battle of Chæroneæ, reduced to a condition of comparative insignificance, and even of positive vassalage. A strong party, therefore, at Thebes, was always found hostile to the interests of Macedonia; and, indeed, to the principles of the confederacy of which that country was now the head; and it was obviously to subdue the refractory spirit manifested by these discontented democrats, and to maintain the peace of the republic at large, that a resolution was passed in the Amphictyonic council, authorising a garrison of the confederated army to be placed in the Theban citadel.

Amyntas and Timolaus, the one supposed to be a Theban, and the other a Macedonian, were the commanders of this fort at the period in question; who having no apprehensions in regard to the peaceable disposition of the people, were wont to sleep in the town, instead of taking up their residence, at night, within the precincts of the garrison. The revolt, for which, it is said, abundant means and encouragement were supplied from Athens, was begun by the murder of the two officers just named; upon which, cries were immediately sent through the city, summoning the people to arms, and assuring them that Alexander had perished in his northern expedition. The conspirators, who consisted chiefly of exiles, who had been admitted into the town during the darkness of the night, reiterated the most positive assurances that the king of Macedon was dead; and exhorting the citizens to throw off the foreign yoke under which

they groaned, urged them to begin the glorious work of independence, by laying siege to the citadel, and destroying or expelling, all the Macedonian soldiers who might happen to be found within it.

These events, when made known in Illyria, hastened the departure of Alexander, who, with a chosen body of light-armed troops, advanced by rapid marches upon Thessaly, where he arrived in seven days; whence, in six days more, he carried his forces into Bœotia. So little, says Arrian, did the Thebans dream of his approach, that he was at Onchestus with his whole army, before they had heard of his passing the Straits of Thermopylæ; and even then, the authors of the sedition affirmed that it must be an army newly raised by Antipater in Macedonia, for that Alexander had certainly died in the northern deserts. Nay, so obstinate were they in their incredulity, that when it could no longer be doubted that the king was at the head of his troops in their very neighbourhood, they maintained it could not be the renowned son of Philip, but that it must be Alexander the son of Aëropus, who was discharging the office of commander under the direction of Antipater. Availing themselves of the delusion which they had thus spread among the people, they succeeded in driving them to the resolution of opposing, by arms, his advance towards their city; and the more effectually to prevent, or to render abortive any change of measures, they sent out a party of horse and light-armed foot to attack the *vao guard* of the Macedonians; of whom, as not being prepared for such hasty violence, they killed a few with missile weapons. The behaviour of Alexander afforded a striking contrast to these furious and unwarrantable proceedings; for even after all that had taken place, he caused a proclamation to be made, inviting all the Thebans, without distinction, to relinquish the foolish course upon which they had entered, and to partake of the common peace of Greece. In return for this conciliatory proposal, the leading demagogues in the city, gave order that a herald, of powerful voice, should proclaim in the hearing of the Macedonians, an invitation to all of them who desired to restore liberty and independence to the Grecian states, to join, forthwith, the standard of the king of Persia and of the Theban patriots.

Satisfied, however, that a large proportion of the people were friendly to the Macedonian alliance, and that they were only prevented from declaring their real sentiments by the violent measures pursued by the agitators within the walls, Alexander was resolved to refrain, for some time, at least, from the application of force, and to wait the course of events. With this view, he advanced with his army, the following day, towards that gate of the city which led to Eleuthera and Athens; still forbearing any assault upon the fortifications, and only placing himself in such a situation, with respect to the citadel, that he might have it in his power to assist the Macedonians who were shut up in it, should they happen to be severely pressed.

But matters did not long remain in this uncertain Thebes predicament. A party of the Macedonian army stationed near the walls, under the command of Perdiccas, perceiving an opportunity to scale the rampart, were induced, without either orders or authority from the king, to commence the assault; and having

effected a breach, they pursued their advantage with so much ardour, that they soon found themselves in close conflict with the Thebans, in the very heart of the city. Here a considerable number of them lost their lives; and among these Eurylotus, the leader of the Cretan bowmen. Persida, too, being wounded, a retrograde movement became necessary, whilst the Thebans, in their turn, drove the assailants from the walls; and following up their success with thoughtless impetuosity, they advanced so far into the plain as to come in contact with the heavy-armed troops of Alexander's army, whom he had just drawn forth from the camp, in order to remedy the confusion and repair the disaster so unexpectedly occasioned by the rash conduct of his advanced guard. At this juncture the fortune of war changed once more. The Thebans, unable to abide the shock of the phalanx, recoiled from the first onset, and rushing in the utmost disorder and trepidation towards the gates whence they had just issued, the multitude of fugitives so completely choked up the passage, that they not only trod one another under foot, but even prevented all possibility of securing the portals against the victorious enemy. Both parties entered at once; whilst the garrison in the citadel, observing what had occurred, sallied forth from their strong-hold and fell upon the miserable citizens, now no longer capable of resistance or master of their movements, and added not a little to the indiscriminate slaughter which finally disgraced the success of the confederate army. Platonius, Theopompus, Orctomevius, Phocion, and others, who composed the army under Alexander, having formerly suffered from Theban tyranny, and recently dreading a renewal of it, gave a loose to the most furious passions. Ranging the town, to use the words of Mr. Mitford, careless of commands, which scarcely any could hear, they slaughtered equally the resisting and the unresisting; not sparing even women and children; even the sacredness of temples not affording protection. A kind of intoxication of fury urged their destructive course, so that, as Arrian remarks, the extent of the calamity exceeded, not more, all previous apprehensions of the sufferers, than all previous purpose of the perpetrators.

Nor was the vindictive feeling of the minor republics against Thebes, confined to the first moments of military execution. A solemn council was held, composed of the representatives of the several states, in which a decree was passed, declaring that the Theban name should be annihilated; the town utterly destroyed; the surviving women and children sold into slavery; that the territory should become the property of the victorious allies, including the friendly Thebans, and be duly divided amongst them; and, that in order to secure the execution of these resolutions, a garrison from the confederate army should be appointed to take possession of the citadel.

Amidst these scenes of blood, and still more repulsive manifestations of revenge and jealousy entertained against one another by freemen and brothers, it affords some relief to find, that in executing the horrid decree, of which the particulars have just been detailed, some respect was shown to the claims of literature and genius. Alexander gave orders, that in the general demolition of Thebes, the house of Pindar, the poet, should be spared, and that none of

his relations should be subjected to the severe sentence passed upon their countrymen; an act of clemency, it should be added, for which various motives have been assigned, according to the opinions and prejudices of different writers.

In this manner did Thebes expiate her revolt, with the loss of six thousand of her people slain in the battle, thirty thousand sold into slavery, and in a word, with the extinction of her existence as a separate and independent state. Plutarch, who delights in anecdote and in revealing secret thoughts and motives, which he was not likely to know, assures us, that the calamities which he brought upon the Thebans, frequently gave Alexander great uneasiness in the subsequent part of his life, and that upon this account, he treated others with less rigour. He certainly, says this author, imputed the murder of Clitus, which he committed in his wine, and the dastardly refusal of the Macedonians to follow him to his Indian expedition, by which his wars and glory were curtailed, to the anger of Bacchus, the avenger of Thebes. And, he adds, there was not a Theban who survived the fatal overthrow, that was denied any favour he chose to request.

When the news reached Athens that Thebes had yielded to the arms of the young king of Macedonia, a general consternation seized all classes of the people; and such was the fear of an immediate attack upon their own city by the forces under that commander, who, they knew, could not be ignorant of their intrigues with all his enemies, both in Greece and Asia, that an instant order was issued to stop the Eleusinian mysteries in which they were then engaged. A council was called, and a resolution immediately adopted, to send an embassy to Alexander, conveying the congratulations of the Athenian citizens on his safe return from the Illyrian war, as well as on his success in inflicting a speedy and condign chastisement on the seditious Thebans. Although perfectly aware of the motives which had produced this late and rather unreasonable compliment, the Macedonian ruler thought proper to receive it in good part; but, at the same time, he addressed a letter to the Athenian people, demanding that ten of their number, whom he specified, should be delivered up to him, to be dealt with according to the common law of Greece; as being, he added, the authors of all the troubles which had befallen their country, and particularly of the miseries which ensued upon the memorable battle of Charonea. Among the demagogues mentioned in this famous epistle, Arrian gives the names of Demosthenes, Lycurgus, Hypérides, Polyæctes, Charites, Charidemus, Ephialtes, Diotemus, and Merocles. Such a demand threw the city into greater confusion than ever, and the allusion to Demosthenes, on this occasion, are still spoken of by historians as having afforded a subject for ridicule. It is said, that he contented to pay to Demades the sum of five talents to secure the influence of that politician as an intercessor with Alexander, at whose hands, he was perfectly aware, he had great reason to apprehend the last severity. To avert, however, the hard fate which seemed to be in reserve for their orators, the Athenians decreed a second embassy to the captain-general of Greece; beseeching him to extend such a degree of indulgence towards their republic, as to allow them to proceed

Constanza
tion of
Athens.

Biography. against the accused citizens, according to the forms of their own tribunals. To this request the conqueror acceded, on condition that Charidemus, who bad, in the time of Philip, acted as a spy at the court of Macedon, and who had on other accounts rendered himself disagreeable to the reigning prince, should be forthwith banished from the territory of the Amphictyonic states. Throughout the whole of this transaction, indeed, were a sound policy as well, perhaps, as the natural temper of the king, dictated moderate measures, the desire to come to a speedy adjustment of affairs in Greece, with a view of being at liberty to conduct the confederate army on the grand Asiatic expedition, is repeatedly mentioned by Arrian as a principal reason for exercising clemency, and shortening his discussions with the disaffected Athenians.

111. 3. Having returned to Macedon, and completed the religious festival which had been interrupted by his father's death, Alexander lost no time in equipping the army placed under his command for the invasion of the Persian dominions. The forces with which he entered upon this arduous undertaking did not exceed, in cavalry and infantry, the very moderate number of thirty-five thousand: and, at the head of these, in the spring of the year, noted in the margin, the magnanimous son of Philip advanced to Sesos on the Hellespont, where he had resolved to embark for the opposite shore. After performing sacrifice at the tomb of Protesilaus, he placed himself in a trireme under the direction of Menestheus, and committing his fortune to the care of the gods, he took a final leave of the shores of Europe.

Preparations for the invasion of Persia.

Eager to visit the site of ancient Troy, then occupied by a village, he proceeded thither; and finding, in a temple of Minerva, certain consecrated suits of armour, which were said to have been preserved there from the time of the Trojan war, he offered up the usual religious homage; and then proceeding to dedicate to the goddess the arms which he himself wore, he carried away from the holy fane one of the ancient panoplies, to be thenceforth carried before him on all solemn occasions, but more particularly when going into battle.

Of the preparations made by Persia, to oppose the invaders, no detailed account is to be found in history. The satraps, who governed the western provinces, appear to have been intrusted, each with the defence of his own territory; whilst a considerable force of mercenary Greeks, under the command of Memnon, the Rhodian, seems to have been charged generally with the protection of the Grecian cities on the Asiatic coast, which acknowledged subjection to the Persian crown. The want of vigilance or wisdom was, however, strikingly manifested, in the absence of the most ordinary means for preventing the descent of a hostile army, in a populous part of the country, and at the very point too, where such a descent was most to be apprehended. Not a ship appeared to dispute the passage with Alexander, or to interrupt his supplies, though the Persian navy greatly outnumbered that which transported the invading forces; and thus, with all the information which the most public proceedings could convey to them, the lieutenants of the great king, suffered his empire to be violated by a foreign enemy, with as much indifference as if he had landed merely to present the homage of an ancient and devoted vassal.

VOL. IX.

To shun the difficulties of a mountainous country, and perhaps, also, to avoid a premature encounter with Memnon, at the head of his disciplined Greeks, Alexander pursued his march in a north-easterly direction, along the shores of the Propontis. His progress is minutely recorded by the faithful Arrian, who, as every one knows, professes merely to follow the narrative of Ptolemy and Aristobulus, Macedonian generals, who served in this campaign; but it is enough for our purpose to mention, that, when he had arrived in the lower Phrygia, of which Aristes was satrap, he found himself about to be opposed by a considerable army, suddenly collected from the neighbouring districts. According to Arrian, this army consisted of twenty thousand foot, and as many horse; whilst Diodorus, including perhaps, the skirmishers and retainers of the camp, makes it amount to an hundred thousand. That the latter number exceeds the bounds of probability, is rendered obvious, by the counsel administered by Memnon on this occasion, who recommended that the Persians should abstain from battle, lay waste the country, and thereby compel the invader to retrace his steps. This advice, prudent perhaps in any circumstances, when opposed to such an enemy as Alexander, is recommended by the consideration, that the Persians were inferior in regular infantry: but Aristes replied, that he would not suffer a single house in his province to be burnt, nor the property of one inhabitant to be injured, whilst he had such ample means in his power to protect both.

As delay was alike incompatible with the plans and the temper of Alexander, he resolved to move forward his troops, and cross the Graïcus, at a ford near Zeleia. The Persians, aware that his line of march would be confined to that direction, encompassed with their whole force on the opposite side, prepared to dispute with the Macedonians the passage of the stream, and the possession of the rich provinces which stretched out beyond it. A battle now appeared inevitable, and the contending armies were already arranged for the conflict, when Parmenio, the brave and faithful friend of Philip, ventured to expostulate with his impetuous successor, on the great hazard which would attend the crossing of the river, in the face of such a numerous, and determined enemy. "Your reflections," said Alexander, addressing the veteran general, "are just and forcible; but would it not be a mighty disgrace to us, who so easily passed the Hellespont, to be stopped here by a contemptible brook? It would indeed be a lasting reflection on the glory of the Macedonians, as well as on the personal bravery of their commander; and besides, the Persians would forthwith consider themselves our equals in war, did we not, in this first conflict with them, achieve something to justify the terror which attaches to our name."

Having thus spoken, says Arrian, he appointed Parmenio to the left wing, and in the right, where he himself presided, he placed Philotas, the son of Parmenio, with the royal cohort, and the archers and pikemen. The historian then proceeds to describe, with much minuteness, the order adopted on the side of the Macedonians at large, to secure victory in this important fight. As, however, his military terms are not quite familiar to our apprehension, we shall for the sake of our readers, avail ourselves of the exact and masterly description which is given of it, in the volumes of Mitford, as being at once the fullest and

47

Whilst Alexander was marshalling his army for the hazardous attempt, on which he had resolved, the Persian generals, watching from the opposite bank all his movements, were at no loss to gather from the splendour and dress of the officers who surrounded him, where the king himself was to take his station; and as far as time and circumstances would allow, they drew their choicest troops towards that point. This movement could not be so made, as to be unobserved from the Grecian army; and its purpose being conjectured, Alexander was confirmed by it in the plan which he had formed, in regard to the distribution of his troops, and the position where he was to exercise his personal command. Could he defeat that large part of the hostile force so immediately opposed to his wing, he trusted, from the accounts he had obtained of Asiatic armies, that the rest would not long keep the field.

"An advanced body," says Mitford, "infantry with cavalry, the former under Amyntas, son of Arnbabaris, the latter under Prokeus, son of Philip, crossed the river first and began the battle. The Persian cavalry carried javelins, light enough to be thrown by the arm; in which then, as still at this day, being trained to it from early youth, they were highly dexterous. In closing, they mostly used the scymetar. The Grecian horseman carried a lance for close action, but no missile weapon. The Grecian advanced bodies were received with such firmness, by numbers very superior, on ground of great advantage, that they were quickly compelled to retire with considerable loss. Nevertheless, the employment they gave, enabled the main body, led by Alexander himself, to cross the more quietly. But on approaching the bank it suffered, and on reaching it was so met in stationary fight, that Arrian, following the account of the Macedonian generals, characterises the action by comparing it to a contest of heavy-armed infantry. Alexander's lance was disabled. Turning to Teres his master of the horse, for another, that officer could only shew him one equally injured, so warmly had he also been engaged. The extraordinary skill of the Persian horsemen to disable an enemy's lance, is noticed by Xenophon in his account of an action in which he was engaged under Agesilaus. There the Persians, hardly equal in numbers, as the candid historian allows, overbore the Grecian cavalry: but these were Asiatic Greeks, and very recently raised. The very superior practice of those under Alexander, animated by his example, gave prevalence to their superior formation, and superior weapons, against very superior numbers, and the Persians gave way.

Alexander
in great
personal
danger.

"A short leisure was thus afforded to Alexander; and Demaratus, a Corinthian, of the hand royal companions was the first to supply him with a sound lance. No sooner was he thus provided than he observed a powerful body of Persian horse returning to charge, and a leading officer considerably advanced before it. In the warmth of mind of the moment, he rode onward so hastily, that before his attendants could join him, he had with his lance killed the leading officer, but almost in the same instant, lost part of his helmet, by a stroke from another's sword, whom yet, with his shortened lance, he killed also. Nearly surrounded now by enemies, one of them was aiming a sword-

stroke at him which might have been fatal, when Chytus, son of Dropis, one of his lords of the body-guard, arrived so critically, as to disable the uplifted arm, by a wound to the shoulder.

"Through the retreat of the Persian cavalry first engaged, and the check in their return to the onset by the death of their principal officers, the right wing of the Grecian army had leisure to gain footing on the plain ground of the meadow. Meanwhile, the left wing under Parmenio had a severe contest with the Persian right. In this contest, the Thessalians, always esteemed among the best of Grecian cavalry, particularly distinguished themselves; and the Persians weakened, as before mentioned, to strengthen their other wing, were compelled to give way."

The horsemen of the Persian army being thus broken and put to flight, there only remained a strong body of Greek infantry, who served as mercenaries under the standard of the great king. This division of the enemy's army, if it had been properly commanded, would still have occasioned to Alexander no small embarrassment, and might even have deprived him of that triumph which already appeared so secure. But Omare, who had been appointed to lead them, ignorant perhaps of their discipline and the mode of using their arms, and struck with consternation at the sudden defeat of the cavalry, in which the Persians placed the greatest confidence, remained in his position till Alexander brought up his phalanx, supported by a chosen body of horse to cut them in pieces, or drive them from the field. They defended themselves with bravery; but courage in their circumstances was unavailing. Attacked in front by the formidable phalangites, and in both wings by the Macedonian cavalry, they soon covered with their dead bodies the ground on which they had received the enemy: for, says Arrian, the assault was so furious, that they were all slain, not so much as one of their whole number escaping, unless such as concealed themselves among the heaps of slain, and about two thousand who surrendered themselves prisoners.

The loss of the Persians in the battle of the Granicus, is estimated by Diodorus at ten thousand men. Plutarch again says, that the barbarians lost in this battle, twenty-two thousand foot, and two thousand five hundred horse; whilst he reduces the numbers who fell on the Macedonian side to thirty-four, nine of whom were infantry. Arrian does not mention the number of the slain, satisfying himself with a list of the commanders who fell in the action; among whom we find the names of Spitridates, governor of Lydia, Mythrobuzanes, president of Cappadocia, Mithridates, a son-in-law of Darius, Pharnaces, the queen's brother, and Omare, the general of the mercenaries. On the part of the Macedonians, the slaughter is usually confined to about one hundred and twenty; of which number, twenty-five belonging to the royal guard or band of companions, were killed at the first onset, when fighting around the person of their king. Of these brave youths, statues cast in brass, by the masterly hand of Lycippus, were placed in the city of Dium, in Macedonia; whilst to shew his respect for the meanest individual who had fallen in his cause, Alexander granted the freedom of their respective cities, to the parents and other surviving relatives, of all the soldiers who lost their lives on the banks of the

The Persians
defeated with
great loss.

Biography. Granicus, and even conferred on their posterity, a perpetual exemption from taxes.

From A. M. 3648. — B. C. 356. to A. M. 3681. — B. C. 323. With the news of his splendid victory, the generalissimo of the Grecian army, sent to the several states, a portion of the military spoil, gathered on the field of battle, in order to afford to them the means of commemorating their joint success against the enemies of their country. To the Athenians he sent three hundred complete suits of Persian armour, which were dedicated to Minerva, their tutelary goddess, and suspended in her temple, with the following inscription, dictated by the conqueror: ALEXANDER, SON OF PHILIP, AND THE GREEKS, EXCEPTING THE LACEDÆMONIANS, OFFER THESE, TAKEN FROM THE BARBARIANS OF ASIA.

Rapid success of Alexander. After the victory of the Granicus, the progress of Alexander was, for some time, quite uninterrupted; whilst the rapidity with which he reduced into subjection, the most important of the towns belonging to the Persian alliance, surpassed his most sanguine expectations. Dascylium, the capital of Bithynia, opened its gates at the approach of Parmenio, who had been dispatched against it. Sardis, a place strong by nature, and rendered almost impregnable by art, was given up without a blow; Mithranes the governor, having gone out, accompanied by the magistracy of the city, and meeting Alexander, at the distance of seven miles from the walls, entreated his clemency in behalf of the people. Possessed thus of the capital of the rich and extensive province of Lydia, Alexander next directed his attention to Miletus and Ephesus: in both of which cities, he was perfectly aware that the friends of Greece were opposed by a strong party, who cultivated the connection with Persia; and, in the latter particularly, as he had been recently informed, the fury of the two factions had risen to such a height, that a frightful massacre was daily apprehended. The presence of the king, however, prevented that catastrophe: and assuming the direction of affairs, he mediated so successfully, between the democratical leaders and their opponents, that he had little difficulty in restoring the wonted form of government, and in giving efficacy to the voice of law. Desirous of popularity, and knowing its vast importance to him, in the pressing circumstances in which he was then placed, Alexander made, on this occasion, a considerable sacrifice of financial means, in order to secure the affections of his Ephesian subjects. Whilst under the Persian dominion, these Asiatic Greeks were accustomed to pay an annual tribute to the satrap of their province; a burden, it seems, from which they were not exempted even when enjoying the more natural protection of Athens and Lacedæmon. Unwilling, however, to remit their taxes altogether, and doubtful of the expediency of demanding them for the use of his own treasury, Alexander gave orders that the sums formerly act apart for the Persian monarch, should now be devoted to the service of Diana, and, in particular, employed in repairing the temple of that goddess, in which the Ephesians had long found so much to gratify at once their pride and their superstition.

Miletus, situated in the province of Caria, still owned the Persian dominion, and was now become an object of very considerable importance, not only to the present rulers of it, as the means of protecting the extensive territory that lay beyond it, but also to Alexander, whose views upon Asia rendered it a matter of

no small consequence, to deprive the fleets of his enemy of all ports on the Ægean sea. A large navy was, indeed, already prepared to act against the confederated powers on the coast of Lydia and Caria; with the intention, not only of affording aid to such towns on the sea-coast as might happen to be attacked, but also to intercept those supplies of men and arms, on which Alexander partly relied for carrying on his designs in the remoter provinces of the Asiatic peninsula. Having therefore settled affairs at Ephesus, the king of Macedonia proceeded forthwith to Miletus, prepared to lay siege to it immediately on his arrival; and so vigorously did he ply his battering rams, and the other means of assault supplied by his engineers, that in a few days the fortifications were reduced, and the garrison dispersed. It is worthy of remark too, that this achievement was accomplished in the sight of the Persian fleet; which, although greatly superior to the small armament which the Macedonians had on the coast, allowed an important town to fall, without making the slightest effort for its relief.

The success which had all along attended the arms of Alexander, neither slackened his exertions nor satisfied his ambition. The possession of Miletus only served to remind him that Halicarnassus had not yet submitted to the authority of Greece; and, moreover, that the great talents and zeal of the celebrated Memnon had been some time employed in strengthening its resources, and in adding discipline to the valour of its garrison. According to Arrian, this city was surrounded with a ditch thirty cubits wide, and fifteen deep, which, before engines could be advanced against the wall, it was necessary to fill up; an arduous undertaking, in the presence of an active enemy, who annoyed, without ceasing, the Macedonian soldiers, by throwing from above every species of missile weapon. The skill and perseverance of Alexander, however, at length prevailed. After a number of sallies by the garrison, attended with various fortune and heavy loss, the commander, Memnon, found himself reduced to adopt the hazardous expedient of withdrawing his troops by night, and of covering his retreat by setting fire to the engines and machinery which he had used in defending the ramparts. A part of the town was involved in the flames; but the citizens, among whom there were many friendly to the Macedonian cause, were, by the humane policy of the conqueror, saved from the horrors of an assault. The castle, into which Memnon had thrown a portion of his army, was indeed still prepared to resist the arms of Alexander; but the latter, unwilling to waste what remained of the season in reducing a fortress, strong by situation, and diligently supplied with all the means for sustaining a long siege, and satisfied, at the same time, that the garrison was too small to occasion any danger to the acquisitions which he had already made, immediately directed his attention to matters of higher consequence. He commanded his engineers, says Arrian, to convey the artillery to Tralles, which city he soon laid level with the ground; and marching thence into Phrygia, left a body of three thousand foot, and two hundred horse, under the command of Ptolemy, to keep the province of Caria in obedience—a portion of his conquests, of which he committed the ostensible government to Ada, a native princess, who had at first thrown herself upon his generosity and protection.

Determined not to allow either to himself or to his enemies the usual respite afforded by the arrival of winter, the King of Macedon made known to the army his intention of advancing eastward to meet Darius, on the confines of Syria, should he think proper to take the field in the spring; and, in the meantime, to complete the reduction of all the Persian cities within the boundaries of Asia Minor. To remove, however, the most obvious ground of objection and murmuring among the soldiers, in the prospect of a winter's campaign, he allowed such of them as had been lately married to return home, to pass that season with their wives; giving the command of this domestic party to three of his general officers, Ptolemy, Coenus, and Melaeger, who likewise happened to have recently entered into the estate of matrimony.

Having completed these arrangements, and having despatched Parmenio to take post at Sardis, in order to preserve entire the communication between Macedonia and the army during their progress eastward, Alexander commenced his march through Lycia and Pamphylia, with the design, as Arrian informs us, of reducing all the towns on the sea-coasts, and by that means of rendering useless the enemies' fleet. Upon his entrance in the former of the two provinces just named, the four principal cities of the country, Telmessus, Pinara, Xanthus, and Patara, readily submitted; and thirty smaller towns almost immediately followed their example. Continuing his march in the very depth of winter, he was met by deputies from Phaselis, the principal town of the Lower Lycia, who, presenting him with a golden crown, solicited his friendship and protection. He then passed, continues the accurate historian of Alexander's expedition, into the province of Phaselis, which he reduced, as also a certain fort which the Pisidians had built there; whence the barbarians were wont, by frequent incursions, to harass and lay waste the country around.

Conspiracy
against the
life of
Alexander.

Whilst Alexander was at Phaselis, intelligence was brought to him of a plot against his life, concerted, as it was said, by his namesake, the son of Atropus, whom he had so generously admitted into his friendship at his accession to the throne, and even appointed to the command of the Thessalian horse. The Macedonian prince Amyntas, son of Antiochus, who had fled to the court of Persia, was also engaged in this conspiracy; and under pretence of sending letters to the satrap of Phrygia, he despatched a nobleman named Antiochus to the treacherous Alexander, assuring him that if he would procure the murder of the King, he should have the crown of Macedonia conferred upon him, besides a gratuity of a thousand talents of silver. The Persian messenger, however, was seized by Parmenio, under whose immediate command the son of Atropus was at that time serving, and having confessed the real nature of his embassy, was forthwith sent a prisoner to the head-quarters of the unsuspecting King, that he might reveal in his personal hearing the actual intentions of the conspirators. No doubt being entertained that the general of the Thessalian horse was implicated in the evil intentions of Amyntas and the Persian court, it was resolved in the council which Alexander summoned on the occasion, to send a private messenger to Parmenio, with verbal instructions to supersede him in his command, and retain his person in safe custody.

Having discharged this unpleasant duty, which, it should seem, he was induced to perform rather in compliance with the wishes of his army, than to gratify his personal fears or dislike, Alexander resumed his progress; and, advancing from Lycia into Pamphylia, along the line of the sea-coast, he had an opportunity of profiting by one of those natural contingencies which the ancients were much in the habit of ascribing to divine interposition. At a certain part of the road the mountainous ridge of Taurus projected into the sea, and thereby, except in a particular state of the wind, precluded all passage along the beach; and as it fortunately happened that the wind, which had blown a great while from the south, carrying the waves with great violence into the bay, changed to the north, as the Macedonians approached, and thus drove back the billows towards the deep, leaving a clear path between the sea and the rock, the enterprise of Alexander was regarded by all who witnessed this simple occurrence as sufficiently pious to merit the favour of the gods, and as sufficiently important to demand their interference.

An occurrence, unnoticed by Arrian, is here mentioned by Diodorus, which serves to throw some light on the character of the people who at that period occupied the hilly country which separates Lycia from the adjoining province on the east. As the baggage and cattle belonging to the Macedonian army were, under the protection of a small escort, passing through a valley commanded by the strong town of Marmara, the inhabitants, smitten with the love of spoil, issued forth from their hiding-places, and at once possessed themselves of the whole convoy. Halting his troops, Alexander returned to chastise these predatory barbarians, and, having applied his engines to their walls, was on the point of compelling a surrender, when the desperate plunderers, holding council among themselves, agreed on the horrible resolution to kill all the women, children, and old men, and then, by night, force their way across the besiegers' lines, to a place of refuge in the neighboring mountains. A general feast preceded the execution of this savage expedient. The best provision of meat and drink was produced, and all were invited to partake; when, having just allowed time for a hearty meal, a signal was given for the intended massacre, by setting fire to all the homes. Six hundred of the youth, however, had the humanity to refuse concurrence in the atrocious plot to murder their parents, wives, and children; and no mention is made by the historian to what extent the bloody purpose of the Marmareans was actually realised. The projected sally, however, was performed with considerable success; for it is stated, that the young men who were fortunate enough to execute their design, reached in safety the mountain fastnesses.

Marmareans destroy themselves to avoid punishment.

Having dispersed this nest of robbers, Alexander pursued his march towards Pergo, in Pamphylia. On the way he was met by commissioners from Aspendus, a town situated in the same province, who professed themselves ready to acknowledge his power, on the simple condition, that he would not burden their citizens with a garrison. To this proposal the king readily acceded; requiring, in return, that the horses annually sent to Persia in the name of tribute, should now be sent to him; and besides, that the Aspendians should advance to him a contribution of fifty talents,

Biography. or about ten thousand pounds sterling. The depoties yielded their consent to these stipulations, on the part of Alexander; but whether the inhabitants of Aspendus thought the terms too hard, or whether their proposals for negotiation were merely intended to gain time, and prepare for resistance, certain it is, that they refused to deliver either horses or mules, and even denied admittance within their gates to the persons whom the Macedonian sent to demand them.

Such conduct could not be allowed to pass without severe punishment. Perga and Sida having been surrendered to him at discretion, Alexander directed his forces against Aspendus, and invested it without delay. Unable to resist, the inhabitants desired capitulation, offering to fulfil the conditions to which their deputies had bound them; but the Macedonian monarch, though unwilling to protract the siege, positively refused to listen to such terms. He required, moreover, together with the horses, double the amount of the sum which he named as a subsidy, a yearly tribute in mules, and subjection to a governor whom he should appoint to superintend their affairs.

But the attention of Alexander was soon after drawn to certain measures concerted by the indefatigable Memnon, who had now obtained command of the Persian fleet, with full powers to carry on a vigorous war in the Ægean. The Lacedæmonians, still obstinate in their refusal to join the Grecian confederacy, were, moreover, irritated by the success of the Macedonian arms in Asia Minor, and therefore not a little disposed to co-operate with the views of Memnon, in distracting the councils of the youthful conqueror. To effect this object, Agis, the king of Sparta, condescended to solicit the republican states of Peloponnesus, and had even prevailed with some of them to receive into their territory a considerable land force, engaged in the service of the Persian monarch. Meanwhile too, Darius himself was preparing to take the field with a powerful army, composed as well of Greeks as of Asiatics, in order to meet Alexander, if he should advance, or to pursue him, should he be compelled to retreat.

Informed of these circumstances, the Macedonian ruler discovered the necessity of assembling the different divisions of his army, and of meeting the reinforcements which he expected from Greece. Gordium, the ancient capital of Lower Phrygia, was the place appointed for mustering such of his soldiers as had wintered at home, who, according to instructions received, were expected to join early in the spring, bringing with them a body of recruits. To that city he directed his steps, over part of the high grounds of Taurus, where he had to conquer the furious but ill-coordinated opposition of several hordes of predatory mountaineers, who attempted to prevent his march through their country. Having reached Celæne, the principal town of the Greater Phrygia, he found the inhabitants ready to acknowledge him as their head, being indifferent whether they paid tribute and owned subjection to a Persian or Macedonian sovereign. This province was accordingly added to his conquests; whilst the rapid progress of his arms, whether employed against the roving barbarians of the Taurian ridge, or the more civilised natives of the Lycian plains, had already increased so much the terror and fascination associated with his name, that the appear-

ance of his standard was in many cases equivalent to a victory.

Before, however, he had completed his march to Gordium, intelligence was conveyed to him of the active proceedings of Memnon in the Ægean. Chios had already yielded to his powerful fleet; and in Lesbos, Mitylene was the only town which held out against him, and prevented the progress of his formidable armament to the Hellespont itself, whence he threatened an immediate attack on the hereditary dominions of Alexander. Antipater, who was left at Pella with the power of regent, employed indeed all the means which he could command, in order to raise such a navy as would protect the Macedonian shores; but had not Memnon died, while as yet he was only beginning to realise his extensive plans, the Grecian confederacy must have recalled their general from his victorious career in Asia, to combat the Persian legions within the limits of Europe. The loss of Memnon, however, defeated the views of Darius in the invasion of Greece.

Intelligence of the death of Memnon, and of the withdrawal of the Persian land forces from the Ægean, relieved Alexander from all apprehensions in regard to his own kingdom, as well as the states of his allies; whilst the movement of the Persian Greeks from all quarters to join the standard of the great king in the east, marked out for him the point to which his attention was to be principally directed. It was now obviously the purpose of Darius to employ his whole strength for the recovery of his lost dominions; and it therefore became the business of Alexander to provide for the maintenance and defence of that great peninsula which he had already overrun; an object which he was most likely to accomplish, by meeting the Persian king on its eastern boundary, or even beyond the mountain range which separates it from the plains of Syria and Mesopotamia. Limiting his stay, therefore, at Celæne to ten days, he proceeded to Gordium, where, as we have already stated, he meant to collect his army, and adopt such measures as might be rendered necessary by the hostile attitude recently assumed by the government of Persia.

A story is told of the Macedonian hero, during his residence at Gordium, which the gravest historians have not disdained to preserve in their pages. Plutarch tells us, that upon taking this town, which is said to have been the seat of the ancient Midas, he found the famed chariot fastened with chords, made of the cornel tree; and was informed of a tradition firmly believed among the barbarians, that "the fates had decreed the empire of the world to him who should untie the knot." This, as most historians state, was twisted so many private ways, and the ends of it were so artfully concealed, that Alexander, finding he could not untie it, cut it asunder with his sword, and made many ends instead of two. But Aristobolus affirms, that he easily untied it, by taking out the pin which fastened the yoke to the beam, and then drawing out the yoke itself.

This place is also remarkable for an embassy, sent by the Athenians to Alexander, requesting him to release those of their citizens, who had been taken at the Granicus, fighting under the banner of the king of Persia, and who, according to Arrian, were then with

Death of
Memnon.

Intelligence of
Memnon
and the La-
cedæmonians.

Biography. two thousand others, detained prisoners in Macedonia. For very obvious reasons the prayer of this petition was refused. He did not, says the historian, think it advisable, while the Persians yet continued, to remove from the Greeks that salutary fear which would prevent them from taking up arms for barbarians, against their own countrymen; on which account he dismissed the deputies, with the assurance, that as soon as the war was finished to his mind, he would listen to their solicitations in behalf of their citizens who had fallen into his hands.

The news was from time to time reiterated, that Darius, at the head of a large army, had commenced his march westward, and was already crossing the great desert, with the intention of repelling the Macedonian invader. To secure his conquests in the Lesser Asia, and to be able to sustain with success, the immense pressure of military force, which was arrayed against him, it appeared to Alexander absolutely necessary, that he should possess the great chain of mountains on the eastern confines, where several strong posts might be occupied, and the advance of the enemy essentially retarded. But within that boundary, two important provinces, Cappadocia, and Paphlagonia, still acknowledged the Persian dominion; the former of which, commanded one side of the pass by which, almost exclusively, a large army could cross the ridge of Taurus, and have free communication, between the Lesser and the Greater Asia. To effect this important acquisition, however, there was no need to have recourse to arms. As soon as Alexander had reached Ancyra, an embassy from the Paphlagonians, soliciting his friendship, relieved him from the painful alternative of compelling their subjection; and Cappadocia, in like manner, unwilling to trust to the hazard of war, received a governor, appointed by the Macedonians, and owned the confederated Greeks as their paramount sovereigns.

The province of Cilicia was now the only portion of Asia Minor, that owned subjection to the Persian empire; and against this important district, commanding an extensive line of coast on the Mediterranean sea, the Macedonians now resolved to conduct their victorious phalanx. Advancing with his usual rapidity to cross the mountains at what was called the Gate of Taurus, Alexander was informed that a strong body of the enemy had already occupied the pass, and were prepared to dispute his further progress towards the south. Without a moment's delay, he made arrangements for attacking them in the course of the ensuing night; but the Persians, intimidated by the fame of his valour and military skill, retreated before the break of day, and left an open passage to his army into the maritime plains of Cilicia. Tarsus, the capital, soon opened its gates: the governor, Arsames, having fled with the garrison to meet his master Darius, and to carry to him the ominous intelligence, that the Persians had hardly any longer a foot of ground to stand on, or a strong-hold to flee unto, in all the rich provinces of the Asiatic peninsula.

It was at Tarsus that Alexander was seized with that memorable fever which had so nearly proved fatal to him, and which was the means of affording to the Persians considerable advantages in the choice of their ground, before the decisive battle of Issus. This severe illness is ascribed by Aristobulus to mere

fatigue, sustained by the king in his forced march from Cappadocia into Cilicia. Other writers, however, inform us, that it was the consequence of an unseasonable use of the cold bath in the city of Tarsus; for arriving there greatly heated, and admiring the cleanness of the river Cydnos which flows through the town, and knowing that it was celebrated for its coolness in the summer heats, as coming in rapid course from the snowy mountains of Taurus, he plunged into the current and amused himself some time with swimming. He was soon after seized with the violent fever of which we have just spoken, and was so extremely ill that his life seems to have been despaired of by all, except by his able and favourite physician, Philip the Acarnanian. Whilst the latter was preparing a draught for his patient, a communication arrived from the general Parmenio, advising the king to beware of Philip, who, it was believed, had been bribed by Darius to poison him. Alexander had hardly finished perusing the letter, when the physician presented to him the potion: and taking the cup from his hand, the royal patient desired him to read the note which he had just received, and while he was yet reading, says Arrian, the king swallowed the draught, perceiving by the undisturbed countenance of the Acarnanian that he entertained no design against his life. Nor were the skill and honesty of Philip long in doubt; for the rapid recovery of the king proved that Parmenio's information was groundless, and the infidelity of the physician a malignant calumny.

His first movement upon his restoration to health was to despatch Parmenio with a competent force to occupy the pass which leads into Syria, with the view either of preventing the enemy from entering, or of reserving to himself the power of carrying the war beyond the mountain barrier. In the mean time, with a body of light troops he turned aside into the hilly country of Cilicia, to consolidate his government over the wandering tribes which inhabited that portion of the province. The first day's march brought him to Anebialus, a town said to have been built by Sardanapalus the king of Assyria, and which, by its extent and the magnificence of its fortifications, continued to bear evidence to the traditional character of that monarch's mind. A monument representing this luxurious sovereign was still found there; warranted, as Mr. Mitford expresses it, by an inscription in the old Assyrian language, to which, whether well or ill interpreted, the Greeks gave the following meaning: "Sardanapalus, the son of Anacyndaraxes, in one day founded Anebialus and Tarsus. Eat, drink, play: all other human joys are not worth a filipp." Leaving Anebialus, the conqueror proceeded to Sali, where he imposed a contribution of about forty thousand pounds, and stationed a garrison. Thence he advanced to Megurus, where he sacrificed to Minerva; and afterwards to Mallus, a colony originally peopled from Argos, where he succeeded in attaching the inhabitants to the Macedonian interest, by granting them an immunity from the tribute formerly paid to the Persian government.

Alexander was still at Mallus when information reached him that Darius had crossed the plain of Syria, and was already encamped near Sochi, about two days march from that pass in the mountains

Alexander.

Biography. usually called the Syrian gate. Finding his army eager to meet the Persians, he advanced to the rocky barrier which separated him from his enemy; and passing the strait now named, near the town of Myriandrus, formed an encampment on the eastern side of the mountains. The king of Persia, who, listening to the counsel of his Grecian officers, had resolved to wait the approach of his antagonist in the open plain, now thought it expedient to yield to the wishes of his own subjects and make a forward movement, so as to meet the Macedonians in their descent from the hills, or to drive them back into the wilds of Cilicia. Aware that the main pass was in possession of the Greeks, Darius moved his army towards a similar strait, known by the name of the Amanic gate; through which, as no steps had been taken to oppose him, he pushed on his advanced guard to Issus, and thereby placed himself between Alexander and the countries which he had recently conquered.

It is not concealed by Aristotolus and Ptolemy, the authorities whom Arrian avowedly follows, that this movement on the part of the Persians, created some degree of agitation among the Macedonian counsellors who surrounded the king. Decisive measures were obviously necessary to obviate the fatal effects which might result from this neglect to occupy the Amanic pass, and thereby allow their flank to be turned; and Alexander accordingly, with that promptitude and self-possession which characterised all his proceedings, instantly resolved to retrace his steps, and secure at least the command of the pass by which he had entered Syria, and which was now more than ever necessary, to maintain his communication with his friends in Greece. To palliate the real motives for this retrograde movement, he told his army that the step which Darius had taken was precisely that which they should most have desired; that he had certainly followed the worst advice which had been offered to him, or rather that some divine impulse had led him to marshal his force in a place, where its greatness could neither be displayed nor called efficaciously into action; that his cavalry would be useless, and his light troops, armed with missile weapons, absolutely unserviceable. He concluded by assuring them that the Deity had clearly demonstrated his intention that victory should be theirs, and that the Persian empire should pass into their hands.

The main object contemplated by the Persians, was unquestionably to prevent the return of Alexander to Cilicia; and for this purpose they took ground near the Syrian gate, by which, they knew, he would endeavour to effect his retreat across the mountains, should he finally resolve on that measure. A river called Pinarus, issues from the highland district, in the neighbourhood of the pass now described, and, after flowing some distance in a westerly course, diverges to the south, and falls into the Mediterranean. On the northern bank of this celebrated stream, Darius drew up his army in battle array, his right extending to the sea, and his left occupying a very strong position at the foot of the mountains. Alexander formed his troops on the opposite bank, with his right supported by the high ground which bounded the plain, and his left by the sea, or bay of Issus, which spread out towards the west. It is remarked by Mitford, who, on such occasions, speaks with the precision of a practiced soldier, that as the Persian army occupied

the exterior of the curve formed by the river, the inferior or shorter curve was left for the Macedonians. Having ascertained his adversary's formation, the hero of the Granicus placed his own formidable phalanx to oppose the Greeks in the Persian service. His republican Greeks he divided on each flank, to oppose the Cardaces and the cavalry. The command of his left wing, occupying the ground next the sea, where cavalry might act advantageously on either side of the stream, and where the powerful charge of the Persian horse might be expected, he committed to the veteran Parmenio. The immediate command of the right wing he took upon himself, with the apparently desperate purpose, it seemed, of forcing the strong position of the enemy's left, should they not be imprudent enough to descend from their vantage ground and attack him.

Nothing is more perplexing, when examining the statements of ancient history, than to arrive at correct notions, in regard to numbers; and more particularly in regard to the number of men who fought or fell, in any given battle. It is recorded in the present instance, for example, both by Arrian and Diodorus, that the Persian army amounted to more than half a million; a computation which, if it apply to the fighting men whom Darius conducted across the Syrian desert, must exceed not a little the bounds of all probability. Mr. Mitford confining himself to the details of the former writer, and summing up the number of the several bodies specified by him, as holding a place either in the march or in the battle, reduces the amount to about one hundred and forty thousand combatants, of which nearly one-third was cavalry. The difficulty is nearly as great in attempting to ascertain the precise number of the warriors who fought in the army of the confederated Greeks. In the absence of all documents on which to found an accurate calculation, it has been conjectured with much probability, that the forces which Alexander led to the Syrian gate, were at least as numerous as those with which he crossed the Hellespont. Taking this computation at the highest, there was still an immense disparity between the contending hosts; for, from the concurring testimony of the best authors, it seems clearly established, that the Macedonians, with their allies, did not exceed forty thousand men.

Arrayed as we have just described, both armies for some time kept their ground, unwilling apparently by any rash movement to put to unnecessary hazard the fortune of that important day. Alexander, it is manifest, had expected that the Persians would begin the action on their left, and, in this view, had drawn to his right the most efficient of his cavalry: and it was not till he found that they were resolved to direct the principal weight of their charge against the wing under Parmenio, that he despatched his Thessalian horse, and a chosen body of foot, to sustain the attack meditated in that quarter, whilst he himself, at the head of his light armed troops, advanced to drive the enemy from the heights which they had occupied on their left. Crowned with success in this bold manœuvre, he seized the moment of confusion which ensued, to march the phalanx of allied Greeks across the stream, and instantly fell upon the Persian line with such determined valour, that the Cardaces, who composed it, soon turned their backs and left the field. The Macedonian phalanx which was placed in

opposition to the Persian Greeks, the best troops which served under Darius, seems to have waited this event as the prescribed signal for advancing to the attack; and accordingly, moving forward, these renowned soldiers of Alexander dashed into the current, to decide the fate of two powerful sovereigns and to change the empire of the East. The conflict here was singularly obstinate and bloody. The mercenary Greeks, trained under the experienced Memnon, and commanded by approved officers, highly accomplished in the art of war, were formidable adversaries even to the phalangites of Macedonia. These men, says Arrian, solicitous, though in a foreign service, to shew themselves worthy of the ancient fame of their nation, as the Macedonians were to maintain their new renown, occasioned to the latter a dearly-bought victory. One general and a hundred and twenty-five officers of inferior rank were killed. But, as Mitford well observes, Alexander's first bold measure proved the key of victory. On the flight of the enemy's left, the Greeks of the confederacy occupied their ground, and thus placed a powerful division of troops on the flank of the Persian Greeks, now actively engaged with the Macedonian phalanx in front. This celebrated body, sorely pressed, and suffering severely in the contest, was now relieved by the seasonable approach of their victorious allies; whilst the brave Greeks on the Persian side, unable to resist the combined assaults of two such masses of disciplined combatants, were nearly all put to the sword.

Meanwhile Darius was performing every thing that courage could dictate to the commander of a mighty army, fighting for the mastery of the Asiatic continent, as well as for the safety of his wives and daughters who were present in his camp. Mounted in his chariot with four horses abreast, he appeared conspicuously in the centre of his line, and mixed in the tumult and carnage which the onset of the heavy-armed foot had already carried into that part of his host. Being recognised by the Macedonians, he was so closely attacked and so vigorously pressed upon by the victorious phalanx, that his horses were wounded and rendered quite unmanageable; whilst the heaps of dead bodies and arms so impeded and alarmed them, that the king would in all probability have been carried into the enemy's ranks, but for the gallant exertion of his brother Oxathres, who at the head of a body of horse, charged the confederates with so much impetuosity, as to gain time for the servants of the household to bring up another chariot, into which the monarch immediately removed his person. The fortune of the field, however, being now determined in favour of the Macedonians on the right and centre of their army, the individual exertions of Darius would have been of no avail, even had he possessed all the skill and bravery, which some authors are willing to ascribe to him: for the Persians, destitute of that degree of discipline which enables soldiers to repair their broken ranks, whilst there remains any hope of victory, and to retreat in good order when that hope can no longer be entertained, no sooner saw their ruler turn his back upon the enemy, than they precipitated themselves from the field in a general rout, regardless of every thing except their personal safety. The cavalry on their right wing, indeed, attempted to redeem the character of Persian horsemen; having, according to Arrian,

maintained a severe conflict with the Thessalians under Parmenio, long after the main body of the Macedonians had crossed the river and repulsed the heavy-armed foot, in which Darius seems to have placed his chief confidence: nor was it until they perceived that a total discomfiture had been inflicted on the left and centre of their army, and that their sovereign himself was no longer on the ground to direct or encourage, that these brave troops relinquished a contest where, even the most complete success would have been of no avail.

Owing to the nature of the ground over which they had to pass, the Persians suffered severely in their flight, both from the close pursuit of the enemy, and from the confusion and panic which prevailed in their own ranks. It would appear that Darius had left the field some considerable time, before Alexander was made aware of his departure, or at least before he deemed it expedient to pursue him. At length, however, when victory was fully secured, the conqueror placed himself at the head of a body of cavalry with the view of overtaking the fugitive monarch; who appears to have retreated as far as the roads would permit, in his chariot of state, and afterwards to have mounted a horse, and hastened through the Amanic pass which led into Syria. The approach of night induced Alexander to desist from the pursuit; and carrying back with him the chariot of Darius, in which were found his shield, bow, and cloak, he returned to the Persian camp, now in the possession of the Macedonian soldiers, and proceeded to seek repose in the royal tent.

The number of the slain is so variously reported, that it is impossible to ascertain the exact amount; and it is somewhat remarkable at the same time, that the Grecian writers, whilst they affect much accuracy in regard to the Persian loss where they had small means of arriving at the truth, abstain from all particulars relative to the killed and wounded of the Macedonians, concerning whose casualties they might easily have obtained information. Arrian relates that of the army of Darius no fewer than an hundred thousand fell, including ten thousand cavalry. Diodorus estimates the loss at a hundred and twenty thousand foot, and ten thousand horse; whilst Orosius to ninety thousand slain adds forty thousand prisoners. The statement of Justin differs considerably from that of all other historians, as he reduces the killed to sixty-one thousand foot and ten thousand horse; agreeing, however, with Orosius in the number of captives. Of commanders possessing the highest rank, Arrian mentions the names of five who lost their lives; three of whom, Arsames, Rheomithres, and Atizyes, had fought as chiefs of cavalry at the battle of the Granicus.

Considering the obstinacy with which the conflict was maintained on the side of the Persians, particularly by the horsemen in their right wing, the loss sustained by the confederate army could not fail to be severe. Arrian, however, satisfies himself with informing us, that in the battle of the Issus, the Macedonians had one general killed, Ptolemy the son of Seleucus, and others of no mean account, to the number of one hundred and twenty. This very vague statement is by no means improved by the narrative of Quintus Curtius, who, with an appearance of detail, which only aggravates the improbability of his account, assures us that the loss of the army under

There are several anecdotes connected with this memorable fight, which though differently told by the different authors who have related them, appear to have a solid foundation in fact. It is said, for example, that upon the return of Alexander from his pursuit of the Persian king, having in his possession, as we have already stated, the shield, bow, and elask, of that unfortunate prince, some one inconsiderately conveyed this intelligence to the wife, mother, and daughters of Darius, who were now prisoners in the camp, and who, concluding that he must have been killed, instantly raised a loud and very piteous lamentation. On learning the cause of their distress, Alexander humanely sent Leonatus, one of his principal officers, to inform them that Darius was not dead, but that on the contrary, as he had outstripped his pursuers, there was every reason to believe that he had reached a place of safety: adding an assurance on the part of the Macedonian commander, that the princesses would be treated by him, with the utmost delicacy, and in a manner becoming their royal rank; and that even towards the king himself, he entertained no personal enmity, farther than was implied in their contest for the dominion of Asia.

It is likewise reported, that Alexander, on the following day, taking with him his favourite general, Hephæstion, repaired to the tent of the captive ladies to pay them a visit of condolence. On entering the apartment together, without any one to announce him, the mother of Darius, mistaking the attendant for the prince, threw herself, after the Persian fashion, at the feet of Hephæstion, who, it should seem, appeared in her eyes the more dignified and guilely person. The general, drawing himself back, pointed to Alexander, who immediately relieved the embarrassment of the aged queen, by telling her, that she had committed no mistake, for that man, to whom she had paid her respects, was worthy to be esteemed his equal. Hephæstion, said he, is another Alexander. This passage, adds Arrian, I neither relate as truth, nor condemn as fiction: if it be true, the pity and indulgence shown by Alexander to the women, and the honour bestowed on his friend, deserve commendation; whilst, if we suppose them feigned and only related as probabilities, it is still honourable to him to have had such speeches and actions recorded by the writers of his own times, not only as being generally believed, but as consonant with the character which he bore among his contemporaries.

Arrian further informs us, that soon after the battle of Issus, a confidential eunuch in the service of the captive queen, found means to repair to her unfortunate husband, now returned to his capital. On his first appearance, Darius hastily asked whether his wife and children were alive; and when the messenger assured him that they were not only well, but treated with all the respect due to royal personages, the fears of the unfortunate monarch took another direction. The queen is said to have been the most beautiful woman in Persia; Darius's next question, therefore, was, whether his honour was still entire, or whether she had yielded to her own weakness, or the violence of others? The eunuch, protesting with solemn oaths, that she was as pure as when she parted from her husband, and adding that Alexander

was the best and most honourable of men, Darius Alexander. raised his hands towards heaven, and exclaimed, "O great God! who dispose of the affairs of kings among men, preserve to me the empire of the Persians and Medes as thou gavest it; but if it be thy will that I am no longer to be king of Asia, let Alexander, in preference to all others, succeed to my power." So powerfully, observes the historian, does generous conduct gain the affections even of an enemy.

The victory of Issus opened a passage for the confederates into the heart of Asia; but before proceeding eastward, Alexander thought it expedient to subject to his dominion the Persian provinces of Syria and Phœnicia. With this view, he despatched Parmenio, with a body of troops, to reduce Damascus, the principal city of the former district, in which, too, Darius had placed his treasury, and whither many of the fugitives, from the late battle, had fled for refuge. In this undertaking, the success of the Macedonian general was rewarded, not only with the capture of the military chest, destined to maintain the enemy's army and to secure the fidelity of their Grecian allies, but also with the seizure of several prisoners of importance, who had been commissioned to attend Darius by the party opposed to Alexander at Sparta, Athens, and Thebes. Indeed, one of the greatest advantages resulting from the recent splendid victory over the Persians was manifested in the complete disappointment of the republican faction in the three cities now named; where a correspondence was constantly maintained with the satraps of Darius, in order to distract the operations of Alexander, and even to invade his hereditary states. We have already remarked that a Persian fleet, under the command of Pharnabazus and Antiochus, was sent round to the Ægean, with the intention of aiding the Lacedæmonian king, Agis, in a descent upon Macedonia; whilst the immense armament, led by Darius himself, was advancing across the desert to repel the conqueror from the confines of Syria. But the issue of the conflict between the grand armies thwarted all the arrangements entered into at Sparta. The Persian fleet almost immediately left the shores of Peloponnesus, and directed its course to the southern coast of Asia Minor; relieving thereby the apprehensions of the king of Macedon, in regard to the safety of his native territory, and securing to him the most perfect liberty to pursue his conquests in the Syrian provinces, and ultimately in Egypt.

Whilst, therefore, Parmenio advanced upon Damascus, Alexander led the rest of his army towards the coast of Phœnicia. The main object of the conqueror in following this route, was to reduce the city of Tyre; a place of great importance as a maritime station, and whence, as he was well aware, the Persian navies derived their best recruits and most abundant supplies. Before, however, he engaged in the famous siege, by which he found it necessary to subvert the power of this mistress of the seas, a deputation from Darius overtook him at Marathus, charged with offers of friendship and alliance, and with a request, as from a king to a king, that his wife and daughters might be released. The answer of Alexander, it is well known, was extremely haughty and threatening. He accused the Persian monarch of

Biography. Intriguing with the Greeks, and even of having countenanced the conspiracy for assassinating his father Philip. He recounted all the injuries which the Macedonians had sustained, or had cause to fear, at the hands of the Persian faction in the republican states, and concluded by announcing to Darius his pretensions to the sovereignty of all Asia, and his readiness to treat with him as a vassal prince. As lord paramount of the east, the young hero invited the vanquished king of the Medes and Persians to come personally to him and prefer his requests. "If you have any apprehension for your safety, send a confidential person to receive my plighted faith. When with me, ask for your wife and children, and whatever else you may desire, and you shall have all: ask freely; nothing shall be refused. But whenever, hereafter, you would communicate with me, I must be addressed as king of Asia, lord of all you possess, and of all you can desire; otherwise I shall consider myself unduly treated. If you propose yet to dispute with me the sovereignty of Asia, be it so, and prepare for my approach: I shall seek you wherever you may happen to fix your quarters."

Proceeding southward to Tyre, Alexander was met by the son of the governor, accompanied by some of the principal townsmen, offering him allegiance, but refusing, on any account, to allow him to enter within their walls. Aware of their disposition, and sensible, at the same time, that it would not be prudent to advance into Egypt, leaving so powerful an enemy behind him, he submitted to his officers a proposal either to demand from the Tyrians an unequivocal avowal of their alliance, or in the event of their refusal, to compel them by force of arms to open their gates.

we cannot enter into the details of the memorable siege which followed. The insular situation of the town, at the distance of half a mile from the shore, gave the Tyrians many opportunities of defence, and numerous advantages in repelling the invader, which directed by an unusual degree of skill and courage, had nearly baffled all the efforts of Alexander. A mole, stretching from the mainland to the island, facilitated the operations of the conqueror; but it was not till he had obtained a fleet, and trained his men to fight on shipboard, that he found himself a match for the expert sailors of Tyre, who destroyed his works as fast as he erected them, and burnt his towers and machines before they could be brought to act against their ramparts. At length, after a siege of seven months, the Macedonians took the city by storm, putting eight thousand of the inhabitants to the sword, and reducing to slavery not fewer than thirty thousand, who had survived the horrors of the bombardment and the carnage of the last assault.

It was while Alexander lay before Tyre, that a second deputation reached him from Darius; bringing the offer of ten thousand talents, about two millions sterling, for the ransom of his family, and proposing a treaty of peace and alliance. To further this last object, the Persian offered the additional inducement of his daughter in marriage, and all the country between the Euphrates and Mediterranean sea, in name of dowry. The proposal was, as usual, submitted to his council; and it was on this occasion, according to the concurrent testimony of historians, that the Macedonian prince pronounced, in

reply to one of his generals, the pithy expression Alexander, which has been so often repeated, and so inconsiderately admired. "If I were Alexander," said Parmenio, "I would accept the terms."—"And I," rejoined Alexander, "were I Parmenio."

The answer returned to Darius was so harsh, so destitute of feeling, and withal, so unlike the romantic generosity of Alexander's character, that we readily participate in the doubts entertained by Mr. Mitford, as to the genuineness of the expression in which it is conveyed. He replied to the ambassadors, says Arrian, "that he did not want Darius's money, and that he would not accept of a part of his empire when he had a right to the whole; and as to his daughter, he would marry her, if he pleased, without her father's consent; but that if he had a wish to put his humanity to the proof, he might come and see him in person."

Gaza was now the only town in Syria which intervened between the Macedonian and his views upon Egypt. It occupied a strong position in the midst of deep sand, which rendered approach to it on all sides extremely difficult; but as Alexander was resolved to leave behind him no fortress of any consequence in the hands of the enemy, he instantly adopted measures for its reduction. The garrison, according to the statement of Arrian, consisted of Arabians, hired for the purpose by Betis, the governor, who likewise had laid up an immense stock of provisions to enable him to hold out during the long siege which the obstinacy of the Macedonians in their investment of Tyre, had prepared him to expect. But no precautions were found sufficient against the resolute bravery of Alexander. The place was taken by storm after a gallant defence on the part of the citizens; who, when they saw the enemy within their walls, collected together in a body, and fought till every man lost his life on the spot on which he stood. The women and children were, as usual, sold for slaves to reward the toils of the conquerors; and the town itself was bestowed upon the partizans of Macedonia, who forthwith, founded a colony amidst the ruins of its buildings.

The fall of Gaza was rendered memorable by a wound which Alexander received whilst conducting an assault against the ramparts, and which has been recorded by historians with all the accompaniments of credulity and superstition, usual on such occasions. Plutarch, whose love of the marvellous had no bounds, relates a variety of particulars concerning it, full of augury and omens; but the only thing which admits of no doubt, is the fact that the captain-general of Greece was severely wounded in leading up his men to the enemy's walls, at a period of the siege so extremely critical, that personal example and encouragement had become absolutely necessary.

Syria, including Judaea, Samaria, and Phoenicia, being now added to the conquests of Alexander, he lost no time in directing his march towards the richer and more important provinces of Egypt. Arriving before Pelusium, the key of that country, he summoned it to surrender; upon which the Persian deputy, unable to resist the power of the conqueror of Tyre and Gaza, and finding the Egyptians heartily disposed for a change of masters, immediately delivered that strong-hold into his hands, together with the whole of the territory which, at that period, acknowledged

Biography. the dominion of the great king. Thus, in the course of a few days, did the Macedonian chief obtain possession of that wealthy and powerful nation which had so long defied the force of the Persian empire; thereby excluding the navies of the Asiatic monarch from all the shores of the *Ægean* and *Mediterranean* seas, and also securing to himself the command of the vast trade, and other resources, of which the Arabian gulf had already become the principal channel. It was, perhaps, at this period, that for the first time, his mind opened to the numerous advantages which would redound to his extensive dominions from the establishment, in *Egypt*, of a regular emporium for the commerce of the east. It is certain, at all events, that from this epoch, he turned his attention to those magnificent plans for laying the foundation of a permanent intercourse between *India* and the states of the west, which reflect so much honour on his discernment and patriotism.

Determined to employ the first moments of peace in surveying the vast country which he had so easily acquired, he proceeded up the Nile as far as *Heliopolis*, and crossing the river at that point, returned by the way of *Memphis*; where, we are told, he had immediate recourse to all his arts of popularity, with the view of gaining the affections of his new subjects. Having next examined the several mouths of the *Egyptian* river, and considered the comparative advantages of *Pelusium* and *Canopus*, he rejected both as unsuitable for the great object which he had in view. At length, passing to the western side of the branch on which the latter city stood, he made choice of a site between the river and lake *Mareotis*; and there he resolved to build a town, which in point of magnificence and commodiousness, should eclipse all similar works on either shore of the *Mediterranean*. To *Dinocrates* he committed the design and execution of his new city; which, as if he had wished to attach his reputation to the labours of peace and improvement, rather than to those of war and desolation, he named after himself, and called it *Alexandria*.

The resolution of this wonderful man to visit the temple of *Jupiter Ammon*, has never been clearly explained, or traced to motives such as usually influenced his sagacious mind. *Arrian* merely informs us that *Alexander*, about this time, was smitten with a desire to visit that famous temple, and to consult the oracle; because *Perseus* and *Hercules* had formerly consulted the god, and because he counted these personages among his ancestors. As was to be expected, a number of supernatural occurrences distinguished this expedition. Rain fell miraculously from heaven to quench the thirst of the exhausted Macedonians whilst travelling through the desert; and when they had lost their way amidst the trackless sand, a couple of dragons or large serpents, appeared in order to conduct them to the sacred territory of *Ammon*. It was worthy of remark, that whilst *Ptolemy* describes these guides as belonging to the species of animals we have just named, his brother officer, *Aristobulus*, who was also of the party, informs his readers that they owed this seasonable interposition to a pair of ravens. *Rooke*, in his notes attached to *Arrian's* history, indulges in much absurd merriment, in regard to these divine heralds, whilst he seems altogether incapable of penetrating the mystery which

is occasioned by the use of this figurative language. The learned *Bryant*, on the contrary, proceeding on the fact that both the serpent and the raven were symbolical of sacred things among the Egyptians, conceives that such names might be given to different orders of priests, who, in their turn, might act as guides to the devotees whose zeal led them to cross the *Lybian* desert. A more natural explication of the passage has been suggested by an annotator on *Strabo*, who reminds us, that in a wilderness destitute of water, the flight of birds is commonly held as a sure indication of the existence of woods and fountains in the neighbourhood towards which it is directed.

Arrived at the land of *Ammon*, which is described as a green and pleasant spot in the arid waste, the Macedonian prince was received with the respect becoming his high rank, and with that reverence to which his great piety had entitled him. The answer of the oracle, of which we are told nothing more than that it was satisfactory, seems not to have come down to the time of *Arrian*; and there is moreover, much reason to believe that the response to be delivered from the holy shrine, was the least important object which *Alexander* had in view, when he undertook a march of more than three hundred miles over the moving sands of an African wilderness. It is not to be imagined that such a man as he could allow his mind to fall a prey to the absurd vanity of obtaining from the oracle, an assurance that his parentage was divine; or that there could be any ground for the puerilities narrated by *Plutarch* and *Quintus Curtius*, as having been played off by the juggling priests, to gratify their illustrious visitor. No character of antiquity could employ more successfully than the son of *Philip*, those passions and weaknesses of the human race, which have their origin in superstitious fears and anticipations; but, on no occasion, does he appear to have yielded to them so far himself, as to become the dupe, either of prophets or of the interpreters of prophecies.

Upon his return to *Memphis*, the king of *Macedon* arranged the affairs of his extensive government, and appointed presidents of his newly acquired provinces; keeping in view his great object, the conquest of *Persia*, which was about to engage all the powers of his active mind, as well as all the resources of the confederated states. In the spring of the year he proceeded to *Tyre*, where the naval and military forces which he had raised in *Macedonia*, or which were intrusted to his command by the Grecian republics, had been ordered to assemble. Having transacted business here with certain commissioners from *Athens* and other allied cities, he put his army in motion, in order to commence his third Asiatic campaign, and to complete the subjugation of the *Persian* monarchy.

In the beginning of *June*, in the year noted in the margin, the Macedonian hero reached the *Euphrates*, having performed his march thither without any opposition. At *Thapsacus*, where he intended to cross that celebrated barrier of the *Persian* territory, he found the bridges broken down, and about four thousand horsemen manœuvring on the opposite bank; stationed there, however, rather to observe his motions, than to dispute his passage, for they immediately retired upon ascertaining his purpose to transport his troops to the eastern side. Meeting no

hostile force, Alexander advanced along the northern border of Mesopotamia; in the course of which march, he learned from certain prisoners taken by his mounted skirmishers, that Darius had already occupied a strong position on the further bank of the Tigris, where he seemed disposed to await the approach of his adversary. It had been the intention of the confederates, as suggested by Alexander, to proceed at once to Babylon, to strike a decisive blow at the very heart of the empire; but no sooner were they informed of the situation and apparent views of the Persian king, than they yielded to the advice of their able commander, and immediately directed their march towards the Tigris, in order to bring on a battle.

Pursuing the line of the river now named, the fourth day brought the Macedonians in sight of the enemy, who appeared to be retreating still farther into the southern provinces, either with a view of falling back upon his resources, or of exhausting the army of Alexander by fatiguing marches. Darius, however, was so closely pressed, that he could not any longer follow this judicious system. It was now necessary for him to hazard a battle; and he therefore proceeded to make preparations for it, with considerable skill and foresight, and with a due reference to the nature of the ground where he was posted, and the character of the troops under his command. Leaving his heavy baggage and military chest in the fortified town of Arbela, he made choice of a field about six miles off, on the banks of the Bumadus, a stream which falls into the Tigris, where the open plain appeared suitable for the action of his numerous cavalry, and particularly of his armed chariots.

In estimating the number of troops engaged in this memorable conflict, we are, as usual, puzzled with the various and inconsistent statements of the several Grecian historians. Arrian, indeed, favours us with a very minute muster-roll of the different nations which fought under the standard of the great King, as well as with the names of the respective commanders who conducted them to the war; but he is, at the same time, so extremely neglectful in regard to the actual numbers which every tribe brought into the field, that we have no means of satisfying ourselves as to the accuracy of the total amount of the Persian force, with which Alexander had to cope at Gaugamela. This historian relates that the infantry under Darius, was not short of a million; whilst the cavalry, according to his estimate, amounted to forty thousand, the armed chariots to two hundred, and the elephants to about fifteen; a computation which is evidently as much exaggerated, as the Macedonian army engaged in this battle is diminished; the numbers of the latter being reduced as low as forty thousand foot, and seven thousand horse.

The invader having granted to his soldiers a rest of four days, began to fortify his camp and make preparations for an attack on the enemy's lines. At the second watch of the fifth night, accordingly, he drew out his forces, with the intention, as it should seem, of lending them against the Persians by break of day; but having advanced about half the distance which intervened between the two camps, and reaching the summit of some small hills which had concealed each host from the other, Alexander perceived so many tokens of defensive preparation on

the part of his adversary, that he thought it expedient to halt and summon a council of war. The majority of the commanders were for an immediate attack: Parmenio, however, opposed himself to that rash opinion, and advised the king to examine well the nature of the ground on which they were about to risk their safety and reputation, and by all means to postpone the attack till night. The advice of this faithful veteran coincided, in this instance, with the judgment of his royal master; who, repressing his usual ardour and impetuosity, spent the day in viewing the several bearings of the field, and in securing himself against the use of stratagem or any other undue advantage on the side of the Persians. Both armies appear to have remained at their posts, ready for battle, till the next morning; when each, desirous to bring to a decision the momentous interests which were suspended on the fortune of the day, advanced slowly to meet the other.

The action commenced with the cavalry and chariots, and soon became general throughout both lines, and sanguinary in the extreme. Arrian admits that the battle was for some time doubtful. The Scythian horse, well armed and remarkably brave, pressed hard on the Greeks, and even compelled them to give ground; but discipline and skill at length prevailed over numbers and courage. The Macedonian phalanx advancing to the charge, overthrew the Persian foot, and created so much confusion in their ranks, that Darius was carried off the field among the fugitives, and, according to Arrian, set an early example of flight and despondency.

The fortune of the day, however, was not yet quite determined, and the eagerness of Alexander to secure the person of their unhappy monarch, had nearly thrown the victory into the hands of the Persians. Having weakened his left wing in order to make a more efficient attack with his right, he instantly commenced pursuit at the head of his victorious cavalry; leaving the former wing exposed to a furious charge from a large body of the enemy's horse under Mazæus. This officer, who seems to have been one of the most active in the Persian service, broke through a double line of phalangites, commanded by Parmenio, and proceeded forthwith to take possession of the Macedonian camp, which, during the battle, was protected by a very small guard. Overcoming the resistance of this inadequate force, the troops of Mazæus betook themselves to plunder; and having set at liberty such prisoners as they found in the hands of the enemy, they encouraged them to take a share in the booty and massacre, to which they most inconsiderately confined their attention, even at a time when the main body of their army was involved in a total rout, and their king driven from the field.

Messengers were despatched after Alexander to inform him of the precarious circumstances in which Parmenio now found himself. Returning, therefore, with the utmost speed, he charged a body of Persian cavalry, which were still hanging on the left wing, and which had prevented the Macedonian general from sending relief to the camp. A conflict, singularly fierce and destructive, immediately ensued. Sixty of that famous corps called "The Companions" were killed, whilst fighting around the person of their prince; and Hephæstion, Cornus, and Menidas, generals of high rank in his army, were severely wounded. The tactics

Battle of
Gaugamela,
and flight of
Darius.

Biography. and valour of the Grecian cavalry, however, restored once more the balance of fortune: the Persians betook themselves to flight; upon which Alexander gave orders to Parmenion to take possession of their camp, whilst he, at the head of his indefatigable horsemen, instantly resumed the pursuit of the fugitive king.

After the delay occasioned by his return to the relief of his left wing, it was not to be expected that the most rapid movement, practicable for troops at the close of an obstinate fight, could bring Alexander within reach of Darius. Arriving accordingly, upon the approach of night, at the river Lycus, which the Persian had already crossed in safety, the victor issued orders to his men to relinquish the pursuit, and refresh their bodies. He himself, however, seemed to require no repose. At midnight he set out for Arbela, and arrived so unexpectedly, that he obtained possession of the town without any opposition; finding in it the rich treasures which had been deposited there for the use of the army, together with a chariot, bow, and shield of the Persian monarch, the second set of spoils of the same description, which had fallen into his hands.

The numbers of the slain in the contending armies, as recorded by Arrian, are marked with so much improbability, that it is only surprising they should ever have been received by credible writers. The Persians, says he, lost three hundred thousand men in killed, and a still greater number in prisoners. The loss of the Greeks, according to the same authority, did not exceed a hundred men; a statement, not only grossly improbable in itself, when considered with a reference to the fierceness of the combat, but even quite inconsistent with the details of the battle, as narrated by Arrian himself.

Surrender
of Babylon.

Darius having collected some of the scattered remains of his army, turned his face towards the north, and prepared to make in the provinces of Media, a last effort for the preservation of the empire. Meanwhile, Alexander directed his march to Babylon, with the view of rendering himself master of the fruitful provinces of the south; and arriving there at the head of his victorious forces, was met by the whole population of that great city, who came forth unarmed; the nobles, and priests, leading a solemn procession, bearing presents in their hands to the conqueror of the east, and prepared to inform him that the town, the citadel, and the treasury, were already placed at his disposal. These fruits of his victory were much more ample than he had expected; and he knew well how to profit by them. He gratified his soldiers with sums of money; received the vanquished into his favour; appointed some of them to offices of trust; soothed the people with demonstrations of his respect for their religious rites; and even assisted at a festival held by his orders, in the temple of Belus, the chief of their gods.

During his stay in the capital of Assyria, information was conveyed to him, that the Armenians also were eager to acknowledge his sovereignty; and he was soon after favoured with the intelligence, that the inhabitants of Susa, the principal seat of the Persian government, were likewise willing to change their dynasty of rulers. Accordingly, proceeding thither with his army, he was met by the son of the satrap, accompanied by a messenger; who was authorised to assure him that the city would be surrendered imme-

diately on his arrival, and the treasury, containing about ten millions sterling, would be given up into his hands. On the twentieth day, says Arrian, after his departure from Babylon, he arrived at Susa, and entering the town, took possession of all the money, amounting to fifty thousand talents, besides the royal furniture. Many other things, he adds, were found there, which Xerxes had formerly carried out of Greece, and particularly the brazen statues of Harmodius and Aristogiton, those celebrated tyrannicides, so deeply venerated by the Athenians as the avengers of liberty. These works of art were ordered by Alexander to be sent to the people of Athens, as a testimony at once of his respect for their character, and of his own conquests over their ancient enemies.

Diodorus and Curtius agree in the statement that, Alexander when at Susa, placed the wife and family of Darius in the palace-royal, and committed the civil government of the town to a native Persian. Whilst here, too, a powerful reinforcement arrived from Macedonia, accompanied by fifty youths of the first families in that country, sent by their parents, and recommended by Antipater to be admitted into the king's young guard. Finding his army thus strengthened, Alexander made arrangements for pursuing his conquests in Persia Proper, the birth place of the famous Cyrus, and the strong-hold of the vast empire which that conqueror established in Asia. A range of mountains divided the territory of Susiana from that of Persia, inhabited by hardy and determined barbarians, who thought themselves able to check the progress even of the Macedonian commander, when shut in among the narrow and difficult passes of their rugged country. But they knew not the enemy with whom they had now to contend. The light troops of the invader, deceiving their vigilance, or anticipating their movements, secured the straits, before the rude mountaineers had perceived their advance; and thus, instead of obtaining payment of toll, which they had been accustomed to exact, even from the Persian kings, the Uxian villagers found themselves at the mercy of a foreign sovereign, who, for their insolence, threatened them with immediate extermination.

A severer conflict awaited Alexander at a pass in the Sogdian mountains; where the satrap Ariobarzanes awaited his approach with a body of troops, amounting, according to Arrian, to forty thousand foot and horse. The Persian had taken his ground so well, and defended it so resolutely, that the best soldiers of Macedonia were unable to make any impression upon his lines; and it was not until Alexander had found means to conduct a body of men through another pass, to fall upon his rear, whilst the main body attacked his forces in front, that the gate of Persia was secured in behalf of the combined army. The main object of the invader now, was, to get possession of the treasury in Persepolis, before the news of the satrap's defeat could induce the Persian officers commanding in that city, to remove or destroy it; and, accordingly, to prevent such a spoliation, (which, he had reason to believe, was actually intended,) he advanced with extraordinary rapidity to the capital, and completely defeated the designs of his enemies.

The fatigues and anxieties of war were here followed, as usual, with much festivity and rejoicing; and the destruction of the magnificent palace of the king of Persians, unfortunately commemorates the

Destruction
of the pa-
lance of the
king of Per-
sians, unfortunately commemorates the

Biogr-phy. the intemperance of Alexander, during his stay in Persepolis. The celebrated Thais, an Atheolian courtesan, was admitted to the banquet at which the Macedonian prince entertained his commanders; who, being bented with wine, and stimulated by the recollection of what she had heard concerning the demolition of Athens in former times, by the hands of the Persians, proposed to avenge the cause of her native land, by reducing to ashes the royal dwelling of its haughty enemies. Some of the Grecian officers, we are told, willing to check in their captain-general, the growing partiality, which they could not fail to observe, for Persian luxuries and manners, and afraid, perhaps, that he might be induced to establish his residence in the east, did not think it necessary to refuse their concurrence to the mad proposal of their countrywoman. The hero of the Granicus, accordingly, perceiving that his friends expressed no decided aversion to the frolic, sallied forth with a torch in his hand, and set fire to the gorgeous palace of the great king, the conqueror of Assyria, and lord of the Medes and Persians. He was however, immediately seized with repentance; and exerting himself to stop the progress of the conflagration, he fortunately succeeded in saving a part of the royal buildings, as well as in preventing the ravages of the flames from extending to the houses of the city.

Confederacy of his hereditary states, and their defeat by Antipater. We have already mentioned that Darius, after his defeat at Arbela, conducted the few troops which he was able to collect, into the country of the Medes; and it appears from the concurrent testimony of historians, that during the four months the victor spent at Persepolis, the vanquished monarch, in conjunction with the anti-Macedonian party among the Greeks, found the means of exciting an active war against Alexander in his hereditary states. The Lacedæmonians at the head of this confederacy took the field, and offered battle to Antipater, the viceroy of Macedon; who, descending into Peloponnesus with such a force as he could raise, attacked the enemies of his master, and, after a sanguinary conflict, secured for him a complete victory, dispersing the combined army of Spartans, Arcadians, and Achæans, and leaving Agis, the king of Lacedæmon, dead on the field. In consequence of this successful campaign, Alexander had the satisfaction to find, that the governors of Sparta, no longer hostile to the allied republics, made haste to send into Asia their contingent of troops, to assist him in the complete subjugation of the Persian empire.

R. C. 330. O. 112. 3. As soon as the season would permit, Alexander commenced his fourth campaign in the east, by marching into Media to attack Darius, who was said to have collected such a body of troops as to justify another appeal to arms, in defence of his northern dominions. The defeat of his partisans in Greece, however, and the rapid advance of his indefatigable adversary, produced a sudden change of determination on the part of the Persian, and he fled from Ecbatana, the capital, with an escort of about nine thousand men, carrying with him a mass of treasure, valued at a million and a half sterling.

The extensive territory of the Medes having thus, without a blow, been added to the conquest of Alexander, he became more desirous than ever to obtain possession of the fugitive monarch's person. Making a selection, therefore, of his most active troops, he set out from Ecbatana in pursuit of Darius; and

having during eleven days performed marches of incredible rapidity, he arrived at Rhage, near the celebrated pass, called the Caspian Gate, in the mountains of Caucasus; where he learned that the unfortunate king, despairing of successful resistance, had abandoned the strong hilly ground, and was now continuing his flight in the open plains of Parthia. Whilst the conqueror remained at the town just named, in order to refresh his men and collect provisions, information was brought to him by two Persian chiefs, who could no longer accompany their sovereign in his rapid retreat, that Bessus, the satrap of Bactria, with another satrap, and the commander of the cavalry, had conspired against the unhappy Darius, whom they were then dragging along as their prisoner; and whose life would, in all probability, be sacrificed to the accomplishment of their ambitious views, or personal safety.

Death of Darius. Such intelligence could not fail to prove a fresh stimulus to Alexander. Marching, accordingly, throughout the night, he found himself next day, at noon, in a village which the satraps, with their royal charge, had left but the preceding evening; and, again pushing forward across a waterless desert, which presented a nearer road than the one taken by the fugitives, he had the pleasure to discover, with the first light of the morning, the enemy hastening before him in a disorderly retreat. As he continued to gain upon their steps, a few of the more resolute attempted resistance; but finding that they could not possibly convey away their prisoner alive, and afraid, it should seem, that his name and influence might be turned against them, did he fall into the hands of Alexander, the barbarian satraps plunged their swords into the body of their ill-fated prince, and immediately rode off, leaving him mortally wounded. Before the pursuers could reach his chariot, Darius had expired; and nothing now remained of the mighty sovereign of Asia but a bloody corpse, presenting a silent appeal to the generosity of the youthful conqueror, about to be indebted for the rites of sepulture to the very band which had deprived him of all the power and splendour belonging to the greatest potentate of the east. Nor did Alexander refuse the claim that was thus made upon him. He ordered the dead body to be treated with honour and respect; and sending it into Persia, gave command that it should be deposited in the royal tomb, with all the pomp and ceremony formerly used at the burial of the kings of that country.

The death of Darius may be regarded as the conclusion of the eventful war which the confederated Greeks, under the Macedonian chief, waged with their ancient enemies, the rulers of Persia and Assyria. Bessus, indeed, that faithless and unfeeling satrap, who, upon the murder of his master, assumed the title of Artaxerxes, had the presumption to aspire to the sovereignty of the empire; and was, it is added, already busy in the attempt to gain over to his views the adherents of the late king, and particularly the Greeks who had served in his army. As, however, his ambition was not supported either by power or by talent, it only paved the way for his downfall; and, placing him in the hands of Alexander, ultimately brought upon him that severe punishment by which he atoned for the assassination of his sovereign.

Whilst engaged in reducing some of the northern provinces attached to the Median dominions, the

attention of the king of Macedon was attracted to symptoms of disloyalty among certain of his officers. The first who was brought to trial was Philotas, the son of Parmenio, accused of having engaged in traitorous measures against him. The nature of the charge is no where clearly explained; but it appears to have satisfied the military judges who were appointed to inquire into it, for the young general was condemned and executed. The death of Philotas was soon followed by that of his father, Parmenio, the confidential friend of Philip, and reputed the ablest commander in the Macedonian army. This brave soldier was at the head of a body of troops in Media when certain officers were despatched thither to supersede him in his military authority, and to place him before a tribunal. What the crimes or suspicions were which rendered expedient so severe a measure against a favourite old general, we have no means even of forming a conjecture; the narrative of the historian being confined to the simple fact that, in pursuance of a sentence, Parmenio suffered death.

Determined to inflict punishment on the murderers of Darius, the Grecian hero once more directed his course eastward; and having obtained the submission of Bactria, Aria, and Aornos, he continued his progress, till, crossing the deep and rapid Oxus, he entered the province of Sogdiana, which was at that period under the command of the satrap Spitamenes. When on the eastern bank of the river now named, Alexander received information that Bessus had taken refuge in a small fort; after being deserted, if not even actually betrayed, by Spitamenes, on whose invitation he had been induced to intrust his life to the fidelity of the Sogdians. This strong-hold was summoned by Ptolemy, the son of Lagos, who promised security to the town and garrison, on the sole condition of their surrendering the assassin of Darius into the hands of the king of Macedon. The terms were accepted; and Bessus, after being cruelly mutilated, according to the fashion of the Oriental barbarians, whose practices Alexander now showed some inclination to adopt, was put to death, either in the capital of Media, or in that of the Bactrian satrapy, his former residence and seat of government.

The Bactrians and other inhabitants of the remote provinces which extend between the Caspian sea and the river Iaxartes, continued, notwithstanding the death of Bessus, and the nominal submission of Spitamenes, to occupy, during several months, the arms of Alexander. Naturally courageous, and smitten with the love of independence, these hardy barbarians yielded with much reluctance to the progress of Macedonian invasion. The fidelity of Spitamenes too was seduced by the prospect of kingly power; and he invited the natives of Sogdiana, as well as the roaming Scythians, who fed their flocks on the banks of the Iaxartes, to join his standard, in order to repel the Greeks from their territory, and establish an independent sovereignty in the north. The rude warfare of barbarians, however, proved unequal to the experienced tactics of their invader. Spitamenes was defeated by the Macedonian general Cœnus; and, flying into the desert, was put to death by his own people, who sent his head to the conqueror, as a token that they would no longer continue their resistance, or with the more immediate intention of securing their personal safety.

There now remained only two fortresses in Sogdiana, or in the adjoining province of Parthacene, which opposed the arms, and bade defiance to the engineers of Macedon. Into one of these Oxyartes, the Bactrian, removed his wife and children; and as the rock on which the Sogdian strong-hold stood, was very lofty, and so steep on all sides as to be almost inaccessible, the garrisons usually placed in it imagined they had nothing to fear, except the assault of famine. Having, however, on the present occasion, an abundant supply of provisions for a long siege, and deriving a copious supply of water from the snow which lay deep around their buildings, the Bactrians were so confident in their strength, that when summoned by Alexander to surrender, they contemptuously asked him whether his soldiers had wings. To this extraordinary man difficulties always proved a stimulus to exertion; and being determined, in this instance, to exhibit an instructive lesson to the rude soldiers of the Scythian wilds, he called into action all the means which he possessed, whether of skill or hardihood, in his army, in order to reduce the vaulted castle of Oxyartes. He offered a reward of twelve talents to the individual who should first mount the top of the rock on which it was situated, and smaller sums to those who should immediately follow him in the assault. The place was next day in the hands of Alexander; who found among the captives the beautiful Roxana, a daughter of the revolted chief, and who soon became wife to the renowned conqueror of Asia.

This union with the family of Oxyartes, though offensive to the prejudices of his Grecian subjects, was dictated not only by affection for the fair Bactrian, but also by political considerations, affecting the stability of his empire in the east. There is reason to believe that a large portion of his soldiers had been for some time recruited in the conquered states of the Persian dominions, and that his views were now directed to such alliances among his European and Asiatic subjects as might ultimately effect a complete consolidation of his power over the wide regions already traversed by his victorious army. In the mean time, the example of Oxyartes, who had submitted to Alexander; and the generous conduct of the latter to those whom he vanquished in war, induced Cherienes, the governor of the fort in the Parthacene hills, to listen to terms for capitulation, and to accept, in like manner, the friendship of the conqueror.

By such achievements the great empire of Persia, and of the Medes, was at length transferred to the Macedonians. The arms of Alexander were already touching the boundaries of India, and were about to disturb the repose of those ancient kingdoms in eastern Asia, of which imagination, and an uncertain tradition, had presented the most splendid pictures to the minds of Europeans. Mean time, we may be allowed to remark that, in the conduct of the eventful war which was now brought to a close, the transcendent abilities of this great commander were conspicuously displayed. His example taught the troops to despise hunger, cold, fatigue, and danger. Neither rugged mountains, nor deep rapid rivers, nor wounds, nor sickness, could interrupt his progress, or abate his activity. His courage indeed often exposed him to difficulties from which he could only be extricated by such new efforts of bravery as, in any other general,

Reduces the Bactrians.

Biography. would have passed for unwarrentable rashness. Amidst all the perils and hardships of a military life too, he still respected the claims of humanity, and practised the mild virtues of forbearance and clemency. The conquered nations were all allowed to enjoy their ancient laws and privileges; the rigours of despotism were softened; arts and industry were encouraged; and the proudest governors compelled by the authority and example of their chief to observe the rules of justice towards their moment subjects. To civilise the fierce inhabitants of the hilly country he built a city, to which he gave his name, in the range of Paropamisus; and to habituate the roaming Scythians to the manners of cultivated society, he founded towns and planted colonies on the banks of the Oxus, and the Jaxartes. Even his operations in the field, and his extensive campaigns, usually ascribed to restless activity, or blind ambition, appeared to his discerning mind as not only essential to the security of the conquests which he had already made, but also as necessary preparations for those more remote and splendid expeditions which he still meditated.

From this period, indeed, his views have been described as less patriotic, and as being actuated almost solely by personal ambition, and the love of military glory. His resolution to invade India too, has been regarded as a measure of very doubtful expediency; but even by those who are the most severe in their strictures on the policy of his eastern expedition, the wisdom, humanity, and skill which he showed in the war with Persia, have been most unequivocally applauded.

Whilst in winter-quarters in Bactria, two occurrences took place which contributed not a little to disturb the enjoyments of Alexander, as well as to admonish him, that the maxims and habits of Orientals would ultimately alienate the affections of his Macedonian subjects, and thereby undermine the foundations of his power. We allude to the murder of Clitus, and the conspiracy of his young guard.

Murder of Clitus. The celebrated commander now named, indignant at the flattery which was poured into the ear of his prince, during an entertainment in honour of Castor and Pollox, thought proper to reprove the sycophants, who abused the rising vanity of the conqueror. The interference was disagreeable to Alexander. He remonstrated with Clitus, who heated with wine, turned fiercely on the king himself, and addressed him in very offensive terms. After a pause, the provocation was renewed; when the monarch, no longer able to restrain his fury, snatched a weapon from one of the guards, and killed the general on the spot. This unhappy event was, we are told, followed by deep remorse. Three days Alexander confined himself to his chamber, and would neither eat nor drink; and it was not until the rash act was ascribed to the anger of Bacchus, that he allowed himself to receive comfort, and to desist from his merited self-upbraidings.

Conspiracy of the hand of pages. The conspiracy among the hand of pages, as they have been called, originated in an affront, which one of them received from the king, during a boar hunt, in the neighbourhood of Bactria. Hermolus, a youth of the class now mentioned, struck the game before Alexander, who was at hand, and was, for this insolence or indiscretion, immediately chastised with rods, and deprived of his horse, in the presence of all his companions. The wounded pride of the page dictated

a terrible revenge. As the band to which he belonged, had the duty of keeping watch during the night in the royal bed-chamber, Hermolus induced four of the number to enter so completely into his vindictive purpose, as to agree to murder the king in his sleep. The plot was, however discovered, by means of an old woman, who dissuaded her master from going to bed that night; and the young conspirators being next day put to the rack, revealed all the particulars of their horrid plan, and declared that Callisthenes the philosopher, a turbulent and excessively rude personage, attached to the suite of Alexander, was their chief instigator. Punishment was immediately inflicted, according to the usage of the Macedonians; and the king, already tired of the inactivity incident to winter-quarters, began his preparations for a march into India.

The spring of the year being somewhat advanced, the coqueror of Asia set his troops in motion; and crossing the ridge of Paropamisus with an army of more than a hundred thousand men, he descended into the plains which divide Persia from the rich territory, that is watered by the Indus. Having reached the banks of the Cophenes, he divided his forces; and, placing a detachment under Hephæstion and Perdicas who were directed to advance to the river just named and make preparations for crossing it, he himself, with the main body, assumed the more laborious undertaking of subduing the barbarians who should happen to oppose his progress.

After many severe conflicts with a variety of tribes, whose names are now altogether unknown, and having reduced the strong fortress of Aornus, which was situated on a rock, nearly a mile and a half in height, Alexander led his army southward, in the country between the Cophenes and Indus; where stood of old, the celebrated town called Nysa, said to have been founded by Bacchus, in the fabulous ages of Grecian coquest. He immediately crossed the Indus, and received the submission of the several princes who dwelt on its eastern banks. Among these was Taxiles, a ruler of considerable eminence, who, besides other presents, brought to the Macedonian seven thousand Indian horse; offering, at the same time, the surrender of his capital, the most wealthy and populous city between the Indus and Hydaspes. Alexander, however, still actuated by the same generous motives which marked his conduct towards the vanquished chiefs of Persia, and desirous to have friends rather than enemies behind him, not only restored to Taxiles his dominions, but even added to their extent.

Preparing to pass the Hydaspes with the view of pursuing his conquests eastward, the king of Macedonia was informed that Porus, a powerful and warlike monarch, had advanced with a large army to the bank of the river, to dispute his passage. To expose his troops in the face of an enemy so numerous and determined, was a measure, which, viewed in connection with the ultimate objects now entertained by Alexander, and his increasing distance from his resources, he could not fail to regard as extremely hazardous. He therefore had recourse to stratagem. Feigning no attack on Porus, night after night, he at length so far deceived the vigilance of that commander, as to throw a part of his army across, before the break of day, a movement which brought on a general engagement, and obtained for the Macedonians a complete victory.

Alexander's expedition to India

Biography. The unfortunate Indian lost both his sons, all his captains, twenty thousand foot, and three thousand horse, and was himself carried a prisoner into the camp of the conqueror. Alexander, it is said, admired his stature and the majesty of his person; but he admired still more his courage and magnanimity. Having asked in what he could oblige him? Porus replied, "by acting like a king." That, said Alexander with a smile, I should do for my own sake, but what can I do for your's? Porus replied, "all my wishes are contained in that one request." Struck with the firmness of the captive prince, Alexander declared him reinstated in his throne, and received him into the number of his allies and friends: and having soon after reduced a people, named the Gilanæ, who had thirty-seven popular cities on his eastern frontier, he added this valuable province to the dominion of his own confederate.

The conqueror, devoting some time here to the refreshment of his army, exhibited on the banks of the Hydaspes, the gymnastic and equestrian games of his native country: and before leaving that river he signified his victories by founding two cities, one of which he called Nicæa, in reference to the battle with Porus, and the other Bucephalia, in honour of his favourite horse, which died there, worn out by age and fatigue.

Intrusting to Craterus a division of his army, which was to be employed in building and fortifying the new cities, Alexander continued his march eastward. He crossed the river Acesines, which is said to be fifteen furlongs broad; and having subdued the feeble opposition of another prince called Porus—a word which seems to have imported a title rather than a mere name—he next passed the Hydrotæ, a stream of the same breadth with the Acesines, but flowing with a more gentle current. Arrived on the eastern bank, he received intelligence that several independent tribes were prepared to oppose his progress. A battle ensued, in which the undisciplined courage of the barbarians was, as usual, overcome by the experience and more perfect arms of the invaders; and the former being driven from the field took refuge in their city, Sangala, a place of considerable strength as well by nature as by very laborious fortifications. The Indians, unfortunately, resolved to abide the hazard of a siege, and their town, after an obstinate defence, was taken by assault. Seventeen thousand are said to have fallen on that occasion, and about seventy thousand to have been taken prisoners. The city itself was razed, and the confederates either submitted to Alexander, or attempted, by retiring to the banks of the Hyphasis, to find safety beyond the reach of his arms.

Refusal of his troops to proceed. The captain-general of Greece was now master of that valuable country which is at present called the Panjab, watered by the five great rivers, whose united streams form the Indus. The Hyphasis, the most eastern of the five, was not crossed by the victorious army; for it was whilst this indefatigable chief was preparing for the passage of that current, that his European troops adopted the resolution of returning into Europe, and relinquishing all further conquest in the east. It was with no small reluctance that Alexander yielded to their determination. Misled by inaccurate ideas of Indian geography, he imagined that he was at no great distance from the extreme bound-

daries of the Asiatic continent; and exhorting his soldiers to proceed, he assured them of a short passage homeward by sea, from the Indian ocean through the Persian gulph. All his arguments and remonstrances, however, were in vain: and at length finding that even his veteran Macedonians would accompany him no further, he made a pretence of consulting the gods, and announced to his army, that the will of heaven coincided with their wishes. Proceeding, then, to erect twelve altars on the banks of the Hyphasis, equal in height to the highest towers used in fortifications, he left them as monuments of his victories, as well as to define the extent of his empire towards the east. He committed to Porus, the command of seven nations, including, it is said, two thousand cities, and forthwith commenced preparations for sailing down the Hydaspes, to its junction with the Indus, and thence along that majestic stream to the ocean.

Alexander divided his army into three parts; one of which he intrusted to Hephæstus, another to Craterus, commanding them to proceed along the opposite bank of the river; whilst himself, at the head of the third, embarked in vessels prepared by his Phœnician and Cyprian followers, to drop down the stream in company with the forces ashore. This navigation employed several months, being frequently retarded by hostilities with the natives on either shore, particularly with the Malli, a tribe of warlike and resolute barbarians. Having landed, in order to chastise these active assailants, the king laid siege to their capital; and proceeding to storm it, he allowed himself to be betrayed by his courage into an exploit, which, in any other man, would have been accounted madness. The Mallians chased from their ramparts, had taken refuge in the citadel; upon which Alexander commanded the scaling ladders to be applied with all possible expedition; but the persons appointed to perform this service, not advancing with a rapidity equal to his impatience, he snatched a ladder, fastened it to the wall, and mounted in defiance of the enemy's weapons. The Macedonians alarmed for their king, followed in such numbers, that the ladder broke, just as he reached the top; and for some moments, Alexander remained alone on the wall, conspicuous by the brightness of his arms, and exposed to thick volleys of darts from the adjacent towers. Immediately he sprang into the place: and posting himself with his back to the wall, he slew the chief of the Mallians and three others who advanced to attack him. Meanwhile Abreus, Leonatus, and Peucestes leaped in, to assist his single arm, and, if possible, to save his life. The first was instantly wounded and fell; the two others, regardless of their own safety, defended the king, whose breast was already pierced with an arrow, until a larger body of his men succeeded in hoisting into the citadel to effect his rescue. The Macedonians at length carried the strong-hold, and procured without a moment's delay, such medical aid for their gallant leader, as placed his life beyond the reach of danger.

Having arrived at the ocean, and provided necessities for a long march, the Macedonians here determined to proceed towards the capital of Persia, through the barren wilderness of Gedrosia. His motives to this most arduous undertaking were not those of vain glory, or a wish to surpass in extraordinary exploits, the fame of Cyrus and Semiramis. On the contrary, as he had determined that his fleet under Nearchus,

Alexander.

Marries the
daughter of
Darius.

should sail on a voyage of discovery, along the shores of the Indian ocean, and the Persian gulph, it became necessary that a land force should proceed by the coast, to supply the ships with water, and to defend the crews when in search of provisions. The fleet and the army mutually assisted each other; and by the example of their heroic sovereign, both soldiers and sailors were taught to despise toil, danger, and the severest privations. On foot, and carrying his usual armour, Alexander traversed the parching sands of the Gedrosian desert, sharing the fatigue, hunger, and thirst of the meanest soldier; nor was it till after a march of two months, distinguished by unexampled hardships, that the army and their royal leader arrived at the cultivated province of Carmania.

The king of Media had much to reform, and not a little to punish, when he returned to the Persian dominions. The governors of Babylon, Persopolis, and Susa, had abused their power during his absence, and oppressed the people; and as all just complaints were listened to and redressed, such of the accused as did not save themselves by flight, were visited with a speedy and condign retribution. It was now, indeed, a leading object with Alexander, to conciliate by all the means in his power, his numerous subjects in all parts of his empire; and with this view he encouraged marriages between the Greeks and Persians, and also adopted in his own person, so much of the manners and habits of the latter people, as appeared necessary to recommend them to his court, and even to his army. We have observed that he left in the palace royal at Susa, the family of Darius, who had fallen into his hands at the battle of Arbela. He now married the eldest daughter of that unfortunate sovereign, though his wife Roxana, the daughter of Oxyartes, was still alive; whilst he gave to Hephæstion, his friend and favourite general, the youngest sister of his new queen, as a consort, who by her rank at least, was worthy of the fame and services of that noble soldier. In like manner he provided wives for about eighty of his distinguished commanders; and it fell to the lot of Nearchus, the celebrated admiral, to receive as his spouse, the daughter of Mentor, that able Grecian officer who so faithfully served the Persian monarch; and who, had he survived to aid the counsels of his brother Memnon, would in all probability, have not only sustained the throne of the great king, but even given a turn to the affairs of the civilised world. All the weddings took place in one day, and were celebrated after the Persian fashion: a compliment which could not fail to be agreeable to the families of the ladies. In short, by imitating the manners and using the language of the vanquished, Alexander gained rapidly in the affections of his eastern subjects; at the expense, however, it must be added, of forfeiting to some extent, the respect of the Greeks, who still continued to regard the barbarians with contempt, and to cherish a rooted dislike for their speech and domestic habits.

a. e.
324.
on.
114. 1.

Having arranged matters in Persia Proper, the conqueror proceeded to realise a plan which he had formed, for visiting the interior provinces of his empire. Sailing down the river Euleus, he ascended the Tigris with the purpose of ascertaining the capabilities of those streams, in a commercial point of view, and of introducing such improvements, as an actual survey by experienced officers might suggest to him, in the

course of the voyage. Upon his arrival at Babylon, he found the Euphrates obstructed with dams and mounds, drawn across the current; a precaution adopted by the kings of Persia, for defending their provinces from sudden incursions by water, as well as for confining the ambition of their Assyrian subjects to the trade and affluence afforded by the culture of their own fields. But Alexander having nothing to fear from hostile armaments, made haste to open his rivers for fleets of merchantmen. He repaired the harbours, constructed arsenals, and built at Babylon, a dock sufficiently large to contain a thousand ships. By these and similar improvements, he expected to facilitate internal commerce among his central provinces, while by opening new channels of communication, he hoped to unite the wealthy countries of Egypt and the east, with the most remote parts of the known world. Nor was his attention altogether confined to the commercial and military resources of his empire. He promoted likewise the important interests of agriculture. Finding that the Euphrates no longer supplied to the husbandman the usual quantity of water for the purposes of irrigation, whilst an extensive tract of the alluvial soil along its banks was, by the periodical floods, converted into a useless and unwholesome marsh, he employed a great number of men in erecting such works, as might secure to the inhabitants all the advantages of that magnificent river, both as an instrument of commercial intercourse, and as a source of fertility, beauty, and comfort to the extensive regions through which it flowed.

Having, after his voyage down the Euleus to the Mouth of the ocean, ascended the river Tigris, as far as the city of Opis, he gave rest to his troops, and celebrated the usual festival of the Macedonian Olympiad. Here too he had to sustain the assault of a mutinous disposition in his army; who, dissatisfied with his attention to his new subjects, and longing to revisit their native country, clamorously insisted on the relinquishment of his eastern conquests, or on obtaining a speedy discharge from the service. The speech, which Arrian reports as having been pronounced by Alexander on this occasion, is not less eloquent than affecting. He brought back his soldiers to a sense of their duty, and even revived in their hearts, that love with which they had so long regarded their youthful king, and that implicit reliance which they had so long reposed in the talents and courage of their unrivalled commander. He sent home to Greece, ten thousand veterans, loaded with rewards and honour, giving the charge of them during their march, to the sage and popular general Craterus, whom he at the same time nominated to succeed Antipater as viceroy, in Macedonia, and his representative in the assemblies of the confederated Greeks.

From Opis the conqueror marched into Media, with the intention of reducing to obedience a tribe of fierce, but very warlike mountaineers, who occupied the high grounds between that country and Persia, without owning a regular subjection to either. In the course of this march, Alexander was gratified with the sight of an Amazonian body-guard, supplied to him by one of the Median satraps; composed of a hundred women, mounted and equipped like troopers, but, instead of lances, carrying battle-axes. In the same expedition, too, he lost, by death, his dear friend and favourite officer, Hephæstion, who, ut

Death of
Hephæ-
stion.

Biography.

From Ecbatana, sunk under the fatigues and privations of war, after an illness of seven days. The grief of the king was insupportable. He shut himself up three days, indulging in the most immoderate sorrow; and it was not until he had buried the deceased commander in a style of extravagant magnificence, and found occupation for his mind in the mountain warfare with the Cossees, that the attendants of the affectionate monarch ceased to have serious apprehensions, in regard to the effects of the uneasiness which preyed upon his spirits.

When in Media, Alexander formed a plan for ascertaining the extent and geographical relations of the Caspian sea. At the period of which we are writing, that large sheet of water was understood to be connected with the Arctic ocean, on the north, and to open into the Pacific in an easterly direction; the boundaries of the great continent of Asia being then very imperfectly known, and, as it appears, very much contracted, particularly towards the pole and the rising sun. To remove all doubt, therefore, respecting the limits of the Caspian lake, the king of Macedonia sent, under the command of Hemicles, a body of shipwrights into the forests of Hyrcania, with instructions to build vessels and provide equipments suitable for a voyage of discovery.

Meanwhile, the conqueror of Asia made preparations for his entry into Babylon, the chosen capital of his eastern dominions. The priests of the temple of Belus, to whose hands he committed the management of a large revenue, when he visited that city, after the battle of Arbela, and who were, perhaps, not quite prepared for a minute scrutiny into their disbursements, arrayed against him all the terrors of their superstition, and laboured, by the most frightful predictions, to dissuade him from approaching their walls. A deputation of these Chaldean soothsayers met him at the distance of thirty miles from the gates, and assured him, that he could not at present enjoy a propitious entrance into Babylon; but Alexander was too well acquainted with the various arts of priestcraft to be diverted from his purpose by omens and oracles. He satisfied himself with replying to their extraordinary admonition in the words of Euripides: "He the best prophet is, who guesses best."

Seated in the palace of the Assyrian kings, whence so many proclamations were issued to all people, nations, and languages of the earth, the victorious son of Philip, far from indulging in the pleasures and pageantry of eastern princes, directed all his thoughts to the improvement of his vast dominions. He resumed his project for improving the river, and for relieving the rich soil which spread out on its banks, from the destructive incumbrance of stagnant waters. He even spent whole days in an open boat under a burning sun, superintending the numerous works which he had planned for the convenience and beauty of his capital. Amidst all these operations, however, he still retained the purpose which he had formed, when on the shores of the Persian gulph, of surveying the coasts of Arabia and of eastern Africa, and of ultimately carrying his conquering arms to the remotest parts of that continent; and even, it is said, of adding to his dominions, the western nations of Europe, including the British isles. It is recorded by Arrian, that whilst at Babylon, embassies pre-

sented themselves to congratulate the king and to court his favour, from various parts of the African and European shores. He mentions envoys from Lybia, and from Brutium, Lucania, and Tuscany in Italy; and alludes, also, to similar representatives from Carthage, from Ethiopia, from European Scythia, and even from the people who inhabited Gaul and Spain.

As preparatory to this great southern expedition, Alexander announced a magnificent sacrifice to the gods, and a feast to his army; with his usual attention to the decencies of religious observance, and with that regard for popularity which no wise commander will ever neglect, the king bore a distinguished part in each; but, whether his health was already impaired by the severe duties of his military life, and by the constant exposure of his person to the excessive heat and marshy effluvia which tainted the climate of Babylon, or whether he had indulged to excess in the enjoyments of the table during the hilarities of that momentous day, it admits not of doubt that he was next morning seized with a fever, which in a short time, terminated his career of conquest and discovery. From a diary, called the *Royal Day Book*, to which both Arrian and Plutarch appear to have had access, a very particular account of the symptoms and progress of the disease is given by both these writers; and from the details there exhibited, it should seem that no fear of death was entertained till the eighth or ninth day of his illness. He bathed and attended sacrifice every morning, and even gave an audience to his principal officers, who were still employed in forwarding preparations for the projected expedition.

On the tenth day there was no longer any hope; and at this period the army, believing that he was already dead, and suspecting that the chief commanders had selfish views to realise, hostile to the common interest, became so extremely impatient to know the fate of their renowned leader, that they proceeded to threats of violence unless they were admitted to see his person, dead or alive. It was, therefore, conceded that a few of their number should, without arms, and in plain clothes, pass singly through the chamber where the king lay, and thereby receive the most satisfactory evidence that no deceit was practised upon them. Alexander was still able to return their looks with an eye of intelligence. He raised his head a little; held out his hand; but was unable to speak. He expired next day.

There were many absurd reports spread abroad relative to the death of this great prince, several of which are repented by Arrian; rather, however, as he himself expresses it, that he might not seem to be ignorant of their existence, than that he imagined them to be deserving of the smallest credit. It is said, for instance, that he was killed by means of a subtle poison, made up by his tutor Aristotle, and forwarded from Greece by Antipater, the protector of his native kingdom. A variety of other incidents was invented to feed the strong desire of credulous curiosity; but they are unworthy of mention, as having been long rejected by all writers of candour and research. We, therefore, hasten to conclude this long article by exhibiting, in a very abridged form, the character of the Macedonian hero, as given by the modest and judicious Arrian.

After stating that Alexander died in the hundred

lon.

His death.

Biography. and fourteenth Olympiad, at the age of thirty-two years and eight months, he goes on to remark, that his body was very handsome and well-proportioned, his mind brisk and active, his courage wonderful. He was strong enough to undergo the severest hardships, full of alacrity in meeting the most appalling dangers; ever ambitious of glory, and ever attentive to religious rites. As to those pleasures which regard the body, he shewed himself indifferent; but in the desire of fame and honour, he was altogether insatiable. In his councils he was shrewd and penetrating; and by the force of his natural sagacity, arrived at clear views in the most obscure and doubtful matters. In all the arts of a general he was thoroughly skilled; and in arming, marshalling, and commanding an army, he remains still unrivalled. He possessed the rare talent of exciting the courage of his soldiers, of animating them with the hopes of success, and of dissipating by his words and his example, all their inward fears. His resolution and vigour, too, were equal to the most desperate undertakings; whilst his unwearied vigilance secured to him every advantage that could arise from delay or ignorance on the part of his enemies. He was never imposed upon, either by craft or by perfidy; and never himself used these bad arts against any one. For his own private pleasures, he was sparing in the use of money; whilst in presents to his friends, and in rewards to the meritorious, his magnificence and liberality knew no bounds.

dress. His claim of kindred to Jupiter, a folly not uncommon in those ages, is ascribed to a political motive, the desire to elevate his wisdom and magnify his auspices in the eyes of his soldiers; whilst the compliment which he paid to his Persian subjects by using their language and natural costume, had an object at once so judicious and so obvious, as not to admit of being misunderstood. Long banquets and deep drinking, he adds, on the authority of Aristotulus, were none of his delights; neither did he prepare entertainments for the sake of the vice, (which he did not greatly love and seldom drank much of,) but to maintain a pleasant intercourse among his friends. The authors, therefore, who attempt to condemn or calumniate Alexander, do not ground their accusation on particular actions, which, though worthy of reproof in themselves, are yet capable of receiving some mitigation when connected with the circumstances in which they were performed, but, on the contrary, bring forward a sweeping charge against his character in general, and pronounce a sentence upon his conduct at large, a method of proceeding which precludes at once all defence and apology. But let it be considered who Alexander was originally; what success crowned all his enterprises; and to what a pitch of glory he ultimately arrived—that he governed indisputably as king of both continents, and that his name, even in his own life-time, was spread through every part of the habitable world; let these things be kept in mind, and it will readily be granted, that in comparison of his great character and astonishing exploits, his vices and infirmities were trifling, and ought hardly to be regarded as casting a shade on the bright annals of his eventful reign.

THE island Omothermon, originally peopled by the enterprising voyagers of Phœnicia, and subsequently by a migration of the Siculi from southern Italy, was colonised from Corinth, under the auspices of Archias, of the Herculean family, and received the name, by which it is well known in history, of Ortygia, the island of the Quail, or of Latona. This island lying close to the main land, and extending itself half way across the great bay into which the river Anapus discharges itself, forms two of the finest and most commodious harbours in the world; an advantage highly appreciated by a maritime people, as the immediate source of political importance and commercial prosperity. The colony founded in so favourable a situation rapidly extended itself to the main land, where another and a larger town Achradina, and soon afterwards a third named Tyche, was built; and in a subsequent age, Neapolis was added to them. These four towns constituted the great city of Tetrapolis, or Syracuse, (so called from the rich fen pastures in its vicinity) which, with the fortifications of the Epipole, erected by the great Dionysius, covered an area twenty-two miles in circumference, and contained a population of about three hundred thousand free citizens, which, at a very moderate computation, would make the whole number of its inhabitants little less than two millions.*

Syracuse was doubtless indebted for much of its lateral prosperity and foreign influence to the policy and virtue of the patriotic Gelo; and for much of its beauty to the taste and magnificence of the Olympic conqueror Hiero; nor must it be forgotten how much the honour of the national character was advanced by the incorruptible virtue, and the extraordinary talents, of the brave, though unfortunate, Hermocrates.

But it was during the administration of the elder Dionysius, that the Syracusans attained that height of power and splendour which excited the admiration of surrounding nations, and has appeared incredible to some modern historians.

Of the real character and conduct of this illustrious prince, it is by no means easy to form a decided and accurate judgment. The greater part of those writers to whom we are indebted for the scanty and scattered materials of his biography, were warm advocates of the Ciceronian doctrine, that the whole genus of tyrants ought to be extirpated from the earth, and held up to universal execration; and tyrannicides are seldom scrupulous respecting the means of effecting either object. Yet amidst all the misrepresentation and fiction, to which the extravagant violence of the

democratic spirit pushed the party writers of Greece and Rome, the substantial truth of history survives; and a moderate share of industry and discernment has served to strip such patriots as Harmodius and Dion of their ill-earned popularity, and to wipe off many stains from the great objects of their ferocious hostility.

But whilst we make all due allowances for the effect of republican zeal in most ancient authors, and of republican dishonesty in not a few; and find a generous pleasure in detecting the inconsistencies and absurdities of those preposterous stories of folly and wickedness and cruelty which are related by them of almost all princes, whom they indiscriminately denominated tyrants; it is the duty of the historian to avoid espousing the cause avowed of the calumniated with too much eagerness; and to remember that he is not to become the advocate of any party, though that party may have been injuriously treated, but to adhere with strictness to the impartiality of his judicial character.

The greatest modern authority upon subjects connected with Grecian history appears occasionally to deviate from this obvious line of duty.

In his laudable zeal to vindicate the character of great and good princes, and the administration of monarchical or aristocratical governments from unmerited obloquy, Mr. Mitford has exercised his peculiar acuteness and uncommon learning in casting discredit upon almost every authority which records their vices and mismanagement; whilst he has adopted, with somewhat more eagerness than might have been expected from his soundness of judgment, the slightest testimonies in their favour: so that in availing ourselves of his able assistance to lift up the dusky veil of political prejudice, it will be well to remember, that he who thus displays the picture, throws upon it, from his own lamp, the lights which he esteems most advantageous. Of this disposition the most striking example occurs in the history of Sicily during the reign of the great Dionysius, whom Diodorus, and Plutarch, and other ancient writers, concur in representing as an unprincipled usurper, governing an unwilling people in the most arbitrary manner, by the most oppressive means, and stained with almost every vice of which human nature is capable: but whom Mr. Mitford considers as the popular leader of a commonwealth, brave, politic, and eminently virtuous; obtaining his authority by steps perfectly unexceptionable, retaining it solely through the affection and confidence of the people, and exercising it with unprecedented wisdom, mildness, and generosity.

An impartial review of facts admitted on all sides, will lead us to a conclusion more probable than either; and which is supported by a brief, but masterly sketch

Early life.

Designs of the Carthaginians on Sicily.

Agrigentum.

of the character of Dionysius from the pen of Cornelius Nepos. "The first Dionysius of Sicily was conspicuous for personal prowess and military skill; and, what is rare in a tyrant, he was by no means profligate; neither was he luxurious, nor avaricious; covetous, in short, of nothing, unless of monarchical and permanent power, and only in pursuit of that object, cruel. For in the maintenance of his government he spared the life of no man, whom he supposed to entertain designs of treachery against him. He obtained the direction of affairs by his merit, and kept it with peculiar good fortune to the end of his life."^a

With his political career, indeed, the history of his life commences: for Diodorus tells us nothing but that he was the son of Hermocrates,† and other authorities are equally silent respecting his family and early life. It may be gleaned, however, from some casual hints, principally of the orators who have attacked or panegyrized him, that his birth was in no way remarkable, either for elevation or meanness. But that his fortune was ample, his education that of a young man of distinction, and his connections of the first in the state, is not denied even by those who would impute to him, as a reproach, the mediocrity of his hereditary rank. The political party, to which he was attached in early life, may be inferred from his having been severely wounded, and left for dead in the tumult, when the virtuous and gallant Hermocrates lost his life; as well as from his intimacy with Philistus the historian, and with the other opponents of Diocles, and of the democratic faction.

After the untimely death of Hermocrates, there remained no man who had the ability, if indeed any of the seditious party, then successful, had the wish, to provide for the safety of all Sicily, by uniting its numerous independent Grecian settlements, in a common confederacy against the ambitious designs of the Carthaginians, who partly by negotiation, and partly by arms, never ceased to aim at the subjugation of the whole island, till the overwhelming power of Rome laid both countries in the dust. No sooner was an opening offered, by the temporary triumph of the faction of Diocles, than a vast armament, naval and military, was intrusted to the command of Hannibal, to be employed in reducing Sicily to what was termed the alliance of Carthage; and in order to combine the vigour and maturity with the experience of age, Hamilcar, the son of Hanno, was appointed to act with them.

These preparations, though their destination was sufficiently understood, were met by no corresponding activity on the part of the Sicilian Greeks, distracted by factions, and discouraged by disasters. The Syracusans tried negotiation, and failed; the other states made no united nor effectual efforts to avert the storm; the African army landed without material opposition, and commenced at once a regular siege and blockade of Agrigentum, at that time second only to Syracuse in power and greatness, and scarcely its inferior in wealth and population.

The Agrigentines had long ceased, however, to

dispute the supremacy of the rival city, and a friendly alliance was maintained between them till the period of the assassination of Hermocrates, when the prevalence of the democratic party in Syracuse occasioned a coolness between the government in that city and the ruling powers at Agrigentum, who were in the Lacedæmonian, that is, in the aristocratic or oligarchical interest. But the alliance, though no longer cordial, remained unbroken; and the Syracusan leaders, at length awakened to the greatness of their danger, determined on sending prompt and effectual relief to the besieged. They accordingly summoned their other allies in Sicily and Italy to furnish troops, and despatched Daphneus with a collective force of thirty thousand foot, and five thousand horse. The operations of the siege had fortunately been delayed by the prevalence of sickness in the Carthaginian army, and by the death of Hannibal; and Daphneus arriving at this juncture, engaged the enemy, and obtained a decisive advantage.

But in Agrigentum, as in most Grecian towns, the opposition of parties was too nearly balanced to admit of any thing resembling consistency in public measures. The people rendered unready by the prospect of deliverance, rose upon their generals and murdered them; democratic influence was once more re-established, and produced its usual consequences; so that although the zeal of their Syracusan allies was sharpened by the revolution which had been effected, no due advantage was taken of the favourable circumstances which occurred; and after a siege of eight months, Hamilcar became master of Agrigentum.

This event caused the utmost consternation throughout Sicily. Many took refuge within the walls of Syracuse; and some embarked for Italy, carrying with them their families and fortunes. The Agrigentines who had escaped from their city, murmured loudly against the conduct of the Syracusan leaders; and a general discontent prevailed among the Sicilian Greeks, that men so unfit should have been appointed to the administration of affairs. A popular assembly being held at Syracuse, and no one, in the general dissatisfaction, venturing to make any specific proposal, Dionysius, who had acquired great popularity by his courage and activity under Daphneus against the Carthaginians, boldly accused the generals of corruption, and moved that the people should not await the period of their command appointed by law, (when their conduct would regularly come under consideration) but should inflict instant punishment upon their venality.

The government, in return, declared Dionysius guilty of sedition, and proceeded to impose a fine upon him; but the influence (or according to Diodorus, the suretyship) of his friend, the historian Philistus, procured for him a second hearing; and he urged the popular topics of invective against the men in power with so much effect, that the administration were compelled to resign, and Dionysius himself, as he probably anticipated, was elected among their successors, at the age of twenty-four.

From this moment he became, in fact, the autocrat of Syracuse; for his colleagues in office, whether willing to intrust the whole power of the state in his hands, or wanting the talents and popularity to oppose his measures, appear to have taken little part in the government, or in the military arrangements

Election of
Dionysius
to the
supreme
power.

^a This passage is quoted by Mr. Mitford, who allows due credit to the impartiality of Cornelius Nepos.

[†] Some copies have *Hermocrates*. Dionysius having married the daughter of *Hermocrates* may, not improbably, have been called by *Diodorus* & *Apianus* through inadvertence. Yet *Wesseling* believes that there were two persons of the same name, one the father, the other father-in-law, of Dionysius.

which followed; and it seems probable that an ambitious young man would not be unwilling that they should quietly sink into insignificance.

His first care was to recall the citizens who had been exiled, or who had fled from their country, at the period of the banishment of Hermocrates; and this being obviously a measure of sound policy, in the present exigencies of the state, as well as of justice and humanity, it was in vain objected by a few, who already dreaded the establishment of a tyranny, that Dionysius would thus surround himself with a powerful body of men wholly devoted to his interest, and of principles confessedly hostile to an unlimited democracy.

About this time, despatches arrived from Gela, soliciting an augmentation of the force sent for its defence against Hamilcar; and Dionysius went thither in person, with two thousand foot and four hundred horse. He found the town, as was usual, distracted by dissensions between the aristocratic and popular factions; and Dexippus the Lacedæmonian, who commanded the auxiliary forces, unable to procure the stipulated payment for his troops: an assembly of the people took place, and order was restored by the condemnation to death of some of the most seditious among the wealthier citizens; and Dionysius had influence enough to procure a decree, that the funds arising from the confiscation of their property, should be applied to discharge the arrears due to Dexippus; at the same time, to secure the fidelity of the troops he had brought with him, he promised them that he would, at his own cost, double their pay. The Geloans, thus restored to order, were profuse in their gratitude, and sent ambassadors to Syracuse to report their satisfaction with the conduct of Dionysius, upon whom they had conferred peculiar marks of honour, entreating him to continue among them till the apprehended danger from the Carthaginians should be over. Dionysius, however, had a more important charge at home; and promising the Geloans to watch over their safety, he departed for Syracuse.

On his arrival, it happened that the people were coming from the spectacles of the theatre, and a crowd was immediately collected about him, eagerly inquiring for news respecting the enemy. He took occasion to reproach them with their supineness and indifference in being occupied in festivities, while Hamilcar was actively engaged in preparing for the siege of their city; and he announced his own intention to resign his command on account of the incapacity and corruption of his colleagues, who, he insinuated, had been tampered with by Hamilcar, and with whom he should, in consequence, decline to act any longer.

It is probable that Dionysius had reserved this bold measure till he felt his own popularity sufficiently established to overwhelm any opposition which could be raised to him, either by the friends of the accused, or by the democratic party, who were always hostile to power in the hands of a single person, especially if that person were eminent for ability and virtue; and the result fully answered his expectations. So rapidly was the report spread of the approach of the enemy, and the treachery of the generals, and so universal was the panic excited by it, that upon his calling an assembly of the people the next morning, his colleagues were denounced as traitors to their country; were de-

prived of their office; and the consideration of their banishment reserved for a special meeting; the example of Gela, and the dread of sharing the fate of Agrigentum, sufficing to induce the people to commit the whole power of the state to Dionysius, with the title of general autocrat; an office, it should seem, less absolute, but more permanent than that of dictator at Rome, and comprising all the duties and authorities of a governor-general and commander-in-chief. Plutarch asserts that Hipparchus, a man of the highest rank and largest fortune in Syracuse, was associated with Dionysius in power; and the assertion appears to derive confirmation from the manner in which Aristotle speaks of their joint authority; but if it were so, Hipparchus played the part of the slave in a Roman triumph.

— Et sibi consul
Ne placeat, cetera sennis portante edem.

The responsibility, and the power belonged to Dionysius; his colleague served only to remind him that he was not a monarch; nor is the period of his death noticed in any extant history.

To secure himself in this invidious station, the favour of the populace, and especially of the army, was indispensable; and accordingly he began by proposing to double the pay of the soldiers; assuring the assembly that the revenue of the state could well afford it. Of the wisdom of this measure, on public grounds, it is difficult to form an opinion, in the uncertainty in which we are left, respecting the sources and amount of the public income, and the sum received by the soldiers; but it is not improbable that at Syracuse, as at Athens and other Grecian states, in proportion as the military system became more regular, and the service consequently more completely interrupted ordinary employments, the small stipend originally allowed, was found insufficient for the soldier's comfort.

His next measure appears more exceptionable, having imitated Pericles in his manner of ingratiating himself with the military, he adopted the artifice of Peisistratus to obtain, for his personal security, the invidious protection of a body guard; which though, perhaps, rendered necessary by the unusual mildness and liberality of his administration, which permitted his political adversaries to live unmolested in the city, was universally reprobated throughout Greece, as the badge and support of arbitrary power, and imposed upon him the unpopular appellation of tyrant; a word, in its origin, of no obnoxious signification, and simply denoting a chief;* but degraded by the democratic prepossessions of Greece and Rome, (as *villania* has been by an opposite prejudice in modern Europe) to become a term of reproach.

Having ordered all the troops under forty years of age to prepare a month's provision for a march to Leontium, which, though an independent city, was garrisoned by Syracusan refugees and other foreigners, he encamped for the night in the fields: in the dusk, a violent tumult arose; and the domestics of the general crying out that he had been treacherously attacked, he fled with all expedition to the citadel of Leontium, where he called to arms, and kept up

* Thus Jupiter, without any irreverence, was called tyrant of heaves.

Raises a
body guard

Biography. watch-fires till the morning; when an assembly of the people being convened, voted him a guard of six hundred men, to be selected by himself from among the soldiers most devoted to his person.

His enemies, of course, treated the whole affair as the contrivance of Dionysius, and represented him as having called an assembly of the people at Leontium, in order that it might be composed more of his own creatures than of the respectable inhabitants of Syracuse; but though it is not unlikely that he wished to give his enemies an opportunity of attacking him, and for that purpose thought proper to pass a night on the road, it appears that Daphneus and Demarechus, and some other leaders of the party in opposition, were at this time, actually implicated in a treasonable plot against him; and the two former suffered death by the laws of their country. The Lacedæmonian Dexippus, labouring under strong suspicion of having shared in their crime, was ordered to quit the city.

Dionysius certainly neglected no means of strengthening his authority, or of conciliating popularity; and he applied himself diligently to preparations for the expected contest with Hamilcar. The democratic writers, as usual, attribute every measure which his military skill and foresight adopted, (even the necessary expedient of engaging a mercenary force, and the advantageous position which he selected for his camp) to his determination of establishing himself in absolute power. But if his bold and active spirit was not insensible to the allurements of ambition, nor his virtue always proof against its temptations, there is at least abundant proof in his whole conduct, that his ambition was that of a great and generous mind, and was uniformly directed to promote the safety, the glory, and the prosperity of his country; all of which, in a great measure, depended upon his retaining the reins of government. To confirm his connection with the noblest and most popular families of Syracuse, he married, about this time, (a. c. 405) Arete, the daughter of that enlightened patriot, Hermocrates; and he bestowed the hand of his own sister, Thesea, upon another relative of the same family.

Hamilcar, meanwhile, having wintered his army in Agrigentum, continued to make great preparations for the reduction of Gela in the spring; and Dionysius was neither deceived in his object, nor remiss in his endeavours to obviate it. He enrolled every Syracusan capable of bearing arms; he called out the contingent forces of the Sicilian allies; and obtained succours from the Greek states in Italy; and still further, he augmented his army by engaging mercenary troops; the whole amounting, according to the most probable account, to thirty thousand foot, a thousand horse, and a fleet of fifty ships. With this force he marched to the relief of Gela, and on his arrival, pitching his camp near the sea, in order to maintain a communication with the fleet, he endeavoured to intercept the supplies of the Carthaginians by sea and land, and to reduce them to the necessity of abandoning their lines. And with this view he remained quietly in his position for twenty days.

But the temper and constitution of a Grecian army, trained to republican principles, and accustomed to submit to control only in active service, was ill adapted to protracted operations; and Dionysius became sensible that it was absolutely necessary to lead

his men into action with as little delay as possible. Watching his opportunity, therefore, he formed his infantry in three divisions, who were to advance by different routes, and to commence an attack on the three points of the camp at once; the cavalry had orders to act as a reserve, and the fleet to assist in forcing the lines next the shore. But although the plan was shrewdly arranged, either the distances had been miscalculated, or some disaffection among the troops occasioned a defect of communication, for the Italian allies, after conducting themselves with great gallantry, being unsupported, were repulsed with severe loss; and were only preserved from entire destruction by the protection of the fleet; the Sicilians, overpowered by numbers, retreated into the town, leaving six hundred slain on the field; and Dionysius himself, met with so many unexpected obstructions to advancing through the streets with the division under his immediate command, that he arrived only in time to witness the defeat of his army, and to retire within the walls.

A council of war was immediately held, and in order to gain time, a herald was sent to Hamilcar, with a request that the Greeks might be permitted to bury their dead. During the cessation of hostilities which this occasioned, Dionysius prepared to evacuate the town, now no longer deemed defensible; not leaving two thousand light troops to kindle the fires, and keep up other appearances of habitation, he withdrew the whole population of Gela during the night, and sent them forwards in safety towards Syracuse. He, himself, meanwhile, went to Camarina, and directed all the citizens, with their wives, children, and moveable property, to prepare for an immediate removal; and so cooived were they of the necessity of the measure, that the greatest promptness was manifested in obeying his orders; and in a few hours they also were on the road to the only place which now appeared to offer any security from the invading army.

But Dionysius was not exempt from the usual consequences of failure, though the measures which he adopted to save the inhabitants of the two cities from total ruin and destruction, were undeniably well planned and shrewdly executed. Some few, from age or sickness, or obstinacy, were left behind, and their complaints produced a strong sensation of pity, not unmingled with indignation; others, whose feebleness was ill calculated for a march, necessarily rapid, were overcome by fatigue and vexation; and there were not wanting disaffected persons in the army to inflame these natural discontents, and to represent the whole transaction as a scheme of the general for increasing the population of his own city, and establishing a despotic power over Sicily, by means of the Carthaginians. The Italian allies, fired at the idea that their exposure to extreme danger had been preconcerted, immediately crossed the island and returned home; and the Syracusan cavalry, by whose inactivity or treachery, the defeat at Gela seems partly to have been occasioned, and most of whom were of the violent democratic party, would have murdered Dionysius on the march, had not his body guard been vigilant and faithful. Failing in this design, they deserted and hastened to Syracuse, where forging a tale which suited their purpose, and asserting that the whole army had conspired against the tyrant,

Preparation for a war with Carthage.

His army defeated by Hamilcar.

Biography. they obtained ready admission within the fortifications; and proceeding (with such friends to their cause as they could collect) to the house of Dionysius, not only pillaged and destroyed his property, but with true republican brutality, wreaked their vengeance on his innocent wife, the hapless Arete, who, like another Lucretia, disdained to survive her involuntary shame.

The general, meanwhile, informed of the desertion of so large a body of cavalry, and suspecting it to be their intention to raise a sedition against him, resolved, if possible, to anticipate their arrival in the city; taking with him his body guard of six hundred, and one hundred horse, on whose attachment he could rely, he marched fifty miles with extraordinary speed, and arrived about midnight at one of the gates of Acradina. Finding it closed against him, he set fire to it by means of some fuel which accidentally lay near, and while this was doing, collected together such of his followers as had been unable to keep up with him. The gate at length giving way, he rushed through Acradina, and finding a party of his principal enemies collected in the forum, and the people in general not disposed to interfere, he put them all to the sword; and passing immediately through the city, he executed, or forced into exile, the partisans of the atrocious conspiracy. Early in the morning the remainder of the mercenary troops, and all the Sicilian allies, arrived in good order at Syracuse; but the Geloni and Camarinean emigrants, alarmed by the suggestions of the disaffected, had turned aside to take refuge among the Leontines.

Syracuse thus weakened and distracted, appeared to offer an easy prey to the victorious army of Hamilcar; but unusual circumstances, among which was the spread of a pestilential disorder among his troops, induced the Carthaginian general to send a flag of truce to Dionysius, reminding him that the conqueror was making overtures to the conquered. His proposals were gladly received; and it being equally the interest of both parties to put an end to the war, a treaty was soon concluded, the terms of which considerably extended the dominion of Carthage in Sicily, whilst it deprived Syracuse of all her dependencies. The prisoners and ships taken in the course of the war, were exchanged; and Hamilcar immediately conducted home the remainder of his army, diminished, according to Diodorus, by half its number; carrying with him an infection which spread rapidly in Africa, and not only wasted the territory of Carthage, but depopulated the neighbouring states; and for many years weakened the power of the empire.

Dionysius thus freed from the pressure of a foreign enemy, employed all the activity of his extraordinary genius in confirming his government, and in augmenting the resources and power of his country; and in the measures which he adopted to secure these objects, he displayed that political sagacity and patriotic liberality, which led Scipio to rank him among the first of statesmen and commanders; and Isocrates to recommend his conduct for the imitation of Philip of Macedon. With a noble and enlightened ambition, he endeavoured to render himself master of Syracuse and of Sicily, by making himself necessary to its glory and prosperity; and it appears clearly, even in the accounts handed down to us by

writers devoted to the adverse faction, that he triumphed over them rather by means of a majority who were sensible of the advantages of his government, than by the vigour with which he repressed the designs of the disaffected, and punished those who could neither be gained by moderation, nor trusted with safety. Though he is accused of employing foreign influence to establish his despotic power, the charge is wholly unsupported by evidence, and is satisfactorily refuted by the line of conduct which he invariably pursued towards foreign powers, as well as by the system which he followed at home; the very reverse of that narrow and selfish policy, generally adopted by tyrants in Greece, who were afraid of encouraging among their people a spirit of enterprise, lest it should be employed in the recovery of their liberties; and who sacrificed the honour and welfare of the state, to the maintenance of arbitrary power.

The ascendancy of Syracuse over the other states of Sicily, and its safety from the invasion of the continental nations, obviously depended, chiefly, upon its marine, which Dionysius determined to place immediately upon a footing of unprecedented strength and magnificence. Surrounding the island of Ortigia, which separates the great and lesser harbours, with prodigiously strong and lofty walls surmounted by numerous turrets; he fortified both entrances to the Laccian port, which was shut by gates, admitting no more than one ship at a time; the interior was adapted for receiving sixty ships of war, and boat-houses were erected to shelter them from the weather.

The entrance on the land side was protected by a strong citadel, (called Pentapyle, or Five Gates) surrounded by splendid porticoes, calculated for the accommodation of a large army, in a climate where sudden transitions from the heat of the afternoon sun, to the chilling damps of the evening, are particularly injurious to men exposed to the open air. It is even said, that the bottom of the harbour was paved with large flat stones, and an aqueduct laid under it, which supplied the fortress with fresh water; but this story, as its authority seems questionable, and the utility* of the design doubtful, is scarcely deserving of credit. The whole fortification and naval arsenal were certainly so complete as to be impregnable by any arts of war then known; though, being commanded by higher ground in the district of Acradina, it has yielded to modern improvements in science. The younger Dionysius maintained himself within it, at a later period, long after the other divisions of the city were occupied by different enemies, each more popular and powerful than himself, and capitulated at last on favourable terms; and even the all-conquering Roman arms, under the conduct of the great Marcellus, having gained possession of the other parts of Syracuse, were indebted to treachery for the reduction of the citadel; and when once master of it, the prætor became so sensible of its strength and importance, that he compelled all the natives to remove to the other quarters of the town.

Having thus provided for the security of his navy, Dionysius employed a number of workmen in ship-building; and to increase his own popularity, as well as the strength and population of the place, he divided

Military
intersec-
tion.

the land which had eschewed to the state* among all classes of freemen, including resolute foreigners, and manumitted slaves, whom he admitted to the rights of citizens, under the appellation of Neopolites; and it is probable that this class of persons principally inhabited the district of Neapolis, which appears scarcely to have existed at the time of the Athenian siege, (see. 91.) but grew into a large and handsome town under the auspices of Dionysius.

In this division of land, as was natural, and by no means reprehensible, Diodorus asserts, that those who had been faithful and active in the service of the governor general obtained the fairest portions; and that in assigning the habitations of the new citizens, he took care to people with his most steady adherents, the strong fortress of the island, which he made his own residence, and decorated with beautiful sculpture and magnificent gardens; where his son afterwards erected a splendid monument to his memory.

These peaceful occupations, congenial to the taste and talents of Dionysius, were interrupted by a renewal of that factious spirit which so unhappily blighted the prosperity of almost every Grecian state. A detachment which had been sent against a marauding party of native Sicilians, having murdered their commanding officer, sent to the Syracusean refugees, whom the moderation of Dionysius had permitted to establish themselves in the garrison of Etna, on the south side of the mountains, for a troop of cavalry; and having readily obtained what, in all likelihood, had previously been promised, they marched back to Syracuse under the conduct of the assassins, with the intention of effecting a revolution. In the meanwhile they solicited from Rhegium, in Italy, and from Messina, (now, though an oligarchical state, brought over to the seditions party,) a naval force to co-operate in the recovery of their liberty; and a hundred and twenty ships of war were despatched to their assistance. The land force immediately seized the Epipolæ, a craggy and precipitous eminence, commanding great part of the city; and the measures of the rebels were conducted with so much promptitude and ability, that Dionysius thought it prudent to retire within the fortifications of the island, to which he thus early became indebted for the preservation, not merely of his power, but of his life. A large reward was proclaimed for his head, and every inducement was offered to his troops to desert him, and, if we may believe the democratic historian, not without effect. Blockaded now by sea and land, the hattering engines planted against his walls, and all communication with his own party in the other quarters of the city being cut off, the governor-general held a council of war, the result of which was, a proposal made to the rebels that he should surrender the citadel, on condition of being permitted to quit Sicily with as many of his followers, and as much of his property, as could be conveyed in five ships of the line. His real object, however, appears to have been to gain time, and to open the means of intercourse with his friends in the city, and with his Sicilian partisans. By this artifice he contrived to introduce reinforcements into the

island; and very shortly succeeded in expelling the insurgents from the remaining parts of Syracuse, and in completely re-establishing his authority.

In the tumult which unavoidably accompanied this counter-revolution, Diodorus himself admits that Dionysius rode up and down restraining his troops from bloodshed, and that he bestowed the honourable burial of citizens indiscriminately upon all who fell of both parties. An act of piety and generosity, as well as of liberal policy, which republican gratitude rewarded by praying that "his opponents might speedily have an opportunity of returning the favour." The governor-general, however, persisted in his endeavours to conciliate the people, offering free pardon to all who would return to their homes, and receiving such as availed themselves of his clemency with every mark of favour.

Dionysius thus restored to power, and apparently confirmed in it, was regarded by all the commonwealths of Greece with an eye of jealousy; and Aristus was despatched as ambassador from Sparta, with instructions, as it appears from the sequel, to engage the stronger party in the Lacedæmonian interest. With this view he at once flattered the court, and tampered with the people; till finding that the influence of Nicoteles, a secret agent of the Corinthian government, prevailed over his own among the disaffected party, he entered warmly into the views of Dionysius, assisted in detecting an extensive conspiracy which was forming with the sanction of Cnirith, and denounced Nicoteles as a traitor. The measures which followed partook strongly of Spartan severity; and though apparently called for by the dangerous spirit of the times, were rather submitted to than willingly embraced by the liberal temper of the governor-general. Nicoteles was condemned to death; several of the most violent partisans of sedition were banished; and, during the ensuing harvest, the mob of Syracuse, or, in the factious phrase, the people, were deprived of their armour. Most of the Grecian settlements, like some of our own colonies, were destitute of country habitations; and a system of tillage, imperfect indeed, but sufficient, in the fertile soil and genial climate of Sicily, to produce an abundant crop, was carried on by the inhabitants of fortified towns, who, except during harvest, seldom slept in the fields. But at that season, booths and arbours supplied the place of more durable shelter, and the whole labouring population evacuated the cities, and lived for a time in the open air. Advantage was taken of this custom to search the houses for arms, and thus to give a secure ascendancy to a military government.

The exiles taking refuge in Etna rendered that place so populous, and so formidable, that no permanent tranquillity could be expected, whilst an inveterate enemy should continue to hold a post every way calculated for the encouragement of plots and conspiracies in Syracuse. It was therefore resolved to level it with the ground, and to disperse the inhabitants. Most of them, it is supposed, found a welcome reception amongst the Rhegians, who persevered to the last in their hostility against Dionysius.

These vigorous measures produced a temporary cessation of war and sedition, and allowed leisure for the advancement of the extensive plans formed by the genius of Dionysius for the aggrandisement of his native city, in prosecution of his favourite object to

That powerful state had been so weakened by the extensive desolation of the pestilence which drove Hamilcar from Sicily, as to be incapable, at this period, of interfering with effect in foreign affairs; and Dionysius eagerly availed himself of the opportunity, thus unexpectedly afforded, to bring many of the smaller Grecian and Sicilian towns again into alliance with Syracuse, and even to extend his influence among the independent states in Italy; and so rapid was the growth of political power and commercial prosperity which ensued, as to excite the envy and astonishment of contemporary nations, and the incredulity of modern critics.

It could not, however, escape the sagacity of the governor-general, that the supineness of the Carthaginians was not likely to continue long; and that the fame of his successes must speedily rouse them to avenge his infraction of the treaty, and his contempt of their authority. He was perfectly aware that the storm was not to be averted by concession, nor to be resisted by any thing short of the most extensive and complete preparations. Profiting by past experience, he determined to fortify the commanding site of the Epipolæ, (which had repeatedly been the source of danger to the town) and convert it into a fortress for its defence.

Fortifies
the Epipolæ.

The rock is precipitous, and nearly inaccessible on the north side; and the plan adopted was to crown it with a strong citadel, and by a long wall, surrounded with towers, to connect it with the walls of the town. An extent of building, altogether, of above thirty furlongs, (about four miles): the remains of which are still reckoned the finest existing specimen of ancient military architecture. "We were quite astonished," observes an intelligent English tourist, "at the magnitude of the subterranean passages, from whence both infantry and cavalry might make their sallies, and retreat again under protection of the fort. We admired the huge square towers of solid masonry; the excellent contrivance of its gateways for every purpose of defence; the vast blocks of its parapets, which lay upon the ground, bored with grooves, by which melted pitch or lead were poured down upon the assailants. Nor did the art and judgment fail to strike us with which the walls were built; constituted of immense blocks, without cement, they varied in thickness, according as the situation required: where nature herself had assisted in forming the rampart, they measured from seven to nine feet in breadth; but in more unguarded situations, they were fifteen, of that species of building which the ancients called *empletion*." * In order to accomplish this great work with as little delay as possible, Dionysius engaged sixty thousand citizens to labour unremittingly in building, exclusive of an immense number of artists of various descriptions, employed in squaring the stones, and fitting the materials, and a multitude of labourers at work in the quarries. † Six thousand oxen were required to draw the huge stones of which the wall was con-

structed; and it has ingeniously been conjectured, that the materials of the great works thrown up near this spot by Nicias during the Athenian invasion, contributed to facilitate the present undertaking. The new fortress obtained the name of *Hexapyle*, (Six Gates) and, though it does not appear to have been inhabited, occasioned the name *Tetrapolis* to be exchanged for *Pentapolis*.

From the eminence of the Epipolæ, Dionysius must have enjoyed a noble prospect of the whole city, with all its palaces, and temples, and gardens, its impregnable fortresses, and magnificent harbours, filled with the preparations for war, and the occupations of peace; and it is easy to conceive the exultation of spirit with which he viewed the scene of splendour and prosperity before him, so much the work of his own generosity and genius. In this enjoyment he passed much of his time during the building of the Hexapyle, mingling freely with all classes of the people, encouraging industry, rewarding talent, assisting personally on any emergency, and lying aside, like the great czar Peter, not only the guards and attendance, but the manner of royalty, to render his instructions to the workmen more familiar, and his design more popular; and so great was the zeal with which his people worked by night as well as by day, that the undertaking was completed in three weeks.

It is obviously impossible to reconcile the accounts of the conduct of the governor-general on this and similar occasions, with the stories related by Plutarch, and even by Diodorus, of his arbitrary violence, despotic system of government, and excessive dread of popular fury or private revenge. It is quite clear that he who could thus trust himself unarmed and unprotected among nearly an hundred thousand of the people indiscriminately assembled, must have felt assured that they were neither dissatisfied with his administration, nor aggrieved by private wrong; and it is not to be believed that a man so secure in the midst of the populace, could be cruel and suspicious at home. We are justified, therefore, in rejecting the anecdotes told of his having his hair and beard trimmed with a live coal, lest his barber should cut his throat; of his obliging all who approached him to strip and change their clothes in the vestibule of his apartment, lest they should have concealed some weapon in their dress; of his rage against his own brother for raising a spear to point out a distant object; and a number of similar tales, which republican bitterness delighted to heap upon a great and successful tyrant, not a few of which have been related of others besides Dionysius. To him alone, however, belongs the celebrated story of the feast of Damocles, which, if true, implies nothing more than that Dionysius, by a practical allegory, conveyed an important lesson on the troubles and dangers of royalty to a man who ignorantly envied the splendour and luxuries of the palace. It is certainly difficult to conjecture the design of that extraordinary cavern in the *lætæmæ* of Neapolis, generally known by the name of the *Ear* of Dionysius, and vulgarly believed to have been made by him for the purpose of listening to the conversation of the numerous prisoners confined in it by his jealous timidity; but there is no authority for referring its construction to the time of the excavation of the *lætæmæ*; and although the cavern possesses some amusing properties for the conveyance of sound,

refuted.

* Hughes's *Travels in Sicily*, &c. vol. I.

† These *lætæmæ* were excavated so regularly as to form magnificent and secure prisons, (as the Athenians found to their cost) and excited the great admiration of Cicero, who calls them *opæ* *regium*—a truly royal work. They are open at top, and are now laid out into gardens and pleasure grounds.

Biography. it is incapable of answering the purpose for which the tyrant is said to have designed it.

There were, undoubtedly, some periods of his life when the violence and treachery of the republican faction must have rendered extreme caution indispensably necessary: and when an enormous reward was offered for his assassination, common prudence would oblige him to be circumspect in admitting strangers to his presence. But these precautions, whatever they might be, ceased with the occasions that gave rise to them; and Dionysius lived more unguardedly among the citizens of Syracuse than is usual with popular princes in limited monarchies.

After a short season of unexampled tranquillity and prosperity in Syracuse, when faction every where paused from its continual agitations, as if to become a spectator of the bold undertaking of Cyrus, and the wonderful return of his Grecian army, the Rhegian people — (the staunch promoters of revolution, stimulated by the Syracusan exiles who had taken refuge among them; and affecting to commiserate the fate of their kindred, the inhabitants of Naxos and Catania, who had entered into the alliance of Dionysius,) — fitted out a fleet of fifty ships of war, and embarked an army of six thousand infantry, and six hundred cavalry, in what was then, as now, denominated by the cant of party, “the sacred cause of liberty;” in other words, the overthrow of an established, peaceful, and flourishing state, by means of stimulating the worst passions of the lowest people.

The Rhegians contrived to engage in this attempt the oligarchical administration of Messen, who sent them a reinforcement of four thousand foot, four hundred horse, and thirty ships of the line; but the government of Syracuse was at this time so popular in Sicily, that the Messenian soldiers, on learning the object of the expedition, refused to obey their generals; and the Italians, deprived of their assistance, and unable alone to meet the forces which Dionysius had led out to oppose them, were glad to obtain peace on easy terms.

The consequence of this ill-conducted scheme was the extension of the Syracusan empire, (for so the Greek historians are accustomed to term the supremacy of the first state in a confederacy) not merely in Sicily, but also over several of the Greek settlements in Italy; so that Dionysius from this period was not unusually called “the tyrant of Sicily and Italy,” being at the head of the Greek nation, both in the island, and on the adjoining continent. Nor did he remit his exertions to strengthen his interest, and to combine the whole Grecian name in one league against the Carthaginian dominion in Sicily.

He had now leisure to resume those prodigious preparations against invasion which have excited the admiration of all succeeding ages, and of which the native historian observes, that each of his numerous undertakings appears sufficient to have absorbed the whole resources of the state. By what means he raised such enormous sums, without any apparent diminution of individual wealth among the citizens, any oppression of the allies, or any known opportunity for considerate plunder, no ancient writer now extant has left us a satisfactory account. We learn, however, that * one source of revenue was a kind of

poll-tax, the origin of which is deserving of notice. Dionysius, foreseeing that he might probably want large supplies of money on some future emergency, when his credit and popularity might be less productive, gave out that it was necessary to raise an immediate and general contribution for a secret service, the nature of which could not, consistently with its object, be disclosed. The tax was readily granted, and paid; and soon afterwards public notice was given, that circumstances having occurred to prevent the execution of the projected plan, the money which had been raised would be repaid on application at the treasury. So great was the confidence gained by this artifice, in the integrity of the administration, that, when the real necessity arose, the supply was obtained without any difficulty.

Such indeed was the universal popularity of the scheme for driving the Carthaginians out of Sicily, that the government received frequent voluntary contributions of labour, materials, and money. In the last essential supply Dionysius seems, by whatever means, to have bounded. He not only paid the numerous artisans whom he engaged from all quarters of the world in the most liberal manner, but stimulated their activity, and rewarded their ingenuity, by giving splendid prizes to the best executed designs. By these means he drew to Syracuse all who possessed either skill or industry in mechanical operations, and he displayed the most consummate genius in directing and superintending the works. The existing fleet of a hundred and ten ships was speedily put into complete repair, and two hundred additional vessels were built, some of which were upon a new construction, and on a larger scale than any yet known, and having two more banks of oars than the ordinary trireme, obtained the name of quinqueremes. To secure this powerful navy from the effects of the weather, the number of boat-houses in the harbour was doubled, and many of them made capable of containing two ships. While, with a policy utterly irreconcilable with the despotic system attributed to him, Dionysius used all his influence to engage the citizens of Syracuse in the naval service, and actually succeeded in half manning his fleet with a class of sailors whom no tyrant, ruling against the will of the people, could have trusted within the walls of the arsenal.

Dindorus asserts, that the battery (*το κατεστρωμένον*) was at this period first invented at Syracuse; meaning, not the art of battering fortifications by a variety of engines, which had been practised long before in Greece, and was carried to great perfection in Africa, but the contrivance of manning a naval force by machines planted upon the walls of a fortress, and discharging huge blocks of stone, and beams of wood, headed with masses of iron, which Archimedes afterwards improved, to the great discomfort of the Romans, under Marcellus. The most ingenious mechanics were assiduously employed in the construction of these batteries for the protection of the port; while an incredible number of armours filled every vacant space in the city with their forges and workshops; and so eager were the citizens in forwarding the wishes of the governor-general, that multitudes voluntarily contril their personal labour in the

cities.

fabrication of arms; and upwards of an hundred and forty thousand suits of armour were soon ready for service.

Pursuing his view of uniting in one confederacy against Carthage the whole Grecian name in Sicily and Italy, Dionysius was particularly anxious to conciliate the hostile parties at Messene and Rhegium, who were more than suspected of inclining to take part with the enemy in the event of war. The former he secured by conceding to them a considerable tract of border land which had been the subject of dispute; and to the latter he made a proposal, contrary indeed to the narrow policy of the democratic states of Greece, (which forbade alliance by marriage with any other republic) but perfectly accordant with the more liberal notions which he had early imbibed from the excellent Hermocrates. He offered to grant the Rhegians an increase of territory* adjoining their borders, and to provide for the commercial interests of their city, upon receiving in marriage the daughter of a Rhegian citizen. Republican prejudice, however, prevailed; the proposed alliance was rejected by an assembly of the people; and, according to a report not apparently well authenticated, but by no means improbable, the refusal was accompanied with a vulgar insult. Persevering in his design, he instructed his ambassadors to make a similar offer at Locri, where it was well received, and Doris, the daughter of Xenetus, the most illustrious citizen of Locri, was espoused to him: one of the newly-built quinqueremes, richly fitted up with gold and silver furniture, conveyed her to Syracuse; and she became the mother of the second Dionysius. It is stated by Diodorus, Plutarch, and Elian, that on the same day the governor-general married Aristomache, (or Aristenete, as the last mentioned author calls her) the daughter of his colleague Hipparchus; and that he conducted her to the palace in an equipage no less splendid than the galley of Doris. It is even added, that both ladies were perfectly happy in his impartial kindness, one enjoying the advantage of being his countrywoman, and the other of blessing him with a son; and Plutarch affirms, that the mother of Doris, who had accompanied her daughter to Syracuse, being suspected of administering poisons to Aristomache to render her barren, was put to death by Dionysius; after which the birth of the younger Hipparchus completed the felicity of the family.

The whole of this account is rejected by Mr. Mitford, simply on the ground of its improbability; and he conjectures that Doris died soon after the birth of her son, and upon her death the connection took place with the daughter of Hipparchus. However this may be, the governor-general took the opportunity of his nuptials to ingratiate himself with the people by splendid entertainments, and by the most engaging familiarity and clemency; so that even those historians who generally represent him as an odious tyrant, maintaining himself in power by a mercenary force, are compelled to acknowledge that he was at this period extremely popular; though Diodorus, with singular inconsistency, attributes at the same time to the Syracusans a violent desire for a revolution.

His vast preparations being now completed, Dio-

nysius was unwilling to afford time to Carthage for recovering from the ravages of the plague; and assembling the people, highly delighted with the nuptial shews and banquets, he addressed them at great length in favor of an immediate war; a topic already popular, which he took care to enforce, by holding out such immediate as well as contingent advantages, that the measure was carried without hesitation; and an instant confiscation, or rather pillage, followed, of all the Carthaginian property in the town and harbour: the example was quickly adopted by the other Sicilian towns, not without some violence to the persons of the unfortunate Carthaginian traders; and in the towns which were subject to Carthage, the populace rising upon the garrisons, exercised upon them the most cruel revenge for the former plunder of their houses by Hamilcar. In the beginning of the succeeding year, (OL. 95. 4.) Dionysius sent a formal embassy to Carthage, declaring war, unless, upon condition, that the Carthaginians should evacuate all the Grecian towns in Sicily. The letter containing this alternative was read to the senate and people; and although the previous conduct of Dionysius must amply have prepared them to expect such a result, the declaration of it appears to have occasioned general alarm. No idea of concession, however, was entertained; and the dismissal of the herald was the signal for the commencement of actual hostilities.

The governor-general lost no time in effecting a junction with the allied forces of the Agrigentine, Gelouan, and other Grecian states, amounting, with his own army, to eighty thousand infantry, and between three and four thousand cavalry, and attended by a fleet of nearly two hundred ships of war; about five hundred transports followed, conveying some of his newly-invented batteries, and abundance of naval and military stores. Most of the cities in the Carthaginian interest, unsupported against so overwhelming a force, hastened to submit to Dionysius; but the inhabitants of Motya, always faithful to Carthage, and on that account entitled to expect little moderation from the Syracusans, made vigorous preparations for defence, hoping to protract the siege till the arrival of succours from Africa. Five other towns followed the example; and the governor-general, leaving his brother Leptines to prosecute the operations against Motya, hastened to plunder their territories, and laid vigorous siege to Ægesta and Entella.

In the mean time, Hamilcar was again appointed at Carthage to take the command in Sicily; and in the pressing circumstances of the Sicilian allies, he resolved immediately to attempt a diversion for their relief. Despatching a squadron of only ten fast sailing vessels, he directed them to enter the harbour of Syracuse by night, and to destroy the ships of war remaining there. His orders were executed with little difficulty, and the adventurous squadron returned in safety. But although the damage was considerable to the Syracusan navy, the plan did not operate to the advantage of the Motyans; on the contrary, raising the siege of the two inferior places, Dionysius applied his whole force to the reduction of Motya, trusting to the vigilance of the garrison in Ortygia to prevent a repetition of the surprise at the arsenal.

Hamilcar, thus disappointed, and destitute of means

Hamilcar

conducts

the war in

Sicily.

Biography. for openly opposing the powerful fleet and army of the Greeks, employed all the resources of his active and enterprising genius to supply the deficiency. Collecting an hundred ships, he sailed by night, and doubling the Lilybaean cape, hove in sight suddenly off Motya at daybreak. Attacking the guard-ships, which were aloft without the harbour, he burnt and sunk most of them; and passed on into the fort before Dionysius had time to man his fleet, which was drawn up on the beach, or to push a single ship into the water. Perceiving at once the extent of the danger, and the disadvantage to which his vessels would be exposed in a naval action, from the narrowness of the channel, the Syracusan general instantly ordered his men to draw the ships over the mole into the sea, on the other side; and covering the pier with his land forces and portable batteries, he did such execution, and spread so much alarm among the Africans, to whom these engines were new and strange, that Hamilcar found it necessary to retire to Africa, and leave Motya to its fate.

Capture of Motya. The siege was consequently pressed on every side; and though the Motyans made a most gallant defence, and fought to the last with desperate valour, they were in a few days overwhelmed by superior numbers, aided by the extraordinary machinery and military stratagems of Dionysius. The slaughter was immense; and the inhabitants would in all probability have been exterminated, had not the general sent an herald to proclaim that they might take sanctuary in the temples of the gods worshipped by the Greeks: an act of humanity which the prejudiced historian attributes to the most sordid motives. The city was given up to plunder; and all the inhabitants who had escaped from the sword were sold into slavery: a Greek named Damenes, and some others of the same nation who had sided with the Carthaginians, suffered crucifixion, as traitors to the country; which, under all the circumstances of the case, must be deemed a cruel policy. The governor-general, leaving a fleet of an hundred and twenty ships, under the orders of his brother Leptines, to guard the coast, and to keep in check the people of Ægesta and Estella, and having garrisoned Motya with Syracusan and native* Sicilian troops returned home with the main body of the army.

Success of Dionysius. Early in the following spring, Dionysius marched to the scene of action, and having accepted the submission of the Halicanes, he opened the campaign by investing Ægesta, and laying waste its territory where he met with no opposition. But the Ægestans, warned by the fate of Motya, resolutely defended their town, and sallying by night, surprised and set fire to the camp of the besiegers. A small party hastening to extinguish the flames, were cut off, and the conflagration spreading rapidly, destroyed a number of houses.†

This check was followed by intelligence which could not surprise Dionysius; but which, after success so little corresponding with his own great preparations, and with the comparatively defenceless condition of the enemy, at the commencement of hostilities,

* *Zachos.* Sicilian Greeks, *Zachosarai.*

† Mr. Micford has judiciously corrected the error of Wesseling, who renders *arvum, equitum*, as if the men were burnt in their tents: a most impetuous supposition, and no way supported by any authority.

must have occasioned him serious alarm. The Carthaginian government resolved to vindicate its dominion in Sicily by a great effort, collected an army, (according to the most credible authority*) of an hundred thousand men well equipped, who were joined, as soon as they landed, by thirty thousand Sicilian allies, and a fleet of four hundred ships of war, and six hundred transports. The armament was commanded by Hamilcar, who was on this occasion raised to the rank of *Boastem* or commander-in-chief: an officer, under the ancient constitution of Carthage, invested with unlimited civil and military powers during the continuance of his command, but accountable, at its termination, for his conduct to the senate and people.

The Carthaginian fleet sailed with a fair wind, the commander of each vessel bearing sealed orders from Hamilcar, which were not to be opened till they should be under weigh. According to these orders, the ships of war coasted along shore, while the transports sailed directly across the channel, both however bound for Panormus. Dionysius, who was on the watch for any favourable occurrence, observed that the transports profiting by the breeze, had run too much ahead of the convoy, and he despatched Leptines, with thirty ships of the line, to sink as many of them as possible. The gale continuing to rise, the Syracusan men of war, built for fast rowing, and unmanageable in a heavy sea, could not easily come up with the round-built transports, which sailed best before the wind when it blew hard; but even with this disadvantage, the admiral succeeded in running down fifty of them, having on board five thousand troops, and two hundred chariots, the whole of which were lost.

Hamilcar, however, landed safely and without opposition at Panormus, with a force which Dionysius could not venture to meet, either by land or at sea; and he recovered with little opposition, the places formerly in the Carthaginian alliance. The governor-general of Syracuse having endeavoured by liberal offers, but with very indifferent success, to recruit his forces from among the Sicilian natives, retired hastily, to prepare for the defence of Syracuse. The Carthaginian general, thus left in undisputed possession of the western district of the island, resolved to make his first attempt upon Messina, with a view to the shelter which would be afforded by its fine harbour to his fleet, consisting altogether, of between six and seven hundred sail.

In his way thither, he made himself master, by voluntary submission, or by force, of all the petty states on that side of the country, exacting subsidies from those who offered any resistance. Messina, meanwhile, always distracted by faction, was now divided by a warm dispute respecting an ancient prophecy, "that the Carthaginians should draw water in the city;" which one party interpreted to foretell the triumph, another the defeat and consequent slavery of the enemy. The latter prevailed, and hasty preparations were made for a vigorous defence; the women and children were sent away, with the most valuable moveable property, to places of security; and troops occupied the shore, to prevent the landing of the enemy's

* Timæus, cited by Diodorus. Other accounts make the African army alone, to have consisted of above three hundred thousand infantry, four thousand cavalry, and four hundred armed chariots.

Hamilcar lands at Panormus.

Biography. foraging parties. Hamilcar immediately perceived their error, and took advantage of it; profiting by a favorable wind, he sailed boldly into the port without previously attempting to land any of his forces; and the town ill fortified towards the sea, and weakly garrisoned, fell an easy prey.

Of the inhabitants, some sought a noble death in hopeless resistance; some were interrupted in an attempt to escape over land, and were put to the sword; a few succeeded in reaching friendly fortresses; above two hundred flung themselves into the sea, with the desperate design of swimming to the opposite shore; and it is asserted, that nearly a fourth part of the number reached Italy in safety. The towers, however, which defended the city on the land side, remained impregnable, and Hamilcar, eager to push his advantages, would not consume time in their reduction; but he levelled the walls with the ground, and so completely razed and burnt the houses, that, in the words of the historian, "it was difficult to ascertain where the town had stood."

^a Success of the Carthaginians. The native Sicilians, as well as the Sicani, had now, with very few exceptions, gone over to the Carthaginians; and so many of the Grecian towns were either subdued or gained, that Hamilcar commanded much more than half the island, and the resources of Dionysius were proportionally narrowed. In this emergency he was not, however, discouraged, nor waiting in exertion, to make the most of the means yet remaining to him. He manned sixty ships with unarmoured slaves, thereby making up the number of his fleet an hundred and eighty sail, of which but a small proportion were ships of the line; and having obtained a reinforcement of a thousand heavy-armed mercenaries from Sparta, or more probably from some neighbouring Lacedæmonian garrisons, he had a disposable land force of about thirty thousand infantry, and three thousand cavalry, with which he resolved to occupy the strong line of country between mount Ætna and the coast, and there either to arrest the progress of the enemy, or compel Hamilcar to attack him to disadvantage.

The Carthaginian general meanwhile continued his march along the coast, so as to preserve his communication with the fleet; but his progress was suddenly stopped by an eruption of the volcano, and the descent of a large stream of burning lava into the sea, which rendered it impossible for the army to proceed. Obligated therefore to take the difficult and tedious circuit of the mountain, and dreading the event of a naval action in his absence, he ordered Mago, his admiral, to proceed directly with his fleet to the harbour of Catania, about half way between Messina and Syracuse, and there to await his arrival. Dionysius, ever on the watch, and urged by the impatience of some of his allies, and the doubtful fidelity of others, to strike a decisive blow, made a bold attempt to intercept the enemy's fleet, and marched with a strong division of the army, to support the attack made upon Mago, by the squadron under Leptines, and to oblige the Carthaginians to keep the sea.

Apparently, the arrangement of the Syracusan admiral, was not judicious. Selecting thirty of his best ships he rushed impetuously into the enemy's line, which he threw into disorder, and sunk several of their largest vessels; but being soon surrounded and pressed by the multitude of their men of war, he lost the advantage of his superior naval tactics, and his men, compelled to fight hand to hand, were overpowered by numbers. With great difficulty he broke through the crowd of shipping, and escaped to sea, at the expense of leaving the main body of his fleet to the enemy, who sunk and captured more than half the Syracusan navy, and killed twenty thousand men. Their own loss was considerable, both in ships and men; but they succeeded in securing the port, where they ostentatiously displayed and repaired their numerous prizes.

Hamilcar soon afterwards, having completed his arduous march round the foot of mount Ætna, reached the fertile plains of Catania, and immediately took advantage of the success which had been obtained in his absence, to form the siege of Syracuse. While Mago entered the great port, and covered its ample space with ships of war and transports, the army invested the city on the land side, and plundered the country for thirty days, in the most barbarous manner; endeavouring by every possible provocation, to induce the Syracusans to attempt a sally, either by sea or land. This design was frustrated by the prudence and firmness of Dionysius; but he could not prevent the Carthaginians from possessing themselves of the suburb of Acradina, less strongly fortified than the other divisions of the city; where Hamilcar suffered his soldiers to plunder the temples of Ceres and Proserpine. "Of which crimes," says Diodorus, "he speedily and providentially suffered the due reward; for immediately his affairs grew daily in a worse condition;" "the Syracusans," he adds, "made a successful sally; nightly panics alarmed the camp; and the plague again made its appearance among the men." Hamilcar, however, only advanced his operations, and in the progress of his works destroyed the tomb of the illustrious Gelo and his consort, an offence which we should be disposed to visit more severely than the pillage of the temples.

In the meanwhile, Dionysius continued to use every exertion for the preservation of his country. His relative Polyxenus, was despatched through Italy to Lacedæmon, and Corinth, to solicit supplies, and to represent every where the impolicy and cruelty of suffering the Grecian name to be exterminated in Sicily; commissioners were sent to Greece, with orders to engage mercenary troops at any price; and merchant ships were engaged to transport corn from Sardinia and Africa. It was probably at this time that necessity suggested many of those financial expedients, which are referred by Aristotle and other writers, to the administration of Dionysius. He is said to have adopted the scheme, in modern times so familiar, of a forced circulation of tokens, coined of a base metal; and the more questionable measure, of doubling the nominal value of the current coin of the realm. He passed a decree, that all the jewels of the ladies should be consecrated to Ceres, and that they who would continue to wear them should pay the hire of them, according to their value, into the treasury of the goddess, for the use of the public; and the first example of

96. 1.

^a Among these is mentioned a tribe of *Assurians*, a name evidently of Oriental extraction: the Sicani and Sicilians migrated into Sicily from Italy, driving out the older inhabitants, who were a colony of Phœnicians, and of whom the Assurians were probably descendants.

Biography. compliance is reported to have occurred in his own family; he had recourse also to what in our country have been termed "*benevolences*;" but finding the excuse of poverty often pleaded against the claim for voluntary contributions to the public service, he declared that his own private resources were exhausted, but that he would set some of his property to sale: the best hidders, as he had anticipated, were among the recusants, and by general acclamation, in this instance fairly exerted, the money was exacted for the treasury, but the goods were restored to the governor-general.

At this period, also, Dionysius had recourse to the precious metals deposited in the temples; and possibly to some of the rich ornaments with which the piety of more prosperous times had decorated the shrines of the deities. It is reported that he endeavoured to reconcile the people to these liberties, by facetious though somewhat irrelevant jests: such as, that "the golden robe of Jupiter was too cold for winter, and too heavy for summer, and that a woollen cloak would be more comfortable at all seasons;" and that "it was very unbecoming in Æaculypus to sport a long golden beard, whilst his father Apollo was still a beardless youth."

It is not to be supposed that there existed among the Greeks that awful respect for the objects of their degrading worship, which Christians naturally feel for every thing pertaining to the service of our pure and sublime religion. The rites of heathen idolatry, and the personal character of the divinities, were permitted subjects of the grossest ridicule, not to say of the most offensive ribaldry, on the stage, as well as in the jocular intercourse of the mob; and it would not have been regarded as any mark of impiety, if Dionysius had really seasoned an unpopolar act with the undignified drollery, which has more probably been invented by some compiler of anecdotes, like Plutarch or Ælian.

The truth is, that the treasures in the ancient temples were deposited there as in places of security, and dedicated to the gods, by way of additional precaution; but it was generally understood, that they might be in part, or wholly withdrawn, to relieve the necessities of the depositor: the practice of extending this right, even to the costly decorations of the sacred edifice, was not only sanctioned by most respectable precedents in Greece, but by the example of the truly great king of Israel, the pious Hezekiah,* under circumstances very similar to those of Dionysius.

The siege still continued with little progress, when Polyxenus returned from his embassy with thirty ships of the line, under the command of a Lacedæmonian admiral; Dionysius and Leptines took the opportunity afforded by the arrival of an officer of so high rank, to leave the city, and sail with a squadron to convoy the expected supplies of corn. During their absence, the citizens observed a vessel laden with wheat, hastening to the enemy's landing place, and boarding her with five boats, took her. The Carthaginian admiral, endeavouring to retake the prize, was beaten off by the whole Syracusean fleet hastily launched to relieve the boats; twenty-four of his men of war were sunk, and the flag-ship was taken. The victorious fleet towed their prizes triumphantly into port, and offered battle to the enemy; who, astonished at the boldness of their attempt, declined to hazard an action. In the

moment of exultation, Dionysius entered the harbour, and immediately calling an assembly of the people, congratulated them warmly on their achievement, and assured them that the city should soon be delivered from its besiegers. Having made this confident assertion from private information which he had received of the state of the Carthaginian army, he was about to dismiss the assembly, when Theodorus, a man holding some command in the cavalry, and possessed of considerable influence among the lower class of citizens, rose, and addressed the assembly, in language, which, if it at all resembled the report of Dionysius, an opposition member in the British House of Commons would scarcely venture to use towards a popular minister. After taxing the governor-general with the most arbitrary and oppressive tyranny, under which freedom of speech was absolutely denied, he exercised the privilege, of which he thus deplored the loss, with the utmost license, in heaping upon Dionysius to his face, every scurrilous epithet which party rage could dictate. He enlarged upon the unsuccessful expeditions which had been undertaken; the ruinous wars that had been brought upon the country; the chicanery and impolicy by which money had been raised to supply a lavish expenditure; the interests of the state sacrificed to private ambition; the disastrous coalition to which they were reduced; the incapacity, in short, and the personal cowardice of the general, who thus commanded them against their will; nor did he fail to represent, that, no sooner was Dionysius absent, than the ancient glory of their fathers had again graced their arms. "Wherefore, my countrymen," he concluded, "if the tyrant will voluntarily abdicate his power, let us permit him with his family to quit the city un molested; if not, we have now a glorious opportunity for recovering our liberty. We are all met together; arms have been unavoidably put into our hands; we have friends who are ready to assist us, not only in the Italian Greeks, but in the allies from Peloponnesus. And let the provisional government be formed either from Corinth, our mother country, or of the Spartans here present." To this audacious proposal, Phænicus, the Lacedæmonian admiral, rose to reply; and the friends of Theodorus were not without hope, that he would take part with the opposition. But he stated, with the dignified simplicity of a Spartan, that his commission was to assist the government against the Carthaginians, not to coöperate in a revolution which would, probably, terminate in the loss of the city. And the friends of Dionysius appearing to have a decided majority in the meeting, the assembly was peaceably dismissed; nor was any other notice taken of what had passed, except that some of the disaffected party received marks of kindness and favour from the governor-general.

The plague, meanwhile, increased rapidly in the Carthaginian army, and became so dreadfully infectious, that few could be found to administer to the sick; none to bury the dead; the putrefying corpses corrupted the water, and tainted the air; and the celebrated pestilence of Athens, described with such touching fidelity by Thucydides, and so beautifully painted by Lucretius, seems scarcely to have exceeded in violence, that which now spread dejection and death through the gallant and triumphant army of Hamilcar. Dionysius availed himself of this distress in the

Sicily continued.

Appearance of the plague among the Carthaginians.

* Vide 2 Kings, xviii. 15, 16, 17.

Biography. enemy's camp to make a sally with his whole force by sea and land. Leptines and Pharcides succeeded beyond their hopes in destroying and burning great part of the fleet; and the governor-general, who commanded the army in person, gained a considerable advantage over the enemy, and took possession of two strong places, which enabled him to entrench himself beyond the Carthaginian lines, and to place them between his own camp and the fortifications of the town. In the rencontre, by which this was achieved, a Syracusan detachment, consisting chiefly of the disaffected party, was cut off to a man, not without suspicion of having been designedly exposed to danger.

Hamilcar thus pressed on all sides, and seeing his numerous forces daily sinking under the ravages of disease, sent an officer to Dionysius, proposing to give up his military chest, still worth three hundred talents, (about £60,000) for permission to withdraw with his remaining troops and fleet to Africa. Diodorus labours to represent this as the offer of a private douceur to the governor-general, and attributes his subsequent conduct to a desire of preserving a remnant of the Carthaginian army, in order that the apprehension of hostilities might enable him to keep his command. For the former suspicion there is not the smallest ground; the military nature of the office, and the constant state of military preparation or actual warfare, in which Dionysius kept the people employed, will be thought to afford some colour to the latter supposition. The jealousy of the Corinthia or republican party, rendered it extremely difficult to treat on liberal terms with a fallen enemy, or even to observe the conditions of any treaty which might be concluded. Dionysius, however, agreed that on payment of the three hundred talents, the Carthaginian citizens alone should be suffered to depart; and accordingly the mighty Hamilcar stole away by night, with the miserable remains of his proud ornament, pursued by the insults of the Syracusan rowers, and the execrations of his deserted allies; and meeting at home with nothing but scorn and neglect, he ended a miserable existence by voluntary famine; "a signal example," observes the historian, "of the just indignation of the deities, whose temples he had profaned; nor did the Carthaginian nation cease to feel the vengeance of Ceres and Proserpine, till the crime was publicly expiated."

The native Sicilians, who had joined Hamilcar, taking advantage of their local knowledge, shifted for themselves, and reached their respective towns in safety; the African allies, attempting to escape, were either cut off, or being overtaken, threw down their arms, and begging for quarter, were seized for slaves. The Spaniards alone, true to each other, and to the gallant spirit of their country, continuing embodied under arms, demanded honourable terms; and were received into the alliance and pay of Syracuse.

So great, however, had been the expenses of the war, that the three hundred talents paid by Hamilcar, did not enable Dionysius to satisfy the demands of the Grecian mercenaries, whom he had hired on their own terms; and these men, generally bitter republicans,

were ready, on the slightest discontent, to join with the disaffected party in promoting a revolution. Devision in this case was necessary—violence would have been dangerous. The governor-general perceiving that the insubordination of the troops was secretly encouraged by their commander Aristotle, a Lacedæmonian, he ordered him to be arrested, and sent home to be tried by his own country. He then offered the mercenaries the town and territory of the Leontines, left desolate by the enemy, as a compensation for their services; which the fertility of the soil, and the advantages of the situation, induced them readily to accept.

Tranquillity being thus restored, Dionysius immediately employed himself in repairing the wreck of his empire, and in restoring the prosperity of his country. He rebuilt ruined towns, and repopulated deserted countries; offering an asylum to the numerous exiles, the victims of faction in the republican states of Greece. Among the rest, he settled six hundred families of the ancient Messenian race, expelled from Peloponnesus by the cruel oppressions of Sparta, in the Sicilian Messene; being particularly anxious to plant a powerful and friendly colony there, as a check to the hostile machinations of the Rhegians on the opposite shore. But the inveterate malignity of Lacedæmon, pursued the Messenians even across the seas; and Dionysius was obliged so far to comply with their prejudices against the revival of Messene, as to remove the whole people to a fertile territory on the northern coast of the island, where they founded Tyndaris, and extending their influence, partly by conquest, and partly by negotiation, among the neighbouring tribes, became a considerable and flourishing state. Dionysius, meanwhile, by no means relinquished his plan of rendering the port and fortifications of Messene formidable to Rhegium; and he endeavoured to establish a connection between the garrison there and the new settlement of Tyndaris. The Rhegian government meanwhile was not inactive: collecting the exiles, whom Dionysius had expelled from Naxos and Catana for revolting to the Carthaginians, they fixed them at Mylae, so as to intercept the communication between the colonies friendly to Syracuse; and they encouraged a party of Naxians who had seized the strong-hold of Taurominium, to persevere in maintaining it against Dionysius. Having by these means, as they supposed, engaged the attention of the Syracusan troops nearer home, they ventured upon open hostilities, and laid siege to Messene. But Dionysius saw at once the advantage thus opened to him; and marching without delay, he defeated the Rhegian general; took Mylae, and established a friendly intercourse between the new colonists, and his own allies on the coast; so that the measures of the Rhegians only tended to confirm the strength opposed to them.

Returning to the petty but venacious contest at Taurominium, Dionysius blockaded the place, in the expectation that the enemy would evacuate it on the approach of winter; but these brave people, looking upon the Greeks as invaders, who had robbed the native Sicilians of their fertile plains, were resolved to be masters at least of the wild mountain fastnesses; and they held out against all the efforts of the Syracusans, though their fortifications were covered with snow.

Defeated
at Taurominium.

* This seems the fair construction of the passage, lib. xiv. c. 75, which Mr. Miford understands very differently, as if Diodorus supposed that Dionysius was supported in power by the direct influence of Cathage.

Biography. of a mid-winter night, resolved on attempting to carry the fortress by storm. The storming party, conducted by the general in person, having with great toil and difficulty surmounted the craggy path, rendered almost impassable by the depth of snow, succeeded in surprising the citadel, and opening the gate to their comrades. But unfortunately, Dionysius received a wound in his face, and his eyes became suddenly inflamed by the frost : at this moment the garrison made a sudden and successful attack upon him ; he was thrown down by a blow upon his gorget, and narrowly escaped being taken prisoner ; the assailants alarmed, and missing their commander, made a precipitate retreat, with the loss of above six hundred men, and leaving behind them most of their accoutrements. Dionysius himself, it is reported, brought away no part of his armour but the gorget, to which he owed his life. The intelligence of this disaster made an unfavourable impression throughout Sicily, and occasioned a change of administration in Agrigentum, which seceded from the Syracusean alliance.

Upon this, Mago was despatched to head the Carthaginian party in Sicily ; and assembling an army of natives, he ravaged the territory of Messena,* and after collecting a great booty, he pitched his camp near the friendly city of Abacnum. The active governor-general of Syracuse, however, soon came up with him ; and defeating him in a pitched battle with considerable slaughter, obliged him to leave the island without delay. Not many days afterwards, Dionysius sailed with an hundred ships of war, to chastise the Rhegians ; and arriving unexpectedly, set fire to the city, and applied his scaling ladders to the walls. The inhabitants eager to save their houses from the flames, left the defence of the walls to a very insufficient force, and the place would unquestionably have fallen, had not Heloris their general exerted himself to prevail on them to let the conflagration take its course, and to unite in repelling the enemy. Dionysius, by these means, disappointed of his object, plundered and laid waste the country ; and, concluding a truce for a year, returned to Syracuse.

In the next spring, the Carthaginian government renewed their efforts in Sicily ; and Mago with an army of not less than eighty thousand men, overrunning several Sicilian states of the Syracusean confederacy, encamped in the territories of the Agriguntines, near the river Crysa. Aggris, however, at this time, next to Dionysius, the most powerful prince in Sicily, remained proof against intimidation or allurements ; and Mago thought it prudent to advance no farther. Dionysius hastened to the assistance of his ally, and concluded a treaty with him, by which Aggris was to be put in possession of a considerable territory at the close of the war ; and engaged in the meanwhile to support the troops from Syracuse at his own expense.

The two princes, having intelligence that Mago was destitute of supplies, and in great distress for provisions, determined not to risk a battle ; upon which a large detachment of the Syracusean army, ever impatient of a protracted campaign, mutinied and returned home. Dionysius, not discouraged, supplied their place as well as circumstances would allow, by arm-

ing their slaves ; and the Carthaginians soon afterwards furnished an ample justification of his conduct, by sending to treat for peace, on terms quite as favourable as could have been expected from a decisive victory : namely, that the belligerent powers should stand as they did by the former treaty, excepting, that the native Sicilians were to be annexed to the confederacy under Dionysius, and that he should be put in possession of Taurominium.

It deserves remark, that on his return to Syracuse, the governor-general appears to have instituted no proceedings against his refractory soldiers ; on the contrary, he restored to them their slaves whom he had enlisted to serve in their place. His mercenary troops, to whose steadiness the success of the war was in a great measure attributed, were rewarded with the town and territory of the exiled Taurominians.

During the short season of tranquillity which followed these transactions, the influence, or as it was called, the empire of Syracuse, extended itself not only throughout Sicily, but also once more to a considerable extent over the Grecian settlements in Italy. Relying upon support from some of these states, Dionysius fitted out an armament for the reduction of his ancient enemies the Rhegians ; and though his attack upon the town failed, and a storm which arose occasioned some loss of ships and men, it was more than compensated by the plunder of the country, and by a treaty of alliance formed with the Lucanians, a native Italian people, between whom and the Rhegian confederacy, the most bitter animosity existed.

About the same time, the Syracusean interest was further strengthened in Italy, by the liberal conduct of the admiral Leptines, towards a body of unfortunate Thurians, allies of Rhegium, who had been defeated and driven into the sea by the Lucanians. He not only permitted them to take refuge in his fleet, towards which they had fled, under the idea that it was a squadron of their allies, but ransomed them at a considerable sum. Thurium was consequently detached from the league against Dionysius ; but the Rhegians and Crotonians continued to manifest the most determined hostility to his government. Diodorus insinuates that Leptines, in consequence of this humane action, was superseded in his command, and his brother Thearidas appointed to succeed him ; but the behaviour of the admiral was not only consonant to the line of policy generally pursued by the governor-general, but was imitated by him very shortly afterwards on an occasion, which the same historian calls the most glorious of his life. It must have been for other reasons, therefore, that we find Thearidas commanding the fleet, which, in the succeeding year, attended another expedition against the Rhegian confederacy. After some successes at sea, Dionysius invested Caulonia ; and the Rhegian and Crotonian governments intrusted the command of the allied army to Heloris, a banished Syracusean, who had before been defeated in the battle of Messena, and whose principal recommendation appears to have been his inveterate hatred of the tyrant. With superior numbers he marched immediately to oblige the Syracuseans to raise the siege ; but advancing with more eagerness than skill, he was easily routed, and lost his life fighting bravely to the last. A considerable slaughter ensued : at a detachment of ten thousand men

* Mr. Mitford observes, that this fact proves the error of our copies of Diodorus, which join Messena with Agrigentum in the preceding sentence.

taking refuge on an eminence, where they were surrounded by the Sicilian army, demanded to surrender on conditions. The general insisted upon their surrendering at discretion; and distress, and want of water obliged them to comply; they marched down, therefore, with the sullen resolution of men, who disdained to supplicate where they expected neither generosity nor forbearance. But in proportion as their hope of mercy had here forlorn, their joy and thankfulness were extreme, when Dionysius, having counted their number, informed them that they were all free to depart unransomed, whithersoever they thought fit. Golden crowns were sent to him as tributes of gratitude, from the friends and countrymen of the liberated prisoners; and the fame of his popularity contributed to alarm the Rhegians, now in a great degree deprived of their allies, and onable to resist the victorious army which was daily expected to surround their walls. They sent, therefore, to offer submission, and to solicit that he would impose upon them moderate terms. Dionysius exacted a fine of three hundred talents; deprived them of their whole navy; and took an hundred hostages. Then, razing Caulonia, he assigned its lands to his friends the citizens of Locri, and removed the Caulonians to Syracuse; where he admitted them to the freedom of the city, and exempted them for five years from bearing any share in the public burdens.

Dionysius
passes into
Italy.

Ol.
98. 1.

In the next year, Dionysius again crossing to Italy, adopted the same measure with the Hipponians, and gratified the Locrians with their land. A dispute having arisen with the Rhegians, respecting a supply of provisions, with which they were bound to furnish the Syracusan army, the last hope of establishing any permanent treaty with that obstinate people vanished, and it was resolved to make a fearful example of them. Disdaining, however, every unmanly advantage, the governor-general set their hostages at liberty before the commencement of hostilities.

The siege of Rhegium immediately followed, and was pressed day and night with unremitting exertion; but the inhabitants, ably directed by their general, Phyto, and despairing of any treatment from the enemy better than slavery or death, defended themselves with astonishing perseverance, for eleven months; till they had eaten, not only their horses and other beasts of burden, but had even boiled down their leathern hides for food, and ventured out by stealth to collect the herbage that grew wild beneath their walls. Of this last resource they were deprived by the vigilance of Dionysius, who, though suffering from a severe and dangerous wound, remitted nothing of his activity; and hoping now to reduce the town by famine, he destroyed every trace of vegetation around it. The miserable Rhegians at length opened their gates, and displayed to the conqueror a horrid spectacle of numbers dead or dying of hunger, while the survivors presented a scarcely less squalid and emaciated appearance. Six thousand prisoners were sent to Syracuse, where those who could redeem themselves at a silver mine, (about £3) for each man, were permitted to reside as freemen; the rest were sold for slaves. Phyto and his son alone, suffered death; by circumstances, according to the democratic writers, of atrocious barbarity. The town itself was given to the small party in it who had been friendly to Dionysius, and the population being

Ol.
98. 2.

augmented by colonisation, Rhegium shortly became a flourishing ally of Syracuse.

It was during the operations of this siege, according to the Sicilian historian, that Dionysius made his first unsuccessful attempt to rival his magnificent predecessor, Hiero, at the Olympic games; and sent his brother, Theoridas, in a style of unusual splendour, to superintend the recitation of his prize poems, and the running of his horses in the chariot-race. The imposing effect of royal grandeur was, however, no match for the vehement eloquence of the Athenian orator, Lysias, who endeavoured to excite a tumult against "the presumption of the impious tyrant;" and either by some contrivance of the hostile party, or from the mismanagement of the drivers, some of the chariots were driven out of the course, the rest were broken by running against each other, and the horses failed of obtaining the honour which their swiftness appears to have merited. The same prejudice occasioned the rejection of his verses with marks of the most insulting contempt; though we may infer, from his having succeeded in the more arduous contest for a tragic prize at Athens, that he could not be altogether deficient in poetic talent.

But Dionysius devoted his leisure to pursuits more beneficial to his country, and more conducive to his own lasting fame. In the interval of peace which followed the reduction of Rhegium, he began to extend his connections, and to found colonies along the coasts of the Adriatic and Ionian seas; and deriving from these sources vast commercial advantages, and a plentiful supply of materials, he repaired and enlarged the city wall, so as to make it the greatest work of the kind then known in the world; he greatly improved the docks; and erected the magnificent gymnasium on the banks of the Anapus. The city was, at the same period, enriched and adorned with numerous temples and other public edifices.

The extended commerce of Syracuse suffered greatly from the pirates of Tuscany; and in the following year, Dionysius undertook an expedition against them; which Diodorus attributes to his desire of plundering a rich temple at Agrigola, (as he does the commercial connection with Epirus and Illyria, to a preposterous scheme for pillaging the temple at Delphi.) The probable truth is, that the Agrigolan pirates made use of the temple of Leucothea as a depository for the produce of their predatory excursions; and that Dionysius was perfectly justified in pursuing the recovery of his own property, even within the limits of the sanctuary. The spoil found in it is said to have amounted to five hundred talents (£100,000) and to have been very acceptable to him in the exhausted state of his treasury.

On this occasion, suspicion arising that some of the soldiers had secreted part of the precious utensils, the general, in order to discover the delinquents, issued an order, that every one who had taken part of the spoil to his private use, should pay half its value. The soldiers concluding that this payment would operate to secure the remainder, came forward to avail themselves of it, and were immediately seized and deprived of the whole.

On his return home, Dionysius continued to pursue his favourite policy of uniting all Sicily in the alliance of Syracuse; and by negotiation and benefits, succeeded in detaching several small states from

Peace con-
cluded.Private life
of Diony-
sius.

the Carthaginian interest. The government of Carthage, having in vain expostulated with him on the injustice and impolicy of renewing hostilities, raised Mago to the same high office of commander-in-chief formerly enjoyed by Hamilcar, and instructed him to carry his attack upon the allies of Syracuse, into Italy and Sicily at the same time. This obliged Dionysius, also, to divide his forces, and a variety of skirmishes ensued, with no very important results. At length a decisive action took place, in which the Carthaginians were routed with the loss of ten thousand slain, and five thousand prisoners, and Mago himself, after signalling himself by his personal bravery, fell covered with wounds. The army deprived of their leader, and disheartened by their defeat, desired conditions of peace; but Dionysius would hear of nothing less than the complete evacuation of Sicily, and the payment of all the expenses of the war by the Carthaginians.

In this instance he appears to have miscalculated the resources of the enemy, who had no other intention than to gain time for the reinforcement of their troops, and the re-organisation of their materiel, under the able management of the son of Mago, who was chosen to succeed his father. So that while the Syracusans were exulting in the expectation of becoming sole masters of the island, they were attacked and defeated with great slaughter; and the gallant and generous Leptines lost his life in the action.

The Carthaginian general, as prudent in using his victory as he had been skillful in obtaining it, withdrew immediately to Panormus, and sent to propose peace on reasonable terms: namely, that with some trifling exceptions, the respective territories should remain in statu quo ante bellum, and that Dionysius should pay a thousand talents (£200,000) for the expenses of the campaign.

Both powers were now convinced of the impracticability of reducing the whole of the Sicilian states under one dominion; and for the first time, a peace was concluded, which neither intended immediately to violate. Dionysius, secure in power, and fatigued with incessant warfare, eagerly embraced the opportunity of cultivating those arts of peace, which displayed his talents to the best advantage. The great undertakings already mentioned for extending the commerce and political interests of his country towards ancient Greece, flourished under his superintendence; the city became the rival of Athens in extent and in magnificence; and the Syracusan empire presented the singular spectacle of a Grecian confederacy in the full enjoyment of prosperity, uninterrupted by domestic faction or foreign hostilities.

In his private life, during this happy period, the ambitious and active spirit of Dionysius sought for exercise in those literary and gymnastic contests in which he is said to have engaged, even amidst the toils and dangers of war. He was assiduous in improving the breed of horses, and had establishments for that purpose in Italy as well as at home; and he continued to court the Muses, though, it is reported, without very general success. In the conversation of men of letters, he passed much of his time; and, according to the custom of an age when printing was

unknown, and writing laborious, he frequently recited his poetry to his friends, and availed himself of their criticism. Their judgment would, of course, generally be favourable; and a prince of his temper would not much relish severe animadversions. Yet though he was, perhaps, sometimes offended by the frankness of his intimates, his anger was easily appeased by submission, or averted by some facetious excuse. When Philoxenus, himself a poet, was sent to prison for speaking contemptuously before company of the prince's verses, he was almost immediately released and restored to favour; and so little did he apprehend any serious consequences from the offended vanity of his master, that on the next recitation, being asked for his opinion, he called out to the attendants—"To prison with me;" and the implied censure was well received. On another occasion, the same friend ventured to say of some elegiac complaint, composed by Dionysius, that the verses were "truly pitiful," and the pun met the approbation of the royal author.

The authority for these, and for similar tales respecting Philistus, Leptines, and others, is, however, of a questionable nature. The literary men of that age, were for the most part, hostile to monarchical governments; and, like the savans of France, while they gladly sheltered themselves under the patronage of the court, were always eager to embrace any occasion of insulting the sovereign, or bringing his administration into disgrace. Mr. Mitford is disposed to attach no credit to the story, that Plato himself was repeatedly entertained by Dionysius, who took particular pleasure in his conversation; but finding that he was diligent in propagating republican doctrines, and had warped the allegiance of Dion, the son of his late colleague, Hipparchus, (afterwards the assenter, as Pintarch calls it, of the liberty of his country,) he seized and sold him as a slave, that he might learn the difference between real and imaginary grievances. But the men of letters resident at court, subscribed to redeem him, and sent him home in safety.

The domestic comfort of Dionysius, and the prospect of transmitting his power to his posterity, were eluded by the thoughtless profligacy and wild freaks of his son, who inherited his father's taste and magnificence, without his military talents, or political virtues. As he was reprimanding him one day for his excesses, and observing that he had set a very different example, the youth replied, "True, sire; but you were not the son of a prince."—"Even so," said the father, "nor will you be father of one."

During sixteen years, Dionysius took no part in the commotions which agitated the rest of the world, except that on two pressing occasions he sent some assistance to his constant allies the Lacedaemonians. But about, *OL.* 103. 1, he was once more tempted by the state of affairs in Africa, to attempt the expulsion of the Carthaginians from Sicily. The plague had again desolated the territories of Carthage; the tributary states had taken advantage of its distress to assert their independence; and a conflagration had destroyed the greater part of the navy. The Syracusan army and fleet, therefore, proceeded for a time with little opposition to possess themselves of some strong places, and to collect plunder. But the genius of the Carthaginian government, ever fertile in resources, assembled an hundred and thirty ships of

With him expired the vigour and glory of the Syracusan empire; and although the strength and wealth which it had acquired, by his extraordinary talents and industry, preserved it from immediate and sudden decay, its decline may be dated from the year in which it lost its noblest ornament—in the genius, the valour, and the patriotism of Dionysius.

DIONYSIUS THE YOUNGER.—TIMOLEON.

FROM A. M. 3639. B. C. 365. TO A. M. 3669. B. C. 335.

Biography. Dionysius the first, commonly called the tyrant of Sicily, left at his death two sons, Hipparchus and Nisæus, and two daughters, Sophrosyne and Arete, by his third wife, Aristomache, the daughter of his colleague Hipparchus, and sister to the celebrated Dion. The former of these princesses had been given in marriage to the younger Dionysius, the son of Doris, and the latter to her uncle, Dion. (Corn. Nepos.)*

O.L.
103. 1.

When the illness of the tyrant became alarming, and the physicians gave little hope of his recovery, Dion was anxious to represent to him the claims of his sister's children to a share in the succession, expecting, probably, as they were yet very young, to secure for himself the reins of government; but in this design he was anticipated by the vigilance of the eldest son, who prevailed upon the medical attendants to prevent the interview. Hence arose a jealousy between the two branches of the family, which though suppressed for the present, occasioned ultimately the revolution, in which Dionysius the second lost his power; and Syracuse and all Sicily suffered for many years the ruinous consequences of anarchy.

Accession
of Dionysius
the Younger.

At first, however, all went on smoothly. Dionysius, assembling the people, informed them of his father's death, and pleaded his own cause with so much success, that he succeeded to power without opposition; and after celebrating the funeral with becoming solemnity, entered upon the dignities and duties of his high office, and became master of the most flourishing and powerful empire then in Europe. His first measure was to conclude a peace with Carthage; and though he is severely censured by Diodorus and Plutarch for deserting the policy of his father, and making terms with barbarians, the impartiality of posterity has done justice to the wisdom of his administration, in avoiding an unnecessary rupture with the only power from which danger was to be apprehended, and which had so often been more than a match for his active and warlike predecessor.

In a petty war with the Lacanians, in Italy, Dionysius shewed that he was neither deficient in personal courage nor in military skill; and the vigour

with which he repressed the pirates who infested the Adriatic, did honour to his government.

But for the maintenance of his authority, and the regulation of affairs, he appears to have been much indebted to his able counsellors, Philistus (the venerable and accomplished friend of his father) and Dion, who, to a princely fortune, added great dignity of manners, and uncommon talents for command, both in the council and in the field. The former was a warm advocate for the continuance of the monarchy, subject, as the supreme power was, to the ultimate control of a popular assembly; and the latter was a determined aristocrat, equally adverse to power in the hands of an individual, or vested in the democracy. The prince, fond of ease and pleasure, but by no means deficient in ability, contrived, for a time, to reconcile the discordant views of these eminent statesmen; and throwing upon them the principal weight of business, gave himself up to literary leisure, and to voluptuousness; and, assembling round him all who were most distinguished for wit and conviviality, he lost, in the gaieties and excesses of a luxurious life, that respect and confidence with which the Syracusans had been accustomed to regard his father.

The decline of his popularity opened a prospect which the penetrating ambition of Dion did not fail to improve. Severe in his own morals, and haughty in his manners, he encouraged the growing disgust against the licentiousness of the court, and the thoughtless familiarity of Dionysius; and gradually withdrawing from his government the support of public opinion, prepared the way for its entire subversion. In these views he was seconded by Heracleides, who had the command of the cavalry, and was in high favour with the lower class of citizens, to whom the austere dignity of Dion was less engaging than the courtly urbanity of the master of the horse.

It is generally believed that these discontents were inflamed by the arrival of Plato, on a visit to Dionysius. The habits of the philosopher were more congenial with the sober gravity of Dion, than with the riotous dissipation of the prince; and he is reported to have entered warmly into his interests, and to have offended the courtiers by the boldness of his lectures, and the undisguised avowal of his political principles. Dionysius, however, delighted with his

Arrival of
Plato at
Syracuse

* The account of Plutarch differs from that of Cornelius Nepos and Diodorus in some particulars.

Biography. learning, eagerly cultivated his society, treated him with every mark of favour and distinction, and, from respect to his character, imposed a decent restraint upon the libertinism of his companions. It is even said, that he became a convert to many of the maxims of government then prevalent among men of letters in Greece; and Philistus, perceiving the dangerous tendency of this new influence, exerted himself to support the sinking power of the prince, almost equally endangered by the machinations of his ministers, and by his own vacillating facility.

Dion, having in the beginning of this reign been sent as ambassador to Carthage, had used all his art to ingratiate himself among the leading men in that state, with the purpose of strengthening his interest in Sicily by so powerful a connection. And now, hoping that his ambitious schemes were in a promising train, he renewed his correspondence with his friends in Africa, through the medium of their dependencies in the island. Some of his letters, accidentally intercepted, were brought to Dionysius, and served, for a time, to open his eyes to his danger, and to rouse him to something like vigour and decision.

Ruinishment
of Dion
and Hera-
cleides.

Sending for Dion, to speak with him on the rampart of the citadel next the sea, he upbraided him with his treachery, and observing that it was impossible they could both continue in safety at Syracuse, obliged him to embark in a ship which lay under the wall prepared for the purpose, and to go into exile at Corinth; where he permitted him to receive the vast income of his Sicilian estates, and to live in a style of splendour before unknown in Peloponnesus. At the same time, from information probably contained in the intercepted letters, he banished Heracleides from Sicily, and bestowed the vacant offices in the state among the friends of Philistus.

But neither the proud unbending temper of Dion, nor the unprincipled duplicity of Heracleides, were likely to be won with the generosity and clemency of Dionysius. The first object of both was to employ the large resources left in their power to raise troops in Greece for the purpose of effecting a revolution at Syracuse; and though there could be no cordial co-operation between two men who agreed in nothing but in enmity to the existing government of their country, they were each unremittingly active to engage in their interest banished Sicilians of the revolutionary party, and malignant adventurers of all countries, and in hiring mercenaries for the expedition.

As soon as intelligence of these proceedings reached Sicily, Dionysius confiscated the property of Dion; and obliging his wife, Arete, to repudiate him, gave her to another; and took her son under his own care, admitting him to share in his excesses, at an age when his education ought to have been religiously severe. Himself, accompanied by Philistus, went to Italy, to provide against the approaching conflict.

Dion and
Heracleides
invade
Sicily.

Meanwhile the success of Dion in Peloponnesus was not answerable to his great means and active exertions. Of the Sicilian exiles only twenty-five, chiefly Naxios, from Taurominia, engaged in his service; and the whole force collected by him did not exceed eight hundred men. These he embarked in two transports, accompanied by three small craft, and avoiding the usual track, arrived in safety at the Carthaginian settlement of Minoa, of which the governor Syntalus, or Pylarus, received him with every demonstration of

friendship, and assisted him by all the means in his power.

"With less means," observes Diodorus, "than any one ever employed before him, he most unexpectedly overthrew the greatest dynasty in Europe. Who would believe that a man sailing with two transports should subdue a potentate who possessed four hundred ships of the line, and commanded an army of an hundred thousand foot, and ten thousand horse; having such supplies of arms and provisions, and all other necessities as were suitable to one enjoying such power and wealth; besides occupying the greatest of Grecian cities, with ports and arsenals, and impregnable fortresses, supported too by numerous and powerful allies."

The wonder, however, in some measure ceases, when we read that Dionysius and Philistus were still in Italy; and the despatch sent to recall them, through treachery or accident, miscarried, so that they did not return to Syracuse until Dion, by means of the disaffected party, had been several days in possession of the city on the main land. On their arrival in the citadel negotiations were attempted, and for some time hopes were entertained of an amiable arrangement; but the haughty temper of Dion, exasperated by domestic injury, and inflamed by good fortune, precluded the possibility of peace on reasonable terms; and the seige of Ortigia continued to be pressed, with various success, but in every rencontre with the loss of many citizens, and with great injury to the town.

Heracleides, in the mean time, arrived with a force very superior to that which had accompanied Dion to Sicily, and possessing great advantages, from his popularity among the lower classes, who were offended by the aristocratic manners and sentiments of his competitor.

It became immediately evident that neither of these chiefs would submit to act a subordinate part; and though present necessity obliged Heracleides to be content with the rank of admiral, while Dion commanded the city, he was equally active in undermining the popularity and power of his colleague, and in co-operating with him for the destruction of Dionysius.

In one of the numerous skirmishes by sea and land, which now daily depopulated and ruined Syracuse, Philistus was killed; and his body falling into the possession of his enemies, was treated with those gross and brutal insults which mark the popular party in civil wars. Dionysius, shocked and disheartened, once more attempted to negotiate; and it is said, that Dion was desirous of hearkening to terms; but it was now the flood-tide of revolutionary violence, and Dion's influence was overborne by Heracleides, the unprincipled flatterer of the mob. The overtures of the prince were accordingly rejected; but he succeeded in eluding the vigilance of the admiral, and escaped to Locri, the native city of his mother, in Italy, leaving the citadel under the command of his son, Apollocrates. His influence among the Greek states, in Italy, enabled him to send a powerful reinforcement to Syracuse, under the conduct of an able commander; and after some temporary, but important successes, Apollocrates surrendered the citadel to Dion, upon honourable terms; and with his friends and private property followed his father to Locri.

fell heavily upon the unhappy Syracusans. Having paid so dearly for the name of liberty, they could trust neither of the competitors for power, by whose means they had overthrown the government.

Heraclides plotted against Dion, and evinced the basest treachery and ingratitude. Dion, after some forbearance, finding his popularity on the decline, murdered Heraclides; and suffering a remorse of conscience, which disordered his understanding, was himself, not long afterwards, assassinated by an Athenian, Callistratus, or Calippus, whom he had received into his confidence. Calippus was successful in his attempt to seize the supreme direction of affairs; and, like the blood-stained demagogues who preceded him, exercised his power with the most oppressive tyranny, and taught the citizens, in late repentance, to call the days of Dionysius the golden age of Syracuse. After a very short reign, whilst he was absent at the siege of Catania, the city was seized by Hipparrinus, son of the elder Dionysius; and Calippus was soon afterwards murdered by the partisans of the family at Rhegium.

Dionysius
in Syracuse

The condition of Sicily was not improved by the accession of Hipparrinus to power; he held it only about two years; and an interval of complete anarchy followed, such, that the lately flourishing and populous island became a scene of universal wretchedness and desolation; commerce was suspended; agriculture at a stand; property plundered; palaces and temples fell to decay, and were tenanted by wild beasts and venomous reptiles. The mercenary troops, in the absence of all regular government, finding neither employment nor pay, subsisted by the most audacious robbery, and infested every district in the island with hordes of banditti.

etc.

108. 3.

During all this period, Dionysius remained peaceably in Italy, enjoying great consideration and influence, if not legitimate power, among the Greek states attached to his family; but at length, solicited by a large party among his countrymen, who were wearied with the endless succession of revolutions, and encouraged by the readiness of his Italian friends to engage in his cause, he returned, after an absence of ten years, and was restored to a dominion, exhausted indeed by intestine discord, and curtailed by the revolt of the allies, but rendered much more absolute than before by the lawless violence of republican leaders. The democratic party, however, were by no means disposed to acquiesce in the re-establishment of the former dynasty; nor were there wanting numbers who, either from personal vanity, or political prejudice, or from a dislike to the restraints of regular government, were ready to join in any scheme for renewing the reign of tumult and sedition. Of the neighbouring chiefs, the two most powerful, Ictes, of Leontini, the friend of Dion, and Andromachus, who had assisted in the expulsion of Dionysius, and had made himself master of Taurominium, were staunch friends to that nominal freedom, under which they exercised unlimited authority; and were eager at all times to lend their assistance to the revolutionary faction, who exclusively called themselves the people. Ictes, in particular, had acquired such an ascendancy among the Syracusans, many of whom had taken refuge under his protection, that he is called by Diodorus, "the dynast of the Syracusans," at the

very time that Dionysius is said to have been "lord of Syracuse."

But the dread of a Carthaginian invasion, which at this time threatened the entire subjugation of the Grecian states in Sicily, gave rise to a proposal by no means agreeable to the ambitious views of Ictes, though he found himself under the necessity of appearing to concur in it. The idea is said to have originated with the Taurominians; but it was eagerly embraced by all parties, the friends of Dionysius alone excepted; and, accordingly, an embassy was despatched to Corinth, the mother city, and fountress of Syracuse, to desire that, according to ancient Grecian custom, a Corinthian general might be sent out to take the command of their armies against the enemy, and to settle their domestic disturbances by the establishment of a permanent and free constitution. Ictes, meanwhile, indifferent by what means he promoted his own designs, privately treated with the Carthaginians, and offered to put Syracuse into their hands, on condition of being appointed to the government; and he held out hopes that the difficulties under which Corinth was known to be labouring at home, might prevent the administration from attending to the claims of the colony. In this expectation he was deceived; the Greek republics, proud of their colonies, and deriving great advantages from them both in war and peace, were always glad to avail themselves of every opportunity to keep up their connection, even with inconsiderable settlements formed of their own citizens; and it was the obvious policy for the Corinthians to preserve their influence in Syracuse, whose power and resources were so much greater than their own. The Sicilian embassy was, therefore, well received; and a decree passed, "that it was the duty of Corinth to send succours to her colony." The question was then put, who should command the expedition; and a person in the crowd proposing Timoleon, the son of Timanctus,* he was unanimously appointed to the office.

In the amusing romance which Plutarch has given us, under the title of Timoleon, he describes that bold and active genius as having, for twenty years previous to this event, moped in his own garden, "under the shade of melancholy boughs," broken in health and spirits by the displeasure of his mother, who could not be persuaded that the assassination of a brother was "a glorious achievement."† The truth rather appears to be, that very shortly before the arrival of the Sicilian ambassador, Timoleon was instigated by the fury of political zeal, either to stab his elder brother Timocrates with his own hand, or at least to assist the conspirators who took away his life. Timocrates bad, by the means most usual in Grecian republics, by courting the populace and the military, attained the supreme direction of affairs, and acquired the appellation of tyrant at Corinth; and Timoleon having vainly attempted to persuade him to relinquish his power, was led by the doctrines then current in Greece, to conclude, that patriotism required the sacrifice of private affections, and that it was his duty to deliver his country from slavery. That there was

no personal enmity between the brothers, appears likely, from its being related that the younger had, not long before, saved the life of the elder, at the imminent risk of his own, in a battle with the Argians; and it is by no means consistent with the determined temper, and sanguine energy which characterise all the actions of Timoleon, to suppose that he ever suffered himself to repeat of what he had once resolved on public motives to execute. Nor is it material, whether Timocrates fell by the dagger of his brother, in the forum,* or whether a remnant of decent respect for kindred blood, induced the author of the deed to hide† his face, or to be absent‡ from the apartment, while the assassins committed it in the palace. Whatever might be the sentiments of the family and their friends, it is clear that the majority of the Corinthian people regarded Timoleon as the deliverer of his country, and concurred with his Greek and Latin biographers† in heaping praises on the patriotic fratricide. It is indeed most probable, that to this horrid crime he was entirely indebted for his appointment to command the Sicilian expedition; for he was told, that the construction to be put upon his late act, must depend on his displaying, in his new station, the same remorseless hatred of tyranny which was pleaded as his justification.

Timoleon immediately set about the preparations for his arduous undertaking; and with the spirit of a man resolved to devote himself to a life of adventure, embarked the whole of his property in his outfit, and bade a final farewell to Greece. The zeal of his countrymen was heightened by intelligence from Ictes, who endeavoured to dissuade them from the enterprise, alleging that he would himself, with the assistance of the Carthaginians, undertake to expel the tyrant from Syracuse. The Corinthians had no intention to permit either to supersede the parent state in the deliverance of their colony, and they hastened the departure of Timoleon, to check the ambitious designs of Ictes. But Coriath was at this time, by no means rich or powerful; faction at home, and wars in Peiopolonensis, had so much drained its resources, that Timoleon sailed with only seven hundred mercenary troops, besides volunteers, on board four ships of war, converted into transports for the occasion, and conveyed by three more cleared for action: passing Corcyra, he was joined by two Corcyrean and one Leucadian man of war, and with this little fleet of two ships, he ventured to cross the Ionian channel. He was too good a general to have omitted to call in the powerful aid of superstition: the oracle at Delphi had promised him success, and a crown of victory had fallen upon his head as he was quitting the temple; Ceres and Proserpine signified their approbation of accompanying the expedition, and accepted the dedication of the flag-ship; and when the fleet got under weigh by night, the presence of the goddesses was indicated to all on board, by meteors or fireworks in the heavens, which continued to move before the admiral, directing his course, and reconciling the crews to the bold measure of keeping the open sea.

Timoleon was already off Metapontum in Italy, when he fell in with a Carthaginian man of war with num-

bersadors on board, who hailed him, and delivered their commission, protesting against his interfering in the affairs of Sicily, or landing upon the island. Upon this, he hastened to Rhegium, where he was secure of a friendly reception, and took refuge in that port till he could ascertain the state of things at Syracuse, and form his own plans accordingly.

His prospect was sufficiently discouraging. The Carthaginian general, Hanno, commanded an army of fifty thousand men, well furnished with supplies and engines of war, and attended by a fleet of an hundred and fifty line-of-battle ships; he had been joined by the forces under Ictes, and the siege of Syracuse was regularly formed. Dionysius continued to hold out against the allied army, till observing Ictes withdraw towards Leontium for supplies, he made a sally, and pursued him; the enemy turned upon him, and after considerable slaughter, the Syracuseans fled in confusion into the city, and the allies rushing through the gates at the same time, became masters of the whole, excepting the impregnable fortress on the island, three days before the arrival of Timoleon at Rhegium, where his little squadron was presently blockaded by twenty Carthaginian ships of war: they prohibited all egress from the harbour, but were instructed to offer no violence to the Corinthians, unless they should attempt the passage to Sicily.

Timoleon having many friends to the city, soon arranged his plan, and executed it with great promptitude and good fortune. An assembly of the people being called in the forum, the crews of both fleets, as was usual, left their ships, to assist in the deliberations. Timoleon spoke at considerable length, while his men, one by one, left the meeting, and quietly embarked pushed out from the harbour; the flag-ship alone remained, but under weigh, the men lying on their oars. When the Carthaginian commodore rose to reply, Timoleon gently sank down among the friends who surrounded him, and, creeping under their garments, slipped away, and in a few minutes was safe at sea.

The Carthaginians did not immediately discover the stratagem; and in the pursuit which they afterwards attempted, they failed to come up with the Corinthian fleet, which reached its destination without interruption, and was received with open arms by the friendly Taurominians. The Carthaginian commodore, immediately sent an officer to Andromachus his chief, requiring him to give up his allies "on pain of having his town blown up;" but the envoy was ordered instantly to quit the port "on pain of having his ships blown up;" and here the affair rested. Ictes finding in the mean time that he could make no impression upon the citadel of Syracuse, where Dionysius made good his defence, led about five thousand men to besiege Adranum, a Syracusean colony, founded by the elder Dionysius, and consecrated to the tutelary deity Adranus, but now disposed to side with the Corinthian party. Timoleon having information of his movements, set out by night with only a thousand* or twelve hundred† men, and marching above forty miles with extraordinary speed, fell upon the enemy at dinner the next day, and putting them completely to the rout, took possession of their camp, and was joyfully received by the Adranites, who declared that prodigies had announced the

will of heaven in his favour. Scarcely allowing time for refreshment, he led his troops immediately to Syracuse, and arriving there before Ictes, seized Tyche and Epipole, almost without opposition.

The Syracusans were now reduced to despair, seeing their city occupied by three belligerent powers, each hostile to the other, and the harbour blockaded by a fourth: for Dionysius still held the fortress of Orygia; Ictes was in possession of Acradina and Neapolis; Tyche, and the fortifications of Epipole, were garrisoned by the Corinthians; whilst the Carthaginian fleet filled the port, and their army lay encamped along the shore. Nor could they look with confidence to any of the contending parties for protection; but after suffering the multiplied ravages of so complicated a war, expected to become at last the prey of the victor.

The star of Dionysius was, however, evidently on the decline, and it was fortunate for Syracuse, that circumstances arose which determined him to surrender his remaining power into the hands of Timoleon, from whom he expected better treatment than he could hope from the treacherous Ictes, or from Hanno, the hereditary enemy of his family. The rapid successes and able conduct of the Corinthian general, and his known abhorrence of tyranny, had prevailed with many of the small garrisons held for Dionysius, to make overtures to him; and he thus obtained the command of great part of the country surrounding Syracuse. Masareus, chief of Catana, a man of great military talents, well supplied with troops and money, openly declared in his favour, and marched to reinforce him. About the same time, nine* or ten ships of war well manned, arrived from Coriath, with a considerable reinforcement. These favourable events enabled Timoleon to press his advantages with great vigour; and the Carthaginians, without striking a blow, embarked their troops, and retired within the territories of their ancient allies. The Messenians, thus left to themselves, immediately entered into the alliance of Coriath, and Ictes, unable to contend with the extensive combination forming against him, took refuge in Leontia. A negotiation ensued, by which the port and citadel were given up to Timoleon, who sent Dionysius to Corinth in a merchant ship of no great burden, with few friends, and but a scanty provision for his future maintenance. Of what then befel him, the accounts remaining to us are neither authentic nor consistent. His literary talents enabled him, for a time, to make a considerable figure in the first society of Greece; but finding himself an object of the most vigilant jealousy, he prudently shrouded his powers and his means under the guise of childish frivolity, and sordid poverty; by which artifice he escaped the fate of his family, who were all cut off in the indiscriminate and relentless licentiousness of republican fury. He is said to have supported himself at last, by keeping a school, (an occupation congenial to his love of letters, and to his habits of command) and to have ended his days in the wilds of Epirus.

Timoleon, thus master of Syracuse, immediately declared the constitution to be a commonwealth, and promised that the supreme power should be lodged in the hands of annual magistrates, chosen by the people, and that all the strong-holds of tyranny should be de-

stroyed. But in the present exalted and distracted state of the city, he could neither carry his measures into effect, nor provide the means of supporting his army, which it would have been impossible to disband. He undertook, therefore, a kind of crusade against tyrants; hoping by the plauds of the petty chieftains, who exercised monarchical powers in many of the Grecian towns, to satisfy the demands of his mercenaries, and to gratify his volunteers; and willing to confirm the character which he had brought with him into Sicily, as the determined enemy of kingly power.

His first attempt was upon Leontia; but Ictes was in too great force to afford him any hope of speedy success; and Timoleon, aware that his circumstances would not bear delay, raised the siege, and marched hastily to Engyum, and, in his own phrase, delivered it from the tyranny of its governor Leptines, whom he despatched to Corinth as a second specimen of a deposed tyrant.

Apollonia, which was dependent upon Engyum, submitted at the same time to the conqueror.

But the Grecian states, harassed by incessant wars and revolutions, were at this period too poor to repay the labour of their liberation; and in the fraternal spirit of a true republica, Timoleon resolved to extend the blessings of freedom to the colonies of Carthage. As this measure would unavoidably lead to a war with that formidable power, it appeared desirable to begin by securing the means of conducting it; and detachments were accordingly despatched under trusty leaders to plunder the richest provinces of the Carthaginian alliance. The produce of this predatory warfare, enabled the general not only to settle with his troops, whose pay had been long in arrears, but to provide abundantly for the siege of Entella, which he took with less difficulty than might have been anticipated, from its strength, and from the resolute defence, which had formerly baffled all the power and skill of the first Dionysius.

Fifteen of the principal inhabitants were sentenced to death, for their faithful adherence to their masters; the rest were informed that "they were free," under the military despotism of the Corinthian general. Numerous other towns, foreseeing little prospect of successful resistance, hastened to avert from themselves the fate of the fifteen Entellians; and even some of the native settlements accepted liberty at the hands of Timoleon.

But the government of Carthage, always high spirited and fertile in resources, was not likely to acquiesce in the encroachments of an adventurer whose power was as yet so little confirmed. The provincial commanders who had tamely suffered his aggressions, were superseded; and a powerful armament was fitted out to recover the lost credit and territory of the empire.

The army is stated by Diodorus to have amounted to seventy thousand men, chiefly barbarian mercenaries; and the fleet consisted of two hundred ships of war, with a proportionate number of transports. Timoleon had in his pay no more than four thousand mercenary soldiers, and the number of Syracusan citizens was so much reduced since the reign of Dionysius, that, instead of thirty thousand, able and willing to bear arms, scarcely three thousand could be prevailed on to march against the Carthaginians. The democratic historians, unwilling to admit the

110. I.

Whilst Timoleon was engaged in the siege of En-gyrum, Ictes had made an unsuccessful attempt to surprise Syracuse, and was obliged to retire hastily with great loss; from that time he appears to have relinquished the hope of making himself master of the city, and to have dropped his connection with Carthage. In the present emergency, therefore, the Corinthian general sent a proposal for an accommodation, which was so well received, that Ictes marched to reinforce him with five thousand men.

His whole force, thus augmented, scarcely amounted to twelve thousand men; yet, relying on his own talents, and the superior discipline and courage of his troops, he held out to them the most confident hopes of success, which could only be realised by carrying the attack at once into the enemy's country, and by watching opportunities to harass and surprise their large army during the march: a mode of warfare in which the Greeks particularly excelled, and to which Timoleon was indebted for all his victories.

Advancing rapidly with this design, he had reached the Agrigentine territory when a tumult was raised among the mercenary troops by one Thrasius, a valuable and impudent fellow, who had been guilty of sacrilege in Greece, but had escaped the punishment that overtook most of his accomplices; this man, addressing his comrades, declared that "the general must be insane, to lead his men thus to inevitable destruction. The enemy's army is six times as numerous as ours, and point-de-vie in all their arms and accoutrements; yet he talks of winning a battle, as if he had a right to set our lives on the cast of a die; and because he is bankrupt and cannot discharge our arrears of pay, our blood is to be gambled away at his convenience. No, comrades, let us return to Syracuse, and quit this mad expedition."

The seditious harangue took effect, and a tumult arose among the mercenaries, who began to demand satisfaction; but Timoleon, whose peculiar excellence appeared in the readiness with which he provided for sudden emergencies, immediately repaired to the meeting, and after pointing out in strong language, the probability and advantages of success, assured the soldiers, that all who were of a different opinion, and were willing to relinquish their share in the expected booty, were at liberty to depart, and that he would give them an order on his treasurer at Syracuse, for the pay due to them. About a thousand availed themselves of this offer, and ranged themselves under the conduct of Thrasius; Timoleon, turning to the rest, declared that he heartily rejoiced at what had happened, since he was now rid in good time, of all those, whose want of courage and enterprise, might have impeded his designs.

His ardour rapidly communicated itself to the army, and they returned to their ranks in high spirits, eager to be led against the enemy; but when they began their march, a trifling incident threatened to damp that sanguine temper upon which all the expectations of the general were founded. A company of muleteers met them, conveying loads of parsley, which was used in the camps as litter for the servants and cattle. As

it was usual to crown the sepulchres with that herb, and the custom had given rise to a proverb, "He has nothing to look for but parsley," implying that certain death was to be expected, Grecian superstition readily interpreted the meeting with such a quantity of the sepulchral herb on the eve of battle, as a fatal omen, and the soldiers were immediately reminded of the prediction of Thrasius. But Timoleon, seizing a handful, and hastily twisting it into a chaplet, crowned himself with it, crying out exultingly, "The gods, the gods themselves have sent us Isthmian crowns of victory!" The Corinthians present, being familiar with those games where the victors were at that time crowned with wreaths of parsley, eagerly embraced the interpretation; and the soothing concurrences in it, the tide of feeling was instantly turned throughout the army, by the ready recollection of the general, and every man was shortly adorned with a similar garland.

In this happy temper they gained an eminence, from which they looked down upon the deep and marshy vale divided by the river Crimessus. The day was showery, and a heavy cloud threw the Greeks on the hill into shade, while the sun glittered on the burnished armour of the Carthaginians below, who were in the act of crossing the stream. Timoleon's plan was quickly formed; he halted till as many of the enemy had passed the ford as he chose to engage, and then giving the signal for attack, fell on them as they were turning on the bank of the river, and after a sharp conflict broke and defeated them. While this was doing, the Carthaginian general had passed over the rest of his army, and was advancing in good order, to take Timoleon in flank; but at this moment a violent storm came on, accompanied with thunder and hail, driving directly in the faces of the Carthaginians, who could neither see nor hear, whilst the Greeks who had the wind on their backs, rushed upon them with redoubled fury. All order was presently lost; the word of command was drowned in the rage of the elements; the African breastplates, ill-contrived, held quantities of water, which added to the weight of their heavy armour, and the deep and slippery soil, occasioned them to slide, and to throw each other down, as they attempted to make good their retreat across the river. Under these disadvantages they offered a very ineffectual resistance, and great numbers were slain by the Greeks; more were drowned; many prisoners were taken; and multitudes, throwing away their shields, fled from the field. The total loss must have been very great if it be true, as stated by Diodorus and Plutarch, that over three thousand of the legion of honour, consisting entirely of Carthaginian nobility, lay dead on the plain; but if the number was computed by the shields taken, which appears not improbable, the circumstances of the action will account for a large proportion of them, without supposing the slaughter to have been so prodigious.

The victory, at all events, was decisive; the enemy's camp became the prize of the victors; and the spoil richly rewarded all who had borne a part in the action; a magnificent trophy, the work of three days, was erected; and specimens of the enemy's armour, remarkable for its richness and workmanship, were sent round to all the allies in the island: the choicest selection, bearing an appropriate inscription, was dispatched to decorate the temples of the gods at Corinth.

Geography.

The shattered remains of the African army fled in disorder to the strong-hold of Lilybæum, whence they sent home an account of their defeat, not venturing, from some motive of superstition, to trust themselves on board the fleet. The news is said to have created a greater alarm at Carthage than any disaster which had ever befallen the state; but, with their accustomed energy and prudence, while they sent ambassadors to treat for peace, the administration exerted themselves to prepare for a renewal of hostilities; Gisco, the son or brother of Hanno, an officer of consummate ability, was recalled from banishment; and having experienced the inferiority of their own troops to the Grecian mercenaries, they employed commissioners to engage in their service an army of Greeks.

Timoleon leaving his mercenary troops to watch the motions of the enemy, returned to Syracuse, where the glory and wealth which he had acquired gave him increased influence, and enabled him in the absence of their comrades, to call to account the detachment who had left him at the instigation of Thrasybulus. He was satisfied with dismissing them from his service for desertion, and commanding them to quit Sicily; a sentence, which, as it branded them with the character of deserters, excluded them from being received into the pay of any other state; so that being reduced to subsist by plunder, they were all, not long afterwards, executed as robbers on the coast of Italy. In the mean time, a number of settlers from Corinth arrived at Syracuse, and receiving from Timoleon allotments of the vacant houses and lands on condition of military service, added greatly to the strength of his army, and to the population and prosperity of the city.

Mamercus and Ictes now too late discovered that nothing but temporary necessity had induced Timoleon to seek their alliance; and that in his indiscriminate zeal for the abolition of tyranny, he designed to effect a revolution in Leontini and Catana, as well as in all the other monarchical states, and to make every Grecian town in Sicily a free republic, dependent on the supreme commonwealth of Syracuse. Incensed at his perfidy and ingratitude, they withdrew from his confederacy, and again entered into negotiation with Carthage: but Timoleon, aware of the formidable force collected under Gisco, and of the extensive league formed against himself by the petty chieftains of the Sicilian towns, concluded a peace with the Carthaginians, by the terms of which he relinquished to them the province beyond the Lycus,* on condition that they should permit all the Grecian settlements to be governed by their own laws, and should take no part in the war of extermination, which Syracuse had declared against tyrants.

It was probably at this time that an incident occurred, referred by Plutarch to an earlier period. While Timoleon was engaged in offering a sacrifice, two men mingled with the crowd intending to stab him. Just as they were exchanging signals to commence the attack, a bystander cut one of them down with his sword, and instantly fled to an eminence, from whence he earnestly begged to be heard; the confederate assassin, clinging to the altar for protection, confessed the purpose for which they had been hired by Ictes. When the tumult was somewhat appeased,

the person who had slain the assassin obtained a hearing, and declared that having recognised him as the man who had not long since murdered his father at Leontium, he had struck him dead to avenge the blood of his parent, without any suspicion of the preset design. So singular an escape was regarded as a manifest interposition of the gods, to preserve the life of Timoleon; and the man whose private feud, had in a fortunate moment arrested the hand of treachery, was liberally rewarded for a very questionable action.

While these things were passing at Syracuse, Hippe, the chief of Messæna was expelled, or, according to Plutarch, massacred by the garrison placed by Timoleon in that city; and Mamercus also appears to have obtained some advantages over the Corinthian troops stationed in his neighbourhood; though the whole matter is hastily passed over by the partial biographer, in that confused manner, which results from his anxious desire to conceal the disasters which befell his hero, and at the same time to provide an excuse for his subsequent violence towards his enemies. Timoleon lost no time in preparing to punish these insults, and to extend, on all sides, the Syracusan confederacy. Even the republican town Ætna, refusing to acknowledge the supremacy of the imperial city, was razed, and its inhabitants either put to the sword, or sold into slavery. Nicodemus, chief of the Centuripini, terrified by the threat that he should suffer the fate of a tyrant, fled from his fortress, and Centuripa was declared free, under the usual conditions of alliance with the superior state. The Corinthian general next compelled Apolloniades to abdicate his power over the Agrigians, and conferred upon that people the freedom of the city of Syracuse, in consideration of their ready adoption of his political system. In prosecution of the same design, he was besieging Calauria with a small force, when Ictes took advantage of his absence to plunder the Syracusan territory; and returning loaded with spoil, passed within sight of the Corinthian lines. Timoleon, whose favourite manner of fighting was by a sudden onset, suffered him to pass without permitting his men to move from their posts; but when the enemy had ceased to apprehend an action, he called out his cavalry and light infantry, and unexpectedly fell upon their rear. Ictes, by a skilful manœuvre, formed his line so as to interpose a small stream with steep and rugged banks between himself and the enemy; but nothing could damp the ardour of the republican army; they crossed the ravine with eagerness, each contending to be first; and the Leontines, astonished at their boldness, took to flight and were pursued with considerable slaughter.

This victory led almost immediately to the capture of Leontini, where democracy was, of course, proclaimed. Ictes, his son Eupolemus, and Euthymus his master of the horse, were all put to death, "as traitors against the sovereignty of the people."[†] It is said that the last, a brave soldier who took little part in politics, would have been spared, had not some person maliciously reported a sarcastic joke, formerly passed by him on the effeminacy of the Corinthian soldiers. Ictes was buried with military honours; the unhappy females of the family were reserved to gratify the barbarous fury of the Syracusan populace, to whom it

* Or Halycus. He is the Phœnician Æa.

† Plutarch. *vit. Tim.*

Biography. was industriously represented, that these were the wife and daughters of the very man who was suspected of procuring the shipwreck, in which the family of Dion had perished. On this account they were condemned to die, nor did Timoleon interfere to prevent the execution of the sentence.

Mamercus was destined to be the next victim. He is reported by Plutarch to have received a considerable reinforcement from the Carthaginian general, Gisco, and in make this offence against the Grecian interest appear probable, and thereby to palliate the severities exercised upon him, the treaty between Timoleon and the Carthaginians is represented as subsequent to the battle of the Abolus; in which the Catanians were defeated, and Mamercus compelled to take refuge on board his fleet. The democratic spirit prevailing among the crews occasioned a mutiny, and with some difficulty he escaped to Messina; where disaffection still spreading, and Timoleon investing the place by sea and land, he attempted to embark with Hippo for Italy; but the infuriated mob seized both princes, and delivering Mamercus to Timoleon, exposed their own chiefs naked in the public theatre; a holiday was granted to all the schools in Messina, and the children were assembled in the theatre, where, to imbue them early with a relentless hatred of monarchy, they were encouraged to scourge the miserable Hippo to death. Mamercus was permitted, at his own earnest desire, to plead his cause before the national assembly at Syracuse, where he strongly represented to the people the service he had performed for Timoleon, and the cruel treatment with which his friendship had been requited. But the many-headed tyrant was deaf to remonstrance; and the appeal to justice and generosity called forth only groans and hooting. Upon this he endeavoured to anticipate the malice of his enemies, by dashing his head against one of the columns in the forum; but he was merely stoned by the blow, and his body being taken up and nailed to a cross, he expired amid the savage acclamations of the surrounding crowd.

Andromachus alone, of all the tyrants of Sicily, was permitted to enjoy his power with the favour of Timoleon, because, as it is asserted by his son the historian,* "he governed his people with mildness and equity, and allowed them to live under equal laws." He had the sagacity to perceive, that while avowed monarchy would not be endured, a popular demagogue might easily acquire and exercise the most despotic power.

It cannot fail to excite surprise that Plutarch should conclude his account of the atrocious, and often unprovoked cruelties, sanctioned if not encouraged by Timoleon, with remarking, that he was the only man among all the worthies of Greece, whose glory was untarnished by a single action which could afford room for censure or repentance; and he quotes after Timæus a verse of Sophocles, which appears singularly inapplicable to the subject of his panegyric.

* What goddess of beauty, what spirit of love, inspires him in every deed."

When all the tyrants were expelled, and the free towns had submitted to the Syracusan alliance, Timoleon employed his activity in remodelling the constitution, and in restoring the prosperity of the confe-

deracy. His first measure was to assemble the people, and with every demonstration of public rejoicing, to demolish the citadel and palace of Ortygia, and every fortress in which a tyrant could be likely to defend himself against the will of the people. The superb sculpture with which Dionysius and his predecessors had decorated the city shared the same fate, the statue of Gelo alone being exempted from the general destruction: upon the ruins of the royal residence was erected a common hall, for the accommodation of the national assembly; the houses and lands not already disposed of, were declared public property; the former were allotted to the mercenary troops, and to the Coriethian and other Grecian colonists; and the latter were put up to sale, (a preference being allowed to any of the ancient proprietors who might desire to return to Syracuse) and the produce was paid into the treasury.

But the spirit of faction had so possessed the Syracusans, that the slightest cause was sufficient to excite the most violent commotion. The old citizens were dissatisfied with the preference evidently bestowed by the Corinthian general upon the new settlers; tumults and bloodshed ensued; Lophyllus, a revolutionary demagogue, entered an action against Timoleon for malversation in his office, and required bail for his appearance to take his trial; the Corinthian party interfered in a violent manner to quash the proceedings; but Timoleon very prudently compelled them to desist, alleging that he had sustained so many labours, and faced so many dangers, only in order that every citizen might be equally amenable to the laws. The people were flattered; and the trial, of course, came to nothing. But the old Syracusan faction was not so easily suppressed; another accuser was found, and the general was impeached for tyranny; he escaped a second time to a similar manner, disdaining to reply to the virulent invective of Democritus, otherwise than by thanking the gods that his endeavours were at length crowned with success, since complete liberty of speech was evidently established in the commonwealth.

But although these were the public sentiments of Timoleon, his vigilance and sagacity were by no means remitted; and he continued fully determined to control the seditious temper of the original inhabitants by the strong hand of power. His plan was ably devised, and readily carried into effect: proclamation was made throughout Greece, that Timoleon would bestow dwellings and estates, with the freedom of the city, upon all adventurers, who would settle in Sicily. Fourteen thousand colonists immediately embraced the proposal, and the population of Leontini was at the same time transferred to Syracuse. By these means the Corinthian party acquired such an ascendancy, that we hear no more of any attempt on the part of the ancient citizens to assert their rights; they sunk into poverty and insignificance; and all the offices of the state, civil and military, were bestowed upon Coriethian emigrants.

Having thus provided for the tranquillity of the republic, Timoleon announced his intention of sending for his wife and children, and of settling for life at Syracuse: this intimation was received by the citizens with unbounded joy; and the national assembly not only sent a deputation to conduct the family in the most honourable way from their native country, but

Biography. assigned Timoleon a magnificent* villa in the district of Neapolis, with a suitable deme, in consideration of his services to the state.

From A. M. 3639. — B. C. 365. to A. M. 3669. — B. C. 335. At the same time he requested that commissioners might be sent out from Corinth, to assist him in the revision of the ancient laws of the Syracusan constitution; but whether this committee merely revived the code of Diocles, the regulations of which, as far as they related to the distribution of property, had never been formally abrogated, or whether they introduced any innovations founded on the policy of their own state, is not distinctly explained. The penal statutes appear to have undergone considerable changes, and to have partaken largely in that severe spirit which invariably characterises the criminal enactments of a popular government. The constitution seems to have been reduced to a very simple form, of which the outline is so slightly traced, that it is scarcely distinguishable from other democracies: its only remarkable feature was the election of an annual officer as president of the assembly, whose title was minister of Olympian Jupiter; and the office continued to exist, through many changes in the state, for nearly three centuries.

Timoleon now became, without any definite title, or any power recognised by the constitution, as completely master of Sicily as the first Dionysius had ever been; and some writers have not hesitated to call him tyrant or king of Syracuse. He had the art, by disclaiming all authority, and affecting the utmost deference for the will of the people, to enforce all his edicts without exciting popular jealousy, or sharing in the odium of severe measures; whilst he was so fortunate as to gain credit and popularity by every vote which tended to promote the prosperity of the city, or the indulgences of the citizens. Under his auspices, the temples and other public edifices were repaired and beautified; an effective police was established; commerce was restored; agriculture flourished; and the blessings of peace rapidly brought back to Syracuse much of the wealth and splendour of former times. As the people became accustomed to order and tranquillity, the severity of the administration was imperceptibly relaxed; and the declining days of Timoleon were spent among a grateful nation, who loved and honoured him as a father; so that it became customary to point him out to strangers, as the glory and ornament of Syracuse. During the latter part of

his military career, a cataract was observed to be forming in one of his eyes; and for some time before his death he became totally blind: this infirmity, however, neither damped the energy of his character, nor prevented his taking an active part in all the public deliberations, and directing by his influence the votes of the assembly. He was carried to the town-hall on the shoulders of the citizens, who contended with each other for the honour of bearing his litter; and he frequently spoke at considerable length on the subject in debate.

The precise period of his death is uncertain. By Diodorus it is placed in the last year of the 110th Olympiad, but the numerous events in which he is recorded to have borne a part, subsequent to the second year of the same Olympiad, lead to a suspicion, that there must be some error in the MSS. and that he lived considerably longer. His popularity continued to the last, and he expired of a gentle decay of nature, in the bosom of his family. The national assembly voted two hundred mina (about £700) for the expenses of his funeral, which was solemnized in the most sumptuous manner, the whole body of citizens joining in procession, and carrying the corpse round the city, through the scenes of his most popular actions. His sepulchre was built in the forum at the public cost; and a magnificent portico, palestra, and gymnasium, named altogether the Timoleonteum, were erected in honour of his memory, where annual games were celebrated, after the manner of similar institutions in Greece, on the day of his nativity, which was said to be also the anniversary of his most important victories.

Timoleon possessed more consistency of character, and was less actuated by vanity and ostentation, than any of the revolutionary demagogues of Greece, who attained to despotic power under the pretext of establishing liberty and equality. He was not naturally cruel, nor destitute of liberal affections; but he never hesitated to commit any atrocity in furtherance of his objects. His talents were unquestionably of the first order. As a general, the rapidity of his movements, the novelty of his stratagems, the singular boldness and vigour of his attack, enabled him to oppose numerous and well conducted armies with a very inconsiderable force; to baffie Carthage, and subdue Sicily, without ever having led into the field more than ten thousand men. He was a keen and sagacious politician; an enlightened and prudent legislator; and though not scrupulous in the means of acquiring power, he was public-spirited and moderate in its exercise.

HISTORY.

CHAPTER XVI.

DISSERTATION ON THE CREDIBILITY OF THE EARLY ROMAN HISTORY.

History. In laying the foundation of those general rules which induction has established in natural philosophy, the multitude of reported facts which present themselves to the inquirer, are carefully weighed and distinguished. Some may seem utterly at variance with all former theories; others may bear a character of internal probability; while a third class may be of a neutral kind, neither inviting nor repelling belief. But the true philosopher presumes not to judge of their truth by their internal evidence; he proceeds to examine the external testimony on which they severally rest. Some, then, which in themselves were most likely to gain credit, he finds reported on mere hearsay, by one who had neither the means to come at the truth, nor yet judgment to sift the stories which others related to him. These may, hereafter, be confirmed by competent witnesses; but at present, nothing can be drawn from them; and for the purposes of establishing a theory, they are utterly useless. On the contrary, some of those facts which seemed most improbable, are found to rest on the most unexceptionable evidence, that of intelligent eye-witnesses, or of men impartial, and judicious, and inquisitive, well practised in the art of scrutinising the loose reports of common informers. The philosopher, therefore, wisely admits them; they are recorded in the journals of science, and serve to modify the theories which a less universal experience had too hastily formed, and to excite a general desire for additional facts, illustrative of the same subject, on whichever side they may be likely finally to turn the scale.

But if the student in natural philosophy, for philosophy we could not call him, should class under one common name all reports of facts, from the mere rumours of a newspaper, to the positive affirmation of the most judicious and scientific eye-witness, and should speak collectively of their credibility or want of credibility; what should we think of his powers of discrimination that could thus confound together things the most dissimilar; or of the soundness of that understanding, which in its reasoning should ascribe to a whole made up of parts so discordant, the peculiar character of one only of its constituent members?

Yet this which we have imagined as a merely possible case in natural philosophy, has actually occurred in examining the facts which relate to the actions and fortunes of men. One common name of history

has been applied to all accounts of the past deeds and condition of mankind; and while some, maintaining the authority of history, have considered as true the tales of the most incompetent witnesses; others, with equal simplicity, have set up their own limited knowledge as the judge of truth, and have rejected the statements of men most honest and most sensible, because they have not been in accordance with their own previous opinions of probability.

These are not imaginary errors; an indiscriminate belief of all testimony caused the writers of the sixteenth and seventeenth centuries to report, as authentic, the tales of *Livy* and *Plutarch*, and of many of the ecclesiastical historians. And *Voltaire*, fancying his own wisdom could of itself distinguish truth from falsehood, presumed to ridicule the statements of *Herodotus*, of *Arrian*, and of those writers who record the creation of the *New Forest* by *William the conqueror*.

These faults should be carefully avoided, if we wish to establish the great doctrines of history on the same sure base with those of natural philosophy. Every portion of the annals of mankind should be judged of by an examination of the credibility of its relaters. If this be very great, we may delay the decision how far internal improbability should overpower external evidence, till it can be shown what facts there are, reported by really good witnesses, which appear improbable upon a due consideration of all the circumstances. On the other hand, if the external evidence be very low, internal probability must not lead us to mistake a vague report for a fact. It may be true, but there exists no sufficient testimony of its truth to allow us to use it as a ground for any general conclusion. This to a sanguine and generalising mind, may be a painful sacrifice; but it is one which the principles of true philosophy fully demand.

Without further preface, we proceed to apply the method above stated, to such facts as are reported of the Romans, from the foundation of the city, to the beginning of the first Punic war. That is, we shall call before us the witnesses by whom they are related, and examine both their means of acquiring information, and their capacity and disposition to make the best use of them.

The only detailed and connected account of the first centuries of the Roman history, is to be found in *Livy* and *Dionysius of Halicarnassus*. Particular

Rome.

History. periods are described by Plutarch, in his lives of Romulus, Numa, Publicola, Coriolanus, Camillus, and Pyrrhus. Incidental mention of particular facts, occurs in Polybius, and in various parts of the works of Cicero. Other writers it is needless to mention, as they mostly either lived at a much later period than any above named, or were poets, and, therefore, concerned themselves little with the truth of their descriptions. Of all this number, we will first examine the pretensions of Livy. This writer flourished in the time of Augustus Cæsar, about 250 years later than the very close of the period with which we are now concerned. He, therefore, must have derived his accounts solely from the information of other writers, assisted, perhaps, by inscriptions still remaining on ancient monuments, by the genealogical records of private families, and possibly by some public registers preserved under the care of the officers of the state. Here then are four distinct sources of information of very unequal value; yet it is only in one or two instances that Livy explains from which of them he is copying; still less does he acquaint us when he is not copying from any one, but writing merely on his own authority. This neglect at once destroys the weight of his whole evidence; as it leaves us with no means of distinguishing between that which is well, and that which is ill supported. But we will go a little further. The principal writers whom Livy quotes in the first ten books of his work, are Fabius, Pictor, Calpurnius Piso, Claudius, L. Cincius, and Valerius Antias. Of these, Claudius and Valerius Antias appear, by Livy's own testimony, to have exaggerated on several occasions, even to extravagance. Cincius is only once quoted in the first ten books, and he is then praised as a careful antiquarian; but this praise is somewhat neutralised by a passage in the twenty-first book, *c.* xxxviii, where he is described as guilty of a strange confusion in a matter that happened in his own times, and which he might readily have understood. Piso is recorded as the author of one exaggeration of the most monstrous kind; (*lib.* i. *c.* 55.) and Fabius, the most ancient of them all, and the one whom Livy prefers to all the rest, is noted by Polybius as a writer of low credit, owing to his excessive partiality towards his own countrymen. (*Polyb.* lib. i. *c.* 14. lib. iii. *c.* 8. 9.)

Inscriptions remaining on ancient monuments are undoubtedly an excellent authority in many respects; but we should be well assured of their genuineness and correct transcription before we can place full reliance in them at second-hand. Livy, however, does not often appeal to them, and where he does, as in *lib.* 2. *c.* xxxiii. *lib.* 6. *c.* xxix., we may allow their evidence; although it does not appear that either of the monuments were extant in his time, and the plate in the capitol, *lib.* vi. *c.* 29., probably perished when the capitol was burnt, *A. U. C.* 670. But the facts which can be thus reported are necessarily few, and can be given with none of the accompanying circumstances.

The genealogical records of private families are useful to an historian in settling the chronology of events; and as they contained an account of the offices which each individual had filled, we might expect them to furnish a faithful list of the persons who at any given period had the direction of public

Rome. affairs. But even here we have no sure ground to rest on. Family vanity, it seems, had corrupted these memorials to such a degree, that fictitious honours and exploits were ascribed by each family to their own ancestors; and this affords an argument that none of these genealogies were really handed down from early times; for the most unshaking evidence would not embolden a contemporary to impute to any man, imaginary titles and victories. Nor is there greater certainty in many of the public documents preserved in the temples or public offices, such as the lists of consuls and other magistrates for every year. For, first it does not appear that those books or records of magistrates, which were formerly kept in the temple of Juno Moneta, were extant when Livy wrote; at least he only refers to the reports of their contents in earlier writers; and as he mentions one instance, *lib.* iv. *c.* 23., in which two of these writers quote them differently, without telling us which was the correct reading; we may fairly conclude, that he either could not, or did not, examine them himself. In the next place, not only must these books have been very unfaithfully examined by one or both of those writers, whose report Livy has transmitted to us, but in one memorable instance, the authority of the books themselves seems highly questionable. They, with all other early annals, represent A. Cornelius Cossus as not having been consul when he killed Tullianus, the king of Veii, *A. U. C.* 318.; yet Augustus Cæsar declared that he had read the inscription on the very spoils of Tullianus, in the temple of Jupiter Feretrius, and that Cossus there asserted that he had won them as consul. Either then the books must be of doubtful authority and of later date, or there must have been such a general uncertainty in the records of earlier times existing in the days of Augustus, that none of them are fairly entitled to that belief, which is commonly given with justice to such official memorials.

Amidst this chaos, it was, perhaps, possible for a well-informed and patient antiquarian, with such facilities for examining every ancient record, as his situation in the emperor's family must needs have given him, to have distinguished between what was genuine and what was forged, and to have told posterity all that was known, on good authority, of the early history of his country. But it is too plain that Livy has done nothing of all this. Although aware of the scantiness, if it were not rather the non-existence, of all contemporary records, and the unfaithfulness of the compilations of later times, his narrative is as detailed as if he were relating the events of his own age. How much of this was his own invention, and how much he copied from the invention of his predecessors, we cannot exactly tell; but that it must be for the most part invention, is even certain.

Again, Livy did, by no means, well understand the early state of his country: in proof of this may be given, his leaving, without explanation, the extraordinary fact, that the Romans, so familiar with bloodshed in all their wars, and so perpetually inflamed by the most violent provocations to engage in internal seditions, should yet, in the first centuries of the republic, have been so careful of taking away each other's lives. Again, his ignorance of the ancient manner of warfare, appears clearly in his account of the engagement of the Cremera, in which all the

History. Fabii were slain. According to him, the whole Roman force, on this occasion, amounted to no more than three hundred and six men, all of them, he tells us, patricians of the Fabian family; and as the same number is mentioned to have been killed at the Cremera, which originally set out from Rome a year before, we must suppose that in repeated actions with the Veientians, during a whole year, not a single man had been lost. He seems to have forgotten that the three hundred and six Fabii, constituted only the heavy-armed men of the army, and, therefore, were alone counted by early writers; but that they would be attended by a great force of their vassals, or poor clients, who all carried missile weapons, and though not thought worthy of notice as soldiers, were yet very effective auxiliaries in a plundering warfare. Long before Livy's time, the use of the sword and large shield having superseded the old distinction of heavy-armed and light-armed troops, the nominal and real force of an army, was the same as with us at this day; but in Greece, as in the early times of Rome, it was not so; and we must always make a large addition to the numbers mentioned by the cotemporary historians, if we would estimate the real strength engaged on either side. A cotemporary historian, writing about a thing perfectly familiar to him, naturally omits to offer an explanation of it, except it be given incidentally; but when a writer in after ages copies his language, without such an explanation as is become necessary to his readers, it is a sure sign that he does not understand it.* But the most remarkable instance of Livy's combined ignorance and carelessness, is to be met with in his details of the battles fought in the first periods of his history. In his description of the divisions and arms of the Roman army, lib. viii. c. 8., he says that anciently, before pay was given to the soldiers, that is, before the year of Rome 349. (Vid. Livium, lib. iv. c. 59.) they used the round shields, clypei, and the close phalanx of the Greeks; their principal effective weapon being the long spear, hasta; as we learn, both from the universal practice of troops drawn up in the order of the phalanx, and also from Livy's express words, lib. l. c. 43., where he is describing the arms of the several classes instituted by Servius Tullius. Yet, in all his history, there is not the slightest allusion to the use of such arms or tactics in the description of a single battle; on the contrary, he writes as if the divisions and weapons of the legion had always been employed; and talks continually of legions, manipuli, triarii, centurions, names which have no connection with the order of the phalanx; nay, he describes the soldiers as throwing their pila or javelins, and then coming to close action with their swords; a manner of fighting practised, indeed, in the Punic wars, but utterly unknown to troops who fought in compact array, and decided their battles by charging with their levelled spears. This, alone, affords a decisive proof that Livy's accounts are not only unfounded, but clumsy and ignorant inventions;

being got up with much less pains to preserve probability, than would now be tolerated, even in the descriptions of past times, which are given by the poet or the novelist.

It is only in deference to the character which Livy has obtained among the learned, because they think him eloquent and picturesque in his narrative, that we have thought it needful to quote so many proofs of his insufficiency as an historian. One more only shall be added. The pretended defeat of the Gauls by Camillus, and the recovery of Rome by the sword, instead of a ransom, which Livy has given in the utmost detail, are in all probability, mere inventions of Roman vanity, to palliate the disgrace of having bought their safety by the payment of money to their victorious enemies. Polybius, mentioning the subject incidentally, says, that the Romans made a treaty with the Gauls for the termination of hostilities on such terms as the Gauls thought good; and, afterwards, (lib. ii. c. 18.) speaking of it more expressly, informs us, that the cause of the retreat was an invasion made by the Veneti on the territories of the Gauls, during their absence, upon which they concluded an agreement with the Romans, and gave them back their city, and returned home; nor was it till forty-two years after this event, although the Gauls had, in the interval, made a formidable irruption as far as Alba, that the Romans were able to meet them in the field. No competent judge can hesitate for an instant in preferring the authority of Polybius, in such a matter, to that of Livy; so that we have here an instance of a signal falsification of one of the most memorable events of Roman history, followed by a series of other falsehoods, where Livy ascribes to his countrymen, no fewer than five victories over the Gauls, some of them of the most splendid kind, won within that period in which they were not strong enough in reality, even to venture a battle.

Considering then the deficiency of all good materials, the very indifferent character of those which were in his power, and the instances given of his own ignorance, carelessness, and deviation from truth in points of importance, it is not too much to assert, that Livy's evidence, as far as concerns the ten first books of his history, is altogether unworthy of credit. Many of the facts reported by him may be true, and many are probable; but we have no right to admit them as real occurrences on his authority. The story of many well-written novels is highly probable, yet we do not the less regard it as a fiction; and the narrative of Livy, even where its internal evidence is most in its favour, is no substitute of external evidence, that although we would not assert that it is every where false, we should act unwisely were we any where to argue upon it as if it were true.

The testimony of Dionysius of Halicarnassus is next to be considered. As he was cotemporary with Livy, his means of information must have been nearly the same; and as we have already seen how imperfect these were, we need say no more on that subject. We must inquire then whether his personal qualifica-

* Even Dioctrius of Halicarnassus shows on this occasion, a knowledge and situation which are wanting in Livy; for he expressly tells us, that the army of the Fabii consisted of four thousand men; the majority, he says, consisting of their clients and followers, but of the Fabian family itself, there were three hundred and six men. *Antiq. Rom. lib. ix. c. 15.*

* Compare also Polybius, book ii., chap. 22., where he makes one of the Gaulish chiefs encourage his countrymen to attack the Roman territory, by reminding them of the glorious and profitable issue of their first invasion.

History. tions were such as to render him a more respectable witness than the Roman historian. And here a strong presumption against him arises on a mere survey of the bulk of his work: the minute detail in which Livy indulges, was stated as an argument against his credibility; but this is applicable to Dionysius in a more than three-fold proportion, for the events, which, in the Roman writer, occupy three books and a few chapters of the fourth, are by the Greek expanded, so as to fill no fewer than eleven; so that he must have supplied himself from his own invention, or that of others, even more plentifully than Livy. Then for his judgment, it is worthy of notice, that he is the author of a criticism on Thucydides, which has never been surpassed for its absurdity: and that while he charges Polybius with writing carelessly and inaccurately upon mere hearsay, he names, among the writers from whom his own work is borrowed, that of Valerius Antias, of whom Livy himself is obliged to confess, that he knows no limit to his falsehoods. He also shows the same ignorance of the early state of the Roman army, that we have before observed in Livy: speaking of legions, centurions, triarii, &c., long before such divisions, or titles, were in existence. His whole work bears the marks of having been written in order to extol the character of the Romans, and to give the most favourable account possible of their origin and early history: and on the whole, his evidence does not deserve to be placed on a higher rank than that of Livy, which we have already pronounced to be insufficient.

Plutarch lived more than a century later than Dionysius or Livy, and was consequently still further removed from the original sources of information. Besides, as he wrote the lives of individuals, and not the history of the nation, he contented himself with following the commonly received accounts, selecting from them such stories as would most adorn the characters of his several heroes. Thus, in the life of Camillus, he adopts Livy's tale of his defeating the Gauls, and delivering his country from the disgrace of paying a ransom: for had he examined into the truth of the facts thus related, the result would have reduced the subject of his biography nearly to insignificance. Moreover, we have the means of judging, from his Grecian lives, of the indiscriminate manner in which he compiles his narrative from the best and the worst authorities; so not unfrequently giving the preference to the latter. So that he must needs be a very unsafe guide, where we have no remaining standard by which we can try him, and thus separate what is worthless from what is true.

Had Cicero ever performed the task which his friends it seems wished him to undertake, and had he given us the fruits of a careful examination into the early history of his country, his evidence would have deserved our most respectful attention. But as it is, he has only introduced particular facts, as they were commonly reported, to illustrate his argument; without by any means giving us reason to think that he had thoroughly ascertained their truth. Nothing is more unsafe than to rely on the correctness of historical facts quoted by philosophers, in illustration of their immediate subject. Not writing as historians, they take them as they find them related, and use them for their own purposes, without strictly inquiring upon what foundation they rest. In referring to

Rome. Bacon's *History of Henry the VIIIth*, we may consider his judgment to have been passed deliberately in favour of the truth of his statements: but we should do him a great injustice, if we were to expect the same accuracy in all the historical examples introduced in his *Instauratio Magna*.

The authority of Polybius is of a very different kind from that of any of the writers hitherto considered. Living at a much earlier period, he might have had fuller means of information; and those which he had, he certainly seems to have weighed far more sensibly. The fables which in after times obtained general circulation, were for the most part confined to the misrepresentations of family traditions, or to the pages of a few writers, whose assertions had not yet been copied often enough to pass for truth. But Polybius does not profess to explore the antiquities of Rome. Its actual state, both civil and military, he had carefully studied; and the events of his own age, or of the one immediately preceding it, he has investigated fairly and fully. Of more remote times, he has spoken briefly and incidentally, and he has shown, in several instances, that the traditions respecting the early state of Rome were far less corrupted when he wrote, than they became shortly afterwards. We may particularly remark this in the famous story of Horatius Cocles. Polybius, book vi. chap. 55, after noticing his brave resistance to the enemy, and his desiring his friends to cut away the bridge behind him, adds, that when he saw the bridge destroyed, he threw himself, armed and wounded as he was, into the river, and willingly died for his country. Livy, on the contrary, reports that he swam across unhurt, and lived to receive the applauses and rewards of his countrymen. It is in such additions as this that we perceive how the real glory of the Roman people has been in fact injured by the clumsy falsehoods of their own historians. The story of Cocles, as Polybius tells, is a striking instance of heroism, but is in no way improbable, and may be paralleled in the authentic history of other nations. As told by Livy, the marvellousness of the escape of Cocles throws a suspicion on the whole achievement, and might incline us to regard the whole as a mere romance. But a foreigner, whose time was busily employed on other pursuits, could not hope to unravel the various records, always imperfect and often contradictory, which professed to relate the origin of the city, its early fortunes, and the causes which led to the foundation of some of its principal institutions. On these points, then, Polybius has said nothing, as other writers have said nothing that is satisfactory.

It results from this view of the authorities on which the early part of the Roman history rests, that they must be considered quite insufficient to establish its credibility. Much of it is doubtless true; but we have no clue to enable us to distinguish between the true and the false; and when we find that so remarkable an event as the first invasion of the Gauls has been so totally misrepresented, a general suspicion and uncertainty is thrown over the whole narrative. Able men have endeavored to find some sure ground in the midst of this treacherous morass, by tracing themselves of the authentic histories of other nations; and from seeing what has been the progress of society elsewhere, they have conjectured what it was at Rome. But such reasoning, although they may be highly useful in supplying a knowledge of particular points,

History. where the general state of a country may be learned from positive evidence, become, we think, rather hazardous, when they must furnish the whole of the picture, almost to its faintest outline. We too could form our theories, and present to our readers speculations which seem to us recommended by much internal probability. These, however, are not to be offered in the place of history: and while there has been

given in this work a transcript of the popular account of the first four hundred and ninety years of the Roman story, we shall content ourselves with having shown its utter want of trustworthiness, and shall leave our readers to select from it such portions as they may choose to think probable, instead of offering ourselves as their guides on an undertaking so desperate.*

Rome.

* It was not till the preceding pages were completed, that the writer of them met with an essay by M. de Beaufort, "On the Uncertainty of the Roman History, during the first Five Hundred Years;" as well as with the attempt made by Hooke, in the fourth volume of his *Roman History* (two edic.) to answer M. de Beaufort's arguments. In the former work the author has gone somewhat further than appeared necessary to the argument maintained in our *Encyclopædia*: for without entering into the question, whether Livy and Dionysius, had they been sensible men, could, from the materials existing in their days, have compiled a credible narrative; it is sufficient for all practical purposes to show, that the narrative which they have actually left us is not credible: their own ignorance, carelessness, and want of judgment being so excessive, that their testimony can give us no reasonable ground of assurance. Another signal proof of this, in addition to those we have adduced, may be here given from M. de Beaufort. The two most memorable events in the early military history of Rome, are the wars with the Gauls and with Porsenna. How completely the former has been falsified by the Roman historians, we have already shown; and it appears that the latter has been reported so less truly. M. de Beaufort quotes Fliny to prove that Porsenna

dictated terms of peace to the Romans, one of which debared them from the use of iron, except in agriculture: a remarkable condition, which evidently implies the dependent state to which the Romans were reduced; and which is exactly the same with that imposed by the Philitians upon the Israelites, recorded in the *First Book of Samuel*, chap. xiii. v. 19, &c. Fliny quotes this stipulation expressly from the treaty itself; (*in fœdere nominatione comprehensum invenimus*) and it is strongly confirmed by a passage in Tacitus; where that historian, speaking of the burning of the capital in the reign of Vitellius, deplores the event as one which neither Porsenna had accomplished, when the city was surrendered to him, (*delitit urbs*) nor the Gauls, when it was taken by assault. Now, if the two most notorious wars in which the Romans were engaged in the early periods of their history, are reported to us by Livy, in a manner totally false, what credit can be attached to his authority in any thing! We repeat again, that we do not pretend to assert the whole contents of Livy's first ten books to be untrue, but merely that Livy's relating them, is no reason at all that they should be true; in other words, that the facts, being quite unsupported by good evidence, should not be admitted among historical truths.

HAMILCAR BARCA.—FIRST PUNIC WAR.

FROM A. M. 3741. B. C. 263. TO A. M. 3764. B. C. 240.

Biography. THE fame of Hamilcar and Hannibal has so far surpassed that of all the other individuals engaged on either side in the contest between Rome and Carthage; that although both were at last unfortunate, they naturally attract our chief attention at the period of history on which we are now about to enter. On the side of Carthage indeed, they stand not only most prominent, but almost alone: the struggle was supported by the genius of one family, with little assistance from the institutions or exertions of their country, and still less from the ability of its government. The Punic wars afford one memorable instance of extraordinary individual character, contending long with doubtful success against the power, zeal, and united ability of a great nation: and the result in this, as in a more recent case, has shown that so such a contest although the individual may win the brighter glory, yet the final triumph will rest with his enemies.

We would fain learn what was the state of Carthage when she first encountered the adversary by whom she was to be afterwards destroyed. We would anxiously inquire what were the manners of her people; what progress they had attained either in the great arts of government and legislation, or in those which add comfort and refinement to our daily life. But our curiosity cannot be gratified. Time, or the jealousy, or carelessness of their conquerors, has deprived us of all the information which Carthaginian writers might have afforded us; and what remains in

the works of Greeks or Romans is mostly of so late a date, and comes from so fettered or so prejudiced a source, that it is little worthy of our attention. We shall content ourselves therefore with combining the scattered notices of Carthage, that are to be found in those early Greek writers, who were near in time, although remote in place, and who certainly appear to have had no temptation either to exaggerate or diminish the fame of the Carthaginians.

We know that Carthage was a Phœnician colony, and the maritime habits of the mother country, as well as its enterprising commercial spirit, were fully inherited by the new settlement. With the usual ascendancy of a civilised people over barbarians, the Carthaginians soon extended their power to a great extent over the surrounding country; and at an early period carried on a profitable trade, and had established colonies on the coast of Sicily and Sardinia. They had penetrated through the Straits of Gibraltar, and had not only a familiar acquaintance with the western coast of Africa, for many leagues to the southward, but had accomplished, or at least asserted that they had done so, the circumnavigation of the Cape of Good Hope; and had ascertained that Africa was on every side surrounded by water, except where it is united by the narrow Isthmus of Suez to the adjoining coo-

tinient of Asia. When the Persians, under Cambyse, first effected the conquest of Egypt, Carthage* became one of the next objects of their ambition: but they were disappointed by the refusal of the Phœnicians to lend their assistance against their own descendants; and the attempt would have been hopeless, when the support of the Phœnician navy was withdrawn from it. Yet Carthage at this time, or within a few years afterwards, possessed itself an empire that might have seemed secure against the attacks of the most powerful enemy. For we read of their sending an immense army into Sicily, at the time of the invasion of Greece by Xerxes, which consisted of native Africans, Spaniards, Ligurians, Sardinians, and Corsicans, in addition to the citizens of Carthage. Their military discipline, however, and probably their naval tactics also, were at this period very inferior to those of the Greeks; and thus we are told by the high authority of Thucydides,† that had the Athenians effected the conquest of Syracuse, they would have soon turned their arms against Carthage; and Herimocrates‡ encouraged his countrymen to hope for the assistance of the Carthaginians, because they, as well as themselves, regarded with alarm the restless ambition of Athens. But this was probably a fear peculiarly awakened by the extraordinary successes, and unrivalled reputation of the Athenian navy: exaggerated, moreover, it is likely, from the effect of distance. Certainly the Carthaginians had no fear of the power of Syracuse, which had destroyed the finest expedition ever sent forth from Athens; on the contrary, within five or six years of the defeat of Nicias, they were busily employed in carrying on schemes of aggression upon the Greek cities in Sicily; and had taken two of the greatest of them, Agrigentum§ and Selinus, the latter the close ally of Syracuse, before the end of the Peloponnesian war.

The operations of the Carthaginians in Sicily, during the reigns of the two Dionysius, and the administration of Timoleon, have been already related. It will be sufficient to observe, in reference to our present subject, that at the commencement of the first Punic war, the possession of the island was divided between the Carthaginians, who occupied the western parts of it, and the Greek kings of Syracuse, who were sovereigns of the greater part of the eastern coast.

But the connection between Carthage and Rome deserves to be traced more carefully. As early as the reign of Cyrus,|| that is to say, about twenty or thirty years before the establishment of the commonwealth at Rome, the Carthaginians and Tuscan possessed the joint dominion of that part of the Mediterranean which is bounded by the coast of Italy on the east, and embracing the islands of Corsica and Sardinia, extends southward as far as the northern coast of Sicily. The interference of the Greeks within these limits seems much to have resembled the first enterprises of the English in Spanish America: on the one hand there was probably much oppressive jealousy, and a spirit of piracy on the other. Thus the Phœnicians, when on their way to the foundation of their famous settlement of Marseilles, provoked the two great powers of Tuscany and Carthage, by their

piracies, to attack them with their united fleets; and a few years later, another small Phœnician squadron, flying from the second conquest of Ionia, in the reign of Darius, carried on a regular buccannering warfare in the Sicilian seas; abstaining from attacking their own countrymen, but plundering the Tuscan and Carthaginian without scruple. (Herodot. *Evato*, c. 17.) A power then like Carthage, whose fleets were so familiar with the coasts of Italy, would be soon led to form some connection with the more considerable of the Italian states, and this would be the more friendly, if there was nothing in those states to excite any fears of naval or commercial rivalry. Rome, it appears, as early as the first year of the commonwealth, enjoyed considerable influence, and was strong enough to be the head of a confederacy of dependent neighbouring allies, the well-known mark of national importance in the political relations of the ancient world. A treaty was accordingly concluded between the Romans and Carthaginians, in the consulship of * L. Junius

* Several points in this treaty having been made use of by M. de Beaufort, to shew the incorrectness of the common accounts given by the Roman historians, it appeared useful to Hooker in his answer to M. de Beaufort already noticed, to impudently impugn the genuineness of the date affixed by Polybius to this treaty, and to insist that it was, in fact, far more modern than that historian represents it, and must have been made after the year of Rome, 418, instead of in the year 244. The testimony of Polybius is so excellent, that any attempt to overthrow it demands a strict examination. Let us see then on what grounds Hooker ventures to doubt it on the present occasion. First, the treaty, as translated by Polybius, or Polybius himself, in his introduction to it, describes M. Horatius as the colleague of L. Junius Brutus; whereas Liry, Dionysius, Plutarch, &c. agree in representing him as the colleague of Valerius Publicius, appointed after the successive deaths of Brutus and Sp. Lucretius. Hooker, therefore, supposes either that Polybius mistranslated the names of the consuls which he found in the original treaty; or that the names were defaced, and supplied partly by conjecture; or that the date was added altogether by Polybius, from other information, which, in this instance, misled him. Now the mistranslation of names is a thing hardly conceivable; and that they were defaced and supplied by conjecture is a mere supposition of no weight, and an unlikely one, as no part of the treaty is spoken of as obscure or obliterated. Still less is it likely, that the treaty itself should have furnished no evidence of its own date; for was there ever any treaty in ancient or modern times, that did not contain the names of the magistrates, whether annual or perpetual, under whose administration it was concluded? But Hooker argues, that the second treaty between Rome and Carthage, as given by Polybius, contains not the names of the consuls by whom it was concluded; therefore, it is probable that the first did not. It is more natural to believe, that the persons in whose consulship the second treaty was made, were then of little celebrity; and that Polybius, therefore, omitted their names, because they would have given a Greek reader no notion at all of the date of the record. But the first consulship of the republic was a remarkable one, which it was very proper to mention. In short, no all treaties necessarily contain their own date in them, as Polybius quotes the original treaty, describing its form, and the place where it was deposited; and then gives the date, though not in the precise words of the official instrument; so it is next to impossible for any man to mistranslate proper names, let his knowledge of a language be ever so scanty; and as it is a mere wild fancy to suppose that the writing was defaced, which Polybius, who saw it with his own eyes, translates, without expressing the least doubt of the true reading; it seems that there is no alternative but to admit the treaty as genuine and indisputable evidence, or to charge Polybius with a willful and circumstantial falsehood, which we consider a complete *redutio ad absurdum*. If the treaty be genuine, it is quite clear, as M. de Beaufort argues, that it is evidence sufficient to convict Liry, and Dionysius, and twenty such writers, if they could be found, of falsehood, wherever their statements contradict it so as not to admit of being reconciled with it. But Hooker says that it is contradicted by other treaties, quoted by Liry, (Hook l. c. 33. and book iv. c. 7) which are treaties of alliance between Rome and Ardea, and Rome

* Herodot. *Thales*, c. 19.

Biography. Brutus and M. Horatius, which Polybius has translated into Greek, from the original record, engraved on a brazen plate, and preserved to his time in the capitol. (Polyb. lib. iii. c. 22.) By the terms of this treaty, the Romans are restricted from all intercourse with the more remote parts of the Carthaginian possessions in Africa, and if driven there by stress of weather, they were to depart within five days, and were not in the interval to buy or take any thing, except for the refitting of their vessel, or for sacrifice. On the other hand, the Carthaginians were to hold no forts in Latium, nor to injure any of those Latin states that were subject to Rome. In a later treaty, the date of which is not given, the Romans, by a sort of navigation act, were debarred from all trade with any part of the Carthaginian dominions, except Carthage itself, and Sicily: they were neither to trade, settle, or plunder on the coast of Africa. But in Carthage itself, and in Sicily, they were allowed to trade on the same footing with Carthaginian citizens. The Carthaginians were to enjoy similar privileges at Rome; and were not to settle on the coasts of Latium, although they might carry off the inhabitants and the moveable property of any city not subject to the Romans. This last article, we may observe, was calculated to magnify the benefits of the Roman alliance in the eyes of their weaker neighbours, as it afforded them protection against the kidnapping and piracy which in old times were unscrupulously practised towards all weaker states, when not secured by an express compact.

When the ambition of Pyrrhus, and his enterprises both in Italy and Sicily, excited general alarm, the Romans and Carthaginians confirmed, by a third treaty, the articles of their former conventions, and added a clause, in which they provided for the way in which they were to assist each other, should the attacks of Pyrrhus lead them to unite in their common defence. It was agreed, that whichever party should require aid, the ships were to be furnished by Carthage, but that each nation should pay its own seamen; and the crews should not be forced to serve on shore. This clearly shows the insignificance of the Romans as a naval power; and, at the same time, the desire of the Carthaginians to keep their fleet under their own command, and the jealous care of avoiding every shadow of dependence, in the succour they might lend their allies.

Scarcely had ten years elapsed from the date of this treaty, when the parties who had signed it began to turn their arms against each other. The internal state of Rome at this period, the form of her government, her institutions and manners, may be gathered sufficiently for our present purpose, from what has been said of them on former occasions. Of those of Carthage I am here to offer such a view as can be collected from the Latin; whereas, the treaty quoted by Polybius describes *Ardes* and some of the cities of Latium as the subjects of Rome. By this it appears that Neeke did not know, or had forgotten, the nature of alliances in ancient times between a stronger power and a weaker. For in fact, the "*Fœdus Ardentinum*," of which Livy speaks, was like the treaties between Athens and Lesbos, or Lacedæmon and Athens, after the Peloponnesian war, when alliance was in reality the subjection of the weaker ally to the stronger. Thus, as in always the case, two really good authorities can easily be reconciled with one another. When Livy quotes an actual treaty, his statements agree with those of Polybius; when he follows his usual guides, it is unlikely that his narrative should accord with the account of a sensible and well-informed historian.

lected, either from the direct or incidental information afforded by credible authorities.

Aristotle, who wrote about forty or fifty years before the beginning of the first Punic war, has left us in his politics* one entire chapter on the Carthaginian constitution, from which our chief knowledge of it is to be drawn. Unfortunately, he does not give a detailed account of it, but rather comments upon some of its principal points; either supposing it to be generally familiar to his readers, or having described it more particularly in one of those parts of his work which have not descended to our times. From him, however, and from Polybius,† we learn that the government was of a mixed nature, and that its effects seemed to prove its excellence; for, when Aristotle wrote, it had never experienced any serious interruption, either from sedition or usurpation. The principal authorities were two officers called by the Greeks, kings, who were elected from certain families or clans, but not according to primogeniture; and who were required to be men of wealth as well as of personal merit. In early times, it is clear that they enjoyed their power for life; and probably possessed, like the kings of Sparta, the chief military command, and the supremacy in all matters of religion. But before the second Punic war they seemed to have been made annual magistrates, like the archons at Athens, and the chief military power was transferred from them to an officer called the general or prator, elected by the people without any restrictions; and resembling the strategus or general of the commonwealth, who was appointed by the Athenians, when the polemarch archons had lost most of their authority. There was a council of elders, which originally had, together with the kings, the sovereign power in the state: but if the kings and the elders differed, the matter was decided by the popular assembly. This of course made an opening for the democratical interest to become in time very considerable; and thus another council was instituted, distinct from the council of elders, and probably of a more popular composition, which in many points tempered or superadded the power of the more aristocratical assembly; just as the council of five hundred at Athens eclipsed the areopagus more and more in proportion as the government grew more and more popular. This council which Polybius simply calls *Συνέλευτος*, or "the convocation," may possibly have been the same with the council of the hundred, or hundred and four, which Aristotle compares to the Lacedæmonian ephori, and which was invested therefore, we must conclude, with great controlling powers over every department of state. Its members were chosen by certain bodies called, courts of five, who had themselves, it seems, several important privileges; such as filling up all vacancies in their own body, and retaining some of the authority or immunities of office, after its actual duration was expired. By the old constitution, also, the whole judicial authority of the state was placed in the hands of the magistracies, or, according to Livy, of one particular court or college, whose members held their places for life. An alteration in this part of the law we shall find hereafter ascribed to the great Hannibal. But in our ignorance of the practical details of the Carthaginian

* Lib. ii. c. 2.

† Lib. vi. c. 51.

Biography. government, we can convey little satisfactory knowledge by repeating the mere names of its several offices: we may better observe, that an undue regard to wealth as a qualification for the highest places in the commonwealth, tended to much corruption in the choice of magistrates; and consequently to frequent malversation in their office: they being naturally apt to make their office reimburse them for the sums they have expended in procuring it. Of the domestic life and manners of the Carthaginians we know nothing; nor are we much better acquainted with the state of literature or of the arts among them. There is still extant, indeed, a Greek translation of a narrative written by Hanno of a voyage along the western coast of Africa, and it is mentioned that a Carthaginian work on agriculture was so esteemed by the Romans, that the senate ordered it to be translated into Latin for the public benefit. The great Hannibal also is said to have written one or two historical works in Greek, relating to the events of his own time. But such scanty fragments of information on a subject so curious are more fitted to excite curiosity than to satisfy it.

A. U. C. Return we then to the course of our history, and let us proceed at once to describe the causes and events of the first Punic war. A few years before the period at which we are now arrived, some Campanian* soldiers in the service of Agathocles, tyrant of Syracuse, having obtained admission into the city of Messina on friendly terms, took advantage of this opportunity to drive out or massacre the inhabitants, to seize the wives and children as slaves, and so to take possession both of the town and its adjacent territory. The Mamertines, for so they called themselves, soon began to annoy their neighbours, the Syracusans and Carthaginians; and for awhile their affairs went on prosperously. For they had very useful allies in some of their countrymen in the service of Rome; who being sent to garrison Rhegium during the war with Pyrrhus, had treated that town exactly as the Mamertines had done to Messina; and being united together by the double ties of being countrymen, and engaged in a similar course of wickedness, they were likely to remain firm friends to each other. But when the Romans, so soon as the departure of Pyrrhus had left them at liberty, had besieged and taken Rhegium, and after inflicting a signal vengeance on their guilty soldiers, had restored the town to its lawful owners, the situation of the Mamertines was materially altered. Hiero,† a man of considerable ability, had lately raised himself to the throne of Syracuse; and not brooking the neighbourhood of a people such as the Mamertines, he marched against them, defeated them and took their principal leaders prisoners. They now found themselves obliged to look out for assistance: some‡ of them applied to the Carthaginians, and actually put the citadel of Messina into their hands; but others, sent to request the aid of the Romans, with whom, as being themselves Italians, they claimed something of a national connection. The senate, it is said, could not be prevailed upon openly to espouse a cause, exactly the same with that which they had so lately combated: but the people, when the question was submitted to them, were less scrupulous. Fear of the rapid growth of the Carthaginian power, which from

the acquisition of Messina was likely soon to extend itself over the whole of Sicily, overcame every other consideration: the Mamertines were received as allies of the Romans; and Appius Claudius, one of the consuls, was ordered to cross over to their support. His coming was welcomed with the utmost joy: means* were found to expel the Carthaginian governor from the citadel; and Appius was admitted into the town in his room. This step provoked the Carthaginians to lay siege to Messina by sea and land: and Hiero marched from Syracuse to co-operate with them. The Roman consul first made proposals to the allies, that they should leave the Mamertines unmolested; and on their refusal, he at once acted on the vigorous policy of his country, and attacked king Hiero's army. We are ignorant how far the numerical strength of the two armies contributed to the event of the battle; but the Syracusan heavy-armed infantry were never much esteemed; and in later times, the general use of mercenary troops, which had been only just laid aside by Hiero, would have lowered still more the value of the native soldiers. However, the Romans won the victory, and Hiero immediately raised the siege, and returned to Syracuse. Encouraged by this success, Appius next attacked the Carthaginians, beat their army so completely that they were driven to seek refuge in the several cities of the neighbourhood; and having thus established his superiority in the field, he employed himself during the rest of the campaign in laying waste the Syracusan territory, and even ventured to lay siege to Syracuse itself. Nothing more was done indeed, so far as appears, than to intercept the usual supplies of the town by encamping before it; but Hiero had reason to apprehend more serious attempts in the next campaign: for both the consuls, with the entire army of the state,† four legions of Romans, and an equal number of Italian allies, were sent into Sicily. Very many cities immediately revolted to them, both from the Carthaginians and Syracusans; and Hiero despairing of resisting them with any effect, hastened to conclude a separate peace. Under his circumstances, peace was only another name for a dependant alliance: he was to support the Romans in their wars, with men, money, and provisions; and his aid in this last point was most important, for a large army could not be subsisted upon plunder, and if the Carthaginians should wisely use their naval superiority, the communication with Italy would be rendered very uncertain, if not impracticable.

It was now plain that the war was become a contest between the Romans and Carthaginians for the possession of Sicily. Both parties accordingly prepared vigorously for the ensuing campaign. The Carthaginians had raised a large army of Ligurians, Gauls, and Spaniards, and had despatched it into Sicily: they also selected Agrigentum as their principal magazine of arms and provisions, and as the base of their operations. The Romans, on their part, sent the two new consuls, with four legions; and they immediately, disdaining all meaner objects, marched against Agrigentum, established themselves on two separate sides of the town, with lines of communication between them, and thus kept the garrison within their walls. The blockade continued for five months, when the

governor in great distress for provisions, sent to Carthage to request supplies. A large force was raised and sent off to his assistance; and Hanno its commander, acting on the outside of the besieger's lines, cut off their supplies, and took up a strong position in their neighbourhood, as if intending to reduce them by famine in their turn. Why Agrigentum was not supplied easily and abundantly by sea, we are not informed; this however was not done, and the garrison therefore having been blockaded so much longer than the Roman army, was unable to wait the issue of Hanno's system, but entreated him to try a speedier means of relieving them. He accordingly marched to attack the Romans, and they having suffered themselves a blockade of two months, and labouring under a great scarcity of food, gladly hastened to meet him. Hanno was defeated with the loss of most of his elephants, and all his baggage; and the governor of Agrigentum, despairing now of relief, could only save his garrison by escaping through the Roman lines, when the joy and fatigue of their late victory had rendered the besiegers less watchful than usual; and the town with an immense plunder, was abandoned to the enemy without resistance.

Thus in three campaigns that had hitherto passed, the Romans had first delivered themselves from their defensive situation, and carried the war into the country of their enemies; they had next reduced one of their opponents to the necessity of making a separate peace on such terms as gave them the use of his whole power; and had now lastly deprived their remaining adversary of the most important town that he possessed in the island for which they were contending.

But although the Carthaginian * navy does not seem to have rendered its countrymen all the services of which it was capable, its aid was yet so important against a state which had no navy at all, that the Romans found it absolutely necessary to make an effort to oppose it. When the capture of Agrigentum brought many of the inland towns in Sicily to submit to them, a greater number of those on the coast, overawed by the Carthaginian fleet, revolted from them; and whilst the coast of Africa enjoyed a perfect security, that of Italy was exposed to continual ravages. The Romans resolved therefore to create a navy; for although they had in former times possessed trading and privateering vessels,† such probably as were used

in Greece in the Homeric ages, they had for a long time so entirely devoted themselves to inland affairs, that they now had not a single vessel of war in their dominions. There were moreover considerable differences between the different classes of ships of war. The Italian Greeks, who at this time were the nearest maritime people to the Romans, still used only the ships of smaller size, called triremes and penteconteres, which had formed the naval force of the free republics of old Greece. But the Carthaginians, and the great kingdoms of Egypt and Syria, which had been founded by the successors of Alexander, had generally adopted vessels of a larger kind, called quinqueremes, which are supposed to have had five banks of oars on each side, as the triremes had three. Of these the Romans had no knowledge; but it so happened that a Carthaginian ship of this class had run on shore in the straits of Messina, when the fleet was endeavouring to obstruct the passage of the first Roman army under Appian, thus falling opportunely into the hands of the Romans, furnished them with a model. They now availed themselves of it, and built a fleet of a hundred quinqueremes, and twenty triremes; and in order to lose no time, they enlisted and trained their men whilst the ships were building, and taught them to manage their oars, and to keep time with one another, by placing them on benches ashore in the same manner that they were to be arranged at sea, and then making them go through their different movements at the word of their officer.

Being sensible however that ships and men thus hastily prepared, must be very inferior in activity and skill to their enemies, they endeavoured to supply this defect by a contrivance for grappling and boarding their adversary's ships,* and thus to make the victory depend on the courage and discipline of their fighting men, rather than on the manoeuvres of their sailors. For as the ancient ships of war were worked almost entirely by oars, and the labour of the oar was considered both irksome and degrading, the seamen were chosen from amongst † the slaves or the lowest class of free citizens; who would not have been thought worthy of a place in the regular infantry or cavalry of the state, and who, even on board their ships, had no other duty but to work the vessel, or to discharge arrows and darts upon the enemy. But whenever a ship ran on board its antagonist, the contest then depended on a certain number of regularly armed soldiers, who formed a part of the complement, and who fought with the same arms, and nearly in the same manner, as if they had been on shore. This part of the crew would naturally rise or fall in importance according to the skill or ignorance of the seamen. With the Carthaginians, as with the Athenians before them, their confidence in the rapidity of their manoeuvres, and the excellence of their ships, made them less value the assistance of these naval soldiers; but the Romans inured to conquest by land, and inexperienced in naval operations, had probably strengthened to the utmost

* Polyb. lib. i. c. 20.

† The testimony of Polybius on this point has been questioned, and Hume does not hesitate to affirm that "he is undoubtedly mistaken." (*Dissertation on the Credibility, &c.* vol. iv. p. 57. Bro. edit. 1766.) and that his account does not accord with his own comment on the first treaty between Rome and Carthage, where it is implied that the Romans had ships of war as early as the first year of the republic. It is rather provoking that men should not consider more carefully, before they venture to dispute the assertions of such a writer as Polybius. We find from the two first treaties between Rome and Carthage, Polyb. lib. iii. c. 22, 24, that Roman citizens possessed some of those ships of war which were anciently used for privateering purposes; and there is a stipulation limiting the distance beyond which this privateering was not to be carried on the coast of Africa. But vessels of this kind did not form a national navy; nor was there any likelihood that ships belonging to the state, or employed in its service, should have ever cruized on the coast of Africa. In process of time, from causes which would be better known if we possessed any real history of the early ages of Rome, trade and privateering fell alike into disrepute, and appear to have been nearly discontinued at the beginning of the Punic wars. Indeed, so far as we recollect, the trading preceded by Polybius are the only record of the existence of naval habits amongst any part of the people of Rome before their contests

with Carthage; so completely had the Romans, for some time before that period, bestowed their whole attention on inland matters. So that it is highly probable that when they first sent out an army into Sicily, to the beginning of the first Punic war, they should have been obliged to borrow ships, as Polybius relates, from the maritime Greek states in their neighbourhood, having at that time none of their own.

This constitution of the crews of the ancient ships of war, will partly account also for the immense magnitude of the naval armaments of the Romans and Carthaginians in the first Punic war, when compared with that of their land armies. None were eligible to serve in the national army, except they possessed a certain property; but the poorest citizens, and even slaves, were freely employed in the navy. Men therefore could be obviously procured for the one service in much greater numbers than for the other; their maintenance, also would be less expensive; for the simplest fare would be held good enough for those who formed the seamen of the state; and as the ancient fleets were mostly fitted out for some particular service, and not kept at sea like ours, for months or even years, there would be no more required than enough to furnish the men with provisions during the limited period for which they were kept in actual employment.

Such being the nature of ancient naval warfare, it is not unnatural that in the first general action between the two parties, the Romans, having succeeded by their grappling machines in boarding their enemies' ships, should have gained a complete victory. Several cities in Sicily were the reward of this advantage, and the Romans, never slow in improving their good fortune to the utmost, from this time began to make attempts upon Sardinia, and there soon after gained another naval victory over their enemies.

From the moment that the two powers had become opposed to each other at sea, it was evident that the possession of Sicily would ultimately belong to that party which could establish its naval superiority. The war on shore languished, while the utmost preparations were made on both sides for a more vigorous prosecution of hostilities by sea. The Romans, too, longed for an opportunity of carrying their usual system of war into effect, by attacking their enemy in his own country; and the Carthaginians knowing the weakness of their power at home, were equally anxious to keep the scene of action at a distance. Accordingly,* about four years after the first naval battle, the Roman consuls, L. Manlius and M. Attilius Regulus, at the head of a fleet of three hundred and thirty ships, crossed over to Messina, thence coasted the eastern shore of Sicily, doubled cape Pachynus, and then advanced along the southern coast of the island, till they should reach the point from which the passage was usually made to Africa. They were met at Encomus, near Agrigentum, by a Carthaginian fleet of three hundred and fifty ships, commanded by Hanno and another officer of the same name with the subject of this narrative. It was a trial of strength on both sides, and was long and obstinately contested; the Romans having taken on board a large detachment of their army, with a view to their projected descent in Africa; and having thus on board each ship three hundred rowers, and an hundred and twenty fighting soldiers. The Carthaginians, on the other hand, were very ill provided with soldiers, but they had a force of seamen amounting to about an hundred and fifty thousand men. The battle ended in a complete victory on the part of the Romans, who with a loss of

twenty-four of their own ships, destroyed thirty, and took sixty-four of their enemy's, with all their crews.

The invasion of Africa, the great object of their wishes, was now put within their power, and they instantly carried it into execution. The fleet was re-victualled, the captured ships refitted for service, and the armament, having first made the land under the cape called Mercury, from thence ran along the shore till they reached the town of Aspis, or Clypea, or as we should interpret it in English, Shield. Here the army was landed, and the town besieged, and soon after taken. Meantime the beaten Carthaginian fleet, not doubting the further intentions of the Romans, had sailed home directly to Carthage, and was stationed in the immediate neighbourhood of the capital, to cover it from the expected attack. But the plan followed by the enemy disconcerted this measure, and the chief attention of the government was now turned to the protection of the country on the land side. The Romans, after the reduction of Aspis, sent home for further instructions; and in the meanwhile overran the country, and besides other valuable plunder, carried off more than twenty thousand persons to their ships,* who being sold for slaves, would be the most profitable fruit of the expedition. These were safely despatched to Rome, when L. Manlius, in pursuance of the senate's orders, returned home with the greater part of the armament, leaving his colleague, M. Attilius Regulus, with 15,000 foot, 500 horse, and forty ships, to prosecute the war in Africa. Little opposition, it seems, was expected in the field, and the expense of maintaining more than three hundred ships in actual service, was too great to be borne for more than a very short period.

The campaign that followed shews remarkably the ill policy of confining national feelings within the walls of a single city, and making the inhabitants of the surrounding region the subjects instead of the equals of the citizens of the capital. Carthage, on the coast of Africa, was like the European settlements on the coast of India: the Africans were not incorporated with the Carthaginians as one people, nor yet were they governed with that wisdom and equity which in India has made the native population so trusty and firm a bulwark of the British government. On the approach of the Roman army, the Numidian tribes joined them, and exceeded them far in the extent of the mischief they committed in the country. Out of Carthage itself there seemed nothing capable of organising a national defence. The inhabitants of the neighbouring districts fled thither in dismay for shelter, and besides adding to the general alarm, such an addition to the population caused presently a scarcity of provisions. A battle had been ventured by the Carthaginian generals, and was lost through their incapacity; and after this, the Roman consul untried every where without fear, and at last took Tunis, and there encamped in a position close to the capital, and advantageously placed for cutting off its communications with the country.

Negotiation was then tried by the Carthaginians; but the consul's demands were so exorbitant, that the government, desperate as their condition seemed, disdained to accept them; and a slight circumstance

soon changed the face of their affairs. A Carthaginian* officer returned about this time from Greece, with a number of Greek soldiers whom he had been commissioned to enlist for that country. Amongst these was a Lacedæmonian named Xanthippus, who had been trained in the Spartan discipline, and had acquired some military experience. He being informed of the state of affairs, said freely amongst his friends, that the disasters of the Carthaginians were owing solely to the ignorance of their generals, who had rendered their chief strength, their cavalry and elephants, quite useless, by fighting on hilly ground instead of on the plains. His words being reported to the government, he was called before them; and there so justified his statement, that the army was put under his direction, though not, as far as appears, under his command as general-in-chief. Having practised the troops for a few days in manœuvres, and having inspired them with great confidence, he accompanied the generals into the field, with an army of twelve thousand foot, four thousand horse, and one hundred elephants.

The Romans, though surprised at the sudden boldness of the enemy, yet were not slow in marching to meet them: while the Carthaginians, full of ardour, called upon Xanthippus to lead them instantly to battle, and were drawn up by him, the generals in all things deferring to his ability. His dispositions, and no higher praise can be given them, were very nearly the same with those adopted afterwards by Hannibal at Zama; the elephants in the front, the cavalry on the wings, and the main body of the Carthaginian infantry in reserve a little behind the elephants: and the different result of the two battles may be ascribed to the superior ability of Scipio, who at Zama left open passages at several points through the whole depth of his infantry, through which his light infantry fled when pursued by the elephants, and thus led them off the field, diverting their attention from the masses of the heavy-armed soldiers. Besides which, Massinissa and his Numidians fought at Zama on the Roman side, and thus gave them the superiority in cavalry. But now it was quite otherwise: the Roman infantry, drawn up in the usual manner, the manipuli of each alternate line covering the intervals left by those of the line before them, was broken through by the weight of the elephant's charge: the cavalry, far inferior in numbers, was chased off the field at the first onset; and the army, surrounded on all sides, was put to the sword, with the exception of about two thousand men who escaped to Aspis, and five hundred, who, together with the consul, were made prisoners.

Xanthippus,† who had won for Carthage this signal victory, soon sailed back to his own country; having secured probably enough from the Carthaginian government to enrich him for ever as a soldier of fortune; and wisely foreseeing, that by remaining in Africa he was more likely to excite jealousy, than to add either to his wealth or reputation. The battle which he had gained, restored to the Carthaginians all that they had lost in Africa, except the town of Aspis, where the relics of the Roman army made so brave a defence, that they baffled all attempts against them. Early in the following spring an immense fleet was sent from Rome to bring them off; and this

armament having defeated with great loss a Carthaginian fleet which was too hastily raised to oppose it, effected its purpose; and taking on board the garrison of Aspis, put to sea again, in order to return to Sicily.

In the succeeding three or four years of the war, the constancy* of the Romans was severely tried by several heavy losses from shipwreck; more than four hundred and thirty of their ships being thus destroyed; so that they could only raise a fleet of sixty ships, for the purpose merely of furnishing their army in Sicily with supplies. By land too they were under great difficulties, for although since their defeat in Africa they had taken several towns from the enemy in Sicily, and among the rest, Panormus, or Palermo, one of their oldest and most important settlements; yet the common soldiers were so terrified at the elephants, that they dared not venture a battle on level ground, and would thus be soon distressed for provisions, if their supplies by sea were interrupted. It became absolutely necessary, therefore, to make another effort to regain the command of the sea, and they were building a new fleet for this purpose, when they were informed of the total destruction of the very part of the enemy's force which they most dreaded, by the ability of the consul Coclilius, who by a feigned retreat, had drawn the elephants after him close under the walls of Panormus, and there overwhelmed them with missile weapons from the towers, and from the soldiers with whom he had lined the trenches. This success restored the spirits of the army, and the fleet was fitted out on a larger scale, proportionate to the increased confidence of the government. Accordingly, in the fourteenth year of the war, the consuls C. Attilius and L. Manlius sailed with two hundred ships for Sicily; and there taking the command of the legions, proceeded to besiege Lilybæum; a town near the south-western extremity of the island, and, except Drepanum, the last place of importance which the Carthaginians possessed in it.

The actions of this memorable siege consisted in every variety of attempt by land and by sea that could be made by either party, to raise works against the town, and to destroy them; to maintain, and to elude the blockade of the harbour. At last, towards the expiration of the year, the garrison succeeded in completely destroying the towers and engines of the besiegers, with a great slaughter of the workmen and defenders of them at the same time; so that the Romans turned the siege into a blockade, and determined to trust to famine for the result. In the next two years they suffered great losses again at sea, P. Claudius, the consul, losing ninety-three ships in an engagement with Adherbal off Drepanum, several more being taken or burnt off Lilybæum by Carthago; and one hundred quinqueremes, together with eight hundred transports, on their way to Lilybæum with supplies for the army, being totally destroyed by a storm in the following year off the southern coast of Sicily. A second time, therefore, the Romans gave up the sea in despair; but being still superior by land, they continued the blockade of Lilybæum; and L. Junius, the consul, whose fleet had been so unhappily wrecked, made some amends for this disaster, by seizing the strong position of mount Eryx, between Panormus and Drepanum, on

Biography. whose summit was the temple of Venus Erycyn, the richest and most famous in Sicily. The town was a little below the summit, and was still maintained by the Carthaginians; but the Romans being masters of the heights above it, and occupying also the approaches to it below from Drepanum, flattered themselves that it must soon fall into their hands.

It was about a year afterwards that Hamilcar Barca^a was first appointed to command the naval forces of Carthage. Of his early life we know nothing, nor at what age he first began to take an active part in public affairs. But from the time that history first notices him, as commander of the Carthaginian fleet in the eighteenth year of the first Punic war, to the final close of his career in Spain, his whole conduct was a series of distinguished services to his country in the most critical circumstances, and was equally marked by its courage, its sound judgment, and its enlarged and enterprising views. His first measure was to carry the evils of war into Italy, a step ominous of the zeal and perseverance with which his son was afterwards to strike at the heart of the Roman power; and he ravaged with his fleets the coasts of Locris and Bruttium. From thence returning to Sicily, he put to shore on the northern coast, between Eryx and Panormus, and there occupied a high table mountain, near the sea, called Eireth, or the close; surrounded on almost every side by precipitous cliffs, and affording on the top, a plain of nearly ten miles in circumference, and capable of cultivation. From this plain there arose in one part a smaller eminence, which served as a sort of citadel to the whole district: whilst towards the sea the position commanded an excellent harbour, with an abundant supply of fresh water. To complete its value, it had only three points of approach, two from the land side, and one from the sea; all of them presenting great difficulties to an assailant. Such a post in the hands of so able a general was a source of infinite mischief to the Romans. He used frequently to put to sea with his fleet, and ravage the coast of Italy as far as Cumæ near Naples; while by land he was continually engaged with the Romans who were quartered in the territory of Panormus, and harassed them with incessant hostility for the space of nearly three years.

Nothing can more clearly show the state of exhaustion to which both parties had been reduced by this protracted war, than the failure of any attempt on either side to bring the contest in Sicily to a conclusion. Instead of availing themselves of the opening afforded them by the total renunciation of all efforts by sea on the part of the Romans, the Carthaginians only laid up their own fleet, to relieve their expenditure, and left Hamilcar to depend solely on his own resources. On the other hand, the Romans accustomed to overbear all opposition, and so anxious to complete the conquest of Sicily, suffered themselves to be kept in check for three years by the ability of a single man, unsupported as he was by any reinforcements from Carthage; and to bear the shame and loss of seeing the coasts of Italy ravaged without resistance. And the same state of things, with a slight change of the scene of action, continued for two years more. Hamilcar left his position at Eireth, for what reason we know not, and threw himself into the town of Eryx, while the

Romans were in possession both of the summit of the mountain above him, and of the passes below him, which communicated with the neighbouring country. In this new station^b he maintained himself for two years, defying all the efforts of the enemy, and enabling the government at home, had not their inability or incapacity been excessive, to dispatch such an additional force to Sicily as would at once have changed the face of affairs in that island. The government, however, did no more than to keep up an occasional communication with the general, and to supply him with provisions, which otherwise, as the Romans were masters of the country, he could scarcely have obtained. But, at length, the Romans were the first to rouse themselves for one last and decisive effort. A fleet, they saw, was required to cut off Hamilcar from all support by sea; and to create this fleet, as the public treasury was insufficient, individuals united their means; two or three persons combining to equip a ship of war on condition that they should be repaid, if the armament were fully successful. It is mentioned too that the ships were built after an excellent model, a Carthaginian quinquereme of superior construction, which had been taken during the siege of Lilybæum. In this manner, two hundred ships were completed; and the consul C. Lutatius taking the command, sailed to Sicily early in the season, occupied the harbour of Drepanum, and secured all the anchorage for a fleet off Lilybæum, the Carthaginians having no force at sea to oppose him. Surprised, however, at this sudden expedition, they at once resolved to prepare a naval armament, which should in the first instance re-victual their troops at Eryx, and then, having taken Hamilcar and the flower of his soldiers on board, should give battle to the enemy. Lutatius, informed of their intentions, awaited for them near the islands called Ægæse, or Ægates, that is, Goat Islands, which lie a little to the westward of Lilybæum. He had carefully employed every portion of his time in exercising his crews, and preparing them for the approaching conflict; and although the weather was boisterous, and ill suited for an engagement, when the Carthaginian fleet first came in sight; yet he very wisely judged that no danger could be so great as that of allowing the enemy to disembark the stores with which they were now laden, and to receive on board Hamilcar and his veterans in their room. He therefore attacked them, and won an easy victory: fifty ships were sunk, and seventy, with more than ten thousand men, were taken; and the conqueror sailed to the road of Lilybæum, to join the army still employed in the siege of the town, and there refitted his prizes, and disposed of his numerous prisoners.

At such a period of the war a disaster like this was irretrievable.† The Carthaginian government felt that it was decisive, and at once commissioned Hamilcar to enter into negotiations for peace. Lutatius, on his part, received the overtures with no less alacrity; and a treaty was concluded, which, after some alterations made by the Roman people, consisted finally of the following terms: "That the Carthaginians should evacuate Sicily, and all the islands between that country and Italy; and that they should commit no act of hostility against the Syracuseans, or any of their allies. That they should restore all their

On the conclusion of this treaty, Hamilcar led his troops from Eryx to Lilybæum, and there resigned the command to Gisco, the governor of that town, who was to transport them, with his own garrison, over to Africa. Their united numbers exceeded twenty thousand men, and as they had been very irregularly paid of late, the sum now required to satisfy all their claims was likely to press heavily on the exhausted treasury of Carthage. Gisco therefore wisely sent them over in small detachments at a time, in order that the government might pay and send to their homes those who first landed, before the whole body should arrive, and form a mass sufficiently strong to create alarm or disturbance. But the government, hoping that the soldiers might be prevailed upon to remit some part of the arrears due to them, detained the first detachments that arrived, in Carthage, till the whole should have crossed over. Meantime a multitude of needy foreign soldiers being naturally guilty of many acts of violence while quartered in a wealthy capital, their officers were desired to march them away from Carthage to the neighbouring town of Sicca; and that there might be no temptation to allure them back, they were obliged reluctantly to carry with them their families and all their baggage.

In their new quarters at Sicca, whilst waiting to be joined by their comrades, they amused themselves with calculating the sums that were due to them, and with dwelling on the splendid promises that their generals had formerly made them on occasions of extraordinary danger. Every man flattered himself with a speedy return to his own country in affluence: when, after the arrival of all the detachments from Sicily, the commander of the forces in Africa, whose situation at home had kept him from ever having witnessed their services, or shared their dangers; came to them, not with the liberal recompense that they expected, but with a statement of the distress of the treasury, and an appeal to their indulgence to remit some part even of that pay, which by the very letter of their bond was due to them.

Universal dissatisfaction arose in the army on such a proposal. The soldiers of the different nations of which it was composed, Gauls, Spaniards, Ligurians, Greeks of half cast, mostly slaves deserters, and native Africans, all formed into small groups, and clamoured in their several languages, against the injustice with which they were treated. The study of foreign languages made so little a part of the system of education amongst the ancients, that Polybius treats it as impossible for the general himself to have understood and been able to converse in the different dialects used in his army; and to address such a mixed body in a public assembly through the medium of several interpreters, appeared productive of endless delay, impatience, and confusion. It was necessary,

therefore, to treat separately with the soldiers of each nation, through their own national officers; but misunderstandings and misrepresentations, unintentional and wilful, rendered this mode of proceeding fruitless; till at last, resolved to make their actions speak an intelligible language, and incensed that none of their old commanders were sent to them, but a man who was a stranger to them, and whom they could not tax with the promises formerly made to them in their campaigns; they broke up from Sicca, hastened towards Carthage, and encamped at Tunis, about twelve miles distant from the capital.

The Carthaginian government was alarmed, and too evidently showed that they were so: they were lavish in promises, which only led to additional demands on the part of the insurgents. Many of these were complied with, and for the rest it was agreed that they should be left to the decision of one of the late commanders in Sicily. Hamilcar was unpopular with the army, because he had so readily resigned his command over them; they fixed accordingly upon Gisco, the late governor of Lilybæum, as the arbiter in their differences. This officer went to their camp, and by his personal influence, and the actual payment of the money that was due to them, was proceeding happily to extinguish the mutiny, when a Campanian slave, named Spendius, who had deserted from the Romans, and a native African, of the name of Matho, alarming the African soldiers in particular, by telling them, that, when their comrades were dismissed to their respective countries, the whole vengeance of Carthage would fall upon them, enkindled afresh the spirit of rebellion. Spendius and Matho were appointed generals of the army, and soon after, on some slight provocation, Gisco, and all the Carthaginians with him were seized, and the money with which they were paying the troops was plundered. Then considering this act as a declaration of war, the mutineers bound themselves to one another by horrible oaths, and sent round to the tribes of native Africans, inviting them to join their standard. The invitation was almost universally complied with; large supplies both of men and money were sent to the army; and the rebels proceeded to besiege the towns of Utica and Hippo, because their inhabitants had refused to participate in the revolt.

This sudden and formidable rebellion, by which Carthage was at once reduced to the utmost danger of its very existence, abundantly acronyms for the final event of the Punic wars. The native Africans, by their taxes and levies of soldiers, were the main support of the Carthaginian power; and in time of war were grievously oppressed by the Carthaginian officers, who carried on this conscription with the utmost rigor, and who were approved by their government in proportion to the strictness with which they executed its orders, and to their neglect of the distress of its subjects. Far from feeling any zeal in the cause they were thus forced to serve, they were ready, therefore, on the first opportunity to take up arms against it: and the women in particular, most exasperated at seeing their husbands and parents dragged away to fight their masters' battles, now entered with the most lively ardour into the revolt, and gave up even their personal ornaments for the pay of the army. Thus in an instant the Carthaginians found themselves confined within the walls of their city, and liable to be besieged

† For the whole necessary war, see Polyb. lib. i. c. 68.

Biography. so soon as they had ceased to be masters of the field. Had Rome stood equally alone in Italy, and had its colonies and Latin allies regarded its government as a tyranny, whose interest was directly at variance with their own; the valour and wisdom of its people would have been displayed in vain after the battle of Cannæ, and the results of that memorable day would have been as important as those of the battle of Zama.

The Carthaginians took all possible measures to meet the danger with which they were threatened; they armed their own citizens who were of an age to serve, and raised a fresh mercenary force; but they appointed Hanno to the chief command, the very man who was most obnoxious to the Africans, as having been one of their worst oppressors, and who had first carried to the mutinous soldiers, the proposals that they should give up a part of their arrears. Active and remorseless in raising contributions, and enforcing conscriptions, Hanno was as a general totally incompetent; and his misconduct exposed him to one bloody defeat, and caused him to neglect several opportunities of winning a victory. The rebels by their position before Utica, and their occupation of Tunis, commanded the isthmus which connected the city of Carthage with the main land: they had besides, fortified the passes of the hills, and occupied the only bridge over the river Bakara, which was an additional barrier to any possibility of escaping from Carthage into the open country. But all difficulties were overcome by the genius of Hamilcar, who after full experience of Hanno's incapacity, was nominated to succeed him in the command. He watched his opportunity when a particular wind had choked the mouth of the Bekam with sand, and had raised a bank of shingles between its own impeded waters and the sea. He then led his army along this bank by night with the utmost caution, till he had thus got across the river, and when day light came, he appeared to the rear of the enemy's position, and hastened to surprise the troops who were stationed at the bridge; but being discovered, he was opposed by them on one side, and by the army employed in the siege of Utica on the other. His able dispositions, however, defeated both these opponents with great loss; then following up his victory he attacked and carried the fortifications at the bridge, drove its defenders into Tunis, and afterwards overrunning the country, recovered a great many places either by force or terror, to the Carthaginian dominion.

Upon this, Mutho, who seems to have been the chief among the rebel generals, ordered Speedius, with six thousand soldiers of different nations, and Autaritis, a Gaul, with two thousand of his countrymen, to follow and watch the movements of Hamilcar; while he sent to the Africans and Numidians, requesting them not to fail in giving their earnest co-operation. They accordingly took the field in two different quarters; and both marching to join Spendius, came unexpectedly upon the front and rear of Hamilcar's army, while Speedius was hanging on his flank. Thus surrounded, on ground which was besides unfavourable to his escape, Hamilcar was delivered in a remarkable manner from the danger. A young Numidian chief named Narava, who had inherited from his father a friendly disposition towards Carthage, was struck with a romantic admiration of Hamilcar's character; and went over to the Carthaginian camp, with a request

to be introduced to the general. Finding that his motives were at first suspected, he left his horse and javelins with his followers, and entered the camp unarmed; his fearless confidence removing all suspicion, and filling the Carthaginians with admiration. When he was brought before Hamilcar, he told him, that he longed to become his friend, and was now come in the hope of being admitted to share truly in all his counsels and actions. Hamilcar, delighted with his frankness, gladly welcomed him, and promised to give him his daughter in marriage, if he should approve himself to the end true to Carthage. Narava then went away and soon returned, bringing over two thousand Numidians with him. With this seasonable aid, Hamilcar no longer hesitated to meet the enemy; and they on their part, having voided all their forces, marched down into the plain to engage him. They were defeated with great loss: chiefly owing to the elephants in the Carthaginian army, and to the distinguished conduct of Narava. Ten thousand men were killed, and four thousand taken prisoners, many of whom enlisted in the victorious army; whilst the rest were called together by Hamilcar, and received a free pardon, accompanied only with a threat of certain punishment, if ever they should be taken again in rebellion.

Nothing so much alarmed the rebels, as this merciful behaviour of the Carthaginian general. To obviate the effects of it, they resolved to involve all their associates so deeply in guilt, that pardon should to all be hopeless. Letters were accordingly forged to all round to the soldiers, as if from their comrades in Sardinia; (for there too, the mercenary troops had mutinied, murdered all the Carthaginians in the island, and taken possession of it themselves) informing them, that some amongst them were plotting to release Giseco, and those who had been seized with him at Tunis. Spendius and Autaritis then argued, that death was the only sure keeping for their prisoners, that thus all intrigues for their deliverance would at once be blasted, and the Carthaginians would see, that none would be deceived by their fair appearances of mercy. Many of the soldiers then came forward, to plead in their several languages for Giseco's life; but when it was generally known what they prayed for, a cry arose of "Shoot them! stone them!" and they were all instantly massacred. This taste of blood, as is natural, made the appetite for it the keener. Giseco and his fellow prisoners, to the number of seven hundred, were dragged out to a short distance from the camp, and there were put to death, with all the circumstances of horrible torture.

The soldiers were now ready to go all lengths with their commanders. The bodies of the victims were refused to the Carthaginians for burial. Proclamation was made, that no herald or flag of truce should be received; and it was resolved that every Carthaginian whom they should take, should be put to death by torture, and every foreign auxiliary should be sent back to Carthage with his hands cut off. Eager to put a stop to such a scene of horrors, Hamilcar united his forces to those of Hanno, who still, it seems, held a command; and now no quarter was given, but those of the rebels who were taken alive, were thrown to the elephants. The junction of the two generals, however, was an unfortunate measure; for their mutual animosity was so great, that the public service suffered from it, neither of them acting cordially with

Biography. the other. Possibly this failure of vigour at so critical a time, encouraged the towns of Utica and Hippo to take part with the rebels, by whom they had been so long besieged: for not content with opening their gates to them, they warmly espoused their cause, and sealed their alliance, by murdering the Carthaginian soldiers who had been sent to assist in their defence, and after the example of their new confederates, refusing the bodies to their friends for burial. Thus strengthened, Matho and Spendius proceeded at once to blockade Carthage: but Hamilcar was still in the field commanding an army in their rear; and being now freed from the interference of Hanno, who had been recalled according to the choice allowed the soldiers by the government, of deciding which of their two generals should remain with them; and being ably and zealously supported by his friend Narava, he cut off all the supplies that were going to the rebels from the country, and reduced them to a worse state of distress, than that which they inflicted on Carthage.

The command of the sea indeed, enabled the capital to support its blockade, by receiving without difficulty the supplies sent by foreign powers. Hiero, king of Syracuse, knowing how much it concerned his safety, that Rome should not be left without a rival, was liberal in his succours: and the Romans allowing their subjects to supply the Carthaginians freely with every thing, forbade them to hold any communication with the rebels. They did more than this; for they refused to listen to the overtures of the rebels in Sardinia and Utica, when they severally offered to put those places into their hands. Thus Matho and Spendius, suffering severely from famine themselves, were obliged to raise the blockade: and Spendius and Autaritus having selected fifty thousand of the best soldiers in their whole army, took the field again, to watch and harass the army of Hamilcar. But they were no match for such an adversary. He sometimes cut off their detached parties; sometimes led them into ambuscades; and by his wonderful activity often surprised them with sudden attacks, and routed them: and every prisoner that he took was uniformly thrown alive to his elephants. At last he hemmed them up in a position which neither allowed them to fight or fly: and here he blockaded them, vainly looking for aid from Tunis, till in the extremity of their hunger, they began to devour each other. Spendius and Autaritus, dreading to be given up by their soldiers, went themselves, with eight other principal officers, to Hamilcar; and a treaty was signed between them, stipulating that the Carthaginians might select any ten of the rebels for punishment, and should let all the rest go with a single garment each. Hamilcar instantly said that he selected the ten officers then present with him; and they were immediately arrested. Their soldiers, ignorant of the terms of the agreement, ran to arms; and Hamilcar surrounded them with his elephants and the rest of his force, and easily put the whole of them to the sword. Above forty thousand rebels were thus destroyed.

This great victory was followed by the submission of most of the revolted towns of the Africans; and Hamilcar soon afterwards proceeded to blockade Matho and the remains of the rebels in Tunis. It appears that the nature of the ground obliged him to divide his army; and while he himself encamped on one side of the town, his colleague Hannibal took post

on the other; nor was the communication between them direct and easy. Of this the rebels availed themselves, and attacked Hannibal's quarters, having observed that he was less on his guard than Hamilcar. They were completely successful, took the Carthaginian camp, with all the baggage of the army, and made Hannibal himself prisoner. An opportunity of a bloody revenge was now in their power. Spendius, and the other rebel chiefs who had been seized with him, had been brought before Tunis, and crucified in sight of the walls. In this spot Hannibal was dragged; the body of Spendius was taken down from the cross, and thirty of the most distinguished Carthaginian prisoners were slaughtered around it, while Hannibal was fastened to the cross in its room. The siege of Tunis was now raised, and Hamilcar moved towards the mouth of the river Bakara, to maintain his communication at once with Carthage and with the sea.

After this new disaster, the Carthaginian government armed their remaining free population, and sent them out under the command of Hanno. Thirty members of the council of elders accompanied this army, who were charged to effect a reconciliation between the two generals in the name of their common country. Their endeavours succeeded, and both henceforward acted cordially in concert with each other. The war was now soon brought to a successful end. After several partial defeats, the rebels collected all their forces, and put their fortune on the risk of one decisive battle. They were defeated with a terrible slaughter: those who escaped from the field were soon after obliged to surrender, and Matho himself was taken alive. Utica and Hippo, despairing of mercy, still resisted, till being besieged, one by Hamilcar and the other by Hanno, they were forced to submit at discretion. How their aggravated rebellion was punished, we are not told; but Matho and the prisoners taken with him, were led in triumph through the streets of Carthage, and put to death in torments. In this manner, Carthage recovered the whole of her former dominion in Africa, after a war of unequalled horror, which had lasted for three years and four months.

Scarcely had the Carthaginians escaped this danger, when they were threatened with another, which in their present state of weakness they would have found it impossible to resist. We have seen that at the height of the late rebellion, the Romans had refused the offers of the rebel soldiers in Sardinia, to take the island into their own hands. But since that time the rebels had been driven out by the native Sardinians, and had fled to Italy for refuge: and the Roman government was now prevailed upon to listen to their requests, and to send a force to take possession of the island as a Roman province. The Carthaginians considering that their rebellious soldiers could not bestow a right on others which they had not themselves, were proceeding, as soon as the war in Africa was ended, to despatch an expedition for the recovery of Sardinia; when the Romans, insisting that the expedition was designed to act against them, declared war against Carthage. That power could not possibly at such a time enter upon a new contest: her government therefore was obliged to concede to what was

Biography. well understood to be the object of Rome : and not only was Sardinia given up, but twelve hundred talents were paid, in addition to the sums stipulated by the treaty of peace, as a sort of bribe to the Romans, not at present to renew hostilities. This conduct on the part of Rome was every way calculated to excite deep resentment in a mind like Hamilcar's. It betrayed not only an alarming, but an insulting and ungenerous ambition ; and plainly showed that the late war had left behind it, in one party at least, feelings of rivalry which were not likely to be soon forgotten. From henceforward Hamilcar, it is said, determined * steadily to pursue the object of obtaining for his country such resources, as should enable her at no distant period to renew the contest with her adversary. It was no common spirit of policy by which he was actuated, but a principle of hatred to Rome, which he intended to carry with him to his grave, and to instil with great strength into his children. His own eminent services, aided by his great family interest, and political sentiments, for it appears he favoured the popular party in Carthage, which was every day becoming more powerful, all contributed to give him an influence over the direction of affairs almost unlimited ; and the same causes continuing afterwards to operate in behalf of his son, the whole administration of Carthage appears for many years to have been in the hands of his party, and its foreign policy almost to have been left at the sole disposal of himself, his son-in-law Hasdrubal, and his son Hannibal.

Excluded from Sicily and Sardinia, Hamilcar turned his attention to Spain. There the Romans had not yet pretended to control his movements : and there the mines of the country would abundantly supply him with money, and its bold and numerous population with soldiers, for carrying into effect his ultimate views. Immediately therefore, on the conclusion of the war in Africa, he prepared to cross the straits of Gibraltar with an army. A solemn sacrifice was performed as usual at the commencement of an expedition, to propitiate the favours of heaven ; and towards the close of the ceremony, Hamilcar desired all the

assistants to withdraw a little, and called to him his son Hannibal, then a child of only nine years of age. He then asked him, whether he should like to go with him to the army ? and when the boy seemed delighted at the offer, and begged that he might be allowed to go, his father led him to the altar, and bade him swear, with his hand upon the sacrifice, that he would never hear a good will to the Romans. This story Hannibal himself related at the court of Antiochus, as a security for his unchanged attachment to all the enemies of Rome ; and it strongly marks the feeling that was most powerful in Hamilcar's mind ; and that whilst he was going to carry on war in Spain, his heart was already in Italy.

Of his subsequent operations nothing is recorded in detail ; we are only told * that partly by arms, and partly by conciliation, he reduced a great number of the native tribes under the Carthaginian dominion. At last, in the tenth year of his command, he was engaged in battle with one of the fiercest and most powerful people in Spain, and finding it needful to set an example of personal daring so exposed himself, that he was killed on the place. His son-in-law, Hasdrubal, who had for some time served under him, succeeded him in the command of the army, and in the prosecution of his designs for rendering the whole peninsula a valuable province of Carthage.

The character of Hamilcar can only be gathered from his public conduct ; as nothing is known of his private life and manners. As a statesman and soldier, his abilities appear to have been of the highest order, and his ascendancy must have been generally acknowledged, since it could excite such an enthusiastic admiration in the young Numidian chief, Narava, and lead him to abandon a cause generally popular amongst his countrymen, from his respect for the personal merit of the Carthaginian general. It would be difficult to find any single family, which in only two generations produced three such men as Hamilcar and his sons Hannibal and Hasdrubal : if his son-in-law Hasdrubal be added to the number, the talent concentrated in the house of one man may be well considered unparalleled.

HANNIBAL.—THE SECOND PUNIC WAR.

FROM A. M. 3785, S. C. 219. TO A. M. 3821. S. C. 183.

Biography. TOXAS are very few instances in which biography so closely unites itself with general history, as in the life of Hannibal. If we were to profess to relate the story of the age in which he lived, his actions and character so influenced the affairs of the civilized world, that we should find ourselves forced to make him the prominent figure in our narrative, to which all others must be drawn as more or less subservient. While, on the other hand, the biographer could not possibly convey a just notion of his genius, without a full description of the state of things in which he was called to perform a part so extraordinary.

Under the eye of his father, Hannibal had for nine

years been trained to all the duties of a soldier ; and when his brother-in-law, Hasdrubal, succeeded to the command, he was between eighteen and nineteen years of age, and was soon able to render himself equally the admiration and the love of the general and the soldiers. During eight years more he had abundant opportunity to perfect himself in all the qualifications of a subordinate officer, and to learn those which were required of a general-in-chief, as well as of a politician and statesman. Hasdrubal* extended the power of Carthage chiefly by his talent of

Bio**g**raphy. conciliating the native princes of the Spaniards: he endeavoured also to provide for its security by founding the city of New Carthage, the situation of which was chosen with excellent judgment. This town, which in its present name of Carthagena still retains the memory of its founders, commands* the best, and for the purposes of ancient seamanship, almost the only harbour that was to be found on the eastern coast of Spain. It was a deep bay, whose entrance looked towards the south, and was protected from the open sea, by a small island which lay across it. In the centre of this bay, there rose out a bold tongue of land, falling down its southern extremity to a flat shore, but terminating in steep and lofty cliffs on the east and west, and on the north side where it joins the main land, presenting a chain of three rocky and rugged eminences; each bearing its own distinct appellation. The southern and eastern sides of this promontory were washed by the sea: between its western side and the opposite coast of the bay, there was a large extent of shallow and nearly stagnant water, such as is not uncommon in sheltered and land locked recesses of the Mediterranean, and which may be particularly remarked in the lagoon of Venice. From this there was an artificial cut made through the isthmus to the sea on the east; a bridge forming the communication between the peninsula and the adjoining country. Thus the town, which was built on the southern part of the point of land above described, in the hollow between the hills, combined the double advantages of security and an excellent harbour, most favourably situated for communicating with Africa. The foundation of this place, and the growing influence of Hasdrubal among the natives of Spain, so alarmed the Romans, that they accused themselves of great neglect in not having interfered sooner; and being unable at present to go to war, because an invasion of the Gauls gave them full employment at home, they tried to gain their ends by negotiation, and concluded a treaty with Hasdrubal, by which he engaged not to carry his arms beyond the Ebro. To this they trusted for the present, hoping soon to be able to oppose a barrier more substantial than any stipulation, to the increasing power of their rivals.

About one and twenty years had now elapsed since the conclusion of the first Punic war; Hannibal had completed his twenty-sixth year; and Hasdrubal had for eight years been successfully advancing the interests of his country, and the great designs of his family, when he was assassinated by night in his own quarters by a Gaul, whom he had exasperated by some personal injury. Great as such a loss was in itself, it was materially lessened by the prospect of a successor such as Hannibal. It appears that at this period the Carthaginian armies were often consulted in the appointment of generals, and had an important share in their nomination. On the present occasion the voice of the soldiers instantly bestowed the command on Hannibal; and the influence of his party, and the general animosity against Rome, that now prevailed in the public mind, easily procured the ratification of this appointment from the popular assembly at home. The new general, in the vigour of youth, and already accomplished in the experience of a soldier's life,

resolved to delay his great design no longer, but at once strike a blow which should announce to the world in thunder the ripeness of his family's long meditated plans of vengeance.

At this period, on the eve of commencing the history of the second Punic war, it seems a proper opportunity to suspend for a while the course of our narrative, and to give a sketch of the situation of the principal countries, which, in the sequel became involved in this wide spreading contest.

Our first attention in this survey will be naturally directed to Italy. It is well known that the Romans appropriated that name in strictness only, to so much of the peninsula as extended southwards, beyond Ravenna on the Adriatic, and the eastern limit of the late republic of Genoa, on the Mediterranean. All the country between these boundaries and the Alps, with the exception of the Genoese territory, which was still possessed by the native Ligurians, and of a small territory around the head of the Adriatic, where the Veneti continued to maintain themselves, had been overrun at different periods by successive hordes of Gauls from beyond the Alps, and was generally known to the Romans by the name of Cisalpine Gaul. Having expelled the Tuscans, who are mentioned as the earliest occupants* of this region, the Gauls gradually pushed further and further southwards: assailed the Tuscans, even in that more southern part of their dominion, which still retains their name, and were in the course of their incursions brought into contact with the Romans, and in their first war with that people, had well nigh destroyed them for ever. For many years after their famous occupation of the city of Rome, they renewed at intervals their invasions of its territory: at first the Romans dared not oppose them in the field; but in process of time they learned not only to meet them on equal terms, but to vanquish them; and at length they became the invaders in their turn, and gradually† began to expel the Gauls from the most southerly of their settlements, and to occupy the ground with Roman colonies. The more northern tribes, fearful of experiencing the same fate, procured large assistance from their countrymen beyond the Alps, and during the period that Hasdrubal commanded in Spain, made a most formidable attack on the Roman dominion. But being entirely cut off in this attempt, the Roman consuls for several succeeding years, extended their conquests over the Cisalpine tribes; and immediately before the arrival of Hannibal in Italy, the Roman colonies of Piacenza and Cremona were founded on the banks of the Po; whilst the natives, though so often defeated, still kept up an incessant harassing warfare against the new settlers.

The north of Italy, then, in the modern extent of the word, although nominally forming part of the Roman dominion, was yet likely in fact to give the most zealous support to the first invader who should hold out hopes of delivering it from its yoke. Etruria or Tuscany, Umbria, and Picenum, contained some Roman colonies, but their population and their cities appear to have been inconsiderable, in comparison with the more southern provinces. The main strength of Rome lay in the numbers and courage of its own citizens, and its Latian allies; whose fidelity might be depended on to the last extremity; and

whose population, of an age to bear arms, amounted, together with that of Rome, to about three hundred and sixty* thousand men. Further to the south the mountain districts of the Apennines in the interior, and the coasts of Campania, Lucania, and Apulia, in ordinary times, furnished the Romans with multitudes of hardy soldiers, or supplies of corn and money. But the allegiance of these provinces was less certain, in case a victorious enemy should tempt them with a favourable opportunity of revolting; they had been more recently conquered, and some of them retained the recollection of long and obstinate struggles which they had sustained against Rome in defence of their liberty; whilst others, as the Campanians, and the Greek cities on the south-eastern coast, proud of their wealth and refinement, felt the hard service to which the Romans compelled them, at once galling and degrading. Accordingly, when Hannibal was absolute master of the field in Italy, it was in the south that he received the warmest support, and was enabled, after many disappointments, to maintain himself so long against all the efforts of the enemy.

Sicily, since the last war with Carthage, was divided between the Romans and their firm ally Hiero, king of Syracuse; so that all the resources of that fertile island were in fact destined to strengthen the Roman power.

To the eastward of the Ionian gulf, we find in the account of Polybius, a state of things very different from that which Xenophon, the next oldest in point of time of all the remaining contemporary Greek historians, presents to us. Names, which in his narrative scarcely find a place, in the days of Polybius were become the most eminent in Greece. The Macedonian kingdom, though greatly shrunk from its meridian greatness, was still very considerable; and embraced not only the ancient dominions of Perdiccas and Archelaus, but in addition, the whole of Thessaly and the coast of the *Ægean*, as far as the Hellespont; with an authority and influence, more difficult to be exactly defined, either in geographical extent or in degree, over the adjacent country of Epirus, and the tribes of the neighbouring Thracians. It possessed besides the important position of the citadel of Corinth, which enabled it to command the entrance into Peloponnesus; and the island of Eubœa, the most valuable of all the dependencies of Athens in the days of Athenian greatness. The throne of Macedon was now occupied by Philip, son of Demetrius, who had just succeeded Antigonus, the regent of the kingdom, and the conqueror of Cleomenes at Sellasia. Next to Macedonia, the *Ætolians* seem to have held the second rank. In the days of Thucydides, they were little better than savages, living in scattered villages, and destitute of any political union; but now, although they still retained the plundering, cruel, and faithless character of barbarians, they were greatly changed in power and importance. Naupactus, so long held by the Athenians, and Ambracia, a Corinthian colony, and since the capital of Pyrrhus, were now held by the *Ætolians*; and their ambition was continually looking out for occasions of aggrandizing themselves in Peloponnesus. The third principal power in Greece was one which had been equally inconsiderable in earlier times, the *Achaian league* or confederacy. The *Achaïans*

were the old inhabitants of Sparta and Argos, and were driven from thence by the Dorians, at the time of the return of the Heracleidae to Peloponnesus. In their turn they expelled the Ionians from the north-western coast of the Peloponnesus, and settled themselves in twelve towns, all of which were bound to one another by a federal union, while none was of sufficient importance to form, like Athens, the acknowledged head of the whole nation. They preserved this form of government down to the age of Alexander, when the Macedonian powers influencing more or less every state in Greece, the *Achaian* union was dissolved; and some of its towns were garrisoned by Macedonian soldiers, and others were subjected to tyrants from among their own citizens. But some years afterwards, a little before the first Punic war, the league began to be renewed, and at first subsisted between four towns only; others, however, gradually joined it, and not only from Achaia, but from many other parts of Peloponnesus. Its principal members, at the period of which we are now speaking, appear to have been, in addition to the cities of Achaia itself, Sicyon, Argos, Megalopolis, Phlius, and Corinth; although the citadel of Corinth was in the hands of the kings of Macedon.

It was the object of the *Achaïans* to extend their union over the whole of Peloponnesus, but to this scheme there were two states strongly opposed, Elis and Lacedæmon. The *Elæans* claimed to be of *Ætolian* extraction: their country, in the great revolution caused by the return of the Heracleidae, having been possessed by Oxyilus, an *Ætolian* prince, who assisted the Dorians, and the followers of Hercules in their enterprise. This circumstance would lead them to a friendly connection with the *Ætolians*, and combined with the jealousy which nations usually entertain towards their nearest neighbours, will account for their having both the will and the power to refuse their accession to the *Achaian* union. Lacedæmon, accustomed of old to the sovereignty of a considerable territory, and being still the mistress of a considerable territory, could not be prevailed upon to sink its name and independence, by becoming a single member of a confederacy whose united strength she could more than equal: on the contrary, aspiring always to regain her ancient dominion, and regarding the *Achaïans* as her most formidable rivals, she naturally became connected with their enemies; and thus *Ætolia*, Elis, and Lacedæmon, formed one party in Greece, whose policy was in decided opposition to Macedon in the north and the *Achaian* union in the south. On the other hand, the Macedonian princes being constantly embroiled with the *Ætolians*, who were their most formidable neighbours, were glad to conciliate the friendship of the *Achaïans*, who like themselves were the enemies of *Ætolia*; and the *Achaïans* on their part found in Macedon, their best protection against *Ætolia* on one side, and Elis and Lacedæmon on the other.

The fame of Athens must awaken our interest, even in the lowest decline of her political importance. Her navy and her foreign dominion had long been no more; in the ebb, however, of the Macedonian power she had recovered her independence; and her situation lying remote from the usual seat of war between Macedon, *Ætolia*, and the states of Peloponnesus, she appears to have taken little or no part in their contests

Hannibal.

The glory of her eloquence and philosophy still procured a value for any honours bestowed by the people of Atheos; but this tribute of respect was abused to serve the purposes of interested flattery; and those kings whose friendship or enmity the Athenians most prized or feared, were courted by complimentary decrees, conferring on them extravagant titles, and admitting them to the still proud distinction of becoming citizens of Athens.

The mention of the eastern kings leads us to describe the state of that large portion of the ancient world which, in the days of Thocydides and Xenophon, composed the Persian empire; and which afterwards formed the principal part of the eastern empire of Rome. It was, at the beginning of the second Punic war, divided chiefly between the kings of Syria and Egypt. Of these, Antiochus the younger son of Seleucus Callinicus, had lately succeeded his elder brother Seleucus on the throne of Syria. His kingdom, the most extensive of all those which Alexander's successors had divided amongst them, embraced the provinces of Persia, Media, Mesopotamia, Armenia, and Syria, together with the greater part of the peninsula of Asia Minor. On the coast of this latter district, indeed, there were one or two independent sovereignties, whose influence upon the transactions that followed was often considerable. Attalus, king of Pergamæ, possessed many towns in Ionia and Æolia, as well as a naval power of some eminence. On the north was the kingdom of Bithynia, held by Prusias; and that of the maritime Cappadocia or Pontus; which was still in the hands of its native prince Mithridates. He was descended, according to the boast of the family, from that Mithridates who had been one of the seven Persian noblemen engaged in the conspiracy against Smerdis the magian; but his name owes its renown, in modern ears, to his great descendant, who maintained so long and obstinate a struggle against the Romans. On the northern side of Asia Minor, a little removed from the sea coast, numerous hordes of Gauls had lately settled themselves, and given the name of Galatia to their new country; being a part of one of those immense swarms from the north, which even at this early period had alarmed and overrun the civilized countries of the south; and whilst one division had been mostly cut off in Greece, others of them had found an establishment in the neighbourhood of Byzantium, and others on the opposite coast of Asia. To the south of Asia Minor, the island of Rhodes was celebrated for the wisdom of its government; and in the decayed state of the Greek republics, was deemed to possess a considerable navy. Finally the most noted towns and harbours along the whole coast of Asia Minor, from Pamphylia to the Hellespont, formed part of the dominions of Egypt.

That famous country, which at this time shared the empire of the east with the kingdom of Syria, after having remained nearly two hundred years under the power of the kings of Persia, and after having been conquered from them, after the victory of Issus, by Alexander the Great, had been erected into an independent kingdom, after his death, by Ptolemy the son of Lagus, one of his generals. Since that period, the kings of Egypt had been among the most fortunate combatants in the various wars that had arisen between the successors of Alexander. Their territories extended along the north coast of Africa, till they reached

the limits of the Carthaginian dominion; including the once independent and flourishing city of Cyrene. They possessed the island of Cyprus; the most valuable stations on the southern and western coasts of Asia Minor, as has been already mentioned; and the towns of Ænos, and Maronæ, with some others on the northern shore of the Ægean sea. On the side of Asia they were masters of Palestine, and of the district called Cœle Syria, or the vale or basin of Syria; a tract of country lying immediately to the north of Galilee. This the kings of Syria claimed as their own; and at the time of which we are now speaking, a war was on the point of commencing between Antiochus and Ptolemy, to determine the possession of it.

With the names of Syria and Palestine that of Judæa is closely associated. But the history of the Jews, from their return from Babylon to the time of their resistance to the persecution of Antiochus Epiphanes, is almost a blank. They followed the revolutions of the great empire around them, but still enjoyed their own law, and the free exercise of their worship. Possibly their long subjection to the Persians, who were themselves so zealous against the use of images, may have confirmed them in that abhorrence of idolatry which their law inculcates, and from which, after their return from the captivity, they are never known to have departed. But though they were thus firm in their outward obedience to God, yet they were never further from fulfilling the spirit of the commandments, to love God and their neighbours; nor were they at any period less fitted to perform one great end, for which they had been separated from the rest of the world; the shewing forth in their lives the proper fruits of their knowledge of their Maker and of his will, and thus by the excellency of their example leading other nations to aspire after the same means of imitating it in themselves.

This sketch, imperfect as it is, will still serve to give the reader some knowledge of the state of the principal countries bordering on the Mediterranean, at the time when Hannibal first took the command of the Carthaginian army. That event seems to have taken place in the middle of the season for military operations; and Hannibal resolved immediately to attempt some enterprise of importance. He accordingly attacked and subdued the tribe or nation of the Olondes; and returning to New Carthage to pass the winter, he availed himself of the spoil gained in the campaign to pay his soldiers; and accompanying this payment with promises for the future, he put his army into high spirits, and established himself in their regard. The next season was marked by successes still more brilliant; inasmuch that the whole peninsula within the Ebro, excepting only the city of Saguntum, was so far reduced as to be incapable of offering Hannibal any disturbance while he should be engaged in his expedition to Italy. After this second campaign, he again returned to New Carthage, and put his troops into winter quarters.

Here he found an embassy from Rome, which had been sent, on the repeated solicitations of the Saguntines, to provide for their safety, and to watch over the Roman interest in Spain. The ambassadors charged Hannibal not to attack the Saguntines, for they were allies of the

* Polyb. lib. iii. c. 13, &c.

Biography. Romans, and were consequently included in the article of the treaty made with Hamilcar, which forbade either party to molest the allies of the other. They also warned him not to carry his arms beyond the Ebro, as he would by so doing violate the more recent treaty concluded with his brother-in-law Hasdrubal. With regard to crossing the Ebro, Hannibal made no answer; as for Saguntum, the Romans, he said, had unjustly interfered in its domestic affairs, had put to death some members of the government, and had invested a party of their own with the supreme authority. It had ever been the practice of the Carthaginians to right the oppressed; and he could not, therefore, tamely pass over such an act of tyranny. At the same time he complained to his own government at home, that the Saguntines, emboldened by their alliance with Rome, were committing acts of aggression on the subjects of Carthage; and he desired to be instructed what he should do. It is too plain that Hannibal, on this occasion, sought to justify, by frivolous excuses, a measure which could only rest its defence on very different grounds. He could not attack Saguntum without injustice, unless he should first openly declare war against Rome and her allies; and this he might have done with fairness, if the Romans had refused to restore Sardinia to Carthage, which they had only wrested from her by shamelessly availing themselves of her inability to resist them.

On receiving Hannibal's answer, the Roman embassy proceeded to Carthage, in the hope of meeting there with a more favourable reception. But as no overt act of hostility had yet been committed, the ambassadors could only caution the Carthaginians as to the future, and had at present nothing to complain of. Meantime, with the return of spring, Hannibal attacked Saguntum. That city is said to have been a Greek colony from the island of Zacynthus;* but with the original settlers there had been mixed, in process of time, a multitude of inhabitants from different nations, so that little of the Greek character remained, except the tendency to internal political quarrels, which had led them to call in the Romans as mediators in some of their differences, and thus rendered themselves the allies, or rather the dependents, of Rome. Being attacked by the Carthaginians, they defended themselves vigorously for eight months; till the town was at last taken by assault. Their brave defence had engrossed the whole attention of Hannibal for one entire campaign, and thus delayed till another year his march into Italy: but the valuable plunder of all sorts which he found in the place, enabled him at once to gratify his army by liberal distribution; to captivate the public mind at Carthage by the splendid spoils which he sent home; and to provide himself with a large supply of money for his own intended expedition.

During the siege of Saguntum, the Romans had been employed in a war with Demetrius of Pharos, the sovereign of some strong fortresses on the coast of Illyria. Their arms were, as usual, triumphant; and the consul, L. Æmilius, gained the honour of a triumph for his victories. But they had lost time irrecoverably, and had suffered their only ally of any importance in Spain to be destroyed; and their most powerful enemy to begin a new war against them with all the reputation and advantage that attend a

first and brilliant success. They now sent to Carthage Hannibal with a denunciation of immediate war, unless Hannibal and his principal officers should be surrendered to them for punishment. The council of Carthage, still wishing to gain time, endeavoured to justify the conduct of their general, and to avoid the alternative proposed to them; till at last, the chief member of the embassy, taking up a fold of his gown, exclaimed, "that here he brought them peace and war; and he would shake out and leave them whichever they bade him." The head of the council desired him to shake out which he pleased; and on his replying, "that he shook out war," several voices at once cried out, "that they embraced the present which he gave them." The ambassadors then left Carthage, and returned to Rome.

It does not appear that Hannibal's measures were in the least affected by the event of this embassy. He had long been carrying on his designs, secure of the support of his government, and well aware that the actual declaration of hostilities would neither retard or quicken the course of his great attempt. After the fall of Saguntum he had again marched back to New Carthage; and there the winter was passed in making various preparations for the approaching war. He first allowed the Spaniards of his army to return to their several homes during the winter, attaching them the more firmly to his service by this attention to their natural wishes. The security of Spain was next provided for, by sending over from Africa an army of about fourteen thousand men, and intrusting the command of it to his brother Hasdrubal, whom, at the same time, he furnished with ample instructions for his general conduct. Then, lest Africa itself should be left defenceless, a Spanish army of about fifteen thousand men was appointed to serve in the provinces, and in Carthage itself; and this interchange of their respective troops, secured at once the allegiance and safety of the Carthaginian dominions, both in Spain and Africa. Hannibal now only waited to receive his expected reports of the nature of the country, and the dispositions of the inhabitants, both in the Alps themselves, and in Transalpine and Cisalpine Gaul. To the tribes of this latter country in particular he looked for zealous co-operation, so soon as he should have crossed the Alps; and this hope, probably, was one of his chief reasons for determining to make his first attack on the north of Italy. The Gauls in that quarter were exasperated against the Romans by the successive extermination of so many tribes of their countrymen, and particularly by the attempt now actually in progress, to plant Roman colonies even on the banks of the Po. Their territory then, as now, was eminently fertile, and likely to offer abundant supplies to a friendly army. Their forces were strong in numbers, and under the command of an able general, might acquire the discipline and perseverance which at present they most wanted. Hannibal, therefore, had sent repeatedly to the chiefs of the Alpine and Cisalpine tribes, and had made them liberal promises, in order to secure their friendship. It was towards the end of the winter that he received their answers, reporting that they were expecting and wishing for his arrival amongst them; and that the passage of the Alps, though laborious and difficult, was, yet, not to be considered impracticable. He

* Strabo. lib. iii. §. p. 168. Edit. Xyland.

Bioscopy. communicated to his army the encouraging tidings of the friendly dispositions of the Gauls; he extolled the fertility of the country into which he was going to march; he represented the indignity offered them by the Romans, in demanding that himself and his principal officers should be surrendered up to them; and flouting the temper of his soldiers to be in accordance with his views, he finally named a day, on which he desired them all to hold themselves in readiness, to begin the march.

It was late in the spring of the year of Rome five hundred and thirty-five, about two hundred and seventeen years before the Christian era, that Hannibal set out from New Carthage with an army* of ninety thousand infantry, and twelve thousand cavalry, and actually commenced the second Punic war. As far as the Ebro he marched in peace; from thence to the Pyrenees he had to fight his way, and subdued successively the intermediate tribes, though not without sustaining severe losses in these operations. Before he crossed the Pyrenees, he left Hanno with a detachment from his army, amounting to eleven thousand men, to retain possession of his late conquests; and in his ear he left the heavy baggage of the troops who were to march with himself into Italy. He dismissed an equal number of his Spanish soldiers to their own homes, considering such a diminution of his numbers of no importance, when compared with the advantages of conciliating the Spanish tribes on the eve of his departure, and of giving the rest of his troops ground to hope that they also would be released from their service, in soon as their general could safely dispense with their assistance. In this manner, together with the losses sustained in battle, the army, when it passed the Pyrenees, consisted of no more than fifty thousand infantry, and nine thousand cavalry.

The Romans, meanwhile, so soon as they learnt that the council of Carthage had rejected their demands, and that war had been in consequence declared by their ambassadors, prepared to carry hostilities, as usual, into the enemy's country, and assigned Spain and Africa as the provinces for the new consuls, P. Cornelius Scipio, and T. Sempronius Longus. Each of these officers was to have under his command two Roman legions, amounting to eight thousand infantry, and six hundred cavalry, besides a large force of the Latin allies; but about the time that these troops were ready to take the field, intelligence arrived in Rome of the revolt of the Boii and Insubrians, two of the most powerful tribes of Cisalpine Gaul, with the addition that the new Roman settlers had been driven in great alarm to Mutina, and that M. Manlius, the praetor, who had attempted to protect them, had been himself beaten, and was actually blockaded by the Gauls in the village to which he had retreated. This danger seemed so pressing, that Scipio's army was immediately transferred to the command of one of the praetors, and sent off to Cisalpine Gaul; whilst the consul was detained at Rome till his troops could be replaced by new levies. As last he set out, and sailing from Pisa to the eastern mouth of the Rhone in five days, he there landed his soldiers; being aware that Hannibal had reached the Pyrenees, but calculating that his

farther progress would be greatly impeded by the resistance he would meet with from the Gauls. In this hope, however, he was disappointed: Hannibal won his way partly by force, and partly by dint of presents, with astonishing rapidity; and before P. Scipio had recruited his troops after the effects of a sea voyage, he learned that the enemy was preparing to cross the Rhone. Even then, so strong was his sense of the danger of leading an army into the field before they had recovered the tossing* and confinement of a passage in transports, he himself remained quiet; and only sent forward a body of cavalry, guided and supported by some Gauls in the pay of the city of Massilles, to reconnoitre the position of his antagonist. Meantime Hannibal had arrived on the Rhone, near the site of the modern village† of Roquemaure, between the towns of Orange and Avignon. He hired of the natives all the boats and small vessels which they used in their ordinary traffic down the river; and from these, added to a great number of hastily formed canoes, constructed by the soldiers themselves out of the trees of the adjacent country, he supplied himself in two days with abundant means of transporting his army. But the inhabitants of the opposite bank were assembled to oppose the passage: and it appears that Hannibal had not the means of persuading or bribing them to disperse, as he had so often done on his march from the Pyrenees. During the night therefore that followed the second day from his arrival upon the Rhone, Hannibal sent off a detachment to ascend the right bank of the river, and cross wherever they could find an opportunity. Hanno, who commanded this detachment, after marching about three-and-twenty miles, found a spot where the stream was divided by an island; and having halted, and constructed with all expedition a sufficient number of boats and rafts from the materials that he found growing near at hand, he crossed without opposition, and halted his troops for the remainder of the day in a strong position which he found on the left bank. At night they were again put in motion, and began to descend the river towards the point where the enemy were encamped. Their approach, was announced to Hannibal early in the morning, by a smoke which they raised as a signal; and he immediately, having his army in complete readiness, began to effect his passage. The Gauls left their tents, and crowded down to the edge of the river to obstruct the landing; when Hanno suddenly appeared, and at once began to set fire to their camp, and to attack their line in the river. Then the first divisions of the main army rapidly threw themselves on the opposite bank, and attacked the enemy in front: so that the Gauls, confused and disordered, presently fled, and all the infantry of the army passed over without any further difficulty.

It was on the day following that on which the passage had been effected, while Hannibal was still remaining near the river in order to bribe over his elephants, that Scipio's party of cavalry met, within a short distance of the Carthaginian camp, a body of Numidian horse, who had been detached by Hannibal on a similar service with themselves. A warm

Biography. skirmish ensued, and the Numidians were worsted, and chased back to their camp; after which the Romans hastened back to their general, to inform him of the situation in which they had found the enemy. Immediately Scipio, having sent his heavy baggage on board the fleet, commenced his march up the left bank of the Rhone, in hopes of bringing his antagonist to an engagement. But Hannibal, on the very day after the skirmish, had sent forward his infantry, still ascending by the left bank of the Rhone, while he waited with the cavalry to cover the passage of his elephants; and as soon as that operation was effected, he set off to overtake the line of march, the cavalry and elephants now serving to protect its rear. In this manner Scipio's hopes were disappointed. With all the exertions he could make, he did not reach the scene of Hannibal's passage till three days after the Carthaginians had resumed their march; and despairing any longer to overtake them, he returned to his fleet, and having intrusted the bulk of his army to his brother Cneus Scipio, and sent him off to Spain to carry on the war in that country against Hasdrubal, he himself sailed back to Pisa. There he landed, and set off through Tuscany, to take the command of the legions which were employed under the prætors Manlius and Attilius, in opposing the Cisalpine Gauls: and with this army he advanced to the Po, ready to meet Hannibal as soon as he should begin to descend from the Alps into the plains of Lombardy.

On the day of the skirmish between the Numidian and Roman cavalry, Hannibal had assembled his army, and had introduced some chiefs of the tribes of Cisalpine Gaul, who had just arrived with fuller assurances of the support of their countrymen; and who engaged to guide the Carthaginians in their march over the Alps. This being reported to the soldiers by Hannibal, and its effect heightened by some further encouragement from himself, the army resumed their march, as we have already mentioned, in high spirits. After four days they crossed the Isere, at its confluence with the Rhone; and in the plains between the two rivers, they found two brothers engaged in a contest with one another for the sovereignty of the country. Hannibal was pressed by the elder of them to espouse his cause; and his assistance speedily decided the quarrel. In return for this service, the prince, whom he had placed on the throne, supplied him abundantly with provisions, with arms, and with clothing, particularly with shoes, a most important article for their approaching marches through the snow. Besides this, he himself escorted the Carthaginian army for several days, till they reached the point where the mountains begin to bound the course of the Rhone, a little to the north of Les Echelles; and by his presence entirely secured them from any attacks which the petty chiefs of the country would otherwise have made on them.

At their entrance upon the mountains, at the confluence of the little river Guicrs Vif with the Rhone, the Gaulish prince left them, and returned home; and from this point the passage of the Alps may properly be said to commence. The route of the army, which has been an often disputed, has been at last fixed with certainty by the researches of General Melville, M. de Luc, and the author of "*A Dissertation on the Passage of Hannibal over the Alps*," published at Oxford in 1890. This last work has been closely fol-

lowed in the present narrative; and no authority can be more satisfactory, from the union of acuteness, sound sense, scholarship, and personal knowledge of the scenes described, by which it is distinguished. It appears then, that Hannibal, after crossing the Mont du Chat at the little village of Chevelin, descended to the edge of the lake Bourguet, and passing through Chamberri, came upon the valley of the Isere at Montmeillan. From thence he regularly ascended the right bank of the Isere, till he arrived at the Little St. Bernard, at which place he crossed the central ridge of the Alps. He immediately descended into the valley of the Dora Baltea, under mount Cramont, and followed the course of that river by Aosta to Ivrea; at which place he found himself in the territory of the Insubrian Gauls, and arrived completely at the end of his march over the mountains. In accomplishing this passage, about eighteen or nineteen days were employed; during some of which however the army halted; either to refresh itself, and to wait for stragglers, or to overcome the difficulties of the road. On two occasions, great loss had been sustained from the attacks of the natives; and immediately under mount Cramont, on the descent from the Little St. Bernard, a most formidable natural obstacle presented itself. The road ran along the side of the mountain, above the river Dora Baltea; and for a distance of about three hundred yards, it had been totally carried away by avalanches from the mountain above. To find any circuitous route by which the army could pass, was impracticable: it was the latter end of October, and a recent fall of snow had so filled the torrent beds and hollows, as to render them impassable. It happened also that the snow of the preceding winter had remained unmelted through the summer, and had now the hardness and slipperiness of ice; so that many men, in attempting to walk over it, fell, and being unable to stop themselves, were carried down precipices; and many of the beasts of burden, being heavily laden, broke through the ice partially, when they fell, or in their struggles to rise, were there held fast, and could not be extricated, or enabled to rise again on their legs. The troops therefore were obliged to halt and repair the road; and this was soon done sufficiently to allow the cavalry and beasts of burden to pass; but three days elapsed before it could be made safe for the elephants; and in this interval those animals suffered greatly from hunger, there being nothing capable of yielding them subsistence in that high and icy region. Indeed the whole army had found hunger one of their greatest evils: they had not the means of transport for such a stock of provisions as might have supplied them sufficiently during their march over the Alps; and much of what they had carried with them had been lost at different times with the beasts of burden: nor ought we to imagine that the temperature and fertility of the Alpine valleys in the days of Hannibal were at all such as they now are. They were habitable it is true; and produced, it is probable, pasture for cattle; but the cattle would be most likely driven away at the approach of an enemy: and the plunder of such dwellings as might be met with near the central ridge of the mountains, would afford but a poor support to a numerous army. In short, Hannibal estimated his whole loss, from the time he crossed the Rhone to his arrival amongst the Insubrians, at

Biography. eighteen thousand foot, and two thousand horse; and adding to this nearly thirteen thousand men, whom he professed to have lost between the Pyrenees and the Rhone, his army, when he entered Italy, amounted, by his own account, to no more than twenty thousand foot, and six thousand horse. The Roman writers, as was natural, rated the numbers with which he began the campaign on the Po, at an amount considerably greater; and we think that Hannibal's statement does appear somewhat exaggerated; and that a loss of thirty-three thousand men between the Pyrenees and the Po is much more than the details of his march can satisfactorily account for.

There is another circumstance, also, in the history of this first year of the war, which appears extraordinary. Hannibal, we are told, arrived among the Insubrians at the very latter end of October, such being the period assigned by Dr. Maskeyne to the setting of the Pleiades, the date given by Polybius. It appears, also, that his whole march from New Carthage, had occupied about five months; so that he could not have opened the campaign at the soonest, before the latter end of May. Allowing then for the length of time that must necessarily have passed in his wars with the Spanish tribes, between the Ebro and the Pyrenees, we cannot suppose that he could have entered Gaul earlier than the latter end of July. And yet it was not till after that time that the Roman consul reached the mouth of the Rhone to oppose him. It is true that the army which he was originally intended to command, was taken from him and sent into Cisalpine Gaul; and he was thus obliged to wait till two other legions were raised. Yet when we consider that the consuls went into office about the middle of March, and that the enlistment of soldiers was usually one of their first duties, and was a business that was soon completed; it certainly does appear, that with a little exertion, a Roman army might have reached Spain in time to support their allies the Bergusians, and possibly to prevent Hannibal from ever crossing the Pyrenees. At least it must be acknowledged, that the Romans were scarcely, on any other occasion, so late in bringing their troops into the field, as they were now, when unusual activity was so highly useful to them.

After his passage of the Alps, Hannibal halted for some time* amongst the Insubrians to recruit his army; and as soon as he was in a condition to move, he attacked the Taurini, a neighbouring tribe of Gauls, who were at variance with the Insubrians, and not well affected to himself; and in three days stormed their principal town, Turin, and put the defenders to the sword. This exploit presently led to the submission of the neighbouring people; but the majority of the Cisalpine Gauls, though anxious to join him as they had promised, were so overawed by the Roman army under P. Scipio, which was now in the heart of their territory, that they dared not make any movement; and some were even forced to serve in the consul's army. It became necessary, therefore, for Hannibal to lose no time in marching towards the enemy; and as Scipio was equally desirous to stop his progress, the two armies first approached one another in the angle formed by the junction of the river Ticinus with the Po; the Romans having just crossed the Ticinus in their march to the westward,

ascending the left bank of the Po. Here an action took place between the light troops of both parties, in which the Romans were defeated and the consul wounded. It was thus proved, that the Romans could not maintain themselves with advantage in the flat country, near the Po, against the superior cavalry of the enemy; they hastily, therefore, fell back, recrossed the Ticinus, descended the left bank of the Po, and having passed that river also, took up a position in the neighbourhood of Placentia. Hannibal pursued them as far as the Ticinus; but there finding that they had broken down the bridge behind them, he despaired of overtaking them; and retracing his steps up the Po, he found a spot where he could throw a bridge of boats across the river, by which he passed over his soldiers; then, descending rapidly along the right bank, he soon appeared in sight of the Romans, and took up a position within six miles of theirs.

The retreat of the consul immediately emboldened all the Gauls to offer their services to the Carthaginians; and to assist them both with men and provisions. So general, indeed, was this disposition amongst them, that two thousand of them who were serving in the Roman army, went over to Hannibal by night, after having killed and wounded a number of the Romans who were quartered near them. This so alarmed Scipio, that he was anxious to provide for the security of his soldiers by taking up a stronger position. He therefore left the neighbourhood of the Po, and abandoned his communications with Placentia; and retreating to the southward, he halted on some strong ground, situated apparently on the southern, or right bank of the river Trebia, not far from the modern town of Bobbio, and probably where the last hills of the Apennines begin to sink down into the plain of the Po. He was followed by Hannibal as far as the Trebia, and his rear sustained some loss in effecting its retreat; but the main army having reached its intended position, the Carthaginians halted on the north side of the river, and encamped at the distance of about five miles from their opponents. In this situation, Hannibal was supplied with every thing in abundance by the Gauls, and found them ready to give him a zealous support in all his enterprises.

Meantime, on the very first intelligence that Hannibal was arrived in Cisalpine Gaul, the Roman government had recalled Semonius from Sicily, where he was preparing to carry the war into Africa, and ordered him to join his colleague on the Po. He despatched the fleet to Rome without delay; but in order to avoid the expense of transporting the army, he dismissed the soldiers, binding them by oath to meet him again at Ariminum, on a day that he appointed. In this manner it became their business to provide themselves with a passage, and to maintain themselves on the march; but so strict were their notions of military duty, that in forty days after they left Lilybrum, they assembled, according to their oath, at Ariminum, and from hence were immediately led by Semonius to join the army of his colleague on the Trebia.

About this time, the town of Clastidium, where the Romans had a magazine of provisions, was surrendered to Hannibal by its governor, a native of Brundisium. This was a welcome event, as it gave him hopes that the cause of the Romans would not

* Polyb. lib. iii. c. 60, &c.

Biography. be considered that of the Italians in general; he therefore conferred signal rewards on the Brundisians officer, and treated the garrison, which consisted, probably, of Brundisian soldiers, with great humanity. Still he could not, with safety, rest contented with his present advantages. The moment that he paused in his advance, the Gauls began to doubt his ultimate success; and some of them, though in alliance with him, kept up also, he found, a communication with the Romans. He chastised this double dealing by a severe military execution on their territory; and the Roman cavalry being ordered to protect them, some skirmishes ensued, which ended rather to his disadvantage; although their result, by heightening the ardour of Sempronius to venture a battle, proved highly favourable to him. It was now the very end of December, or beginning of January; and in addition to the natural wish of a Roman general, not to appear afraid of his enemy, Sempronius was anxious to finish the war before the new consuls should supersede him in his command. His colleague was not yet recovered of his wound, and could, therefore, take no active part; and this too he regarded as a fortunate circumstance, thinking that he should thus enjoy the undivided glory of the victory, which he doubted not soon to gain.

The ground between the Trebia and the Carthaginian camp, was flat and open, but intersected in one point by a small streamlet, whose banks were steep and overgrown with brushwood. Here Hannibal concealed about two thousand of his best soldiers in the night; and early the next morning, he sent his light cavalry across the Trebia, with orders to insult the Romans in their lines, and provoke them, if possible, to follow them; in pursuance of their instructions, they should re-cross the river, as if to fight. Meantime, his infantry were ordered to take their usual meal in their tents, to get ready their horses, and to arm themselves by the fire-side. The Romans, on the contrary, no sooner saw the Numidian cavalry approach, than their own horse first sallied out to engage them; and then the whole army was hastily formed, and without waiting to take any food, began to ford the Trebia, in order to attack the enemy. The day was cold and snowy, and the river so swollen by the rains of the preceding night, as to be up to the breasts of the soldiers; they arrived, therefore, on the opposite bank drenched and chilled with the cold, and began, moreover, soon to feel weak from their want of food. In this state they encountered the Carthaginians, who were in full strength and spirits, and who had not left their tents till the Romans had effected their passage of the river. Still their courage and their great superiority in numbers, (for the Romans had six and thirty thousand infantry to oppose to not more than twenty thousand) enabled them to maintain the contest for some time; till their cavalry being chased off the field, and themselves attacked in flank by Hannibal's victorious horse, and in the rear by the detachment that he had concealed in ambush, their two wings were put to flight, and driven back to the Trebia. Ten thousand men, who formed the centre, cut their way through the enemy, and escaped to Placentia; and the greater part of the cavalry, and those of the infantry who got off the field, joined them, and fled to the same place of refuge; but the largest portion

of the army was cut to pieces; for it had sowed and reaped to incessantly during the day, that to re-cross the Trebia was impossible; and the fugitives were slaughtered on the banks by the Carthaginian cavalry and elephants. The loss of the conquerors in the action was inconsiderable, and fell chiefly upon the Gauls, who were the least valued part of the army; but the severity of the weather, while it hindered the flight of the Romans, was heavily felt, also, by the Carthaginians: for many men and horses perished from the cold, and of the elephants one only remained fit for service after the battle.

Thus did Hannibal triumphantly conclude his first campaign in Italy. The whole resources of Cisalpine Gaul, were now secured to him; and the remains of the Roman army were shut up in some of the towns on the Po, deriving all their supplies by water from the sea. This state of things convinced the senate of the greatness of their defeat, which the cool in his despatches, had endeavoured to conceal. Efforts were instantly made proportionate to the danger: the newly elected consuls, Cnæus Servilius and C. Flaminius, were busily engaged in raising soldiers, and magazines were formed at Ariminum and in Tuscany, on the two sides of the Apennines, where the two consular armies were destined respectively to act. Nor were the other parts of the empire neglected; on the contrary, troops were sent to Sardinia, Sicily, and Tarentum, that the enemy might find no point unguarded, if he should attempt a diversion in favour of his main enterprise. Assistance, moreover, was applied for, and obtained, from king Hiero; and a fleet of sixty ships was got ready to maintain that naval superiority which, since the event of the last war with Carthage, the Romans had enjoyed without interruption.

Hannibal, on his part, rested for a short time in Cisalpine Gaul; and in pursuance of his plan of distinguishing between the Romans and their Italian allies, he detained all his Roman prisoners in confinement, and kept them on a moderate allowance of food; while to the Italians he showed all possible kindness, and sent them away without ransom, assuring them that he was come into Italy as their deliverer, and that he hoped that they would not fail to join their arms with his to assert their freedom. He was anxious to open the campaign with the least possible delay; for the Gauls were impatient to remove the seat of war out of their own country into that of the enemy, and it was not his interest to disoblige them. The consuls were moving to their respective stations, Servilius to Ariminum, and Flaminius to Arretium; and Hannibal had resolved, first to turn his arms against the latter. But here again the direct way into Tuscany presented great natural difficulties. The numerous streams that flow from the Apennines towards the Po, were an insufficient drain for all the water which descended from the mountains; and before it was carried off by the artificial channels which in later times were formed for its reception, it used to stagnate, and spread over a large tract of country. This marshy region, however, was not only the nearest way into Tuscany, but that by which he should be most likely to surprise his enemy; so that Hannibal, whose army was accustomed to overcome every obstacle, determined to penetrate through it. The operation could not be completed in less

than four days and three nights; in which the soldiers suffered dreadfully from want of sleep; for all around them was water or bog, and they could only sometimes snatch a partial rest, by throwing themselves down upon the beasts of burthen, which having fallen with their load, and being unable to rise, were the only objects appearing above the level of the marsh. Hannibal himself rode on the only remaining elephant; but the damp air produced an inflammation in one of his eyes, which as he had neither leisure nor means to pay it proper attention, terminated in the entire loss of the sight of it. At length he reached the Apennines, and halted for a time in the neighbourhood of Fiesule, partly to rest his troops, and partly to make himself more fully acquainted with the nature of the country before him, and the character of the enemy's general.

C. Flaminius, who commanded the Roman army in Tuscany, might, in an ordinary war, have ended his consulship with a triumph, like so many other Roman consuls whose talents were no way superior to his, but who were more fortunate in their antagonists. He had been consul six years before, and had, in fact, then obtained a signal victory over the Insubrians in Cisalpine Gaul; the excellence of the Roman military system supplying the want of ability in the general in a struggle with such an enemy. Since that time he had been censor, and distinguished himself by making the road from Rome to Ariminum, which was long celebrated under the name of the Flaminian way. He seems to have been a rash and headstrong man, and in his former consulship had incurred the censure of the senate for his contemptuous disregard of the religious ordinances of the commonwealth. This affront made him espouse the popular party with more violence than ever; for before this he had been known as the proposer of an Agrarian law, when the Senones were dispossessed of their settlements in Picenum by the Romans. Alone, of all the senate, he supported a law which was to debar the senators from engaging* in commerce; and in his present consulship, he had left Rome in an irregular manner, without having performed the ceremonies which were required by law; and had since slighted the orders of the senate when they had sent to recall him from the army. Hannibal, having become acquainted with his character, did not doubt that he should soon provoke him into the commission of some gross error; and, therefore, as soon as he could put his army in motion, he advanced boldly through Tuscany, left the Roman camp behind him, as if in contempt, and pursued his march towards Rome, laying waste the country around him with fire and sword. Flaminius, as he expected, immediately set out to follow him; regardless of all the cautions of his officers, and only anxious to overtake and engage the enemy. Hannibal, meantime, passed by Cortona on his left, and the lake Trasymenus on his right; and then entered on a deep valley, which extended some way from the lake into the surrounding hills, and was at last closed by their meeting each other at the upper end of it. On these hills then he stationed the head of the valley, Hannibal took post with his African and Spanish infantry; while the Gauls, the light-armed troops, and the cavalry, were concealed

behind the hills on both sides of the defile, and reached as far as its junction with the lake. These positions he had occupied during the night; and at day-break the next morning, Flaminius having passed unmolested along the whole length of the lake, entered the valley at the end of it, by which he supposed the Carthaginians had emerged to the higher grounds, on their march to Rome. A thick fog hung upon the hills, and more effectually concealed the movements of the enemy. All at once he found himself attacked on every side, and after such a resistance as could be made under circumstances so unfavourable, he himself fell, and almost the whole of his army were either killed or made prisoners.

This second victory cost Hannibal no more than fifteen hundred men, of whom the greater part, as before, were Gauls. In his treatment of his prisoners also, he observed the same distinction as after the battle of the Trebia; again dismissing the Italians without ransom, and repeating that his cause was the same as theirs. Nor did his good fortune end here: for within two or three days of the battle, his cavalry and light troops cut off an entire detachment of Roman horse, amounting to four thousand men, whom Ca. Servilius had sent from his own army to strengthen his colleague. His prospects seemed most encouraging, and after some consultation with his officers, and a short halt to refresh his troops, he began more fully to commence that system of warfare which was best calculated to bring the war to a triumphant issue. It consisted in overrunning the richest countries of Italy, enriching his army with the plunder, and weakening the resources of his enemy: above all, in thus giving an opportunity to those Italian nations who were disposed to join him, of doing it with safety. For it should ever be remembered, that the question to be tried was, not whether an army of thirty thousand men could conquer Italy, but whether it could so stagger the power of Rome by one or two vigorous blows, as to enable the nations of Italy to resume their old struggle for independence, and to place Carthage instead of Rome at the head of the Italian confederacy. With this view, Hannibal marched through Umbria and Picenum to the shores of the Adriatic, ravaging the country as he passed, and putting every Roman that he found on his way to the sword. When he had reached the coast, he moved on slowly to the southward, making long and frequent halts, that both the men and horses of his army might recover all the effects of their past hardships in the abundance and comfortable quarters which they now enjoyed. Here too he paid a high compliment to the excellence of the Roman manner of arming the soldier; for he availed himself of the vast quantities of arms taken in the preceding battle, to equip his African troops with the large shield and stabbing sword used by the Roman infantry. He took advantage also of his neighbourhood to the sea, to send despatches to Carthage; where the news of his victories determined the government to make every exertion to carry on the war with vigour. At length, after having laid waste successively the lands of the Præstutii, the Hadriani, the Marrucini and Frentani, he entered Apulia, and was beginning the same devastations there, when the new Roman general appeared in the field, and took up a position within a short

Biography. distance of the Carthaginian camp, in the neighbourhood of Æca and Arpi.

From This new antagonist was the famous Q. Fabius Maximus, whom the Romans after their defeat at the lake Thrasymenus had appointed dictator.—
3785. Attributing the disasters of Flaminius to his contempt for the religion of his country, Fabius was careful before all other things to order such sacrifices, and vows, and solemn ceremonies, as might lead the people to hope for the favour of heaven. When this duty was discharged, he took the field with M. Minucius his master of the horse, at the head of four Roman legions, and the usual contingent from the Italian allies. This army consisted of two legions newly raised, and two which had been under the command of the consul Servilius at Ariminum, for that officer after the defeat of his colleague, had fallen back upon Rome in order to cover the capital; and his authority being now superseded by the appointment of a dictator, his legions were transferred to Fabius, and he himself was sent to command the naval force in the neighbourhood of Rome, with a general commission to oppose any attempts of the enemy to annoy the republic by sea.

The campaign that followed has been often related, as displaying the wise caution of Fabius, the rashness of Minucius, the magnanimity with which the dictator rescued his rival from destruction, and the liberality with which the master of the horse acknowledged his own inferiority, and the wisdom of that system which he had hitherto condemned. Considered in a military point of view, it was highly advantageous to the Romans in giving them a respite from defeat, and in teaching them to regain in some measure their confidence in themselves. Yet Hannibal was able to pursue his plan of warfare without interruption. From Apulia he crossed the Apennines; laid waste the Samnite territory, took the town of Venusia; and then descended into the rich plains of Campania, which he overran and plundered without opposition. Here he provided himself with abundant stores for the maintenance of his army during the winter; and retreated with his plunder in defiance of all the endeavours of Fabius to intercept him. He returned to his former quarters in Apulia, and having taken the small town of Tironium, he fortified it as his principal magazine for the winter; and as it was now the season of harvest, his formidable cavalry were duly bringing in the corn of the surrounding country. And although some of these foraging parties were occasionally cut off by the Romans, yet the supplies they collected were amply sufficient to support the Carthaginian army through the winter in a state of plenty. In one great point indeed, Hannibal had hitherto been unsuccessful; none of the Italian states had as yet joined him; but the last campaign had showed that the Romans were unable to protect the territory of their allies; and a continuance of his system of ravage, with the manifest inability of the enemy to prevent it, might at once urge and encourage those who suffered from it, to unite themselves to his cause as the line of conduct most favourable, both to their present and future interests.

During the latter end of the autumn, and through the whole of the winter, the Roman army had been commanded by Servilius, who had left the fleet in Sicily, and by M. Attilius Regulus, who had been

chosen consul in the room of Flaminius, to act when the six months, the usual term of the dictator's office, should be expired. But the change of commanders made no difference in the state of affairs; Servilius and Attilius followed the system of Fabius, and the season of the year forbade any active operations. Early in spring, however, Hannibal opened the campaign by the capture of the post of Cannæ, where the Romans had laid up their principal supplies of provisions. The distress to which their troops would thus be subjected, and the effect which Hannibal's unchecked successes were likely to produce upon the minds of their allies, urged the Roman generals to consult the senate as to the measures they were to pursue. It was deemed advisable to risk a general engagement; but in order to ensure a favourable issue, the Roman army of four legions, now in the field, was to be doubled by the addition of four new legions, to be raised by the new consuls, L. Æmilius, Paulus, and C. Terentius Varro. Meantime Servilius and Attilius were ordered to remain on the defensive, till they should be joined by the intended reinforcements, and the new consuls should arrive to take the command.

When the whole army * was united on the banks of the Aufidius, opposed to Hannibal, it presented the most formidable force that Rome had ever sent out on one single service. There were eight Roman legions, at their full complement; amounting to forty thousand foot, and two thousand four hundred horse; and if these one half were well acquainted with the enemy, as having been actively employed against him during the whole of the preceding year. The Italian allies amounted to an equal number of infantry, and to nearly four thousand cavalry; half of these also, as well as of the Romans, having been practised by the last year's service; of the generals, one indeed, Terentius Varro, is represented as a man of low birth, rash, ignorant, and self-willed, but Æmilius was an officer of approved ability, and Servilius and Attilius, who still acted as lieutenants under the consuls, were both men of good reputation. It was hoped therefore that whilst the caution of Æmilius would secure the army from any such acts of ignorant rashness as had before proved so fatal, the courage of the Romans when engaged in the open field, and with numbers nearly double those of the enemy, would not fail of obtaining its usual result, a complete and decisive victory.

The inconvenience, however, of a divided command, and the folly of Varro, marred all these fair prospects. Æmilius instantly perceived that the open country near the Aufidius was a field of battle ill-suited to the Romans, while the enemy possessed so great a superiority in cavalry. He wished therefore to remove to more uneven ground; but the command was held by the two consuls alternately, day by day; and when Varro commanded, he brought the army to a position so near that of Hannibal, that to retreat without fighting was henceforth impracticable. At length after a few days, Varro's impatience, which was fully shared by his soldiers, could no longer be restrained; and when it came to his turn to be the acting general, he crossed the Aufidius, and formed his troops in order of battle on the right bank of the river, fronting

southwards; the infantry being drawn up in a single line of unusual depth, and the cavalry covering the two wings. Hannibal was not slow in crossing the river to oppose them. He too stationed his cavalry on the wings; the Gauls and Spaniards on his left, and the Numidians on his right: but his infantry, instead of presenting a straight line, formed a crescent, whose convex side was towards the enemy; and of this crescent the central and more advanced troops consisted of Gauls and Spaniards, while its extremities, which fell back almost behind the centre, were composed of Africans, who were now armed with the sword and shield of the Roman legionary soldiers.

After some skirmishing of the light troops, the cavalry on both sides engaged: and the Gauls and Spaniards, having soon defeated the Roman horse opposed to them, moved round to the right, and decided the contest which was going on there, between the Numidians and the Italian allies. Meantime the Roman infantry advanced to the attack, and although their front was already too narrow in proportion to their numbers, yet the zeal of the soldiers on the right and left narrowed it still more; for finding themselves with no enemy immediately in front of them, owing to the falling back of the extremities of Hannibal's line; they crowded upon their own centre in order to share in the contest with the Gauls and Spaniards, the only part of the Carthaginian infantry that was hitherto engaged. Thus the Roman army became one solid and unmanageable column; which broke through the Gauls and Spaniards by the mere weight of its charge, but pressing forward by the impulse given by the rearmost soldiers to those in the front, it was attacked on both flanks by the Africans, who were armed like the Romans, and who were fresh and in perfect order. Every one knows the utter destruction to which an attacking column of infantry is exposed, when it is itself assailed on the flank. Such was now the condition of the Romans; and their numbers only served to cramp their movements, and to expose them to slaughter without defence. Still the battle was obstinately maintained, till the Gaulish and Spanish horse, having already achieved two victories in the course of the day, now came up and fell upon the rear of the Roman infantry. Then followed a slaughter of which modern warfare can give no adequate notions. Whether the vanquished scorned to ask for quarter, or the victors refused to give it, the whole mass of the Roman and allied foot that were in the field, to the amount of seventy thousand, were cut to pieces, with the exception of three thousand, who escaped to some of the adjacent towns. Ten thousand men had been left by the consul Æmilius in his camp, with orders to surprise if possible the camp of the enemy, during the action. They found, however, that Hannibal had provided for it a sufficient defence; and they spent the day in fruitless efforts to take it, till the battle was decided, and the approach of the victorious army obliged them to fly to their own camp for safety. There they were presently attacked by Hannibal, and were soon obliged to surrender themselves as prisoners. The destruction of the cavalry was hardly less complete; only seventy men escaping with Varro to Venusia; and about three hundred of the allied horse getting safe to the different towns in the neighbourhood. Of the officers, one of the consuls, L. Æmilius, the

consuls of the preceding year Servilius and Attillus, and, according to Livy, Miancius, the late master of the horse, were among the slain. Nor was so great a victory purchased by a heavy loss on the part of the conquerors; four thousand Gauls, fifteen hundred Spaniards and Africans, and two hundred of the cavalry, were all that fell; so that the army was not incapacitated from prosecuting its success immediately.

Some of the states of Italy after the battle of Cannæ began to incline to the cause of the conqueror, and to look out for opportunities of surrendering their towns to him. Campania, and most of the Greek cities of the south of Italy, shortly after revolted from Rome, and actively assisted Hannibal. But the predominant feeling, especially amongst the higher ranks, was an aversion to an army made up of Africans, Gauls, and Spaniards; and a disposition, partly from love and partly from fear, to maintain their old connection with Rome. Besides there were * as fewer than thirty cities in Italy which were Roman colonies: and their support might be depended upon by the senate, almost as surely, as any of the governments of modern Europe could rely upon the inhabitants of their provincial towns. It should be considered also, that the ancient system of warfare gave a security to citizens in defending their walls, which the use of cannon and mortars has totally destroyed. A besieging army by means of a bombardment could in a few days inflict such misery on a large and wealthy city, as the firmest courage could scarcely withstand: whereas any of the populous towns of Italy had nothing to fear from Hannibal, but the slow process of a blockade, or the seducing some of their own citizens to open the gates to him. It may be readily understood then, how utterly fruitless would have been the attempt to besiege Rome itself, while the Roman fleets commanded the seas; whilst so many Roman colonies were scattered over the adjacent country; and whilst the Carthaginian army could not have formed the blockade of so large a city without exposing itself to be overwhelmed by superior numbers, or whatever quarter the Romans should think proper to make a ally.

But in thus stating the means of resistance which Rome had still in her power, we must not forget to do justice to her firmness, in resolving to use them all to the utmost. Few nations have ever exhausted all the resources which they possessed: they have generally hesitated to risk their last stake, and have availed themselves of the chances yet remaining in their favour to procure more tolerable terms from their enemy. This policy the Romans utterly scorned; they seem on all occasions to have abhorred nothing so much as giving their own consent to the diminution of their empire: they knew no alternative between a peace whose terms they could dictate, and a war of extermination. Other nations would have thought, that although they might make a successful resistance; yet the evils they must inevitably suffer in the course of it, more than counterbalanced the sacrifices to be made in a disadvantageous treaty: they would have judged the deliverance of Italy from the scourge of Hannibal's army, cheaply purchased by the cession of Spain, or Sardinia, or Sicily. Or at any rate, they would have abandoned those distant

* Livy, lib. xxvii. c. 5, 10.

Biography. sions for the present, and concentrated all their forces is the defence of their own country. But the judgment of the Romans being never warped by fear, they steadily saw how small a force was indispensable for the preservation of their city, and they did not waste upon that object a single superfluous soldier. They saw that it was possible to protect Rome, and at the same time to maintain their foreign possessions; and being possible, they boldly determined to attempt it. They therefore finally triumphed:—for it rarely happens that men do every thing for themselves which is within possibility, without finding such honest and resolute exertion rewarded with success.

This undaunted spirit was of great service to the Romans on two occasions which shortly followed: the defection of their allies the Syracusans, and the confederacy formed between Hannibal and the king of Macedonia. Had the Roman legions been recalled from Sicily after the battle of Cannæ, the Carthaginians, aided by their party which was now predominant in Syracuse, might have recovered the whole island to their dominion, and from thence have been able to co-operate with the army of Hannibal in the south of Italy. But from having the ordinary military establishment of a province ready on the spot to check the first symptoms of revolt among the Sicilian cities, the Romans were able to act on the offensive, and by the reduction of Syracuse itself, secured to themselves a more absolute mastery over the whole of Sicily than they had ever possessed before. In like manner, they too sooner were informed of the hostile intentions of the king of Macedonia, than they began to organize a coalition against him in his own neighbourhood, and even assisted it with a force of their own, which, though small, was still a sufficient warrant for their earnest interest in the war, and served to keep their name and power continually in the minds of their allies. And thus they hindered Hannibal from ever deriving any assistance from the Macedonians; and amused Philip with a desultory and indecisive hostility, till having finished their contest with Carthage, they had ample means to take vengeance on him for his ill-timed interference in the quarrel.

The reader will perceive that our narrative is no longer given in the same detail as it was up to the battle of Cannæ. The fact is, that owing to the loss of the greater part of the history of Polybius, we are left without any regular account, worthy of credit, of the subsequent years of the war. It is a mere waste of time to copy Livy, and Appian, and Plutarch, through all the inconsistencies, and improbabilities, and idle tales, which their utter ignorance of military affairs, their want of judgment, and their carelessness, have heaped together for the entertainment of children, and the provoking disappointment of sensible men. We shall content ourselves, therefore, with giving only such a sketch of the remainder of the war, as may illustrate, to the best of our power, the causes of its final issue.

After the first violence of grief and consternation had subsided, the Roman senate began to take the necessary measures for the safety of the commonwealth. Troops were raised from among the youngest citizens arrived at the military age; from the Latins and the other Italian allies; and even from slaves and criminals: and thus an army was provided with-

out recalling any of the legions from the provinces. To pay and equip these soldiers, the direct taxes of the state were for one year doubled; but such an expedient could only be temporary; and it appears that the expenses of the war were in general defrayed by the ordinary taxes, assisted by large loans from wealthy individuals, chiefly from those who had amassed large fortunes by undertaking the government contracts* on former occasions; and who were now called upon to assist the state with some of that money which they had gained at its expense. Three companies, consisting of nineteen individuals each, were accordingly formed, and continued to provide the armies of the republic with all the articles which they required; on condition that while thus employed, they should be exempted from military service, and that if any of the stores furnished by them should be taken or lost at sea, the government should ensure them from being the sufferers. Some supplies also of corn and money were given on one occasion by king Hiero, for the support of the troops in Sicily; and by the cities of Sardinia† for the legion stationed in that island. This deserves notice, as it explains the manner in which the Romans could keep up their armies in the provinces, even when their treasury was in such extreme distress. With that ample discretion which was so generally given to the Roman magistrates, the proconsuls and praetors applied the resources of their province without scruple to the support of their troops, whenever the government at home could not conveniently assist them. Besides the supplies of corn which were regularly brought in to head-quarters, and sold at a certain price affixed by the Roman officer, the means were not wanting to draw large sums from the wealthy provincials, by representing to them the absolute necessity of paying the troops, in order to prevent such disorders as a needy soldiery would unavoidably commit; and sometimes, it appears, men were demanded as well as money. It is true, the inhabitants of a country thus oppressed, might carry their complaints to Rome; but if it appeared that their oppressor had been actuated by no personal motives, he was sure to find not only pardon but favour, for the vigour with which he had promoted the service of the republic. Admitting, however, that the legions in the provinces were maintained at little expense to the government at home, still the armies that were employed in Italy, and the fleets which were required to protect the coasts from the ravages of the enemy, rendered as we know a heavy burthen of taxation necessary; and it becomes a curious question, how individuals were enabled to support it; or in other words, from what sources the Romans at this period derived their wealth. Their chief resource doubtless was agriculture; and this might be carried on in Tuscany, Umbria, Picenum, and in the immediate neighbourhood of Rome itself, with little direct interruption from the plundering parties of the enemy. Some commerce there was, but it was not very considerable; nor does it appear what return the Romans could have made, under so severe a pressure of war, for the commodities of other nations. However, there were no means of bringing into the country a sufficient supply of specie to meet the constant demands of the war; and therefore the

* Livy, lib. xliii. c. 45, 49.

† Ibid. lib. xliii. c. 21.

Biology. copper currency, * which was the standard of all payments, was depreciated to a prodigious amount: the pound of copper, which since the first Punic war had been coined into six asses, being now coined into twelve; and the denarius, a silver coin usually equivalent to ten asses, passing now in ordinary dealings for sixteen: although in the government payments of all sums reckoned by denarii, it was still rated at its nominal value. After all, the want of money was so great, that six years after the battle of Cannæ, the higher ranks contributed all their plate, and almost all their personal ornaments of gold or silver, for the service of the state; so that had not the war about that period begun to take a more favourable turn, and the capture of New Carthage brought some of the resources of the Spanish mines into the treasury, it is difficult to conceive how the armies could have been paid for the future. In considering the great efforts made by the Romans, we must recollect, in order to render them credible, what immense sacrifices were required to make them. There is scarcely any limit to the military exertions of a people, when they will consent to give up every luxury and almost all the conveniences of life; and require to retain nothing but food, habitation, and clothing. The term "ruin," as applied to the finances of a nation in modern times, denotes a state of comparative affluence to that which existed in Rome, during Hannibal's invasion; and the amount of capital in the poorest and most devastated country of modern Europe, has always far exceeded that which the Roman republic possessed at the moment of some of its most brilliant victories.

In commencing, as it were, a new act of the war, after the battle of Cannæ, it was above all things important, that the Romans should not again risk the loss of so large a portion of their population, as had lately been cut off by the enemy. Their system, for the future, consisted in defending vigorously the several towns that adhered to their interests: and whilst they still kept an army in the field to watch Hannibal's motions, they took care that it should never expose itself, by venturing into the plains, to the certainty of defeat, from the superiority of the Carthaginian cavalry. For it seems, so high a confidence was still placed in the excellence of the Roman infantry, that they had no apprehensions of being attacked in positions where cavalry could not act; and still less, of being forced in their camps or intrenchments. Yet, unless they could employ a force so superior in point of numbers, that while one part of it was watching Hannibal, another might be acting elsewhere, supporting the faithful, and chastising the revolted, allies of the republic, they could not hope for final success. Happily for Rome, the successful resistance of some small towns which Hannibal besieged soon after his victory at Cannæ, disposed the Italians in general to think more favourably of the Roman cause, and contributed to prevent the other allies from following the example of the Campanians. Thus the Romans were soon in the condition of a nation contending against an army, which though not without partisans, yet found them only an inconsiderable minority of the whole people. Thenceforward Hannibal's movements were often cramped by the necessity of providing for the

subsistence of his own army; when the country immediately around him was purposely laid waste by the enemy; and his communications with more remote quarters were rendered almost impracticable by the numerous armies or garrisons with which he was on every side surrounded.

It may here be reasonably asked, why the government of Carthage did not make every effort to reinforce their general, and enable him to carry on one operation without necessarily neglecting every other. The want of a contemporary Carthaginian historian, prevents us from giving any satisfactory account of the domestic politics of Carthage: but we may conjecture, that for a long time after the battle of Cannæ, the government, in their admiration of Hannibal's talents, imagined that he could do every thing for himself; and that their attention was more needed in other quarters, in Spain, in Sicily, or Sardinia, where their affairs were not conducted by men of the same extraordinary ability. And, indeed, in spite of all his difficulties, Hannibal continued for so many years to gain such frequent advantages, that all on his side might have seemed secure; and thus the temptation might have been greater to endeavour to turn the scale in other parts of the contest, where defeat might be considered as an event less impossible. At last, when the sudden restoration of the Roman affairs in Spain by P. Scipio rendered the Carthaginians more doubtful than ever of speedy success in that country, Asdrubal, another son of Hamilcar, set out from Spain, following the track of his brother, and designing to lead an army that might co-operate with him into Italy. Hannibal was prepared to expect him, and was not likely to disconcert their joint plans by any failure of exertion on his part. But it appears that the speed with which Asdrubal crossed the Alps, and arrived in Italy, was quite unlooked for by his brother; who recollecting the delays of his own march, had thought it impossible that Asdrubal could accomplish his passage before the season was considerably advanced. The natives, however, now aware that they were not the object of attack, had listened to Asdrubal's professions of peace, and had allowed him to pass unmolested; so that it is said he performed in two months the same march which had occupied Hannibal during five. Livy adds, that he lost much of the time which he had thus gained, in a fruitless siege of Pincetia; and that Hannibal, having heard that he was thus occupied, delayed setting out to join him, from an expectation that he would not soon be able to take the town. Be this as it may, the Romans succeeded in intercepting some messengers whom Asdrubal had sent to apprise his brother of his movements; and thus it was that C. Claudius Nero, the Roman consul who was opposed to Hannibal in Bruttium, formed the bold design of marching secretly with a part of his army to join his colleague in the north of Italy, and of thus overwhelming Asdrubal with his united forces. So ably was this operation effected, that Hannibal's vigilance was completely eluded, and Nero, unknown to him, carried with him from the camp in Bruttium seven thousand men, who being reinforced by other troops on the road, brought to the consul M. Livius an overpowering accession of force. The two consuls then attacked Asdrubal on the banks of the little river Metaurus, in the country of Senn Gallicia, and succeeded in destroying him and his army.

This severe blow reduced Hannibal to the necessity of acting entirely on the defensive. It had been for some time evident, that his single army could not overthrow the supremacy of Rome in Italy; still, while the fate of the war was balanced in Spain and Sicily, and while he was looking forward to the arrival of his brother to co-operate with him, he might be justified in making himself as troublesome as possible to the enemy, even though he might sometimes by so doing incur the danger of some loss to himself. But now his policy was altered: to maintain his ground in Italy, till another effort could be made by his government to support him, was now his most important duty. He was obliged to abandon several towns which had revolted to him from the Romans; and the inhabitants of others he forced to desert their cities, and to retire with him into the remotest part of Bruttium. The superiority of his personal character was so great, that the Romans never dared to attack him; and thus he might repose himself, as it were, for a while, watching for the first favourable opportunity of issuing from his retreat, and attempting once more to accomplish the design with which he had originally invaded Italy. The death of Asdrubal had not extinguished all his hopes: Mago, another of his brothers, after the total wreck of the Carthaginian interest in Spain, was ordered to attempt a diversion in Italy; and he, transporting with him by sea a small force, landed in Liguria, and surprised the town* of Genoa. The name of his family urged the Gauls and Ligurians to flock to his standard, and his growing strength excited much alarm among the Romans, and obliged them to keep a large army in the north of Italy to watch his movements. The details of his adventures are unknown; nor are we informed what cause prevented him from attempting to penetrate into Tuscany. We only find that he became so formidable an enemy as to maintain an obstinate contest against an army of four Roman legions, a very few weeks before the final evacuation of Italy by Hannibal; nor were the Romans certain of victory, till Mago was mortally wounded, and obliged to leave the field. From the scene of the battle, which is said to have been in the country of the Insubrian Gauls, he retreated, with as much expedition as his wound would allow, to the coast of Liguria; and there he found orders from Carthage, that he should immediately return to Africa, to oppose the alarming progress of P. Scipio. He accordingly embarked with his troops, and commenced his voyage homewards: but his exertions and anxiety of mind had proved too great for his strength; and he had scarcely passed the coast of Sardinia, when he expired. So unwearied was the zeal, and so great the ability, with which the sons of Hamilcar maintained, almost solely by their personal efforts, the cause of their country, against the overbearing resources and energy of the whole Roman people.

When the Carthaginian government sent for Mago from Italy, they also recalled Hannibal. We have already said that there exists no satisfactory account of his operations, after the battle of Cannæ; but this applies, with peculiar force, to the three or four years that immediately preceded his return to Africa. The Roman writers have transmitted to us some reports of

victories obtained over him in Italy, too audacious in falsehood, for even themselves to believe. But in truth, the terror with which he continued to inspire his enemies, after his career of success was closed, is even more wonderful than his first brilliant triumphs. For four years after the death of Asdrubal, he remained in undisputed possession of Bruttium, when the Romans had re-conquered all the rest of Italy. Here he maintained his army, without receiving any supplies from home, and with no other naval force at his disposal, than such vessels as he could himself build from the Bruttian forests, and man with the sailors of the country. Here, too, he seems to have looked forward to the renown which awaited him in after times; and as if foreseeing the eager interest with which posterity would follow his progress in his unequalled enterprise, he recorded many minute* particulars of his campaigns on monumental columns, erected at Locunium, a town situated in that corner of Italy, which was so long like a new country acquired by conquest, for himself and his soldiers. It is said, also, that he retained one or two Greeks in his army, for the purpose of preserving a full detail of his exploits in that which was the universal language of the civilized world. At length, when it was plain that no new diversion could be effected in his favour, and when the dangerous situation of his country called for his presence, as the last hope of Carthage, he embarked his troops without the slightest interruption from the Romans, and moved only by the disasters of others, while his own army was unbroken and unbeaten, he abandoned Italy fifteen years after he had first entered it, having ravaged it with fire and sword from one extremity to the other, and having never seen his multiplied victories chequered by a single defeat.

It is now necessary to trace the circumstances which enabled the Romans to carry the war into Africa, whilst Hannibal still remained unvanquished in Italy. When P. Cornelius Scipio, himself hastening to meet the Carthaginians on the Po, after their descent from the Alps, despatched the greatest part of his army to Spain, to restore the interests of the Romans there, he paved the way by this wise and vigorous step, for the future victories of his son, and the final triumph of his country. Had Spain been resigned to the Carthaginians without a struggle, Asdrubal would have followed his brother into Italy, after an interval, not of years, but of a few months; and a succession of armies, raised with the utmost ease from the numerous and warlike population of Spain, would have been poured across the Alps, and crowned the utmost wishes of Hannibal. But the resolution of P. Scipio obliged the enemy to contend for the possession of Spain, instead of marching into Italy; and in the long and varied struggle that ensued, the great superiority of the Roman military discipline, and the unyielding vigour of their policy, obtained for them, in the end, complete success.—It would be most unjust, however, not to attribute the rapidity with which the conquest of Spain was at last achieved to the great personal qualities of the Roman general, the famous P. Scipio Africanus. With every allowance for the favourable disposition with which his character and actions are described, not by the Roman writers only, but even by Polybius himself, from his connection with the younger

Scipio, it is still evident that his merit far surpassed that of all his own countrymen of his time, and rendered him no unworthy antagonist of Hannibal. He took the command in Spain^{*} at an early age, and when the defeat and death of his father and uncle, after an able, and for the most part, a prosperous career of six years, had almost destroyed the hopes of the Romans in the peninsula. In these circumstances, his first step gave evidence of the most masterly judgment and the most decisive vigour. Availing himself of the dispersion of the enemy's armies, he marched immediately against New Carthage, and carried that important place before the Carthaginian generals were aware of its danger. He found in it, besides a great variety of military stores, the hostages whom the Carthaginians had taken from the principal Spanish tribes, as securities for their allegiance. These he sent to their respective homes, having given them each some present out of the plunder of the city; and in this manner he greatly inclined the Spaniards to come over to the side of the Romans. And being afterwards delivered from his ablest antagonist, by the march of Asdrubal into Italy, he so completely defeated the other Carthaginian generals, that in five years after his arrival in the province, he dispossessed the enemy of every town they had held in it, except the city and island of Gades, situate in its most remote extremity.

After these important services he returned to Rome, hoping to be elected consul, and to be allowed to carry into execution the design which he had for some time conceived, of forcing Hannibal to leave Italy by attacking the Carthaginians in Africa. In both these points his wishes were fulfilled: but according to the inviolable policy of Rome, he was desirous of securing the aid of some ally in the country which he was going to make the seat of war. For this end he had, during his command in Spain, opened a communication with Syphax, the most considerable of the Numidian princes; and according to Livy, had actually concluded a treaty with him. But Syphax was won over to the interests of Carthage by the charms of Sophonisba, the daughter of one of the noblest Carthaginians; and a short time before Scipio crossed over into Africa, he sent to inform him of his new connection, and to dissuade him from his intended expedition, as now, far from giving him assistance, he should be obliged to join the Carthaginians in opposing him. Scipio, however, was not yet without the prospect of finding allies in Africa: Masinissa, another Numidian chief, had deserted the Carthaginian cause after its repeated disasters in Spain; and had privately pledged himself to support the Romans on the first opportunity. Since that time, he had been deprived of his paternal dominions by the united efforts of Syphax and the Carthaginians; but though his power was thus reduced, his zeal in the cause of Rome was likely to be the more heightened; and as his personal character was high amongst his countrymen, many of them might be expected to join him, when they saw him supported by a Roman army. Accordingly he did unite himself to Scipio, so soon as he had landed in Africa: and his activity, and perfect familiarity with the country and its inhabitants, made him a very valuable auxiliary. The landing had been effected within a few miles of Carthage itself; and after some plunder, amongst

which eight thousand prisoners to be sold for slaves are particularly specified, had been collected from the adjoining country, the army formed the siege of Utica, whilst a considerable fleet co-operated with it on the side of the sea. But the approach of Asdrubal and Syphax at the head of two immense armies of Carthaginians and Numidians induced Scipio to raise the siege, and to remove his troops to a strong position near the sea, where he proposed to remain, as winter was fast approaching; and secure of subsistence through the co-operation of his fleet, to wait for some favourable opportunity of striking a vigorous blow.

His first hope was^{*} to win over Syphax again to the Roman cause; and with this view his emissaries were continually going and returning between the Roman and Numidian camps. Their temptations to Syphax were ineffectual: but their report of the manner in which the Carthaginian and Numidian armies were quartered, suggested to Scipio the possibility of ensuring success by other means than negotiation. They related, that the Carthaginians were lodged in huts constructed of stakes or hurdles, and covered with leaves; and that the Numidian quarters were composed of similar materials, of reeds, thatch, and dried leaves. Upon this intelligence, Scipio conceived the plan of setting fire to both the camps of the enemy; and in order to gain a more perfect knowledge of their situation, and the approaches to them, he pretended to listen to the terms of peace that Syphax had before proposed to him in vain; and under pretence of negotiation, he was for some months in constant correspondence with the Numidian king, and disguising some of his most intelligent soldiers in the dress of slaves, he procured them an easy entrance into the enemy's camp, as forming part of the suite of his officers who were employed in the negotiation. At last, when the season for military operations was returning, and his seemingly sincere desire of peace had thrown the enemy into a state of perfect security, he suddenly broke off all communication with them, declaring, that however disposed he himself was to agree to the proposed terms, the other members of the military council were fixed in rejecting them. This sudden rupture disappointed Syphax, but neither he nor the Carthaginian general had any suspicion of the real designs of Scipio; when suddenly the Roman army marched out by night in two divisions, the one commanded by Scipio, and the other by Lælius, his second in command, and advanced against the camps of the enemy, which were not more than six miles from their own. Lælius, assisted by Masinissa, first silently approached the encampment of the Numidians, and set fire to the first tents that he met with. The flames spread so rapidly, that the Numidians were soon precluded from approaching the quarter where they had first broken out; and having thus no suspicion that they had been kindled by the enemy, crowded together in the utmost disorder to effect their escape out of the camp. Numbers were trampled to death in the confusion at the several outlets; numbers were overtaken by the flames and burnt to death; and the rest, on reaching the open country, found themselves intercepted by Masinissa, who had posted his troops in the quarter to which he knew that the fugitives were most likely to direct their flight. In this

Meanwhile the Carthaginians, when they first saw the camp of their allies on fire, not doubting that it was occasioned by accident, began partly to run with assistance to the Numidians, and the rest rushed hastily out of their tents, without their arms, and stood on the outside of the camp, contemplating with dismay the progress of this fearful conflagration. In this helpless state they found themselves attacked by the enemy, under the command of Scipio in person; some were instantly cut down; and the rest driven back into their camp, and saw it presently set on fire by their pursuers. They then at once understood the whole extent of the calamity which had befallen their allies and themselves; but resistance and flight were alike impracticable; the fire spread with fury to every quarter, and every avenue was choked up by a struggling crowd of men and horses, all with the same distracted efforts striving to effect their escape. In this attempt, Asdrubal and a few followers alone succeeded: thirty thousand men, who had composed the Carthaginian army, perished. The annals of war contain no bloodier or more horrible tragedy.

Asdrubal, hopeless of delaying the progress of the enemy, continued his flight to Carthage; while Syphax had retreated in the opposite direction, towards his own dominions, and was endeavouring to rally the wrecks of his army. After much debate in the Carthaginian supreme council, it was resolved that the fortune of war should be tried once more. Syphax was prevailed upon to join his troops to theirs, instead of confining himself to the defence of Numidia; and of recent arrival of four thousand Spaniards, who had been enlisted by Carthaginian agents in Spain, encouraged the two confederates to hope for a successful issue. Scipio was so engrossed with the siege of Utica, which he had pushed with additional vigour after his late victory, that he allowed the enemy to unite their forces, and appear again in the field with no fewer than thirty thousand men. But when he heard of their junction he lost no time in advancing to meet them; and engaging them a second time, in little more than a month after the destruction of their former armies, he again totally defeated them; and obliged their two generals to fly once more, Syphax to Numidia, and Asdrubal to Carthage.

The victors now divided their forces; Lælius and Masinissa were despatched in pursuit of Syphax; and in a short time Masinissa recovered his father's kingdom; and Syphax, having risked a third battle, was not only defeated as before, but was himself made prisoner, and his capital fell into the hands of the enemy. Scipio, meantime, overran the country towards Carthage, receiving or forcing the submission of the surrounding towns, and enriching his soldiers with an immense accumulation of plunder. The chief part of this, in order to lighten his army, he sent back to his winter quarters before Utica; and then he advanced as far as Ténis, and finding that important place abandoned by its garrison, he there posted himself, hoping by his presence in the immediate neighbourhood of the capital, to terrify the Carthaginians into complete submission. But they had not yet abandoned more resolute counsels; and

instead of suing for peace, they determined to send messengers to Italy, to recall Hannibal and Mago, and, in the mean time, to make an attempt to raise the blockade of Utica, by destroying the Roman fleet. The attempt was made, and was partly successful; but this slight advantage was so far overbalanced by the defeat and capture of Syphax, intelligence of which reached Carthage about the same time, that the further prosecution of the war appeared desperate, and a deputation of some of the members of the council of elders was sent to Scipio to solicit terms of peace. It is said that these deputies forgot their own and their country's dignity in the humbleness of their entreaties: they moved Scipio, however, to dictate such conditions as he might well deem a sufficient recompense of his victories; conditions which, by obliging the Carthaginians to evacuate Italy and Gaul; to cede, finally, both Spain and all the islands between Italy and Africa; to give up all their ships of war, except twenty; and to pay an immense contribution of corn and money; sufficiently declared the complete triumph of the Roman arms. Hard as they were, the Carthaginians judged them sufficiently favourable to be accepted without difficulty. A truce was concluded with Scipio, and ambassadors were sent to Rome to procure, if possible, the ratification of the senate and people.

With regard to the transactions that followed, we are more than ever obliged to regret the want of a Carthaginian historian. Wherever the family of Scipio is concerned, the impartiality of Polybius becomes doubtful; and besides, we have only fragments of this part of his narrative, so that we cannot fix exactly the dates of the several events, a point which here becomes of considerable importance. According to our only existing authorities, the Carthaginians, emboldened by the arrival of Hannibal, or, according to Livy, by the mere expectation of his arrival, wantonly broke the truce subsisting between them and Scipio, by detaching some Roman transports which had been driven by a storm into the bay of Carthage; and then denied satisfaction to the officers whom Scipio sent to complain of this outrage; and lastly, in defiance of the law of nations, endeavoured to seize the officers themselves on their way back to the Roman camp at Utica. By such conduct the resentment of Scipio is described to have been very naturally provoked; and the war was renewed with greater animosity than ever. This, no doubt, was Scipio's own report of these transactions, which Polybius, the intimate friend of his adopted grandson, and deriving his information, in part, at least, as we know, from Scipio's own associate, Lælius, is all probability sincerely believed. But it is probable that a Carthaginian narrative of the war in Africa would so represent the matter, that posterity should esteem the behaviour of the Carthaginians, in breaking off the truce when it suited their purposes, as neither more nor less dishonourable than the conduct of Scipio himself, when he set on fire the camps of Syphax and Asdrubal; and that although the success was different, yet that the treachery in both cases, whatever it may have been, was pretty nearly equal.

Hannibal, we are told, landed^a at Leptis, at what season of the year we know not; and after refreshing

his troops for some time at Adrumetum, he took the field, and advanced to the neighbourhood of Zama, a town situated, as Polybius describes it, about five days journey from Carthage, towards the west. It seems that Scipio was busied in overruling the country, and in subduing the several towns; and he was interrupted in these operations by the approach of the Carthaginian army. He is said to have detected some spies sent by Hannibal to observe his position; and by causing them to be led carefully round his camp, and then sent back in safety to Hannibal, he so excited the admiration of his antagonist, as to make him solicit a personal interview, with the hope of thus effecting a termination of hostilities. The report of this conference, and of the speeches of the two generals, savours greatly of the style of Roman family memoirs; the most unscrupulous in falsehood of any pretended records of facts that the world has yet seen. However, the meeting ended in nothing; and the next day the two armies were led out into the field for the last and decisive struggle. The numbers on each side we have no knowledge of; but probably neither was in this respect much superior. Masinissa, however, with four thousand Numidian cavalry, besides six thousand infantry, had joined Scipio a few days before the battle; while Hannibal, who had so often been indebted to the services of Numidians, had now, on this great occasion, only two thousand horse of that nation to oppose to the Numidians, and fortune, and activity of Masinissa. The account of the disposition of both armies, and of the events of the action, was probably drawn up by Polybius, from the information given him by Lælius, and perhaps from the family records of the house of Scipio. And here we may admit its authority to be excellent. It states then, that the Roman legions were drawn up in their usual order, except that the manipuli of every alternate line did not cover the intervals in the line before them, but where placed one behind another, thus leaving avenues in several places through the whole depth of the army from front to rear. These avenues were loosely filled by the light-armed troops, who had received orders to meet the charge of the elephants, and to draw them after them down the passages left between the manipuli, till they should be cut off entirely beyond the rear of the whole army. The cavalry, as usual, was stationed on the wings: Masinissa, with his Numidians on the right, and Lælius, with the Italians, on the left. On the other side, Hannibal stationed his elephants, to the number of eighty, in the front of his whole line. Next to these were placed the foreign troops in the service of Carthage, twelve thousand strong, consisting of Ligurians, Gauls, inhabitants of the Balearian islands, and Moors. The second line was composed of those Africans who were the immediate subjects of Carthage, and of the Carthaginians themselves; while Hannibal himself, with his own veteran soldiers, who had returned with him from Italy, formed a third line, which was kept in reserve, at a little distance behind the other two. The Numidian cavalry were on the left, opposed to their own countrymen, under Masinissa; and the Carthaginian horse on the right, opposed to Lælius and the Italians. After some skirmishing of the Numidians in the two armies, Hannibal's elephants advanced to the charge; but being startled by the sound of the Roman trumpets,

and annoyed by the light-armed troops of the enemy, some broke off to the right and left, and fell in among the cavalry of their own army on both the wings; so that Lælius and Masinissa, availing themselves of this disorder, drove the Carthaginian horse speedily from the field. Others advanced against the enemy's line, and did much mischief, till at length, being frightened, and becoming ungovernable, they were enticed by the light-armed troops of the Romans to follow them down the avenues which Scipio had purposely left open, and were thus drawn out of the action altogether. Meantime, the infantry on both sides met; and after a fierce contest, the foreign troops in Hannibal's army, not being properly supported by the soldiers of the second line, were forced to give ground; and in resentment for this desertion, they fell upon the Africans and Carthaginians, and cut them down as enemies; so that these troops, at once assaulted by their fellow soldiers, and by the pursuing enemy, were also, after a brave resistance, defeated and dispersed. Hannibal, with his reserve, kept off the fugitives, by presenting spears to them, and obliging them to escape in a different direction; and he then prepared to meet the enemy, trusting that they would ill be able to resist the shock of a fresh body of veterans, after having already been engaged in a long and obstinate struggle. Scipio, after having extricated his troops from the heaps of dead which lay between him and Hannibal, commenced a second, and a far more serious contest. The soldiers on both sides were perfect in courage and in discipline; and as the battle went on, they fell in the ranks where they fought, and their places were supplied by their comrades with unabated zeal. At last Lælius and Masinissa returned from their pursuit of the enemy's beaten cavalry, and fell, in a critical moment, upon the rear of Hannibal's army. Then his veterans, surrounded and overpowered, still maintained their high reputation; and most of them were cut down where they stood, resisting to the last. Flight indeed was not easy, for the country was a plain, and the Roman and Numidian horse were active in pursuit; yet Hannibal, when he saw the battle totally lost, with a nobler fortitude than his brother had shown at the Metaurus, escaped from the field to Adrumetum. He knew that his country would owe more than ever need his assistance; and as he had been in so great a degree the promoter of the war, it ill became him to shrink from bearing his full share of the weight of its disastrous issue.

On the plains of Zama twenty thousand of the Carthaginian army were slain, and an equal number taken prisoners; but the consequences of the battle far exceeded the greatness of the immediate victory. It was not the mere destruction of an army; but the

* The battle of Marengo forms, in many points, an exact parallel with that of Zama. The Austrian having routed the advanced divisions of the French army, commenced an entirely new action with the reserve, which Bonaparte, like Hannibal, had kept at a distance from the scene of the first engagement. The struggle, which was obstinately maintained, was decided, so at Zama, by a timely charge of cavalry on the flank of the enemy's infantry; but the victorious cavalry in the two battles did not belong to the armies whose situations correspond with one another; for at Zama the reserve was defeated by the charge of Lælius; while it was victorious at Marengo, owing to the attack made by Kellerman. Vide Gen. Matthieu Dumas, *Campagne de 1800*, and *Vieilles et Combats des Français*, tome III.

final conquest of the only power who seemed able to combat with Rome on equal terms. In the state of the ancient world, with so few nations really great and powerful, and so little of a common feeling pervading them, there was neither the disposition nor the materials for forming a general confederacy against the power of Rome; and the single efforts of Macedonia, of Syria, and of Carthage herself, after the fatal event of the second Punic war, were of no other use than to provoke their own ruin. The defeat of Hannibal ensured, in fact, the empire of the ancient civilized world.*

The only hope of the Carthaginians now rested in the forbearance of Scipio; and they again sent deputies to him, with a full confession of the injustice of their conduct in the first origin of the war, and still more in their recent violation of the truce; and with a renewal of their supplications for peace. The conqueror, telling them that he was moved solely by considerations of the dignity of Rome, and the uncertainty of all human greatness, and in no degree by any pity for misfortunes which were so well deserved, presented to them the terms on which alone they could hope for mercy. "They were to make amends for the injuries done to the Romans during the truce: to restore all prisoners and deserters: to give up all their ships of war, except ten, and all their elephants: to engage in no war at all out of Africa, nor in Africa, without the consent of the Romans: to restore to Masinissa all that had belonged to him or any of his ancestors: to feed the Roman army for three months, and pay it till it should be recalled home: to pay a contribution of ten thousand Euboic talents, at the rate of two hundred talents a year, for fifty years: and to give an hundred hostages, between the ages of fourteen and thirty, to be selected at the pleasure of the Roman general." At this price the Carthaginians were allowed to hold their former dominion in Africa, and to enjoy their independence, till it should seem convenient to the Romans to complete their destruction. Yet Hannibal strongly urged that the terms should be accepted; and even rudely interrupted,* it is said, a member of the supreme council at Carthage, who was speaking against them. He probably felt, as his father had done under circumstances nearly similar, that for the present resistance was vain; but that by purchasing peace at any price, and by a wise management of their internal resources, his countrymen might again, at some future period, find an opportunity to recover their losses. Peace, accordingly, was signed; the Roman army returned to Italy; and Hannibal, at the age of forty-five, having seen the schemes of his whole life utterly ruined, was now beginning, with equal patience and resolution, to lay the foundation for them once again.

From the scanty notices that we possess of the succeeding years of his life, we learn that his conduct, as a citizen, displayed great wisdom and great integrity. He is said to have reduced the exorbitant power of an order of perpetual judges, whose authority was very extensive, and had been greatly abused. He turned his attention also to the employment of the public revenue, much of which he found to be embezzled by persons in office, while the people at large were heavily taxed to raise the yearly contributions

due to the Romans by the last treaty. When a man of such high character raised his voice against an abuse so gross, there was yet vigour enough in the popular part of the Carthaginian constitution to give him effectual support; and it appears that the evil was removed, and the public revenue henceforward was applied to public purposes. Hannibal, however, as was natural, had thus created to himself many powerful enemies; and they found, ere long, an opportunity of gratifying their hatred. The war between Rome and Macedonia had been lately concluded; and the success of the Romans, and their commanding interference in the affairs of Greece, awakened the fears and jealousy of Antiochus, king of Syria, whose kingdom was the greatest possessed by any of the successors of Alexander. He seemed disposed to take up the contest which Philip, king of Macedonia, had been compelled to resign; and the Romans were either informed, or fancied, that Hannibal was using all his influence at Carthage to persuade his countrymen to join him. Accordingly, a commission was sent to the Carthaginian government, requiring them to punish Hannibal, as a disturber of the peace between the two nations. Hannibal knowing that he should be unable to resist the efforts of his domestic enemies, when thus supported by the influence of Rome, seems at last to have surrendered his long cherished hopes of restoring his country to her ancient greatness. He found means to escape from Carthage, and procured a vessel to transport him to Tyre, where he was received with all the honours due to a man who had shed such glory on the Phœnician name, and from whence he easily reached the court of Antiochus, at Antioch. Finding that the king was already set out on his way towards Greece, he followed after him, and overtook him at Ephesus; and being cordially received by him, he contributed powerfully to fix him in his determination to declare war on the Romans, and was retained near his person, as one of his most valuable counsellors.

The ability of Hannibal was displayed again on this new occasion, by the plans which he recommended for the prosecution of the war. He first and most strongly urged that he should be sent with an army into Italy; there, he said, the Romans were most vulnerable; and an attack made upon their own country, might distract their councils, and at least lessen their means of carrying on hostilities in Greece or Asia. When this measure was finally abandoned, owing, as it is said, to the king's jealousy of the glory which Hannibal would gain by its success, his next proposal was,† that the alliance of Philip, king of Macedonia, should be purchased at any price. Macedonia was a power strong enough to take a substantial part in the war, and would be too important to escape, as the little second or third-rate states might do, by forsaking its ally so soon as he should experience any reverses. This counsel was also neglected, and Philip united himself with the Romans against Antiochus; so that Hannibal, employed only in a subordinate naval command, a duty for which his experience had no way fitted him, could render the king no essential service; and in a short time, when the Romans had brought the war to a triumphant end, he was obliged to seek another asylum, as

* Polyb. lib. xv. c. 19.

Biography. Antiochus had agreed, by one of the articles* of the treaty of Rome, to surrender him up to the Roman government. His last refuge was the court of Prusias, king of Bithynia. With that prince he remained about five years; and it is mentioned by Cornelius Nepos, that he gained a victory, while commanding his fleet, over his old enemy Eumenes, king of Pergamus. All his own prospects had been long since utterly ruined; and the condition of such a man, reduced to the state of a dependent exile, under the protection of so humble a sovereign as Prusias, might have satisfied the most violent hatred of the Romans. But it seems they could not be free from uneasiness while Hannibal lived; and on the occasion of a Roman embassy being sent to the court of Prusias, that king, whether spontaneously, or at the solicitation of the ambassadors, promised to put their great enemy into their hands. His treachery, however, was suspected by Hannibal; and when he found the avenues to his house secured by the king's guards, he is said to have destroyed himself by a poison which he had long carried about with him for such an emergency. Some particulars are added by Livy and Plutarch, which not being credibly attested, nor likely to have become publicly known, it is needless to insert here. It is sufficient to say, that Hannibal died by his own hand, to avoid falling into the power of the Romans, at Nicomedia, in Bithynia; and, as nearly as we can ascertain, in the sixty-fourth year of his age.

If the characters of men be estimated according to the steadiness with which they have followed the true principle of action, we cannot assign a high place to Hannibal. But if patriotism were looked the greatest of virtues, and a resolute devotion to the interests of his country were all the duty that a public man can be expected to fulfil, he would then deserve the most lavish praise. Nothing can be more unjust than the ridicule with which Juvenal has treated his motives, as if he had been actuated merely by a romantic desire of glory. On the contrary, his whole conduct displays the loftiest genius, and the boldest spirit of enterprise, happily subdued, and directed by a cool judgment to the furtherance of the honour and interests of his country; and his sacrifice of selfish pride and passion, when, after the battle of Zama, he urged the acceptance of peace, and lived to support the disgrace of Carthage, with the patient hope of one day repairing it, affords a strong contrast to the cowardly despair with which some of the best of the Romans deprived their country of their services by suicide. Of the extent of his abilities, the history of his life is the best evidence: as a general, his conduct remains unchanged with a single error; for the ill-censure which Livy presumes to pass on him for not marching to Rome after the battle of Cannæ, is founded on such mere ignorance, that it does not deserve any serious notice. His knowledge of human nature, and his ascendancy over men's minds, are shown by the uninterrupted

authority which he exercised alike in his prosperity and adversity over an army composed of so many various and discordant materials, and which had no other bond than the personal character of the leader. As a statesman, he was at once manly, disinterested, and sensible; a real reformer of abuses in his domestic policy, and in his measures, with respect to foreign enemies, keeping the just limit between weakness and blind obstinacy. He stands reprobated, however, with covetousness by the Carthaginians; and with cruelty by the Romans. The first charge is sustained by no facts that have been transmitted to us; and it is a curious circumstance, that the very same vice was long imputed by party violence to the great duke of Marlborough, and that the imputation has been lately proved by his biographer to have been utterly calumnious. Of cruelty, indeed, according to modern principles, he cannot be acquitted; and his putting to death all the Romans whom he found on his march through Italy, after the battle of the Lake Trasymenus, was a savage excess of hostility. Yet many instances of courtesy are recorded of him, even by his enemies, in his treatment of the bodies of those generals who fell in action against him; and certainly, if compared with the ordinary proceedings of Roman commanders, his actions deserve no peculiar brand of barbarity. Still, it is little to his honour, that he was not more careless of human suffering than Marcellus or Scipio; nor can the urgency of his circumstances, or the evil influence of his friends, to both which Polybius attributes much of the cruelty ascribed to him, be justly admitted as a defence. It is the prevailing crime of men in high station to be forgetful of individual misery, so long as it forwards their grand objects; and it is most important, that our admiration of great public talents and brilliant successes, should not lead us to tolerate an indifference of human suffering.

We know nothing of Hannibal's private character, as a son, a friend, or a companion; nor have we any memorials of his temper or conversation. Here, therefore, we shall close our account of his life, which contains also the most memorable period in the course of the several contests by which the Romans acquired their dominion. A brief sketch will suffice to describe their wars with Macedonia and Syria, the third Punic war, and generally, their transactions with foreign nations, till the time of their first engagements with the Parthians. Our principal attention will be directed to their internal affairs; and chiefly we shall endeavour to illustrate the growth of those parties and principles which were opposed to one another in the civil wars; and the condition of society, and the state of morals and of knowledge in the age immediately preceding the first preaching of the Gospel. The materials for our inquiry are in many respects so imperfect, and are often to be sought for in detached passages of so many different authors, that the indulgence of the reader may be craved for the defects and omissions which doubtless he will find in our narrative.

THE death of the Macedonian conqueror, in circumstances so extremely unpropitious to the consolidation of his immense empire in the east, proved, in the first instance, the occasion of a fierce rivalry among his ambitious and enterprising generals, and ultimately led to the dismemberment of all his dominions both in Europe and Asia. Before, however, we proceed to narrate the events which occurred during the struggle for power in which even the most moderate of Alexander's successors soon found themselves involved, we shall take the liberty to invite the attention of the reader whilst we retrace, very briefly, the scheme of policy and government which the king of Macedon seems to have proposed to himself, for confirming his conquests in the Asiatic continent, as well as for securing to his numerous subjects the important benefits of commerce, peace, learning, and civilisation. The conduct of Alexander in this respect, and the generosity of his views, have not as yet been sufficiently appreciated by historians; some of whom, in their eagerness to give the details of battles, marches, and sieges, have overlooked the liberal principles to which his wars were only meant to be subservient; whilst others, actuated by a stoical dislike of conquerors in general, or by a more rational suspicion of the motives of all military sovereigns, have ascribed, without exception, the numerous exploits of this hero, to personal ambition, to a blood-thirsty revenge against the ancient enemies of Greece, or to a settled determination to subdue the independence of the turbulent republics, whose confederated army he was appointed to lead.

Policy of
Alexander.

It has been imagined that the obstinate resistance which he encountered to the siege of Tyre, first suggested to Alexander the immense resources of maritime power, and the great efficiency of those sinews of war which are supplied by a successful commerce. There is no doubt that, from this period, he directed his attention to the establishment of a commercial intercourse between his European dominions, and those vast territories which, stretching beyond the Persian empire, continued to gratify the luxury and the avarice of all the western nations, who had enterprise enough to secure a share in their trade. It was to divert into a new channel, at once more ample and convenient than the Tyrian coast could command, the rich manufactures and precious staples of India, that the Macedonian prince built his famous city at the mouth of the Nile. With such admirable discernment was the situation of it chosen, that Alexandria soon became the greatest trading city in the ancient world; and notwithstanding many successive revolutions in empire, continued, during eighteen centuries, to be the chief seat of commerce with India. Amidst the military operations to which in his campaigns with Darius he was soon obliged to turn his attention, the desire of establishing this lucrative trade, and the more liberal wish, perhaps, of extending the acquaintance of Europe with the geography of the wide regions beyond

the Indus, were never for a moment relinquished by the provident mind of Alexander.

In no part of his military career did the proceedings of this renowned commander resemble the subjugation and hircurement inflicted on such nations as have been overrun by the armies of a barbarian soldier. On the contrary, he built towns, formed stations for the purposes of trade and revenue, improved the soil, and laboured to refine the habits of the people. By exercising a clemency heretofore unknown in Asiatic wars, he endeavoured to convert his enemies into friends; and by intrusting power to native magistrates and governors, he secured for his new subjects an equal administration of justice, as well as the right of property, according to the maxims by which their notions, on these important points, were wont to be regulated.

When Alexander became master of the Persian empire,* he early perceived that with all the power of his hereditary dominions, reinforced by the troops which the ascendancy he had acquired over the various states of Greece might enable him to raise there, he could not hope to retain in subjection territories so extensive and populous; that to render his authority secure and permanent, it must be established in the affections of the nations which he had subdued, and, in fact, must be maintained by their arms; and that in order to acquire this advantage, all distinctions between the victors and vanquished must be abolished, and his Asiatic and European subjects incorporated and made one people, by obeying the same laws, and by adopting the same manners, institutions, and discipline. Soon after his victory at Arbela, accordingly, Alexander himself, and by his persuasion, many of his officers, assumed the Persian dress, and conformed to several of their customs; whilst, with the same liberal intentions, he encouraged the Persian nobles to imitate the manners of the Macedonians, to learn the Greek language, and to acquire a relish for the beauties of the writers in that tongue, who were then universally studied and admired. It was in like manner, with the view of rendering this union more complete, that the conqueror resolved to marry one of the daughters of Darius, and chose wives for a great number of his principal officers from among the most illustrious families in Persia.

The liberality of Alexander's conduct is the more remarkable as it was founded on maxims which were in direct repugnance to the notions and prejudices of his countrymen. The Greeks, it is well known, had so high an opinion of the pre-eminence to which they were raised by civilisation and science, that they seem hardly to have acknowledged the rest of mankind to be of the same species with themselves; and, proceeding on this assumption, they asserted a right of dominion over all other nations, in the same manner as the soul aways the body, and men govern irrational animals. Extravagant as such ideas

must now appear, they found admission into all the schools of ancient philosophy. Aristotle, full of this opinion, in support of which he employs in his *Politics* a variety of plausible arguments, advised Alexander to govern the Greeks like subjects, and the barbarians like slaves; to consider the former as companions, the latter as creatures of an inferior nature. But the sentiments of the pupil were more enlarged than those of the master; and his experience in governing men had taught the monarch that while the speculative science of the philosopher did not enable him to discover.

From the choice of the situations in which he founded his cities, it is obvious that he meant them to serve as channels of communication with India, not only by land, but by sea. It was chiefly with a view to the latter of these objects, that he examined the navigation of the Indus with so much attention; and that upon his return to Susa, he surveyed in person the courses of the Euphrates and of the Tigris, and gave directions to remove those artificial obstructions with which the ancient monarchs of Persia had shut up the mouths of their finest rivers, in order, as it should seem, that they might at once prevent their subjects from engaging in distant commerce, and might defend their extensive territories from sudden invasion. By opening the navigation in this manner, he evidently intended that the valuable commodities of India should be conveyed from the Persian gulph, into the interior parts of his Asiatic dominions, while, by the Red sea, they should be carried to Alexandria, and distributed to the rest of the world.

To realize these extensive and magnificent schemes, Alexander had employed means so judicious, and had calculated so wisely on the co-operation of his new subjects, whose interests he had combined with their fidelity to his government, that he was justified in entertaining the most sanguine hopes of ultimate success. He had secured so firm a footing in India, that his return to it would have been extremely easy, whilst his farther conquests would have been promoted by the very arms and courage which had retarded his progress when advancing. In his first expedition, to the banks of the Hydaspes, Taxiles and Porus, won by the humanity and beneficence of the young conqueror, continued steadily in their attachment to him; inasmuch, indeed, that even after his death, neither of these sovereigns declined submission to the authority of the Macedonians, nor made any attempt to recover independence.

But all those splendid schemes, so ardently cherished in the mind of Alexander, were defeated by his untimely decease. There was no one to succeed him of equal authority and genius, to fulfil the great objects on which his attention had so long been fixed. The mighty empire which had been kept united, and which had increased in power, by the sole effort of his superior talents, fell in pieces as soon as his superintending care was withdrawn; and yet, amidst all the convulsions and revolutions which that event occasioned, it was found that the measures adopted by him for the preservation of his conquests had been concerted with so much sagacity, and his confidence so wisely placed, that, upon the restoration of tranquillity among his ambitious generals, the Macedonian dominion continued to be established in every part of Asia, and not one province had shaken off the yoke. Even India, the most remote of Alexander's conquests, quietly

submitted to Pytho the son of Agenor, and afterwards to Seleucus, who subsequently extended his government over that portion of the east.

These facts, however, while they illustrate the sage policy and extraordinary talents of the king of Macedonia, display, with equal clearness, the difficulties which must have presented themselves to his commanders, when standing by his death-bed at Babylon; and the perplexity in which all their deliberations must have been involved when consulting on the affairs of so large a part of Europe and Asia. The system which was actually adopted, and the momentous consequences which ensued, from the ambition and jealousy of the great men to whom we have just made allusion, it is now our business to set forth, with as much conciseness as the intricate relations and brilliant exploits which characterised their proceedings, in peace and in war, will permit us to employ.

In entering upon this portion of Grecian history, we have to regret the want of our faithful guide Arrian, whose authority, as a narrator of facts, is deservedly very high. This regret is not a little increased by the knowledge that he wrote, in ten books, a full account of the transactions which followed the death of Alexander; a work which is no longer to be found but in the *Bibliotheca* of Photius, where we are presented with an abridgement of the principal occurrences which marked the first steps of the Macedonian generals after the loss of their great leader.

As the children born to Alexander by Asiatic women were not held entitled to enjoy the sovereignty of his European states, that monarch is said, by Diodorus, to have died childless. His son by Barsine, the widow of Memnon, was already five years of age; and Roxana, the daughter of Oxyartes the Bactrian chief, was in the sixth month of her pregnancy; but, besides the disqualification which we have just mentioned, the reign of an infant king promised very little security to the wide dominions which now owed the subjection of the confederated Greeks, and seemed still worse calculated for realizing the splendid projects to which the arms and learning of that renowned people were meant to be directed. Alexander had a half-brother, the son of Philine, a Thessalian actress, and two sisters, Cleopatra and Cyrena; the former being the daughter of Olympias as well as of Philip, the latter born to this monarch by Eurydice, an Illyrian lady, who was distinguished by masculine habits and the most warlike propensities. The claims of the females being overlooked, if, indeed, they had any right to the succession, the eyes of the army were turned to Arrhidæus, the brother of their late commander; a youth of the feeblest intellect, ignorant of affairs, and altogether unambitious, as it should seem, in regard to the honour and power which were now placed within his reach.

Perdicæus, who had been intrusted by Alexander with his ring and signet, together with the following eight generals, who were present in Babylon at the demise of the king, namely, Leonatus, Lysimachus, Aristonous, Pytho, Seleucus, Eumenes, Meleager, and Nearchus, assembled forthwith to deliberate on the measures which it behoved them to pursue, in a crisis so extremely important and perplexing. We have already mentioned that the army made choice of Arrhidæus; but it is necessary to add that this expression of respect to the house of Philip was, in the

Family of Alexander.

Arrhidæus.

Changes
resulting
from his
death.

Biography—first instance, confined to the soldiers of the phalanx, who being for the most part Macedonians, were more naturally interested in the disposal of the crown, and in the support of that dynasty to which their country was indebted for so much of its glory. It would almost appear too, that during the deliberations which passed at Babylon, on this momentous occasion, the cavalry and the infantry were actuated by different motives, and represented, to a certain extent, the feelings and interests which belong respectively to an aristocracy, and to a powerful body of commons; for, whilst the foot soldiers were desirous that the reins of government should continue to be held by a constitutional sovereign, there is reason to suspect that the horsemen would not have been displeased to behold the supreme power vested in one of their chiefs, and the extensive empire of Alexander subjected throughout all its provinces to a military despotism.

Council of the generals—It was on the day immediately after the death of the king that his generals assembled in the great hall of the palace, which was on all sides thrown open so as to display in its centre to the surrounding multitude, the throne, the diadem, and the armour of their lamented sovereign. The character of Perdica, still more than his rank, entitled him to act a distinguished part on this solemn occasion; for he had long held a high place in the estimation of his prince, had given proofs of the greatest talents and disinterestedness in his service, and had consequently acquired that degree of influence with the army, which would have disposed even the most refractory to listen to his counsel. At his first departure from Macedonia, we are told that, when Alexander divided his whole property amongst his friends, and said that he reserved only hope for himself, Perdica alone declined the bounty of the young king; intimating to him at the same time, that as he was determined to share his dangers, he was entitled also to participate in his hopes. Nor was his conduct ever found unworthy of the noble sentiment with which he entered into the service of his magnanimous master. In the most trying scenes of that eventful and very arduous war which was waged with Persia, Perdica acquitted himself with equal courage and address; and such was the confidence which Alexander reposed in his wisdom and faithfulness, that he was raised to the first place in his council, and received from the dying hand of that renowned leader, the symbols even of royal authority.

Perdica named regent.—Possessed of such reputation and advantages, it cannot appear surprising that Perdica should have aspired to a share of the power, which no individual was great enough to exercise alone, and which, whoever should be named the successor of Alexander, was eventually to be divided amongst a number of his followers. Accordingly we find that, after a variety of projects had been discussed in the assembly of the chiefs, Aristonous of Pella, a companion and life-guard, ventured to suggest the expediency of intrusting to the favourite general of their deceased master, the supreme administration, under the title of regent. If indeed we yield to the authority of Curtius, we must admit that the views entertained by the friends of Perdica were even somewhat more ambitious, for the words which this historian puts into the mouth of the orator of Pella, claim openly, for the commander now named, the right to exercise all the prerogative

of a king. "Alexandrum consultum, cui relinqueret regnum, voluisse optimum deligi: judicium autem ab ipso optimum Perdica, cui annulum tradidisset. Neque enim unum eum assedisse morienti, sed circumferentem oculos, ex turba amicorum delegisse cui traderet. Placere igitur summam imperii ad Perdica m deferri."

The elevation of one individual, however worthy, could not fail to excite the deepest envy and alarm in the minds of such as did not enjoy his countenance, or were unaccustomed to co-operate in his views of policy. Meleager, the general of the infantry, was in the predicament now described. He dreaded the ascendancy of Perdica; and, in order to obstruct his plans, he infused into the phalanx the strongest suspicions against his patriotism, as well as against his fidelity to the house of their ancient kings, and thereby urged the generous feelings of the soldiers to declare themselves more loudly for the accession of Arrhidæus.

The intemperance of the one party, and the ambition of the other, had nearly brought the victorious troops of Alexander to stain their arms in the blood of one another; a catastrophe which, it is said, was prevented chiefly by the resolute conduct of the unfortunate youth who had just been raised to the throne. Perceiving that the phalangites were about to attack the horsemen, who still opposed their choice, Arrhidæus threw himself into the midst of their body and entreated them to relinquish their sanguinary intentions. "If this diadem," he exclaimed, "can be possessed only by the wounds and death of Macedonians, I will instantly divest myself of the pernicious ornament! Take back," he continued, "the fatal present; give it to some one worthier than I am, if he can preserve the splendid deposit sustained by the blood of his countrymen!" This spirited behaviour produced the desired effect. The army unanimously acknowledged the sovereignty of the new monarch; and submitting to the authority of law under the direction of a military regency, they allowed condign punishment to be inflicted on a few of the most factious of their number, who seemed to meditate still more dangerous innovations.

The imbecility of Arrhidæus and his total ignorance of business dictated at once the necessity of a regency; which consisted at first of Perdica and Leonatus, and afterwards of these two commanders with Meleager, the general of the foot, as a colleague. During these arrangements too, provision was made in behalf of the child of Roxana, should she happen to have a son. It was declared that the infant should be associated in the government with his uncle; and as the event soon answered their expectations, the boy was honoured with his father's name, and ordered to be treated with all the respect and care which were due to the co-heir of so powerful an empire.

These preliminaries being settled for the official Distribution of the regal authority, the more important business, of assigning to the several commanders the provinces which they were to govern, became the next subject of discussion. The cautious policy of the son of Lagus, shewed itself in the choice which he made of Egypt, a country which was at once detached from the dominions of his colleagues, so soon to become his rivals and enemies, and also easily protected from invasion, owing to the impracticable nature of the territory by which it was surrounded. The veteran Craterus, who had been sent from Babylon

Birth of Alexander, the son of Roxana.

Provinces.

Biography. to relieve Antipater in the government of Macedonia, was now associated with him in the care of the hereditary states. The Thracians were confided to the charge of Lysimachus; who, from his bold and warlike character, was thought to resemble the spirited barbarians over whom he was placed. Eumenes was named to Cappadocia; Antigonus to the Greater Phrygia, and Leonatus to the Lesser. The imperial district of Persia was continued to Peuceates; whilst Python received the important province of Media, in which he might exercise his vigilance and military skill against the faithless and predatory tribes who occupied its mountainous frontiers. Seleucus remained at Babylon as lieutenant to Perdiccas, in his capacity of chief of the equestrian companions; and Aristonous, the personal friend of the regent, continued likewise at the seat of government, without charging himself with any special command. The minor provinces and military stations were provisionally committed to the officers who happened to hold them at the death of the king; a measure which contributed not a little to the tranquillity of the remoter parts of the empire, as well as in the consolidation of that system of mild and popular ascendancy over the Asiatics, of which Alexander set so distinguished an example, and which was unquestionably the principal means of establishing in Persia the dynasty of Grecian sovereigns, founded by Seleucus.

Funeral of Alexander. During the time that these appointments were under consideration, the body of him to whose successful enterprise and commanding genius they were all due, was allowed to remain neglected in the putrifying climate of Babylon. Orders were at length given by Perdiccas to have the royal corpse embalmed; and preparations were set on foot for a pompous interment of it, in the sacred ground attached to the temple of Jupiter Ammon, situated, as the reader has been already informed, in one of those green and luxuriant spots which cheer, at intervals, the solitude of the Lybian desert. It was not, however, until after the lapse of two years, that the funeral obsequies were actually celebrated; and the great Macedonian hero was then committed to the ground, not within the precincts of the African temple, as he is said to have commanded, but in his own city of Alexandria, a monument of his talents and beneficence, which conferred upon his name far greater glory than his imaginary descent from the king of the gods. "This late honour to his memory," says Dr. Gillies, "could ill reconcile his indignant shade to the dereliction of the vast and beneficial schemes which had long occupied him; the improvement in his fleet and army, his discoveries by sea and land, the productive and commercial industry which he had made to flourish, and that happy intercourse of sentiment and affection in which he had laboured to unite distant and hostile nations. After his controlling mind had withdrawn, the system which he had formed and actuated fell in pieces: yet during the distracted period of twenty-two years preceding the battle of Ipsus in Phrygia, which finally decided the pretensions of his followers, many great events deserve commemoration, and many splendid characters will attract regard. Their brightness, indeed, was hitherto dimmed by the matchless effulgence of Alexander; and their individual renown is still lessened by their shining together in one constellation. To a hasty and impatient survey, their history presents

a wild maze of crimes and calamities; but in a full and connected narrative, their transactions will interest the statesman, the general, and above all, the philosopher; who knows that by just delineations of guilt and misery, men are more powerfully restrained within the bounds of duty, than by the most engaging pictures of virtue and of happiness."

As affairs were at first conducted under the auspices of Perdiccas, we shall, in the early part of our narrative, confine the attention of the reader to such events as were connected with his direct government, or influenced by his more concealed policy. It has been conjectured, and not without much appearance of probability, that the generals who departed from Babylon, as governors of provinces, entertained, from the first moment that they were invested with power, the intention of rendering themselves independent sovereigns, and even of enlarging their dominions at the expense of one another; whilst, on the other hand, Perdiccas has been suspected, and apparently not without reason, of the wish to employ them as his tools, as long as he should require their service; and of designing, ultimately, to seize the sceptre of Europe and Asia, as the sole successor of the Macedonian conqueror. The worst of these suspicions appear to be confirmed by the conduct which was actually pursued on the one side and the other: and an occurrence soon took place which shewed, in no favourable light, the principles on which the regent exercised authority, and the motives from which he was served, even by those who professed to be the most devoted to his interests.

When Alexander had succeeded in reducing to obedience the warlike inhabitants of the hilly country which stretches to the north and east of Media, he stationed, at the several military posts which he erected in that strong ground, about twenty thousand mercenary Greeks, who were to act in the double capacity of colonists and soldiers. No sooner, however, did these exiles hear of the death of the king, than they came to the resolution of placing themselves under the direction of Philon, a commander of their own choice, and of commencing a laborious march westward into their native Greece. Perdiccas instantly resolved to defeat their intentions. Drubgating about four thousand horse and foot from the army at Babylon, he issued orders for an immediate expedition to check the migratory colonists; and in order to increase the alacrity of the troops employed in this disagreeable service, he gave them leave to choose the commander to whose skill and sagacity they might be disposed to commit themselves. They unanimously fixed on Python, who being approved by the regent, received a commission to act against the devoted mercenaries, and to demand from the provincial governors, through whose territory he was to pass, a reinforcement of ten thousand foot and nearly as many cavalry.

Python finding himself at the head of so large a Trochaire force, gave way to the temptation which then, perhaps, for the first time, assailed his fidelity, of employing their arms not only in rendering his Median government independent of the controlling power at Babylon, but even of adding to it the important provinces of Upper Asia. The vigilance of Perdiccas, however, was not to be deceived. Suspecting the views of the general, or being apprized of his real intentions, he sent orders to Python of so public a nature that they

Revolt of
Arianthes.

could neither be concealed nor evaded, to put all the Greeks to death, and divide their property among his Macedonian soldiers. The device succeeded. The circumstances of the massacre, as related by Diodorus Siculus, are too horrible to be believed, were not the fact itself somewhat confirmed by the subsequent conduct of Pytho, who, when he at length turned his hand against Perdicas is supposed to have avenged the cause of the Greeks, as well as to have gratified his own resentment.

The attainment of the viceroy was soon after attracted to the affairs of Asia Minor, where he had to oppose the ambitious designs of Antigonus and Leonatus.

When Alexander passed through that country, with the view of meeting the numerous host of Darins on the confines of Syria, he satisfied himself with reducing to temporary submission the warlike chiefs who commanded in the upper provinces; convinced that, if his arms were crowned with success in his approaching campaigns against the great king, all the western dependencies of the Persian empire would necessarily fall into the hands of the allied Greeks. Cappadocia, both Upper and Lower, still remained unconquered; and although these rich provinces, together with Paphlagonia were, upon the death of Alexander, assigned to Eumenes, the arduous task of compelling them to own the supremacy of Macedon, was yet to be accomplished under the auspices of the new governor. The natives of the northern shores of Asia Minor were remarkable for courage, strength of body, and the love of independence; and the Paphlagonians, in particular, had acquired so much fame as skilful and intrepid horsemen, that they were usually honoured by the Persians as allies, instead of being viewed in the light of tributaries. At the head of a powerful force of these hardy barbarians, Arianthes, their prince, proud of his lineage and jealous of his rights, was prepared to dispute the claims of any Macedonian captain, who should advance into his territory.

Disobedi-
ence of An-
tigonus and
Leonatus.

Perdicas, aware of the opposition that Eumenes might have to encounter in taking possession of his government, had issued an order to Antigonus and Leonatus, the commanders of the two Phrygias, to assist him with their arms. The former of these officers refused to obey the protector; alleging that as he had received his province from Alexander himself, he owed no fealty to the mere representative of his imbecile brother. Leonatus, on the other hand, was seduced by views still more ambitious, having projected a marriage with Cleopatra, the own sister of the late king, and the subsequent occupation of the throne of Macedon, which he hoped to possess, in his own right as well as in that of his wife. He therefore declined to assist Eumenes with forces, which, in pursuance of the plan now stated, he intended to employ against the Greeks, who were already endeavouring to shake off the yoke imposed on them by Philip, and afterwards against Antipater, or even Perdicas, should these wary generals oppose his succession to the crown of Alexander.

Defeat of
Arianthes.

Eumenes, disappointed in his hopes of assistance from the governors of the two Phrygias, threw himself on the protection of the regent, who instantly moved with the royal army towards Cappadocia. Arianthes immediately took the field, to repel his formidable invaders. He is said to have had thirty

thousand foot and above fifteen thousand horse; but his valour, united by discipline, exerted itself in vain, when it had to contend with the veteran troops of Macedon, led on by Perdicas and Eumenes, two of their most accomplished generals. The Cappadocians were routed with great slaughter, and their gallant prince, with his family and kindred, who unfortunately fell into the hands of the enemy, were put to death with every circumstance of pain and ignominy. Eumenes was established in the satrapy which was rendered vacant; and by his wisdom and courage contributed, for a time, to support the authority of his patron the regent.

The flame of rebellion next burst forth in the wild mountains of Pisidia and Isauria. Laranda, the capital of the former district, was soon taken by assault, and the inhabitants were either put to the sword or sold into slavery; but the defence of Isaura was attended with a series of incidents, so characteristic of barbarian warfare, that we are induced to narrate them at greater length. Finding, after a continued assault of two days, that their walls and armour could no longer avail them, the besieged came to the desperate resolution of burning their houses, wives, children, and parents, with the most precious of their effects; and having, by the execution of this purpose, secured from the indignities of conquest the persons whom they held most dear in the world, they again mounted their tottering ramparts, and repelled the besiegers with a degree of fierceness and hardihood bordering on frenzy. Astonished at the resistance which he encountered, and unable to account for the dreadful conflagration which he beheld, Perdicas withdrew his troops from the walls to wait the issue of so strange an event. The Isaurians, it is said, having no longer any enemy upon whom to avenge the cause of their country, rushed from the walls to precipitate their bodies into the midst of the flames, leaving to the ambition of the Macedonians, nothing except the burning ruins of their town, and such articles of gold and silver as the fire did not consume.

In all the arts connected with war, in rapidity of movement, decision, military skill, and personal bravery, Perdicas was inferior to none of the able captains who had served under the standard of Alexander. But, in the management of the passions, and in the application of motives, among men of high spirits and sagacious views, he was not perhaps a match for the sagacious Ptolemy, or the intriguing Antigonus. To secure his interests and increase his popularity with the Macedonians, the governor of Egypt proposed to form a matrimonial union with the daughter of Antipater; and it was not till Perdicas was awakened to a perception of the numerous advantages likely to attend this alliance, that he resolved to defeat the designs of Ptolemy, and to solicit the hand of Nicæa for himself. But as policy dictated this marriage, it cannot seem surprising that it should almost instantly have been dissolved upon the same unwarrantable ground. It was suggested to the regent that, as Cleopatra, the sister of the late king, was still disengaged, he ought to strengthen his claim to the supreme power, by connecting himself with a princess so nearly allied to the throne; a measure which would at once further his own views, and disappoint the numerous intrigues which were already forming against him, both in Egypt and the two Phrygias.

War in Pi-
sidia and
Isauria.Intrigues of
Perdicas.

Biography. But the intentions of Perdiccas being known, were vigorously opposed by a body, to whom even he was compelled to yield. The Macedonian army, attached to the house of their ancient king, and preferring an hereditary monarch, though unwelcome, to the ablest general, who had no other claim than his talents, seem to have felt alarm and suspicion upon discovering the ambitious designs of the viceroy. To thwart his intentions, they resolved to strengthen the reigning branch of the royal family, by a marriage between Arrhidæus and Eurydice his niece, the widow of his cousin Amyntas; a lady of a singularly romantic disposition, and opposed, as it should seem, to the interests of Perdiccas. The jealousy of this great general being excited by the interference of the troops, as well as by the bold pretensions of the mother of the intended bride, he is said to have procured her murder under the most revolting circumstances; a suspicion which, whether well or ill founded, continues to inflict a stain on his character, and to arraign the purity of his motives in every subsequent act of his government. The immediate consequences were alarming to the extreme: the soldiers displayed the most violent symptoms of mutiny; the spirit of insurrection was everywhere loud and violent; and Perdiccas, urged by these expressions of public discontent, appears to have postponed his union with Cleopatra, whilst he forwarded that of his royal rivals.

Having quashed the mutinous disposition which had shewn itself among the Macedonians, and conciliated the contending interests of his domestic retainers, the regent turned his eyes towards Phrygia and Egypt, where an ambition equal to his own, and talents to some respects superior, were busily employed in co-ordinating plans for undermining that power, which he was labouring so sedulously to enlarge and consolidate. The means that he possessed were considerable; and the ability and zeal which he could command for employing those means, were such as to promise the most ample success. Besides his brother Meetas, and Attalus the husband of his sister, both men of courage and address, and sincerely devoted to his service, he had Selenus, a young officer of the greatest talents; Aristomachus, a life-guard and companion under the late king; Pytho, a brave though unsteady commander; and Eumenes, whose powerful mind, stimulated by gratitude, bent all its exertions in favour of the regent, as well in the council as in the field.

Jealousy of Antigonus. The refusal of Antigonus to assist Eumenes in making good his claims upon Cappadocia, was not forgotten; and Perdiccas now summoned that governor to appear before him, in order to justify his conduct in the presence of the Macedonian army, the judges of all military offences, or to submit to the penalty which they might see fit to award. The governor of Phrygia, perceiving the object of the regent, instead of answering his summons, made haste to court the alliance of Antipater and Craterus, who resided at Pella, as joint tutors to the king, and protectors of his European dominions. Nor were the representations of Antigonus alone, urged on this momentous occasion. Ptolemy, also, alarmed at the projects of Perdiccas, had sent a pressing embassy to Macedon, recommending the expediency of a coalition, in order to check the growing power of the protector, and to defend his aims, now no longer ambiguous, at exclusive dominion both in the east and west.

A treaty was forthwith concluded among these vigilant commanders; the object of which was, first, by force of arms, to restrict the authority of Perdiccas, and then to establish their own, in their several provinces, by adding to their territory, where that was practicable, and by abjuring all dependence on the central government. In pursuance of this scheme, Antipater and Craterus were to march into Asia, at the head of an army, to co-operate with Antigonus; Ptolemy was to continue in possession of Egypt, and to strengthen his resources in the neighbouring parts of Africa, and by means of a maritime force, in the Mediterranean; and in the mean time, till Antipater could return to Macedon, to resume his charge as viceroy, the government in Europe was to be exercised by Polyperchon, one of the oldest captains that had served under Alexander.

It was not to be expected that Perdiccas could remain uninformed of these proceedings. Aware of the quarter whence the main opposition to him had arisen, and jealous of the increasing influence of Ptolemy at home and abroad, he resolved to invade Egypt, and thereby make the intriguing governor sustain the first pressure of the war which he had so industriously provoked. Meanwhile, to punish Antigonus, to whose diabolical he was disposed to ascribe the revolutionary spirit which now animated the other generals, he stripped him of all his satrapies, and joined them to the valuable provinces already intrusted to the faithful Eumenes.

Both parties set themselves in motion, with the view of striking a blow which each hoped would crush the pretensions of the other; and thus whilst Perdiccas marched towards Syria, on his way to Egypt, Antipater and Craterus were making arrangements for a descent into Asia. The order of events requires that we should attend, in the first instance, to the occurrences which took place in the latter country, where Eumenes, at the head of a considerable force, was left by the regent to defend his provinces against the insurrectionary generals and their adherents. Perdiccas was not disappointed in the skill and bravery of this celebrated commander; and yet it ought to be observed that the success of Eumenes, in this memorable campaign, arose not more from his own talents, than from the foolish measures which his antagonists were induced to pursue. Neoptolemus, a young Macedonian of royal blood, having taken offence at the preference of Eumenes, abandoned the cause of Perdiccas, and went over to Antipater with a small body of troops, which he was eager to employ against his former patron. But his pernicious counsel more than counterbalanced the additional strength which he brought to his new allies. By repeated assurances that the army commanded by Eumenes consisted of a mere rabble, hastily collected, and destitute alike of courage and discipline, he prevailed on Antipater and Craterus to divide their forces; and thus, whilst the latter, in the fullest confidence of victory, took the field against the lieutenant of Perdiccas, the former proceeded towards the Cilician passes, with the view of distracting the operations of Perdiccas himself, and of thereby affording aid to the Egyptian governor, now threatened with an invasion in the direction we have just described.

Craterus, assisted by the advice of Neoptolemus, advanced against their antagonist, who had now encamped near the plain of Troy. The infantry on rus-

Alliance against Perdiccas.

Operations of the rival generals.

Biography. either side, in use the words of Dr. Gillies, did not fall short of twenty thousand. The troops of Eumenes were a mixture of Europeans and Asiatics. Those of Craterus consisted almost entirely of the former. This difference, however, was not accompanied with any corresponding effect, since, through the dexterity of Eumenes, the engagement was decided without the necessity of bringing the masses of foot into close action. On the day of battle, he posted his Asiatic horse in opposition to the enemy's right wing, commanded by Craterus. The left, headed by Neoptolemus, he determined to combat in person with his select band of cavalry, only three hundred in number; hoping, whatever might be the fortune of the day, to chastise the insolence and treachery of that haughty youth. As soon as the enemy came in sight, descending from a hill in Helleaspoon Phrygia, the barbarian cavalry rushed forward to a desperate conflict, in which they had been ordered by Eumenes neither to listen to terms, nor to give quarter. Craterus, astonished at the regularity and fierceness of their assault, and upbraiding, it is said, the fatal confidence of Neoptolemus, exerted a degree of obstinate valour, worthy of a favourite of Alexander, in order to check this barbarian onset, and bring his phalanx to the charge; but being dismounted in the midst of the enemy, either by the fall of his horse, or by the stroke of a sword, he was trampled under foot, and lay undistinguished among the crowd of wounded.

Meanwhile an extraordinary spectacle had been exhibited on the opposite wing. Eumenes and Neoptolemus had no sooner beheld each other, than their old animosity, inflamed by recent injuries, transported them into mutual fury. They darted forward with such impetuosity, throwing the reins from their left hands, that in the shock or subsequent struggle, their horses escaped from under them. Neoptolemus was first on foot, but this seeming advantage only exposed him to a thrust, by which he was ham-strung, and disabled. The combat continued fiercely, Neoptolemus supporting himself on his knee, until Eumenes inflicted a mortal wound on his antagonist, who expired in the exertion of retorting it.

In this engagement, two of Alexander's generals were defeated and slain. Their conqueror, too, was severely wounded: yet, wounded as he was, Eumenes mounted his horse, and as the opposing wing of the enemy was totally routed, hastened to that part of the field where Craterus lay struggling with death. He arrived in time to bestow the last cares on an ancient and respected friend, and to testify to him the utmost regret that ambitious and the chances of war had ever set them against each other.

The loss of the two commanders determined the victory in favour of Eumenes; for, though the phalanx remained still unbroken, there was no longer any one to guide its movements, or to make another effort to recover the fortune of the day. The greater part of that body fled across the mountains to join Antipater in the south; whilst the victor, satisfied with the unexpected success which he had obtained, fixed his head-quarters at Celene, and prepared to communicate with Perdicas.

But the fate of this renowned general was already sealed. Having reached the confines of Egypt, he summoned Ptolemy to appear before the royal army, and answer to various charges which they had to urge

against him. Ptolemy appeared, and justified his conduct on all the points wherein he was accused. A pretence, however, was all that was wanting, and Perdicas could not fail to find one. He impeached the governor of Egypt on the ground of his having arrested the funeral convoy, whilst proceeding to the temple of Jupiter Ammon, and of having committed the remains of Alexander to a tomb in the new city at the mouth of the Nile. To punish this breach of authority, Perdicas dragged his army through the desert, and appeared before Pelusium, a fortress which was at that time esteemed the key of Egypt. The preparations of Ptolemy were equal to the emergency in which he found himself placed. He had employed all the resources of nature, as well as of art, to check the advance of his able adversary; and so skillfully were his measures for this purpose concerted and pursued, that all the experience of Perdicas, seconded by the veteran troops of Macedonia, was found unavailing, and his most vigorous efforts were completely baffled. A nocturnal attack on a fortress named the Camel's Wall, led to the defeat and death of the invader. Crossing the Nile in the dark, more than a thousand men were lost in the stream; whilst the rest of the army, divided by the river, and unable to afford assistance to one another, when assailed by the disciplined soldiers of Ptolemy, fell an easy prey into the hands of their enemies. The policy, as well, perhaps, as the natural disposition of the conqueror, dictated gentleness and humanity towards the unfortunate invaders. The Macedonians, it is said, were struck with the contrast between him whom they came to attack, and the more stern master whom they had undertaken to serve. Other circumstances, too, had contributed to lessen the popularity and power of Perdicas. Deprived of the wise counsels of Eumenes, he had recently appeared haughty and self-willed; inasmuch, that Pythion, Seleucus, and Antigonus, a celebrated leader of the Hydaspists, are all reported to have become disgusted with his Government, and even unfriendly to his person. After his defeat on the Nile, accordingly, and whilst he was meditating new measures for reducing Egypt, a conspiracy was formed against his life, headed by Pythion, a faithless and unprincipled satrap, who, as we have already suggested, had likewise a private grudge to revenge on the head of his patron. The tent of Perdicas was entered in the night, and, in this manner, he who had, during three years, wielded the immense power of Alexander's empire, fell at last an unresisting victim under the hands of his perfidious followers.

Two days after this event, the army received intelligence of the victory obtained by Eumenes over Craterus and Neoptolemus; which, had it arrived forty-eight hours sooner, would probably have prevented the meeting of the troops, and, consequently, that new position of affairs, which ultimately proved so favourable to Ptolemy, Antipater, and to the greater part of those who adhered to their interests.

We now return to the affairs of Greece, which, immediately after the death of Alexander, assumed an aspect extremely threatening to the Macedonian ascendancy, and employed for some time all the wisdom and military skill of Antipater. The republican party at Athens, although much weakened by the banishment of Demosthenes, as well as by the unparalleled successes of the confederated army in Asia, had never-

Lamian
war.The end of
AntipaterDefeat and
death of
Leonatus.

theless obtained such a degree of influence as was sufficient to inflame the passions of the multitude, and to revive their ardour for war. Preparatory to a league among the Grecian states, for throwing off the control of Macedon, the great orator was recalled to Athens. Embassies were sent to all the surrounding republics, inviting their co-operation; and, in the meantime, the Athenians raised about six thousand native troops, which, together with eight thousand mercenaries, who had just returned from Asia, they placed under the command of Leosthenes, a citizen of great ardour, and considerable military talents. To this respectable force was added, by the Ætolians, a contingent of seven thousand youths, the flower of their country: and a few recruits appear to have been sent, to augment the republican army, from the mountainous district of Doris, Phocis, and the wild valleys concealed by Pelion and the famed Parnassus. Thebes was now no more. Sparta declined to act a part under Athens. The Aetians and Arcadians listened to the dictates of prudence, and shrank from the hazard of unsuccessful hostilities. The Athenians, therefore, were the principal parties in the Lamian war, usually so called from the name of a town where the leading events of the campaign occurred, and before which Leosthenes fell in battle.

Antipater, informed of these preparations, advanced into Thessaly with fourteen thousand horse and foot; sending messengers, at the same time, to Leonatus, the governor of Lower Phrygia, and to Craterus, who was at the head of ten thousand veterans, with a request that they would accelerate their reinforcements. Upon his arrival at the straits of Thermopylae, Antipater found that the Athenians had already taken post at that famous pass. He attacked them, and was defeated; and being unable either to renew the combat, or to make good his retreat, he threw his troops into Larnia, a well-fortified town, at the distance of about six miles from the Malian gulph. Leosthenes, the Athenian general, blockaded the place with all his forces, and even attempted repeatedly to storm it, before the expected succours could arrive. The besieged were neither less active nor less vigilant. They made a sally upon the enemy's lines; in repelling which, the brave Leosthenes received a mortal wound, and soon had his services rewarded with the honours of a magnificent burial, and the flowers of a funeral oration.

Leonatus, meanwhile, approached at the head of twenty-three thousand men, of whom two thousand five hundred were cavalry. Antipater, who now commanded the Greeks, relinquished immediately the works before Larnia, and proceeded to meet the governor of Phrygia; carrying with him an army nearly equal to the Macedonians in foot, and somewhat exceeding it in excellent horsemen. A furious conflict ensued on the northern confines of Thessaly, in which the Athenians were once more successful. Leonatus was among the slain. The cavalry whom he led to the charge suffered greatly from the impetuous valour of the Thessalian horse; and the phalanx itself, broken and confused, sought refuge in the neighbouring mountains.

This disaster was, however, soon repaired. Antipater joined the fugitives with his troops from Larnia, and Craterus was at hand with ten thousand of the best troops of Macedon, eager to recover the

reputation of their arms, and to chastise the vanity of the boastful Greeks. The whole army under Antipater exceeded forty thousand heavy-armed foot, besides three thousand archers and five thousand cavalry. Antipater, on the other hand, had sustained a considerable diminution in the numerical strength of his warriors: the Ætolians having returned home to attend to their private affairs, whilst others of the confederates, satisfied with the glory which they had already acquired, had gone to join in the triumphal exhibitions, in which their exploits were represented to the women and children of Athens. The Macedonian generals, aware of their advantages, lost no time in bringing the enemy to battle; in which, after a smart engagement with the Thessalian cavalry, they gained a complete and very easy victory over the allied Greeks, and thereby re-established the ascendancy of their kingdom throughout all the republics, as well within as without the isthmus.

When a herald was sent to Antipater, craving the bodies of the slain, the victorious general declared that he would receive no message from the Greeks in common, but that they must treat with him as members of the several states. The object of this distinction being perfectly understood by the Athenians, they with the Ætolians ventured to refuse compliance; but the appearance of the Macedonian at the head of his army, soon subdued their opposition, and drove them to the opposite extreme of meanness, and the most submissive entreaty. They formed an embassy, consisting of Phocion, a commander of great genius and equal moderation, of Demades, an old and steady partisan of the Macedonian interest, and of Zenocrates, the successor of Plato in the labours of the academy, and withal, a person of such a grave and austere demeanour, as was likely to ensure the respect of the most haughty conqueror and potentate. But all that could be obtained from Antipater, even by such envoys as these, was peace on the following conditions; namely, that the Athenians should new-model their dangerous democracy; should make pecuniary compensation for the expenses incurred by the war; should surrender their turbulent demagogues, Demosthenes and Hyperides, and receive a Macedonian garrison into their fortified harbour Munychia. Hard as these terms must have appeared, the people of Athens were induced to accept them. The necessity of their condition left them no alternative; and yet there is much show of truth in the remark of Antipater, that the severest of the stipulations were the most beneficial to the peaceable citizens of that ambitious and restless republic.

Demosthenes and Hyperides fled on the approach of the Macedonian general; but being pursued, they were both taken, the first in the island of Calauria, the second in the small island of Ægina. Hyperides was put to death by the command of Antipater, with accompaniments of cruelty and insult, which, it is to be hoped, are at least exaggerated: whilst, of Demosthenes, it is reported, that rather than allow himself to fall into the hands of an enemy, from whom he could not expect liberal or even humane treatment, he swallowed poison, which he always carried about with him, and which, it is added, soon produced its effect.

The death of Demosthenes and Hyperides, says Rollin, caused the Athenians to regret the reigns of

Philip and Alexander, and recalled to their remembrance the magnanimity, generosity, and clemency which these two princes retained, even amidst the emotions of their displeasure; and how much they had always been inclined to pardon offences, and to treat their enemies with humanity. Whereas Antipater, under the mask of a private man, in a shabby cloak, with all the appearance of a plain and frugal life, and without affecting any title of authority, discovered himself to be a rigid and imperious master. It is, however, admitted, even by the same author, that Antipater exercised his government with great justice over the Athenians; that he bestowed the principal posts and employments on such persons as he imagined were the most virtuous and honest; and that he contented himself with removing from all authority such as he thought were most likely to excite troubles. He was sensible that this people could neither support a state of absolute servitude nor of entire liberty; for which reason he thought it necessary to take from the one whatever was too rigid, and from the other all that was excessive and licentious.

The *Ætolians* obtain a favorable peace.

After the submission of Athens, the Macedonian arms under Antipater and Craterus were immediately directed against the refractory *Ætolians*. Aided in their defence by a strong mountainous country, this gallant people set at defiance the skill of the generals, and the enterprise of the soldiers; but, as it was whilst Antipater and his colleague were engaged in this arduous service, that Antigonus arrived from Asia to solicit their protection against the dangerous machinations of Perdiccas, the *Ætolians* were favored with peace on much easier terms than they could otherwise have expected. The reader is already acquainted with the events which followed the coalition of the three governors against the regent, and of the fatal issue of the Egyptian expedition in which that policy involved him. We therefore prepare to resume the thread of the narrative where it was interrupted by the fall of Perdiccas, and to detail the leading occurrences to which that catastrophe gave birth.

On the day succeeding the murder of Perdiccas, the governor of Egypt crossed the river to the enemy's camp, with a large supply of provisions, addressed the soldiers as his fellow countrymen, and saluted the commanders as his ancient friends. In the character of Ptolemy, magnanimity and prudence had an equal sway; and as his conduct was remarkably consistent as well as moderate, he never failed to secure the affections of all with whom he acted, even when his views were different, and his interests incompatible. On the present occasion his humane attentions were so much extolled by the royal army, that he would have been appointed regent by acclamation, had he not made known his determination to decline so mighty an office, and recommended Arrideus, a general present in the camp, as the fittest person to succeed Perdiccas.

Regency of
Arrideus.

B. C.
322.

o.c.
114.3.

This Arrideus, whose name was seldom mentioned during the more active part of Alexander's reign, had yet the honour to be nominated to conduct his funeral, and to convey his body to the temple of the African Jupiter. Two years were spent in preparations for this splendid procession; and as it had been predicted that the city which should receive the royal remains, would rise to an unwonted eminence in point of wealth and power, almost all the considerable towns

VOL. IX.

in the empire strove for the honour of the precious deposit. Perdiccas, a native of Pella, and who perhaps cherished the hope of soon exercising kingly authority in that capital, insisted that the bones of Alexander ought to be laid among those of his royal ancestors, in their ancient seat of government. His arguments, however, did not prevail. Arrideus proceeded to conduct the pageant through Syria, on his way to the destined mausoleum in the Lybian desert. He was met by Ptolemy, who entreated him, in the first instance, to grant repose to his followers at Memphis, before they entered the sands of the wilderness; and who afterwards prevailed upon him to erect the royal tomb at Alexandria, the favourite city of the great conqueror whose name it bears.

It was this service, perhaps, which recommended Arrideus so powerfully to the patronage of the Egyptian governor. At all events, the elevation to the protectorate of the officer just named, in conjunction with Python, who had paved the way for the ruin of Perdiccas, was the work of Ptolemy, who, in this arrangement, consulted his own greatness and the welfare of his province, much more effectually than if he had allowed himself to be invested with the precarious rank and invidious authority which he thus conferred upon others.

Indignation
of the Egyptian
army against Eu-
menes.

It was whilst these proceedings occupied the attention of the royal army on the Nile, that the victory of Eumenes, and death of Craterus, were confirmed by the most certain intelligence. The effect of this news on the soldiers was violent in the extreme. Bemoaning the loss of a favourite general, who had fallen whilst fighting against the ambitious schemes of Perdiccas, whom they were now disposed to pronounce a tyrant and foe to Macedonia, they forthwith resolved to inflict the severest vengeance on all his family, his friends, and relatives. They declared Eumenes a public enemy; proscribed, by name, more than fifty of the principal adherents of the late protector, at the head of whom was his brother Alcetas; and having in this manner given vent to their fury, they immediately advanced from Egypt towards Syria, in order to realize the punishments which they had denounced.

Influence of
Eurydice.

Resignation
of the re-
gent.

When arrived at Triparadus, in the latter province, the new protectors found their power so completely annihilated by the aspiring genius and active spirit of Eurydice, the wife of king Arrhidmus, that they deemed it expedient to resign their office; and when Antipater, who was speedily informed of what had taken place, had arrived at the camp, in which the bold and warlike Perdiccas was wont to issue his orders, he saw the veterans of Macedonia actually commanded by a woman! Nor did the appearance of their aged general produce at once the effect which was expected. The soldiers, instigated by the queen, who seems to have promised them a full payment of all their arrears, as well as immediate preferment to the most deserving of their body, would have put him to instant death, had not his person been protected by Seleucus and Antigonus, whose intrepidity and presence of mind contributed mainly to quell the sedition. Smitten with regret at this undutiful conduct towards an old and faithful commander, the leaders of the army almost instantaneously followed the bent of their passions into the opposite extreme. They raised Antipater to the supreme authority, as protector of the empire, and afforded him the means of subduing the restless mind

New distribution of the provinces.

The great age of the protector, and his constant residence in Europe, disqualified him in no small degree for the government of a kingdom, of which the subjects and the interests were now chiefly Asiatic. A stranger to the manners and policy of the east, he resolved to fix the principal seat of power at Macedon, and to issue from thence such orders as might seem necessary for the purposes of administration, throughout the immense provinces washed by the Euphrates and Tigris.

With these views he arranged, before the army quitted Triparados, a new distribution and settlement of the empire. The posthumous son of Alexander by Roxana was now formally associated in the government with the feeble-minded Arrhidæus, and both were declared the legitimate heirs of the crown, as the nearest male relatives of the late sovereign. As to the command of provinces, no material alterations were made, but such as had been rendered necessary by actual change of circumstances. Eumenes having been declared an outlaw and an enemy, the satrapy of Cappadocia was conferred upon Nicanor. Lydia was intrusted to Clytus; and Cilicia was given to Philoxenus: but as these extensive districts were all in the hands of Eumenes, they were to be re-conquered before they could be possessed. To Seleucus, who had performed an important service in quashing the late sedition in the army, was granted the splendid government of Babylonian, an object of the most eager desire, it is said, to that young and ambitious chief, who, of all Alexander's officers, best understood the views and appreciated the magnificent designs of his master. Media had formerly been granted to Pythion, but he had not yet entered upon the discharge of its duties. A native adventurer, in the meantime, seized the upper division of the province, inhabited by a race of hardy mountaineers, who flocked to his standard, and whose warlike propensities rendered them formidable even in the plains. The services of Arrhidæus were rewarded with the satrapy of the Hellespontian Phrygia, vacant since the death of Leonatus, who fell in the Lamiæ war.

Measures against Eumenes.

The great object with the protector, in the circumstances wherein recent events had placed him, was evidently to subvert the refractory force of Eumenes, who being declared a public enemy, and affording at the same time an asylum to the adherents of Perdicas, could be viewed in no other light than that of a powerful rebel. A large division of the army was accordingly committed to Antigonus, who was charged with the arduous task of reducing to submission the disaffected districts of Asia Minor. Meanwhile the commander in chief returned into Macedon, leaving his son Cassander at the head of the cavalry, to co-operate with the troops which were to act against Eumenes.

Intrigues of Antigonus.

In the war which ensued for the conquest of Cappadocia, both parties had reason to complain of treachery, and to guard against the stratagems of even their most confidential officers. Antipater had scarcely crossed the Hellespont on his way homeward, when he was admonished by Cassander of the disloyal ambition which already appeared to actuate the selfish mind of Antigonus, and of the necessity which existed either to watch his motions very closely, or to reduce

his power within narrower limits. Unwilling to entertain suspicions on the suggestions of a mere youth, Antipater used no other precaution than to withdraw a part of the army which served under Antigonus, and to replace it by a body of troops on whose dispositions he could depend.

On the side of Eumenes a treason still more dangerous infected the minds of several chiefs, and eventually exposed that able and faithful commander to a severe discomfiture, in a battle which was soon afterwards fought between him and Antigonus. This latter general having taken the field with a large force, speedily brought the other to an engagement, in which he had previously ensured success. Antigonus had seduced the commander of his opponent's cavalry, as well as several inferior officers of the foot, who deserted during the conflict. Eumenes, finding it impossible either to provide for his troops, or to meet his rival on equal terms, came to the resolution of disbanding the greater part of them, and of shutting himself up with the remainder in Nora, one of the strongest fortresses in Cappadocia. The place was immediately blockaded by Antigonus: but this crafty satrap, more intent on establishing his own power than on serving his country, endeavoured rather to gain the vanquished leader to participate in his ambitious views, than to induce him to lay down the arms of rebellion. He proposed a conference with Eumenes; in which, after explaining his intentions, and setting forth the terms on which he was willing to purchase the co-operation of so able a commander, he left no room for doubt that his main object was to seize upon the empire, and set Antipater at defiance. The reply of Eumenes was brief, but decisive. He declared that as long as he carried a sword, he never would acknowledge a superior, except in the royal house of Alexander. The interview being ended, the faithful secretary returned to his fort, upon which the blockade was resumed with greater activity than before, without however producing any remarkable recurrence.

Plutarch who, with Diodorus Siculus, is our principal authority in this part of the narrative, adds a variety of circumstances in regard to the conference with Eumenes, which give it very much the air of a romantic fiction. He tells us, what is indeed very probable, that the Macedonians were extremely desirous to see the person of this ancient counsellor of Alexander; for that, after the death of Craterus, no one was so much talked of in the army as he: but, he adds, Antigonus, fearing lest they should offer him some violence, called to them to keep at a distance; and, as they still kept crowding in, he ordered them to be driven off with stones. At last, says the biographer, he took Eumenes in his arms, and holding the multitude in check with his guards, with some difficulty got him safe again into the castle.

The siege of Nora was not brought to a close when news arrived that Antipater had paid the debt of nature at Macedon. Antigonus, who had been kept somewhat in awe by the high character of the regent, was roused to indignation when he learned that the last act of that statesman's life was to upbraid point Polysperchon to the government of the empire, and to commit to his charge the custody of the two kings, who appear to have resided at Pella ever since the death of Perdicas. That Antigonus expected those important charges to devolve upon him-

Rise of
Cassander.

self is evident from all his counsels and actions, from the time that he was nominated lieutenant of Asia Minor; not to mention his proposals to Eumenes, nor his arbitrary conduct in the reduction of Pisidia, and certain strongholds in other parts of the peninsula, which he secured, obviously with the view of ulterior operations on a larger scale. Nor was he inclined to relinquish a prize on which he had set his heart, and which fortune seemed now to place within his reach. On the contrary, he had immediate recourse to the means which he had formerly employed to effect his objects, when moving in a humbler sphere; and he attempted once more, by decisive movements in acting, and by deep dissimulation in consulting, to overpower his enemies and overreach his friends.

In carrying on his designs, he was supplied with an instrument whose assistance he had the least reason to expect. Cassander, the son of Antipater, who had, as we have stated above, very early penetrated the intentions of Antigonus, and who had moreover, in disgust, actually retired from his situation, as general of the horse in the Asiatic army, was now prepared to court his alliance by opposing the government of Polysperchon. The views of this young soldier were not less ambitious than those of his superiors, which he was so forward to condemn; but, instead of arms, he had intended to accomplish his purpose by the insinuations of gallantry, and the power of female intrigue. He had gained the affections of the high-minded Eurydice, for whom he now undertook to secure the appointment of regent in the behalf of her husband; not doubting but that he himself, by means of the hold which he had upon her heart, should subsequently obtain possession both of the lady and her delegated authority. The discovery of this plot by Antipater, is said to have incensed him so greatly against his son, that he bequeathed to him no share in the government; the old general having contracted a strong antipathy to the interference of females in matters of state, for which he regarded them totally disqualified both in respect of talent and of temper. To recover the ground which he had lost, and to pave the way for future success, Cassander did not think it unworthy of his character to apply to Antigonus for assistance. In pursuance of the same views, he had also, before the news of his father's death could reach Greece, given secret orders to Nicanor, a zealous and enterprising officer, to take the command of the Macedonians who garrisoned the fortified harbour of Athens; thereby securing for himself an important stronghold, either to check the Athenians, or to invite their co-operation.

Progress of
Antigonus.

Whilst Cassander was thus indirectly weakening the authority of Polysperchon, Antigonus had resorted to more open and effectual means to accomplish the same end. He passed through the greater part of Asia Minor, taking possession of the most important fortresses, placing in their governors devoted to his interests, and raising large sums of money, under the name of contributions. The smaller satraps, who could not fail to perceive his intentions, expressed their alarm, without being able to oppose any effectual resistance. Asander to Caria, and Arrideus in the Lesser Phrygia, were gradually confined within narrow limits, and almost totally divested of power; whilst Clytus, who held the important province of Lydia, was compelled to leave his government, and seek refuge with a few ships in the presence of Polys-

perchon. Ephesus was next seized by Antigonos; Alexander's in this city he almost immediately committed an act of Successors.
Four ships having entered the harbour with six hundred talents, destined for the service of the empire, or as some historians write, for the personal use of the kings and their establishment, the money was detained by order of the lieutenant-general, under the pretence of paying the army under his command. At this juncture of affairs, he made another attempt on the fidelity of Eumenes, who was still shut up in the castle of Noma. His success, however, was not greater than on the former occasion; for no consideration could induce the Cardian to entertain the friendship of Antigonus, or to listen to the terms which he so eagerly pressed upon his acceptance, without first obtaining from him a positive assurance that their joint services should be devoted to the support of the royal line. In one respect, indeed, this negotiation was attended with an important result. The vigilance of the besiegers being somewhat relaxed, Eumenes seized a favourable opportunity, and escaped; carrying with him his faithful adherents on swift-footed horses, which appear to have been kept and exercised within the fortress for this very purpose.

The projects of Cassander kept pace with the more serious designs of Antigonus; whilst the sails kept in view by these intriguing generals agreed in nothing but the extinction of royal authority, and the humiliation of Polysperchon. The latter granted to his youthful ally thirty-five galleys, and four thousand veterans; trusting to his impetuous character that they would not be long unemployed, and having sufficient confidence in his military skill to rest satisfied that they would materially distract the councils of the regent, and confine his principal cares to the European portion of the empire.

To thwart the designs of Antigonus, which were no longer veiled even with the appearance of patriotism or moderation, Polysperchon found himself compelled to have recourse to measures, of which some were injudicious, and others positively brutal. The only wise step which he took during this emergency, was an alliance with Eumenes, whom, in the name of the kings, he appointed sole general of the army serving in Asia, and invested at the same time with the uncontrolled disposal of all the resources of the eastern empire. The provincial governors were ordered to place themselves under his command, at the head of the largest force they could raise; whilst the protector himself began preparations in Macedonia, for conducting across the Hellespont the veteran soldiers of the royal army, with the view of quashing completely the rebellious spirit which Antigonus and his partisans had so industriously raised.

Desirous, too, by all possible means, to increase the popularity of his cause at home, and to check the influence of Eurydice, who had still a powerful party in the army, Polysperchon advised the recall of Olympias, the mother of Alexander, into Macedonia, where it was intended she should once more enjoy a share of that authority in the government, of which, during the regency of Antipater, it had been necessary to deprive her. He had soon reason to repeat of this resolution; for Olympias, still untamed by events, and thirsting for revenge, returned to the Macedonian capital, only to gratify her worst passions, and to disturb the tranquillity of private life.

Return of
Olympias.

Biography. But of all the measures into which Polysperchon was driven by the pressure of affairs, none was more questionable than that which we are now about to mention. Eager to retain the Greeks in his interest, and to defeat the plans of Cassander, who had already anticipated him in regard to Athens, the regent published an edict for re-establishing democracy in all the states which owned the protection of Macedon; reserving to himself in the very deed by which he granted this imaginary privilege, the power of enforcing its stipulations, and of commanding obedience to the authority whence it proceeded. The policy of this step was, as we have already said, not less wicked than its effects were pernicious; but as the object of it, according to the avowed intention of Polysperchon, was to prevent the Greeks from co-operating with Antigonus in his meditated attack on the royal house, it must be admitted that to a certain extent he effected his purpose. The boom of democracy created such a degree of contention and popular licentiousness in most of the states, that the arms of the citizens were for a time employed against one another. Almost every individual, distinguished by rank or merit, was stripped of his property, banished, or put to death; the very lowest of the people having been instigated by the emissaries of the protector, to take vengeance on the rich, whom they chose to describe as the inveterate enemies of their liberty and laws.

State of Athens.

The condition of Athens, controlled by the garrison in Munychia, under Nicanor, prevented the people of that city from partaking of the benefit held out to them by Polysperchon. Impatient of the restraint so long imposed upon them by Macedonian soldiers, they sent repeated embassies to the regent, entreating that he would send an army for their relief, to expel the creatures of Cassander from their forts, and to secure to them the free exercise of that species of administration with which he had been pleased to bless the Grecian commonwealths. Polysperchon, whose views in this instance coincided with the wishes of the Athenians, sent a body of troops under the direction of his son Alexander; whilst himself, at the head of the royal guards, descended more slowly towards Attica, hoping to enjoy the fruits of victory in the establishment of a faction wholly devoted to his measures, as well, perhaps, as in the permanent occupation of the Munychia and the Piræus.

No sooner, however, had the young Macedonian reached Athens, than his councils were moderated by the sensible advice of Phocion, who succeeded in convincing him that, in no respect whatever, would the restoration of democracy prove advantageous to that state; but that it would, on the contrary, weaken at once the power of the laws, the security of property and life, and even the just influence of the regent himself. But the public feeling was already too much excited to admit of restraint, or to allow Alexander to deviate in any material degree from the course pointed out to him by his father. The democratical party, emboldened by the presence of the army, summoned the whole city, strangers, slaves, convicts, and outlaws, to attend a national assembly, and there to give their votes respecting the form of government which it behoved them to adopt. The result could not be for a moment doubtful. Aristocracy was abolished, and a law immediately passed, condemning to exile or death any person who had held any share in the former admini-

stration; penalties which attached, in particular, to Conon, Phocion, Callimedon, and Pericles. Flight saved the greater number of the proscribed; but Phocion and a few others, hoping, by means of Macedonian interference, to save their country from absolute ruin, had recourse to Alexander, who, it should seem, throughout, was averse to democratical ascendancy. The events which immediately ensued are covered with some degree of obscurity. Phocion, and a Corinthian orator, named Dinarchus, proceeded to meet Polysperchon; but whether with the view of representing the grievances of the better order of citizens, or merely to solicit personal protection for themselves, is a point which neither Diodorus nor Plutarch has stated with sufficient clearness. The latter author gives the details of a trial which was got up by the regent, to gratify certain messengers from the popular party at Athens, who arraigned Phocion, and demanded justice on him and his partisans. The circumstances attending this solemn mockery were revolting in the extreme, and only equalled by the ferocious conduct of the Atheian mob when Phocion was sent back to them, as a victim to gratify their revenge. After enduring every sort of contumely which unprincipled orators and an enraged multitude could inflict upon him, this excellent man was condemned to drink the hemlock, after he had passed the eightieth year of his age, and had been forty-five times elected general of the Athenian state.

Four days subsequent to this disgraceful occurrence, Cassander returned to Athens with the naval force granted to him by Antigonus; and having fortified the Piræus as well as the Munychia, kept the democratical citizens in awe, notwithstanding the presence of twenty-five thousand men, with the Asiatic accompaniment of sixty-five elephants. Polysperchon finding his large force useless in the blockade of a harbour, which could only be commanded from the sea, left his son before the town with a part of the army, and proceeded in person to reduce the Arcadian city Megalopolis, which refused to obey the royal edict for the establishment of democracy. The most vigorous efforts of his troops, aided by the physical strength of the elephants, were found utterly unavailing against the ingenuity and courage which were opposed to them by the townsmen. It was fortunate, therefore, for the military character of the protector, that an apology for his sudden retreat into Macedon was afforded by the violent conduct of Olympias, who had already embroiled that part of the kingdom so seriously as to endanger the life and power of the elder king.

Before he left Attica, however, he sent Clytus, at the head of a powerful fleet, to assist Arrideus, the governor of the Lesser Phrygia, who still held his province under the royal warrant, and was consequently hard pressed by his ambitious neighbour Antigonus, who was extremely desirous to possess that important key to the passage of the Hellespont. Cassander was not inattentive to this movement on the part of the enemy. Detaching what portion of the fleet he could spare from the Athenian harbours, he sent his brother Nicanor in quest of Clytus, with orders to prevent any material diversion in favour of Arrideus. The Thracian Bosphorus soon became the scene of a naval battle, memorable alike for variety of success, and for its important consequences to the Macedonian empire.

Effects of the decree of Polysperchon establishing democracy.

Sea fight in the Bosphorus.

Biography. In the first act of this bloody drama, Nicanor was defeated, about one half of his ships were taken, and the remainder were happy to find refuge in the neighbouring harbour of Chalcodon, directly opposite to Byzantium. But Antigonus, who at the head of an army watched the proceedings of both fleets, converted, to use the words of a modern historian, this heavy disaster into the means of signal and brilliant success. Having despatched proper agents to Byzantium, he collected in the first part of the night, the small craft and merchantmen lying in that port. In these vessels, having hastily embarked the choicest of his light-armed troops, he assaulted before dawn the unsuspecting victors, who had presumptuously landed on the Thracian coast, enumbered and fatigued with the care of their booty and their prisoners. Clytus, unprepared to fight, ordered his men to fly to their ships. Part of them put to sea, but encountered there a new danger; for Nicanor, whom Antigonus had reinforced with a select band of mariners, was ready for their reception. Their whole fleet was taken, except the admiral's galley; and he himself, having landed on an obscure part of the Thracian coast, and attempting to escape secretly into Macedonia, was put to death by some deserters, who sought to avenge their cause on the person of this unfortunate chief.

The victory of Byzantium decided the fate of the Athenians, who immediately surrendered to Cassander, on the simple conditions of retaining possession of their soil, their ships, revenue, and laws. The government of the city, and management of the finances, were confided to the wisdom of Demetrius Phalereus, who with much honour to himself, and great advantage to the commonwealth, continued in office during the long period of ten years.

Whilst the rival generals in Attica and Asia Minor were committing their claims to the arbitration of war, the two queens, Olympias and Eurydice, were likewise on the point of making an appeal to arms. We have already remarked that the latter princess, attached to Cassander by the bonds of an unlawful affection, laboured to second his views, as an aspirant to the supreme authority; whilst Olympias, acting as the tool of Polysperchon, as well as in pursuance of her own ambitious projects, exerted the utmost force of intrigue, in support of her grandson, and his mother Roxana. Having acquired a momentary ascendancy over the affections of the Macedonian soldiers, she compelled Eurydice and her husband to seek safety in flight; and afterwards, upon getting possession of their persons, she ordered them both to be despatched by assassins. The imbecile Arrhidæus, who from respect to his father was usually called Philip, had occupied the throne of Macedonia six years and four months; a mere pageant of royalty when a public appearance was deemed necessary, and a mere name used by his tutors, when furthering their own views, or transacting the business of the empire.

But the rage of the inexorable Olympias was not supported by an adequate force. The presence of Cassander in Macedonia, who flew thither to avenge the death of Eurydice, struck such a panic into the breast of the aged queen, that she immediately shut herself up in Pydna, carrying with her the young Alexander Ægus, the interesting Roxana, and a large attendance of females of the first rank and quality. The strength of the fortress resisted long the impa-

tience of Cassander. Famine, at length, aiding his endeavours, reduced the garrison to the greatest extremity, and compelled even the stern Olympias to sue for terms. A trial followed her release from the miseries of a siege; but the forms of justice in such a case are the mere instruments of power, and thus, although not regularly condemned, she was soon after put to death.

The fall of Pydna rewarded the labours of Cassander, not only with the gratification which he received in the condemnation of Olympias, but also with the possession of the illustrious persons who had shared the fortunes of that celebrated queen. Alexander Ægus, now the sole heir of the crown, Roxana his mother, Deidamia, daughter of the king of Epirus, and Thesalonica, the youngest daughter of Philip of Macedonia, and half-sister of the conqueror of Asia, fell into his hands as prisoners of war. The prince and his parent were sent to the castle of Amphipolis; whilst Thesalonica, still more nearly connected with the royal house than the ill-fated Eurydice, was selected by Cassander to be the instrument of his ambition, and the sharer of his bed. The nuptials were celebrated in a style of the greatest magnificence; and the active governor chose to mark his accession to power by building Cassandria, on the isthmus of Pallene, and by restoring to its ancient splendour the renowned city of Thesbe.

Whilst these things were going on in Europe, the same deep game of ambition was played in other parts of the empire by the several satraps into whose hands the largest share of power had fallen. Ptolemy who had at an early period added Cyrene to his dominions, afterwards carried his arms into Syria, reduced the more important strongholds in the maritime provinces, took the city of Jerusalem, and sent into Egypt, as captives and slaves, more than a hundred thousand of the Jews.

After the death of Antipater, when the authority of the central government was greatly relaxed, the satraps in all the remoter provinces ceased to turn their eyes towards Macedonia, either for authority or for approval. Egypt had, in fact, become an independent sovereignty; Babylonia and the fine country of the Medes no longer acknowledged any other ruler than Seleucus and Ptolemy; and Antigonus had, for some time, openly avowed the intention of rendering himself master of the whole of Lesser Asia. Eumenes, at the head of the royal army, was the only obstacle to occasion either delay or uncertainty in the accomplishment of this object; and as the able general now named was merely the lieutenant of Polysperchon, an unpopular and unsuccessful viceroy, Antigonus found no difficulty in confederating against him the commanders of all the principal provinces, whether in Asia or in Europe. It was therefore reserved for Eumenes, upon finding himself at liberty after his escape from Nora, to direct his single genius against the combined talents of Antigonus, Ptolemy, Seleucus, and even Ptolemy; the latter two of whom, however little disposed they might be to second the ambitious designs of the satrap of Phrygia, could not permit themselves to obey the commands of the royal general; because the king being a mere puppet in the hands of Polysperchon, the orders issued in his name, were, in fact, the orders of the protector, or of his substitute at the head of the army. We are accordingly informed by

Flight and death of Olympias.

Biography. Diodorus, that when Eumenes, who had already recovered a great part of Syria from the grasp of Ptolemy, sent a message to Seleucus and Pithon, desiring them, in the name of the kings, to join him forthwith against Antigonus, bringing with them the largest force they could raise, these governors replied that they were ready to assist the kings in their lawful wars, but that they would have no transactions with himself, as being a person who had once been proclaimed a public enemy, and whose authority, even though he showed them the royal commission, in virtue of which he acted, they were determined not to acknowledge. Resolved to be independent of the protector, they found an difficulty in refusing obedience to his command when conveyed by his lieutenant, though that refusal evidently implied the cancellation of their allegiance, and even an overt act of rebellion.

Policy of Eumenes. In stating the disadvantageous circumstances in which Eumenes was placed, we must not neglect to mention the reluctance which some of the high-minded nobles, who had fought under Alexander, manifested to obey the orders of a foreigner and a man of obscure birth. The battalion of *Argyraspides*, or silver-shields, joined his standard indeed in compliance with the royal mandate; but they could not conceal their scorn when they spoke of the Cardian general, who had carried an inborn in the camps, where they had carried the brightest arms, and gained the most splendid triumphs. Eumenes was aware of their prejudice, and adopted the following expedient in order to remove it. Plutarch, who is our principal authority on this point, informs us that the general assured his officers, that he had been favoured with a communication from Alexander, in a vision of the night, and that the deceased king, shewing him a pavilion with royal furniture, and a throne in the middle of it, declared aloud: "That if they would hold their councils, and despatch business there, he would be with them, and prosper every measure and every action which commenced under his auspices." This apparition was readily believed by the superstitious Macedonians; and accordingly the two chiefs of the *Argyraspides*, Antigonus and Teutamus, who had refused to wait upon Eumenes, or to receive his orders, expressed no farther reluctance to appear before him in the pavilion of Alexander, and to participate in his councils. This symbol of royal power and divine influence, was religiously conveyed from place to place wherever the army moved; and whenever unforeseen difficulties occurred, or new measures were to be adopted, the "throne of Alexander" was set up, a species of adoration was performed, and the warrior counsellors proceeded to their deliberations, in the faith that they were to be directed by the spirit of their invincible monarch.

Antigonus had no sooner gained the ascendancy in the west, by the destruction of the royal fleet under Clytus, than he determined to march in pursuit of Eumenes, who, in the mean time, had been successfully employing his arms in Phœnicia and Palestine. Not being in a condition to oppose the disciplined and numerous forces of his antagonist, the last named commander retreated towards the Euphrates; sending messengers before him to the several satraps, exhorting them to join his standard with their contingents, and prepare to defend the provinces committed to their care.

Seleucus, who continued in command at Babylon, gave no encouragement to Eumenes, and even attempted to obstruct his progress eastward. He inundated the camp of the royal general, by opening certain sluices in the Tigris, which poured its waters over the adjacent country, then occupied by the Macedonians, and thus greatly endangered the whole army. Eumenes, however, found means to cross into Susiana, where he was strengthened with considerable supplies of arms and money; resolving to consolidate his forces in that province, and to await the approach of Antigonus, who was already in Mesopotamia.

Pithon, the governor of Media, was as little disposed as Seleucus, to co-operate with the royal lieutenant, in punishing the rebellion of Antigonus. On the contrary, he himself had just attempted not only to render his province independent of the regency, but even to add to it the smaller satrapies with which it was surrounded. In an attack upon Parthia, he had shewn so much cruelty, as well as ambition, that the neighbouring governors flew to arms, drove him from Media, and compelled him to seek for refuge, across the Tigris, in the court of Seleucus. This condition of things, so little expected by Eumenes, and apparently so unfavourable to his hopes of assistance, was nevertheless the means of bringing to his camp a considerable body of active soldiers. The confederated satraps, who had driven away Pithon, were eager to secure the alliance of the royal general; being perfectly aware that the governor of Media, aided by the troops of Seleucus, would soon make another attempt to recover his dominions, and to inflict a signal vengeance on those by whom he had been expelled. Actuated by these motives, Peucestes, the satrap of Persis, joined the standard of Eumenes, with thirteen thousand foot, and one thousand horse; Tlepolemus of Carmania, Siburtius of Arachosia, and Stasander of Aris, brought about four thousand foot, and two thousand three hundred cavalry; Androbazus, the deputy of Oxyartes, led from the heights of Paropamisus, twelve hundred infantry and four hundred horsemen; whilst Eudamias, who commanded in the district which is watered by the Five Rivers, advanced from the east with three thousand five hundred horse, and a formidable array of a hundred and twenty elephants. To these reinforcements, more valuable for quality than number, Peucestes is said to have afterwards added ten thousand Persian archers, summoned by him from the rugged mountains which extend from the bay of Ormus.

Antigonus, informed of these occurrences, resolved in like manner to halt, and endeavour, by new levies, to render his force equal to that of his adversary. He was soon joined in the neighbourhood of Babylon, by Pithon, who commanded fifteen hundred horsemen, and by a detachment from the army of Seleucus, who, anxious to remove the war from his own country, recommended strongly to Antigonus to cross the Tigris, and beat up the quarters of Eumenes, in the fertile province of Susiana. Eastward of the river now named, there is another large stream, called Coprates, over which Antigonus had, in like manner, to convey his army; and here he sustained so severe a loss, inflicted upon him by an act of superior generalship on the part of his rival, that he deemed it expedient to decline a more decisive engagement until he had again recruited and refreshed his army.

For this purpose, he resolved, for the present, to leave Eumenes in undisturbed possession of Susiana, and to proceed northward into Media; where Python had still a considerable degree of influence, and where his partisans could supply the means of subsisting his troops, and conveying their stores. To effect this object, however, he had either a long or a very dangerous march to perform; and, preferring the latter, he had to sustain a destructive warfare with the Cassæans, amid their mountain fastnesses; who during nine days assailed his line so successfully, that they killed a great number of his men, and completely exhausted with fatigue and suffering those who escaped with life. This foolish enterprise was undertaken, it is said, in imitation of Alexander, who determined to chastise rather than court the proud and savage mountaineers, who asked him to purchase a free passage through their narrow vallies—a practice first introduced by the Persian kings, when leading their armies into the northern provinces of the empire.

Discussions
in the army
of Eumenes.

Could Eumenes have trusted to the dispositions of his army, he might have followed up with material success, the advantages which he had gained on the banks of the Coprates. But no sooner was Antigonus out of their sight, than the Aργυραῖοι involved the camp in discussion; insisting that their commander should retrace his steps to Asia Minor, and seize the rich prize which the other had relinquished; whilst Peucestes and his neighbouring satraps, who had joined the army after it had crossed the Tigris, maintained the policy of defending the more important provinces of the east, and particularly the imperial district of Persia, upon which, they predicted, Antigonus would be ready to pour down with restless fury, after having repaired his strength in Media. Eumenes, yielding to the counsel of the latter, directed his march towards Persepolis; in the vicinity of which, Peucestes entertained the army with a splendid festival, the object of which, however, was not so much to reward their exertions against the invader of Asia, as to seduce their affections from their great and faithful commander. Eumenes foresaw the plot, and defeated it. Having forged letters, as if written by Orontes, who was the governor of Armenia, and a warm friend to the satrap of Persia, he caused them to be read aloud, stating, "That the kings and Polysperchon had fully re-established their authority in Europe; that Cassander their most formidable enemy was dead; and that a Macedonian army had crossed the Hellespont to co-operate with the exertions of a general, in whose courage and conduct the lawful successors of Alexander continued to repose the utmost confidence." This stratagem produced the desired effect: Eumenes was confirmed in authority, and one of the seditious satraps was obliged to consult his safety by a sudden flight.

Battle be-
tween Eu-
menes and
Antigonus.

Confidence was hardly restored, when news arrived at the camp that Antigonus had begun his march from Media, and was already on the frontiers of that province. Eumenes, although his health was somewhat impaired by fatigue or intemperance, made immediate preparations for meeting his enemy; and, in the space of twenty-four hours, brought his vanguard within sight of the hostile camp, at the foot of the Paracene mountains. A variety of manoeuvres preceded the battle, which, in the eyes of both armies, had now become inevitable; for each general, knowing the

talents and resources of his adversary, put in exercise all the devices which science and a matured experience could suggest, for securing victory, or diminishing the evils of defeat. The conflict was severe and the success various. The fortune of the day was first determined in favour of Eumenes; but an opportunity which presented itself, was instantly seized by Antigonus, who, with the skill and presence of mind characteristic of the officers formed in the school of Alexander, attacked an exposed part of the enemy's line, and completely checked their ardour in pursuing their momentary advantage. The fruit of this masterly movement was displayed in the facility with which Antigonus was enabled to withdraw his army from the Persian frontier, and re-occupy the commodious quarters afforded him by Python, in the rich plains of Gamorga, a town of Media.

After the interruption occasioned by the winter, Antigonus endeavoured to surprise the royal general, by performing in the greatest secrecy, a forced march of nine days, through a hilly country, barren, and difficult. Information, forwarded by a peasant, saved the army of Eumenes; who, in the course of a few hours, made such able arrangements as set his indefatigable rival at defiance. In this crisis, the merit of the commander only excited the envy of the satraps who served under him; and though in the presence of an enemy, and in the expectation of an eventual battle, Peucestes, who had been disappointed in a former plot, conspired with Tentamus, a turbulent chief, to take away the life of Eumenes, as soon as he should have conquered the opposing army. The conspiracy was revealed to him by some of the other generals who had been invited to accede to it; and who, says Plutarch, were restrained from taking a share in that diabolical measure, not by the affectionate duty which they owed to Eumenes, but merely through fear of losing, by his death, the money which they had lent to him at high interest. The effect on the mind of that great commander was deep and distressing. Lamenting that it was his hard lot to live among wild beasts, he retired in low spirits to his tent, where he wrote his testament, and burned such of his papers as might have endangered those who had given him secret intelligence, or corresponded with him on matters of state policy. Regardless of the consequences to himself, he determined still to resist Antigonus, the enemy of his master's house; and in pursuance of this resolution, he went forth with a cheerful countenance to inspect his troops, and make arrangements for his last conflict with that unprincipled satrap.

The details of the battle are known to every reader of ancient history; and can only be interesting to those who wish to compare the tactics of the Macedonians with the art of war as practised in modern times. The armies were considerable, both for their number and the quality of the troops; that under Eumenes amounting to thirty-six thousand seven hundred foot, six thousand horse, and a hundred and fourteen elephants; and the other consisting of twenty-two thousand foot, nine thousand cavalry, with a body of Median skirmishers, and sixty-five elephants.

The Aργυραῖοι and the phalanx gained an easy victory over the foot soldiers of Antigonus. Not one of the battalions could sustain the shock, and most of them were cut to pieces; but the cavalry were more successful, and by their bravery and perseverance con-

Betrayal of
Eumenes.

tributed not a little to equalize the fortune of the combat. As the engagement took place in a sandy soil, the motion of the horses raised such a cloud as prevented either party from seeing beyond a few paces; a circumstance which suggested to Antigonos, the propriety of attacking the enemy's baggage, which was slenderly guarded by a body of raw troops, at a little distance from the scene of action. The device succeeded beyond all expectation; for the brave phalangites and silver-shields, as soon as they found that their property, their wives and children, and all that they held dear upon earth, were ravished from them at the moment when they imagined themselves in possession of a great victory, broke out into the most violent insubordination, and actually turned their arms against their own general. It was in vain for Eumenes to exhort them to return but once more to the charge, and they would recover every thing they had lost, and amply revenge their momentary grief on the vanquished enemy. The haughty Argyraspides would not listen. Treachery, too, it is obvious, was at work; for Peucestes had already left the field, with all the troops that he could induce to follow him: and now, to complete the disgrace of the whole army, it was proposed by the seditious and faithless satrap Teutamus, to conciliate the victorious Antigonos, by giving up into his hands the person of their gallant commander. The suggestion was acted upon; and Eumenes, after being seized like a felon, and bound with his own belt, was delivered up to his implacable enemy who had long thirsted for his blood. As he was carried through the Macedonian phalanx, on his way to the camp of Antigonos, the unfortunate general is said to have addressed the soldiers, entreating them to despatch him. "Kill me, soldiers," he exclaimed, "kill me yourselves, I conjure you in the name of all the gods; for though I perish by the hand of Antigonos, my death will be as much your act as if I had fallen by your swords."

Eumenes
put to death.

He was soon afterwards deprived of life in prison, at the age of forty-eight; after having served Philip and Alexander, in the honourable capacity of secretary about twenty years, and fought for their royal house after every other general of rank had begun to establish his own interests, on the ruins of allegiance and fidelity. Nor were his excellent qualities confined to military skill and unimpeachable honour. He was also an elegant scholar; evincing, by his writings, a pure taste, and the most exalted moral feeling, an ardent philanthropy, and a steady friendship. A collection of his letters is said to have been preserved till the second century of the Christian era; affording ample proof that the eulogies heaped on his character by ancient biographers and historians, were fully merited by the uniform tenour of his life, and by the liberal, manly tone of sentiment which adorned his principles and animated his writings. In his death, the royal house of Macedon lost one of the greatest ornaments of its court, in its best and proudest days, and one of its most faithful supporters, in the lowest ebb of its power. "De quo," says Nepos, "quanta fuerit omnia opinio eorum qui post Alexandrum Magnum, reges sunt appellati, ex hoc facile potest iudicari, quod nemo, Eumene vivo, rex appellatus est, sed prefectus. Eidem post huius occisum statim regnum creatum: nomenque sumptum; et sequae quod initio predicabant, se Alexandri liberis regnum servare, id prestatere voluerunt,

et, uno propugnatore sublato, quid sentirent apernerunt."

It was in the first year of the hundred and sixteenth Olympiad, that Antigonos rid himself, in the manner just described, of the formidable opposition so long directed against him by Eumenes. At this period, Polyperchon was still nominally protector of the empire, and tutor of the young king Alexander Agus; but after the triumph of Cassander over the partisans of Olympias, and the marriage of that general with Thessalonica, the power attached to his office was utterly annihilated, and he found himself compelled to retire into Peloponnesus, where he appears to have exercised, during several years, a very limited authority among the remaining adherents of the royal cause. In the east, again, there was no longer any one to represent the youthful monarch, or even to maintain his rights in the name of deputy to his protector. The privilege of governing was now determined by the sword; and Antigonos, being at the head of the largest army, assumed the protectorship of Asia, which he knew none of his rivals were in a condition at that moment to dispute with him.

Having gained an accession to his forces from the discomfited army of Eumenes, the new governor of the east returned into Media to concert measures for the stability of his power in the surrounding provinces. To avoid the same which had proved fatal to the renowned general whom he had lately put to death, he resolved, in the first place, to break up the celebrated battalion of the Argyraspides, who had shown too great a disposition to interfere in political arrangements; and, secondly, to despatch the turbulent Python, whose ambition and treachery had undermined not only the rigid government of Perdiccas, but also the mild and loyal sway of the unfortunate Eumenes. The former part of this intention he realized by sending the gallant silver-shields on severe service, where their strength would be wasted by fatigue and privation; and where, in fact, that famous band of veterans, to which Alexander owed so much of his success, was ultimately worn down, without ever revisiting their native country. As to Python, he was at length made the dupe of that atrocious deceit which he had so frequently practised against others. Antigonos had heard of his projects for recovering Media; but affecting to disbelieve such reports against a faithful partisan, he invited him to join his standard, giving him reason to expect a still higher reward for his services than the province from which he had been recently expelled. The ambitious satrap complied, joined the camp of Antigonos, was accused, tried, and put to death in the course of one day.

Fate of the
Argyras-
pides.Python put
to death.

The next measure pursued by the self-appointed protector was to reduce the power of Peucestes, who had repaired to his camp after the battle with Eumenes, at the head of his ten thousand Persian bowmen. Antigonos having accompanied him to Pasargada, the capital of his province, chose to take offence at the popularity with which the satrap was every where received, and immediately superseded him, by nominating to the government of Persis his own faithful tool Asclepiodorus. After this stretch of authority, to which the Orientals seem formed by nature to submit, Antigonos was pleased to confirm in their satrapies the governors placed in the more remote parts of the empire; sending friendly letters to

Alliance of
Seleucus
and
Ptolemy.

Negotiations of
Antigonus.

Demand
of the
confederates.

the rough old chieftain, Oxyartes, the father of Roxana, as well as to Stasander and Tlepolemus, the rulers of Bactria and Carmania, though their armies had served against him, under the standard of Eumenes. He was, moreover, induced to add Susiana to the province of Babylon, under the government of Seleucus, to whom also he forthwith proceeded to pay a friendly visit on the banks of the Euphrates. When at Susa, the commander of the citadel, following the orders of Seleucus, presented to the protector the keys of that fortress; from which, as being one of the chief treasuries of the empire, he carried away with him the very considerable sum of fifteen thousand talents.

At Babylon he was received by the governor with the greatest magnificence. Royal presents were made to him, and his whole army was splendidly entertained. But amidst all these demonstrations of friendship, there was hatred on the one side and fear on the other. Seleucus soon perceived that the fate of Python or of Peucestas awaited him, and that his safety could only be secured by flight. With about forty horsemen, accordingly, on whose speed and fidelity he could depend, he set out for Egypt, to throw himself on the protection of Ptolemy; and, after travelling with the utmost expedition not less than nine hundred miles, he arrived at Alexandria, already become the capital of the flourishing country to which it belonged. Ptolemy received the fugitive governor with open arms, and entered readily into all his views, whether of reprisals or of mutual defence; for policy now combined with personal regard in the breast of the Egyptian satrap, to dictate vigorous measures against the monstrous ambition and atrocious cruelties of Antigonus, who obviously grasped at universal empire. The proposal of Seleucus, therefore, to send an embassy to Cassander and Lysimachus was warmly seconded by his host, who likewise joined with him in arraigning the tyranny of the protector, as the common enemy of all who were invested with power.

Antigonus, meanwhile, having committed the provinces recently held by Seleucus, to Python, the son of Agenor, and having drawn from the fortress of Hircania, and other treasuries in the east, upwards of twenty thousand talents, found himself prepared either for war or negotiation. Knowing that his lieutenants in Asia Minor had lost ground during his absence beyond the Euphrates, he was desirous to gain, in the first instance at least, sufficient time for re-establishing his ascendancy in that important part of the empire, by subduing Asander, the governor of Caria, who had continually refused to acknowledge his government. With this view he sent ambassadors to Ptolemy, Cassander, and Lysimachus, desiring a continuance of their friendship, and explaining in the most plausible manner possible his proceedings at Babylon and Paflagia. The confederated satraps, anxious to avoid war, or desirous to procure for themselves the praise of moderation, met his proposals with a statement of terms, which he was requested to view as the price of their amity, and, perhaps, of their forbearance. Ptolemy insisted that his right to Syria should be acknowledged, and he also joined with Seleucus in the demand that the latter should be restored to his provinces on the Tigris. Cassander declared himself satisfied with Macedonia and Greece, provided he received a share of the money abstracted by Antigonus from the royal treasuries, a condition which was like-

wise urged by all the other contracting powers. Lysimachus, the ruler of Thrace, required that the Lesser Phrygia should be annexed to his dominions, that he might be enabled to command both sides of the Hellespont; whilst Asander, who had acceded to the confederacy on the approach of Antigonus, stipulated that he should be allowed to retain his conquests in Lycia and Cappadocia.

These conditions suited neither the temper nor the ulterior objects of the ambitious protector; and he is said, accordingly, to have dismissed the envoys with the following brief reply, addressed to their masters in common:—"That he was actually marching against Ptolemy, and after he had settled his differences with that satrap, he would proceed in due time to deal with his perfidious and insolent confederates."—"This transaction," says Dr. Gillies, "though conducted with little formality, was attended with momentous consequences, whether we regard the vastness of their extent, or the length of their duration. In Antigonus's answer to the embassy of the allied princes, the knot was tied of a memorable drama, involving the fortunes of mankind from the Adriatic to the Indus, and from the frozen banks of the Danube to the scorching sands of Lybia. The conflict, after being maintained a dozen years, with no less dexterity than energy, terminated in the establishment of four independent monarchies, Syria, Egypt, Thrace, and Macedonia, whose transactions with each other, and with foreign nations, until their successive reduction under the Parthian and Roman power, serve to impress some of the most useful lessons and salutary warnings that are to be found in the whole series of ancient or modern history."

Antigonus lost no time in attempting to realize his threatenings. He marched into Syria and Phoenicia, which, with the exception of Tyre, Gaza, and Joppa, the three principal strongholds on the coast, offered no material resistance. He next proceeded to restore his navy, which had been greatly reduced in the war with Asander, in order that he might be able to cope with the fleets of Greece, and particularly with that of Egypt, which, under the wise government of Ptolemy, had become the largest and best equipped of any in those seas.

The war was soon transferred to Lesser Asia, where the satrap of Caria continued a brave resistance to the arms of Antigonus, in which he was greatly assisted by the Egyptian fleet, under Polycleitus and Seleucus. But Asander was at length compelled to yield to the overwhelming force which was brought against him from all quarters, and directed by the consummate skill of the protector himself. The views of the conqueror were next turned to the state of Greece, the greater part of which was still subservient to Macedonia, and aided its power. By means of his emissaries, who carried large sums of money into that country, Antigonus not only formed a strong party in Peloponnesus, which was in some measure under the influence of Polysperchon and his son Alexander, but even stirred up several of the barbarous tribes of Ætolians, Epirots, and Triballians, to wage a direct war with the Macedonians, and thereby to further his intentions against Cassander, a principal ally of Ptolemy and Seleucus. He artfully enlisted on his side, too, the better feelings of the Macedonian people themselves, by representing Cassander as the assassin of their royal family, and by

war.

denouncing vengeance upon him unless he instantly delivered from confinement the young Alexander Ægus and his mother Roxana.

These professions, seconded by some political concessions in favour of the republics, and also by the gallant conduct of his nephew Ptolemy, operated such a revolution in favour of Antigonus, that he finally succeeded in stripping Cassander of all his possessions in Greece, with the exception of Thessaly, and in reducing his military resources within very narrow limits. In Thrace, likewise, the arms of the protector were crowned with the most flattering success. Lysimachus had acceded to the confederacy against him, and had even, whilst his arms were employed in Asia Minor, made a descent into the Hellespontian Phrygia; to revenge which aggressions, Antigonus stirred up the barbarous tribes which occupy the Thracian mountains to assail his establishments in the north, and, at the same time, seduced from their allegiance the Grecian cities on the Euxine, which this satrap, after the example of Ptolemy, had founded for the purposes of commerce. At this juncture, in short, the protector might have consolidated his power on a broad and lasting basis, had he listened to any other counsellor but his ambition. Syria was completely subdued, for Tyre had already surrendered to the skill and perseverance of his son Demetrius, after a blockade of fourteen months. Greece was wholly in his power; the satrap of Macedonia having no longer either money or troops sufficient to control the ascendancy of the two factions which had been recently formed in that country. Thrace was kept at bay by the internal commotions so artfully excited in it; as well as by the savage hordes which dwelt on the Danube, and which incessantly threatened to inundate with their countless multitudes the more fertile fields which stretch along the Euxine. Ptolemy, the most formidable of his enemies, had, ever since his accession to the government of Egypt, manifested a strong desire for peace; being obviously unwilling to suspend, upon the hazard of a protracted warfare, the improvement of the very important province which had fallen to his charge.

State of the confederates.

They wish for peace.

Antigonus declines negotiation.

117. 1.

The first blow was struck by Ptolemy. Aware of the aspiring views and insatiable ambition of Antigonus, he had spared no pains in increasing the number of his ships, and in adding to the skill and discipline of his sailors. Having completed the conquest of Cyprus, he made from that island a descent on the coasts of Syria and Cilicia; in both of which provinces he reduced several towns, enriching his

army with an immense booty, and a great number of Alexander's captives. Demetrius, the son of the protector, a youth of much spirit and military talent, had been appointed to govern Syria, upon its being wrested from the hands of Ptolemy. Impatient of the insult inflicted upon him by the plundering of so many cities, and the reduction of several important fortresses, he took the field with a considerable force, to chastise the Egyptian satrap and his predatory bands. Ptolemy, who had likewise raised a powerful army, marched his troops across the desert, from Pelusium to Gaza, and presented himself in the territory of Demetrius, ready to dispute with him the palm of victory, as well as the possession of his valuable province.

The battle which followed added to the renown of Ptolemy and Seleucus, who gained a complete victory over the brave but rash son of Antigonus. The numerical force of the armies engaged was nearly equal, amounting to about twenty-five thousand on each side; but the caution and science displayed by the generals of Alexander, gave a decided preponderance to the standard of Egypt, and added immensely to the discomfiture inflicted on their youthful antagonist. Demetrius lost about five thousand horsemen killed in the field, together with eight thousand foot soldiers who were taken prisoners; and as the fugitives, who directed their flight to Gaza, were so hotly pursued that the troops of Ptolemy entered the gates together with them, the whole baggage and treasures belonging to the army, as well as a great number of captives, were added to the spoils gained by the victors, and served as trophies to commemorate their success.

A remarkable circumstance, mentioned both by Diodorus and Plutarch, adds somewhat to the celebrity of this fight, and affords, at the same time, an interesting and rather characteristic view of the mental qualities of Demetrius. Upon sending a herald to Ptolemy, soliciting the usual permission to bury the slain, he was surprised to find that not only the boon which he had asked was granted, but that his camp equipage and personal effects were restored, and also, what he valued much more, his few surviving friends who had fallen into the hands of the enemy. A message, too, from the victorious general, still further increased his amazement. "Tell the youth," said the noble companion of Alexander, "that with the son of my old friend and ancient partner in arms I content only for glory and empire." Demetrius received the kindness with becoming grace; but he prayed to the gods that they would put it in his power to relieve himself from a burden of gratitude, which he felt oppressive, as being imposed by an enemy of his father.

The consequences of the defeat at Gaza were not a little disastrous to the interests of Antigonus in Syria; and they became somewhat more momentous than they would otherwise have been, inasmuch as they afforded to Seleucus an opportunity of returning to Babylon, and of resuming possession of his fine province. In the meantime, the principal cities on the shores of the Mediterranean opened their gates to Ptolemy; and Tyre, the most important of them all, soon declared for the same cause, and compelled its governor Andronicus to surrender. Having, therefore, placed garrisons in the chief fortresses, and committed the greater part of his army to Cilias, with orders to prosecute the war against Demetrius, the ruler of Egypt returned to Alexandria, in order to resign himself to

Generosity of Ptolemy.

Consequences of the battle of Gaza.

Biography. the more agreeable pursuits of internal improvement, navigation, and commerce.

From A. M. 3681. Cilles proved unequal to the charge proposed in him. A. C. 323. Allowing himself to be surprised by Demetrius, who A. M. 3806. had performed a wonderful march over a large portion of Asia Minor, whither he had gone to recruit his army, he was totally defeated with the loss of seven thousand prisoners. It is said that, when Antigonus heard of the reverse experienced by his son, he exclaimed, "Ptolemy has indeed beaten boys, but he shall soon have to do with me;" and it is probable that the protector himself meant forthwith to march into Syria to repair the losses which his cause had sustained. Demetrius, however, entreated that he might be allowed to try his fortune once more, as he was still confident of success. His father complied; and the youth accordingly, proceeding towards Syria with a degree of speed and secrecy not surpassed by Alexander himself, appeared in the heart of that province, before the Egyptian lieutenant was aware of his approach, and redeemed his pledge on the heads of Ptolemy's best soldiers. The young victor, finding himself now in possession of a large booty, seven thousand prisoners, the person of the commander, and all the furniture of the camp, called to mind at once the conduct of the Egyptian satrap, and his own prayer to the gods in relation to it. He resolved, therefore, immediately to send back Cilles, who was the friend as well as the general of Ptolemy, together with all the officers of distinction who were in his hands, loaded with presents, and charged with expressions of respect for their warlike master.

Success and gratitude of Demetrius

Retreat of Ptolemy.

The defeat of his lieutenant induced Ptolemy to withdraw his army from Syria. As Antigonus was himself advancing towards that country, it no longer appeared possible to protect the extensive line of coast exposed to his attack; and the same reason rendered it necessary for the Egyptian government to strengthen their frontier towns, and repair their fortifications on the banks of the Nile.

Accompanied by the Jews.

The army of Ptolemy was accompanied in its retreat by a vast number of the Syrians, and particularly of the Jews, who, wearied of revolutions, and apprehensive of still more alarming changes, preferred to their own country the tranquil residence of Alexandria, already become a considerable and very flourishing capital. The emigrants rose into reputation and some degree of authority under the mild administration of the Grecian sovereigns; and it was from them that Herodotus collected materials for his history of the Jewish nation; a work composed under the patronage of Ptolemy, and repeatedly mentioned by subsequent authors as a performance of great talent and impartiality. We need not add that it has long been numbered among those valuable productions of antiquity which no industry can restore; and of which the loss is deplored as well from the feeling of their great importance, as from the impossibility of finding an adequate substitute.

Preparatory to his meditated invasion of Egypt, Antigonus determined to subdue the migratory tribes of Arabs, who claimed possession of the desert which divides that country from Syria. Descended from Ismael, through his eldest son Nabiaoth, the ancient people now alluded to are known to have carried on, during many generations, a trade in spices and other eastern products, between Egypt and the western pro-

vinces of Asia; deriving a hardy subsistence from the milk of their camels and sheep, aided by the honey and wild fruits, which are occasionally found scattered over the wilderness. In a large cavern at the rock Petra, the Nabathians were wont to deposit their myrrh and frankincense, to be afterwards conveyed to the markets of Phœnicia or of Egypt, whence they were again distributed to merchants from more distant countries, who thereby supplied with the luxuries of Arabia, or even of Hindostan, the dwellers on the Caspian, the Danube, and the Tiber. Accustomed to a life of great freedom, the Ismaelites dreaded nothing so much as dependence; and their contempt of danger was only equalled by the fear with which they inspired all their neighbours.

Such is the character of the wandering people whom Antigonus thought it expedient to subdue in order to facilitate his operations against Egypt. Having committed to Athenus a large body of horse and foot, he despatched him to attack the rock Petra, at a time when the greater part of the tribe were absent, engaged in the pursuits of traffic. The surprise succeeded; the rock was taken, and the victors, loaded with treasure, prepared to return to Gaza. But a signal reverse awaited them. The Nabathian merchants, informed of what had taken place, urged their dromedaries across the desert with such incredible swiftness, that they overtook the Macedonian plunderers before they could reach the Syrian plain; and attacking them in the night with all the fury of incensed savages, put them all to the sword, with the exception of about fifty horsemen, who escaped covered with wounds.

A second expedition was undertaken against those formidable Arabs, and placed under the command of Demetrius, whose youthful ardour, mingling with motives of policy, impelled him to a task which could not fail to appear equally hazardous and romantic. The rock Petra, on this occasion, was emptied of its treasures, and strongly defended by intrepid warriors. The son of Antigonus led his men to the assault; but making no impression on the rude fortress, and having lost a great number of his followers, he found it necessary to draw off the remainder, and prepare for the attack on a larger scale. Next day, when about to renew his attempt, he was addressed from the rock by a Nabathian chief, who remonstrated with him on the folly of invading a territory where neither honour nor advantage was to be obtained. "Our country is burnt with the sun, and is barren and desolate. We alone are born to inhabit it, because we prefer freedom to all other enjoyments. So deeply rooted is our love of independence, that should you enchain our bodies, you never could subdue our minds. All that you could obtain by conquest would be a few obstinate spiritless slaves, incapable of enduring any other form of society than that in which, from the very earliest times, they have constantly continued to live."

Diodorus, who puts the above speech in the mouth of the Arab patriarch, goes on to inform his readers, that it produced such an effect on the mind of the Macedonian captain, as to determine him to relinquish the object of his expedition, to accept of some presents and hostages, and retrace his steps towards the Dead sea.

This petty and unsuccessful warfare was the means of saving Egypt from the horrors of invasion. When

Athenus surprises the Nabathians.

And is afterwards defeated by them.

Expedition of Demetrius against the Nabathians.

Biography. Demetrius returned to his father in Syria, it was only to be informed that Cassander and Lysimachus, in the west, had again become formidable, and that Seleucus, in the east, had already recovered the province of Babylon and defeated the governors of Media and Persia.

We have already stated that the general just named availed himself so far of the defeat inflicted on Demetrius at Gaza, as to march with about a thousand infantry and three hundred horse, which were confided to him by Ptolemy, through the Syrian desert, with the view of relieving Babylon from the tyranny of Antigonus, and of re-establishing himself in his former government. The success of this enterprise exceeded his most sanguine hopes. The strongholds opened their gates at his approach; the troops revolted from their commanders and flocked to join his standard; and the populace of the great city poured out to meet him, rendering the air with acclamation and shouts of triumph.

Victory of Evagoras. Evagoras, the governor of Persia, and Nicanor, the governor of Media, aware that their power depended on that of Antigonus, made haste to unite their forces. In order to check the progress of Seleucus. This last commander, who had learned under Alexander the importance of despatch in the commencement of a war, met his adversaries on the east bank of the Tigris; where attacking their camp in the night, he gained a victory so complete that only one of the satraps, with a few followers, escaped destruction by flying into the desert; while Evagoras lay dead on the field, and all the treasures of both provinces, together with several thousand Macedonian soldiers, fell into the hands of the conqueror.

Accession of the Seleucids. This battle, the successful issue of which contributed so materially to the restoration of Seleucus, has served to mark the era of the Grecian kingdom in Asia, and the commencement of that dynasty, which, under the name of Seleucids, governed the upper provinces so long and so happily. It took place in the first year of the hundred and seventeenth Olympiad, and in the year before Christ 312.

Whilst these things were going on, Demetrius, at the head of fifteen thousand foot and four thousand horse, was already on his march to recover Babylon and chastise Seleucus. The latter, drawn into Media after Nicanor, where he gained another victory and slew his antagonist with his own hand, was still at too great a distance to meet the invader and defend the city. Patrocles who commanded in his absence, but without sufficient force either to hazard a battle or to protect the place, proposed to the inhabitants to abandon their houses and to take refuge wherever they could, until the return of Seleucus with his victorious troops should enable them to repel the son of the tyrant, and to avenge themselves upon their enemies. Babylon, accordingly, when Demetrius entered it, was found desolate and empty. There was neither a foe to combat, nor booty to reward his soldiers. The forts on the Euphrates engaged his attention for some time; but the period having arrived at which his return into Syria had been fixed by his father, he left Archelaus with five or six thousand men to pursue the object of the war, and departed homeward to give an account of his expedition.

The return of Seleucus to Babylon decided the fate of Archelaus; who, having taken refuge in a strong-

hold which had yielded to the arms of Demetrius, was obliged to surrender at discretion.

This change of affairs in the east, which Antigonus foresaw was about to engage his undivided attention, induced him to listen to terms of accommodation on the part of Ptolemy, Lysimachus, and Cassander. A treaty was accordingly concluded; in which it was agreed, that Egypt, with its African dependencies, should be secured to the first of the three generals now named; that Thrace should be assigned to the second; and that the last should be guaranteed in the possession of Macedonia, at least till Alexander, the son of Roxana, should be of age to reign. Antigonus retained for himself the government of all Asia; a condition which implied that Seleucus was to have no part in the succession, should his opponent prosper in his attempt to expel him from his rich provinces on the Euphrates and Tigris, and which soon after gave rise to events, of which the ambitious protector had no anticipation. As a sort of supplement to the treaty, it was stipulated that the Grecian states should be declared independent, and forthwith restored to the exercise of their ancient liberty.

These fair appearances, however, were altogether unproductive either of peace or confidence. The Macedonians, it is said, eager to behold the son of their renowned prince on the throne, proposed to Cassander that he should be brought into public, and be made acquainted with the business and arts of government. In this proposal Cassander saw the termination of his own power; and, therefore, to prevent forever its fulfilment, he caused the young Alexander and his mother Roxana to be murdered in the castle of Amphipolis, where they had long been confined. To thwart the views of this cruel satrap, the ancient protector, Polyperchon, who still retained some portion of authority in Peloponnesus, and who had recently affected great zeal for the royal house of Macedon, contrived to get into his possession the person of Hercules, another son of Alexander, by Barchina, and placing him at the head of a small army, prepared to march with him into Macedon, and assert his right to the crown. This project was met on the part of Cassander, not with force, but with the surer instruments of bribery and deceit. He dazzled the eyes of the old governor with the hope of succession in his family, and actually prevailed on him to put to death both the prince and Barchina, whom he had beguiled into his hands.

In defiance of the treaty, which indeed all the parties had shewn themselves ready to violate, Ptolemy was already employed in Asia Minor, at the head of his army, reducing certain cities belonging to Antigonus, and endeavouring to strengthen his interests by political connections. Having afterwards sailed into the Egæan, where he subdued Corinth, Sicyon, and other places of less note, he embraced the opportunity of entering into a correspondence with Cleopatra, the sister of Alexander the Great, with the view either of asking her to become his wife, or of inducing her to abjure the cause of Antigonus and devote her exertions to his own party. The vigilant protector, informed of what was going forward, issued orders to the governor of Sardis, where she then resided, to have her put out of the way by assassination; taking care, a short time afterwards, when he found it expedient to throw the veil of hypocrisy over his cruel deed, to

prosecute and punish all who had any share in the murder of that unfortunate prince.

We have mentioned above, that one of the conditions of the treaty entered into by Antigonus and the confederate satraps was, that the Grecian states should be restored to the enjoyment of their independence. Cassander, however, in direct contravention of this article, still maintained his garrisons in Athens and Megara; whilst Ptolemy kept his navy at sea, avowedly to enforce the observance of peace, but, in fact, to extend or secure his conquests in the Lesser Asia and Peloponnesus. To punish this glaring infraction of a solemn compact, Demetrius, with two hundred and fifty gallees, and five thousand talents, set sail for Athens, with the determination to expel the Macedonian troops, and to restore the democratical government. The city and harbours were at once surrendered to the invader, who acted with the greatest clemency and generosity to all, but particularly to Demetrius Phalerus; who had ruled the Athenians wisely and beneficially during the long period of ten years that he discharged the office of Cassander's lieutenant. The Phasian, who reposed no confidence in the fickle people of Athens, was escorted to Thebes by order of the son of Antigonus, where he passed his time in the pursuits of literature and in labours of humanity.

The gratitude of the Athenians to their deliverer passed all bounds, or was only equalled by their fulsome and impious adulation. But Demetrius was soon summoned by his father to leave the flattery of orators and demagogues, in order to resume the combined duties of an admiral and an engineer in the reduction of Cyprus.

That island had recently been the scene of a miserable tragedy, perpetrated by the troops of Ptolemy, under the command of his brother Menelaus. The royal family of Nicoses, the descendants of Ajax and Achilles, charged with no other crime except a wish to throw off the Macedonian yoke, were attacked in their palace, where they could find no means of escaping an ignominious death but by the dreadful resolution of dying by their own hands. The monarch himself set the example; and his queen, disdaining to survive him, first put to death her own daughters, and then, inviting the other ladies of the court to imitate her conduct, fearlessly deprived herself of life. The brothers of the king next set fire to the royal building, and obliterated at once every monument and symbol of ancient power and regal dominion; for Cyprus has never again recovered her independence, or even been governed by a prince of her native dynasty.

To take vengeance on a policy which admitted of such atrocious cruelties, as well as to deprive Ptolemy of the principal means of renewing his attacks on the maritime towns of Lesser Asia, Demetrius was directed to proceed to Cyprus, at the head of a large body of both land and sea forces. After a slight engagement with Menelaus, in which he was successful, the son of the protector laid siege to Salamis, the ancient capital of the island.

The occurrences of this siege occupy a prominent place in history, not so much on account of the determined resistance opposed to the assailants, and the great importance attached to its issue by the heads of the belligerent parties, as for a new species

of warlike engine invented by Demetrius, and first employed by him against the town of Salamis. The instrument in question was called *Helepolis*, or town-taker, and was itself an immense tower, consisting of nine stories, gradually diminishing as they rose in altitude, and affording accommodation for a great number of armed men, who discharged all sorts of missiles against the ramparts of the enemy. Plutarch, in his life of Demetrius, gives way to his love of the marvellous in describing the *Helepolis*; informing us that the inventor employed one of them at the siege of Thebes, so extremely large and unwieldy, that, though placed on four wheels, it could not be moved at a greater rate than a quarter of a mile in two months!

Ptolemy dreading the fall of Salamis, which he was sensible would pave the way for the entire conquest of Cyprus, had already made formidable preparations for compelling Demetrius to raise the siege. A memorable sea-fight ensued, in which the satrap of Egypt was completely defeated, with the loss of nearly all his fleet, and thirty thousand prisoners. The fruits of this victory were very important to Antigonus. Salamis and all the other walled towns in the island opened their gates to his army; his navy was largely increased by the addition of about a hundred captured ships; and his settlements, on the Asiatic shores, were now secured against the fear of invasion from the ports of Egypt and Cyprus.

The siege of Salamis is farther remarkable for the following circumstance, which all ancient historians agree in connecting with it. Demetrius, it is said, chose for his messenger, to carry to his father the news of his success, a buffoon called Aristodemus, who, finding the aged protector at his new city on the river Orontes, approached him with a theatrical set and solemn look, exclaiming, hail, king Antigonus! He then proceeded to give the details of the victory which Demetrius had just gained. From that period the regal title was assumed by all the successors of Alexander, with the exception of his brother-in-law at Macedon; who, it is feigned, from the respect which he felt for the ashes of the royal family entombed in his province, would neither use the royal signet nor allow himself to be called king. So conscientious and delicate was the merciful Cassander!

Determined to follow up his advantage against Ptolemy, the royal Antigonus prepared once more to invade the kingdom of Egypt. The fleet under Demetrius consisted of a hundred and fifty gallees, besides an hundred ships of burden for conveying engines, missile weapons, and other instruments of assault. The army, too, greatly exceeded in numerical strength the usual armaments of the Macedonian princes, consisting of about eighty thousand foot, ten thousand horse, upwards of eighty elephants, and an immense number of camels, collected from Arabia, and laden with provisions, stores, and treasures. But the king of Egypt was fully prepared to resist this formidable host. The natural defences of his country, at all times strong, were rendered next to impregnable by the skill and labour of Ptolemy; and the people, now become sensible of the innumerable benefits of his wise rule, were heartily disposed to second all his endeavours for the protection of their rights and independence. The fortune of war, too, seemed to smile on his exertions. The immense flotilla of his adversary was greatly damaged at sea before it could reach his

Biography. shores; and many of the galleys with their crews were driven on the sand banks at the mouth of the Nile, and presented an easy conquest to the experienced Egyptians. The land force, again, under Antigonus himself, could make no progress in the face of the thousand obstacles, which nature and art had opposed to him. Deep marshes and resolute garrisons disputed every step he meditated; which difficulties were materially aggravated by the discontent that already prevailed in his camp, and by the numerous desertions which had already thinned his ranks. To persevere was to ensure his own destruction. Antigonus, therefore, at length professed himself ready to listen to counsel; when his most experienced officers, aware at once of his inclination, and of the necessity of his circumstances, advised him to postpone the conquest of Egypt till a more favourable season of the year. He retraced his march towards Syria; upon which Ptolemy thanked the gods for his deliverance, and sent an embassy to his confederates, Cassander, Lysimachus, and Seleucus, acquainting them with the signal and disgraceful reverse which had befallen their common enemy.

Retreat of
Antigonus.

Siege of
Rhodes.

Unable to affect Egypt by any direct attack, Antigonus resolved to employ his powerful fleet and army against Rhodes; the people of which not only persisted in their alliance with Ptolemy, but had even refused to assist Demetrius at the siege of Cyprus, and subsequently had driven from their coasts a squadron of his ships. To gratify his resentment, therefore, as well as to annoy the king of Egypt, Demetrius approached the island with two hundred ships, and forty or fifty thousand men, with the usual proportion of battering engines, missiles, and other stores, and forthwith engaged in the siege of the principal town, which had set his mighty host at defiance. The operations of this distinguished commander before Rhodes, and the resolute defence of the place by the inhabitants, present, perhaps, the most remarkable example of skill and heroism that is to be found in the annals of ancient warfare. The *Helropolis* employed on this occasion, resembled in form, but greatly exceeded in dimensions, the one which was used at the siege of Salamis. Its towers were a hundred and fifty feet high; it was supported on eight enormous wheels, and propelled by the labour of three thousand four hundred men. Its sides were plated with iron; the portholes were defended with valves of raw hides, thickly covered with wool; and it was prepared to resist fire, by an ingenious device for distributing water throughout every part of the huge fabric. For more than a year however, the talents and bravery of Demetrius were exerted in vain against the courageous Rhodians. Ptolemy, indeed, had assisted them with men, and Cassander and Lysimachus had supplied their magazines with corn; but the honour of defending their city, during twelve months, against an armament at once so large and so ably directed, belongs almost exclusively to the people of Rhodes themselves, who, without one exception, preferred death to the condition of slaves, or even to that of tributaries.

Treaty with
the Rhodi-
ans.

At length the voice of the civilized world was lifted up in their behalf. Ambassadors from fifty states in Europe and Asia interceded for them with Demetrius; but the envoys who had the greatest influence on this occasion were the Athenians, who represented to him that their city was again subjected to Macedonian

thraldom, and begged his speedy interference to save them from the machinations of Cassander. A treaty was accordingly concluded, the conditions of which were, that the Rhodians should enjoy their independence, that they should be at liberty to continue their alliance with Ptolemy, and, at the same time, should be regarded as the allies of Antigonus; terms which left them precisely on the same footing as before the war, and which of course, reflected disgrace and disappointment on the standard of the invader. The people of Rhodes, however, liberal as well as brave, whilst they conferred the title of *Soter*, or *Saviour*, on Ptolemy, and erected statues for Cassander and Lysimachus, refused to demolish those which had been formerly raised in honour of Antigonus and his son. They had too much generosity to indulge in a revenge so unmanly and contemptible.

The several repulses sustained by the arms of Antigonus did not by any means diel from his mind the phantoms of ambition, and dreams of universal empire, with which his imagination had been so long haunted. In the meantime his son, on whose great abilities he chiefly reposed his hopes, had gone to rescue Greece from the domination of Cassander. In this undertaking he was so successful, that in the course of nine months he recovered his ascendancy in almost all the states north of the isthmus; and, in the following spring, descending into Peloponnesus, he reduced the fortresses of Corinth, Sicyon, and Ægium, and ultimately spread the terror of his arms over the whole peninsula. Next year, upon summoning the states of Greece to the great representative council of the Amphictyons, he heard himself declared their generalissimo, and invested with the same authority and honours which had formerly been conferred upon Philip and his immortal successor.

Demetrius thought it not necessary to conceal that among all their subordinate projects, the main object contemplated both by his father and himself, was the final subjugation of Macedonia, Egypt, and the east. With this view, peace was refused to Cassander, and the dominions of Lysimachus were threatened with immediate invasion. Seleucus and Ptolemy, though at a greater distance, knew that they were by no means secured against the ambitious designs of the king, as Antigonus was now called. The confederacy of the four chiefs was therefore once more renewed; and Lysimachus, with a considerable army under his command, crossed over into Asia, and was the first to take the field against Antigonus.

The campaign which ensued in Asia Minor was attended with various fortune; though on the whole, less favourable to Lysimachus than to his adversary. Meanwhile Demetrius hurried from Greece to join his father, and Seleucus and Ptolemy put themselves in motion to assist their allies of Macedonia and Thrace. Ptolemy, there is reason to believe, had no wish to waste his resources in a doubtful war, and therefore, upon a rumour reaching him in Syria, that Lysimachus was utterly routed, made haste to fall back towards the impregnable swamps of the Nile. Seleucus avowed a less ambiguous policy. He poured into Cappadocia with twenty thousand chosen foot, twelve thousand horse, a hundred armed chariots, together with four hundred and eighty elephants, which he had received from Sandrocottus, a powerful prince, who at that period reigned between the Indus and Ganges.

Death of
Antigonus.

New par-
tition of
territory.

Both sides now exerted their best talents in preparing for that momentous conflict which was, in all probability, to decide the empire of Asia. Antigonus, now in his eighty-first year, had long been distinguished by resolution and energy, and Demetrius was not surpassed by any living commander in the principal qualities which constitute an expert and efficient general. It would seem, however, from the concurrent testimony of historians, that the aid protector was appressed with an invincible presentiment, that the fortune of the day was to incline to his rivals. He stumbled when walking from the door of his tent on the morning of the battle; and immediately regarding that accident as an omen, he prayed that he might either be blessed with victory, or be rendered insensible of defeat. The engagement took place near a village called Ipsus, and Antigonus fell covered with wounds. Demetrius, whose impetuosity in pursuing a body of Seleucus's horse, had carried him too far from the field, returned to the scene of action only to learn the death of his father and the total overthrow of his army. Retreat was his only resource; and, accordingly, after a precipitate flight of two hundred miles, he regained his fleet, carrying with him, of all the mighty host which he had marshalled at Ipsus, about four thousand infantry and as many horsemen.

The death of Antigonus and the total defeat of his army, gave immediate occasion to a new arrangement of territorial dominion among the victorious confederates. Ptolemy, indeed, had not appeared in the field at Ipsus, nor is it certain that any Egyptian troops were engaged in that memorable action, yet this monarch obtained as the reward of his counsels and former services, the secure possession of Coele-Syria and Palestine; a province on which he set a very high value, as securing to him the command of the sea, and a convenient channel of communication with the rich islands and seaport towns of Asia Minor. To Lysimachus was conceded nearly the whole of the Asiatic peninsula; the free district of Cilicia being reserved for Cassander, who immediately conferred the government of it to his brother Pleistarchus.

Demetrius, in the meantime, was exerting himself at Ephesus with his characteristic activity and zeal, in order to raise such a force as might enable him to retrieve his affairs and check the progress of his adversaries. Sailing with a considerable armament to Athens, he was informed by the seditious inhabitants that a decree had been recently passed, prohibiting any of the kings from entering within their walls; upon which the son of Antigonus, finding that all Greece had again submitted to the influence of Cassander, made a descent on the coast at Corinth for the mere purposes of plunder and revenge, and afterwards committed similar ravages along the whole shores of Thrace. He was, however, soon to be indebted for a temporary revival of his fortune to a very different cause.

New alli-
ances of
Demetrius.

Seleucus, jealous of the power of Lysimachus, whose territories now extended to the Syrian borders, resolved to fortify his own dominion by forming an alliance with the family of Demetrius, which was still possessed of considerable claims and interests. He therefore made proposals for Stratonice, the accomplished daughter of his former rival, and finally induced him to conduct her into Syria, where their nuptials were to be celebrated. The marriage festi-

vity was hardly over when Demetrius invaded the province of Cilicia, and wrested it from Pleistarchus, the brother of the Macedonian monarch. Being still master of Cyprus, as well as of some important towns on the Grecian and Syrian coasts, he already appeared formidable to the eyes of his aged son-in-law, who began to tremble at the power which he himself had been the means of reviving. An alliance, too, with Ptolemy, who gave to Demetrius his daughter Ptolemais in marriage, added but a little to the apprehensions of Seleucus, in regard to the safety of his political connections. It was, therefore, not without satisfaction that he saw the father of his young wife set sail for Athens, with the view of chastising the ingratitude of that unprincipled city.

Moving compelled the Athenians to open their gates and receive a garrison, Demetrius proceeded to attack Sparta, the possession of which seemed necessary to secure his ascendancy in Peloponnesus. He had not, however, put to the test the long disused arms of the Lacedæmonians, when he received intelligence that the eldest son of Cassander, who had succeeded his father about two years before, was dead, and that the throne was now disputed by his two brothers, Antipater and Alexander, both sons of Thessalonica. The mother, favouring the pretensions of the latter, was murdered by Antipater; who seized the crown in defiance of the indignant anger of the Macedonians, excited by the atrocious act of parricide with which he had just stained his hands. Alexander, aided by Pyrrhus, king of Epirus, soon afterwards succeeded in dethroning his brother, who being son-in-law to Lysimachus, fled to that prince for protection. Dreading the resentment of the Thracian monarch, the new king of Macedon entreated the assistance of Demetrius, who instantly relinquishing the siege of Sparta, hurried his troops into Macedon, prepared, it should seem, to promote his own views, whether in co-operation with Alexander or in direct opposition to him. The current of events determined him to adopt the latter alternative. Alexander, who was supposed to meditate guile against his ally, was cut off by his orders at an entertainment given by that prince; and thus the throne of Macedon was again without an occupant, and presented a fresh stimulus to the ambition of the son of Antigonus.

Demetrius, it is well known, had married Phila, the favourite daughter of Antipater; and as all the male descendants of that able minister were now dead, with the exception of the murderer of Thessalonica, the claims of his son-in-law to the crown were not without a plausible foundation. He was accordingly proclaimed king, and conducted in triumph to Pella; where he had soon after the happiness to receive his wife, who had been made prisoner by Ptolemy at the reduction of Cyprus.

Sent on the throne of Macedon, the restless genius of Demetrius projected new conquests both in Europe and Asia. Hearing that Lysimachus was a captive in the hands of the Getæ, he determined to invade Thrace; but being diverted from this undertaking by the sudden return of the king, he directed his arms against Pyrrhus, whom he drove from Thessaly, part of which had fallen to him in a former war; and then marched to Thebes, which he took by assault, and filled with a garrison devoted to his interests. About the same time, also, he built the

Demetrius
declared
king of
Macedon.

Biography. town of Demetrius on the Pelagic gulph; and in order still further to increase his naval power, he formed a matrimonial union with the daughter of Agathocles, the tyrant of Syracuse, a prince whose warlike exploits occupy a prominent place in the annals of ancient Europe. Bounding his ambition only by the limits of his paternal dominions, Demetrius employed all his means to raise armies and equip fleets; and at length, it is said, his endeavours were crowned with so much success, that his ships of war amounted to five hundred galleys, many of them having fifteen or sixteen banks of oars, whilst his land forces exceeded considerably a hundred thousand, of which more than twelve thousand were cavalry.

The kings of Thrace and Egypt could not behold such preparations without concern. Ptolemy accordingly advanced towards Greece with his fleet, whilst Lysimachus, with his ally, the young king of Epirus, put his army in motion to attack Macedon in two different points at once. Demetrius took the field with his usual alacrity; but whilst approaching the camp of Pyrrhus, dissatisfaction shewed itself in his ranks, and when arrived in sight of the invader, he found himself deserted by the greater part of his troops. Leaving Macedon therefore a prey to Pyrrhus and Lysimachus, and giving the command of the Grecian cities to his son Antigonus, the active Demetrius passed over into Asia Minor with a body of his best troops, resolved to assail his adversary in the most vulnerable quarter. This enterprise was at first attended with the most splendid success. In a short time, however, a check was imposed on his career by Agathocles, the son of Lysimachus; who followed him so closely with a powerful army, and shewed so much talent in cutting off his resources, and intercepting his movements, that he was obliged to apply for protection to Seleucus, who was at that time guarding the frontiers of Syria. His cautious son-in-law yielded to his solicitations only so far as to grant him permission to pass two months within his territory; and was subsequently induced by his courtiers to rid himself of so dangerous a guest, by sending him a prisoner to a strong fortress on the Syrian coast, about sixty miles south of Antioch, where at the end of three years he fell a victim to hunger, sloth, and intemperance. The remains of Demetrius were conveyed to Thessaly, and solemnly interred by his son, in the city founded by himself on the Pelagic gulph; the funeral rites being conducted with a degree of sumptuous splendour, much more suited to the grandeur of his ambition than to the circumstances in which he closed his career.

Macedon was now divided and governed by Lysimachus and the adventurous king of Epirus, in whose hands it continued with partial changes until Antigonus, the son of Demetrius, succeeded in recovering the abdicated throne.

Meanwhile the affairs of Egypt, under the wise government of Ptolemy, had attained to a great degree of prosperity and glory. Desirous to secure a peaceful succession, the king, now in his eightieth year, nominated his son Ptolemy, afterwards Philadelphus, to share with him, during the remainder of his life, the power which he meant should devolve upon him at his demise. The coronation and enthronement of the young prince, which were performed in the most splendid manner possible, could not fail to give im-

brage to his elder brother, Ptolemy Ceraunus, who immediately left Egypt to disquiet, to find an asylum in the house of Agathocles, the accomplished son of Lysimachus, who had become his brother-in-law by marrying his sister Lysandra. The renowned king of Egypt lived two years after the occurrence now stated, and then left the sovereignty of his new kingdom to the judicious youth whom he had associated with him in the government.

Lysimachus, who had married the Egyptian princess Arinoe, was impelled by this unprincipled woman to murder his son Agathocles. The friends of the prince, filled with resentment and horror at his death, and among others his wife Lysandra and her brother Ceraunus, fled into Assyria, seeking protection at the court of Seleucus. Many of the governors of Lesser Asia, too, who admired the character of Agathocles, and lamented his unhappy end, seemed ready to throw off their allegiance altogether, or to transfer it to the milder authority of the eastern monarch. Among these the most determined was Phileteus, the keeper of the royal treasures in the castle of Pergamus, who wrote to Seleucus inviting him to send an army into the peninsula, and promising a powerful aid of men and money.

The king of Syria lent a ready ear to the proposal; for being now advanced in age, and having delivered his Oriental dominions, together with his young wife Stratonice, into the hands of his son Antiochus, he seemed willing to resign the splendour of Asiatic sovereignty, in order to gratify the very natural desire which had sprung up in his heart to revisit his native land, and to lay his bones in a Macedonian tomb. Ambition, perhaps, mingled deeply with this simple affection; for he who had reigned more than twenty years the undisputed monarch of the Persian empire, could not consent to share, as a subject, the soil which was once honoured by the sway of Philip and Alexander, and was now disgraced by the domination of a murderer and tyrant.

Actuated by the motives which we have just described, Seleucus advanced into Asia Minor. Meeting with little resistance, his conquest of that important country was marked with no signal occurrence; for it was not till he had pitched his camp on the shores of the Hellespont that he found his progress disputed by an adversary worthy of his arms, or at all likely to exercise his military talents. Lysimachus himself now appeared in the field at the head of such a force as might check his ambitious rival, or at least make him pay more dearly for the triumphs which he still mediated. The battle of Coroneia decided their respective claims: and was the last scene in which the companions of Alexander the Great were opposed to one another. The aid generals on this occasion renewed the valour and strength of their youth; and meeting in the front of their armies, they engaged in single combat with the greatest fury, playing against each other the sword and lance; till at length Lysimachus fell under the hand of his former friend, and lay buried under a heap of slain. A faithful dog watched his corpse till it was solicited from the conqueror; after which it was conveyed for interment by his son Alexander to Lysimachia, where the citizens honoured the memory of their founder by a stately mausoleum, which continued, in the second century of the Christian era, to attest their gratitude to a master who, except as a soldier and the patron of their

Assassination of Seleucus.

His character.

It consists not with our limited plan to describe minutely the characters of the distinguished individuals, whose actions and fortunes present such a variety of historical incident, in tracing the reigns of Alexander's successors. Of Seleucus, however, we may be permitted to observe, that, with the exception of Ptolemy, he pursued more assiduously than any of the great captains who fought under the banners of the conqueror, the enlarged and benevolent designs which that renowned prince combined with all his military triumphs. After the example of his master, he guided the love and esteem of his eastern subjects, by governing them according to their established principles and habits. His zeal for improvement induced him to build many cities, both on the shores of the Mediterranean and on the banks of the Euphrates. Babylon-Seleucia and the famed city of Antioch continued long to bear witness to his great exertions for promoting the best interests of his people; the former having existed as the capital of the Asiatic empire till near the middle of the seventh century, whilst the latter continued to be illustrious, during a still longer period, as the seat of Syrian kings, Roman governors, and Christian bishops. It was in Seleucia, the port of Antioch, that the remains of this great monarch were deposited, after having been purchased by Philoterus, the governor of Pergamus, from the base mercenary assassin who had imbrued his hands in his blood. A temple erected in the same place, and called Nicetorion, in reference to his title of Nicator, recalled, age after age, to the memory of his Syrian subjects, the mild virtues, the genius, and the numerous exploits of the great general who founded amongst them the kingdom of the Greeks.

The court of Ptolemy.

A better opportunity will occur for describing the character of Ptolemy, the king of Egypt, and for setting forth the numerous obligations which literature and philosophy continue to bear to that distinguished sovereign. His establishment of the Alex-

andrian library, and his marked encouragement of men of letters, are too well known to require mention; and, perhaps, the royal munificence which he displayed in providing so splendid an asylum for learning, was more than equalled by the discrimination which he manifested in the choice of individuals to preside over its interests and to promote its progress. Whilst inviting to his court, and placing in his schools, those characters who were the most distinguished of the age by their scientific acquirements, Ptolemy, nevertheless, shewed himself the greatest philosopher that adorned Alexandria. To the knowledge of books he joined the more valuable knowledge of men and of business; and was thus qualified to direct the pursuits of science to practicable objects, and to withdraw the speculations of the learned from the inane metaphysics in which they were wont to indulge, in order to engage them in the more profitable studies of criticism, history, geometry, and medicine. As, however, it belongs to a different branch of our work to examine the annals of ancient philosophy and art, and to trace the connection of these, as they were cultivated in the schools of Alexandria, with their more improved condition in the present times, we shall hold it enough to have made this reference, and we shall proceed with our historical sketch of civil and military affairs.

The immediate successors of Alexander being now all removed by death, the events which follow are marked with less talent and brilliancy than those which attended the foundation of their several kingdoms. Upon the death of Seleucus, the government of Asia fell into the hands of his son Antiochus, whose follies were soon found unequal to the arduous task of maintaining an hereditary ascendancy in the rich provinces of the east, together with the regal power of Macedonia, which he was likewise taught to claim as the right of his family. Amidst the delay and indecision, which characterised his first proceedings, several nations in Asia Minor, which had recently owned the sway of Lysimachus, asserted their independence. Pergamum, Bithynia, Cappadocia, and Pontus, resumed once more the exercise of a separate government, and placed themselves under the rule of princes, some of whom make a conspicuous figure in the subsequent history of Italy and Greece. We think it proper to state these facts at present, because frequent reference will be made to them afterwards; but as we must abstain from all minuteness of detail inconsistent with the compression which our plan requires, we shall confine ourselves to such leading facts as will connect the affairs of Alexander's successors in Greece, Syria, Egypt, and the Lesser Asia, with the history of that rising power in the west, which was, at no great distance of time, to subdue and supersede the whole. We begin, then, with Macedon and the Grecian states.

Ptolemy Cernanus having seated himself on the throne at Pella, which the aged Seleucus had been so eager to occupy, set at defiance the claims of that monarch's son, as well as those of Antigonus, the son of Demetrius. To secure his ascendancy, he murdered his nephews, the sons of Lysimachus; and having thus rendered himself the heir of the Thracian throne, he proceeded to attack Antigonus, and added his northern dominions to those of Macedon. But a powerful enemy was at hand to avenge the wrongs of the house of Seleucus, and the manifold injuries inflicted on the family of Lysimachus. The Gauls,

Crimes of Ptolemy Cernanus.

Biography. who had some time before passed into Italy, now found their way into Thrace and Macedonia; spreading themselves in vast multitudes over the territory of Ceraunus, and committing the most frightful devastations in his richest provinces. The usurper, who was not deficient either in courage or activity, took the field against his barbarian invaders: but, despising too much their undisciplined valour, he rushed into battle without due precaution, where he fell mortally wounded, and lost a large proportion of his army.

The government of Macedonia was occupied during a few months, by men whose sole claim to supreme power consisted in the ability to save their country. The Gauls, after much hard fighting and various fortune, settled at length in the Lesser Asia; giving the name of Galatia to the district which they occupied, from an affectionate remembrance of their native land. The effects of their invasion on the power of Macedon were, however, so considerable, that Antigonus Gonatas, the son of Demetrius, found little difficulty in possessing himself of the throne; although opposed by the formidable competition of Pyrrhus, and of Antiochus, the son of Seleucus. In his defensive operations against the latter, he was assisted by Nicomedes, the new ruler of Bithynia; and his policy and vigour were rewarded with such success, that Antigonus not only yielded to his pretensions, but also gave him in marriage his sister Phila, the granddaughter of Antipater, the celebrated viceroy of Macedon.

The war that ensued with Pyrrhus was more disastrous and eventful; the particulars of which have been already given in our life of that distinguished prince of Epirus. Antigonus seems to have relinquished, for a short time, the occupation of the throne, which he had found himself unable to protect against Pyrrhus and his fierce allies, the Gauls; and even to have retired into Peloponnesus till his warlike rival was slain at the siege of Argos, and his barbarian followers scattered over the plains of the Lesser Asia. This happy turn of affairs replaced him at the head of his government; over which, from this period, he reigned twenty-seven years, with little molestation at home, and without embroiling himself in the contending claims of Egypt and Syria. His attempt on the independence of the Grecian states, indeed, gave occasion to the Achaean league, and involved him in a war of craft and stratagem, which redounded little to his honour. Aratus, of Sicyon, directed so successfully the energies of the confederated republics, that Antigonus at length relinquished his object in despair, and, retiring to Macedon, died at the age of eighty, and left the crown to his son Demetrius, two hundred and forty-two years before the Christian era.

The united power of the Achaeans continued, during the whole of this reign, to oppose the ascendancy of Macedon. The accession also of Corinth to the league, contributed greatly to enfeeble the exertions of Demetrius, in pursuit of that dominion over Greece, which was first secured by Philip, the father of Alexander, and had become the main object of war and policy with all succeeding princes. After holding the sceptre ten years, a period distinguished by no remarkable event, and filled up only by a petty warfare with the Aetolians, Thracians, and Illyrians, Demetrius departed this life, bequeathing the crown to his son Philip, a child only three years of age.

The government was administered by Antigonus, surnamed *Dodon*, brother of the late king, at first as guardian to his nephew, and afterwards in his own right as sovereign of Macedon, till the boy should be qualified to succeed him. The character of this monarch was at once pacific and warlike, cautious and determined, and acquired for Macedon a greater degree of power, than she had enjoyed since the early years of Cassander, or perhaps of Antipater.

Cleomeas, the young king of Sparta, resolved to revive the liberty and martial glory of his country, took up arms against the Achaean states. These republics lost no time in applying to Antigonus for aid, who, yielding to their solicitation, marched into Peloponnesus with a large army, where he gained several advantages over the Spartans, and took a number of their towns. Cleomeas, on his part, shewed himself worthy of commanding Lacedaemonians, and of meeting in the field a successor of Alexander the Great. The sanguinary battle of Sellasia, however, in which Antigonus gained a complete victory, not only ruined his cause but drove himself into Egypt, to solicit from Ptolemy Evergetes, then on the throne of that kingdom, protection for his person, and a reinforcement to his arms.

The moderation of Antigonus was extremely honourable at once to his principles and his motives. Upon his arrival at Sparta, he treated the inhabitants with singular generosity; allowing them to enjoy the most entire national independence, with permission to adjust, according to their own pleasure, the arrangements of their internal government. At Argos, whither he went to attend the Nemean games, he was hailed as the pacificator of Greece; and he continued to be the object of universal gratitude and applause, both among those he had conquered and those whom he had gone to assist, till news arrived that the Illyrians were already in the heart of Macedon, burning his towns and desolating his fields. He flew to the defence of his country, engaged the predatory barbarians, and completely defeated them in the first battle. But it was at the expense of his life. The vehement exertions of his voice, in the tumult of the fight, occasioned the bursting of a blood vessel, of which he almost instantly died, leaving the crown to his nephew Philip, now in the seventeenth year of his age, and who was doomed, in a short time, to sustain the hostility of the Romans, and thereby to form the connecting link between the history of Alexander's Macedonian successors and the annals of the Philip western republic.

We are informed by Polybius that the victory of Sellasia procured to the members of the Achaean confederacy the enjoyment of peace during only a very short period; for that the Aetolians, being now relieved from the fear of Antigonus, and despising the youth of his successor, gave themselves to their natural love of war, and commenced their ravages by an attack on the territory of the Messenians. Aratus, the protector of the league, marched out against them and sustained a signal defeat; upon which the Achaeans resolved to apply once more to Macedon, and to entreat Philip to interpose his arms with the view of saving their states from the fury of the Aetolian robbers. Unwilling to come to a rupture with so many powerful republics, he was likely to take part against the Achaeans, Philip set out for Corinth,

His victories.

His death.

Philip.

Biography. accompanied by a large escort; to which city he invited deputations from all the states, to concert with him the measures most proper to be pursued in the convulsed situation of Greece. His attention was in the mean time engaged by the affairs of Sparta; which, besides being torn by civil discord, was disposed to follow the counsels of its fugitive king Cleomenes, and to join the Ætolians in their attempts on the tranquillity of the whole peninsula. Philip spoke in favour of conciliation and mildness; and, in opposition to the views of almost all his advisers, he recommended that the Lacedæmonians should be heard in their own behalf at the approaching congress.

With such men as the Ætolians, moderation was altogether fruitless. War was their trade, and plunder their principal revenue; and as they had already drawn the sword, they were determined to admit no other arbitrator to settle their quarrel with the Achaean states. Hence the origin of the social war, so destructive to many parts of Greece, and finally subversive of its independence.

Social war. In the spring of the following year, Philip appeared in the field at the head of a large force, and gained many advantages. Wintering at Peloponnesus, he signalled his oar campaign by the reduction of Elis, which had joined his enemies, and by taking nearly all the strongholds belonging to that state. But whilst he was thus employed, a detached party of the Ætolians had made an inroad into Macedon, where they sacked the city of Dium; a place highly venerated by every native of that country as a principal seat of their religion, and as being adorned with the statues of Alexander's companions who fell to the battle of the Granicus, as well as with the monuments of a long series of their kings. To revenge this insult, Philip surprised the capital of Ætolia, called Thermæ or Thermo, which he not only stripped of every thing valuable, sacred and profane, but even burnt their temples, desecrated their holy places, and loaded the impious pirates with every indignity that he could devise.

After four years of ruinous hostility, the belligerent states were not more disposed to listen to negotiation than at the moment at which they first took up arms. The fifth campaign had already begun, when Philip had reduced some fortresses belonging to the Ætolians, on the southern frontiers of Thessaly, when the Nemeian games called him to grace with his presence the city of Argos, where that solemnity was usually held, and whence the kings of Macedon had derived their origin. It was whilst engaged in this ceremonial, that the news reached him of Hannibal's victory, gained over the Romans at Thrasimene; an event which their recent intercourse with Italy instructed the Greeks to believe, could not be indifferent to their interests; and which, according to the wisest of their counsellors, ought to induce them to compose their quarrels and unite their means for the common defence. "Consider," said Agelaus of Naupactus, "consider the great and ambitious powers that have arisen in the west, and the vast exertions that they have been able to make by sea and land. They are actually engaged to a second and more desperate conflict; and whichever party prevails, think not that the victor will be contented with the spoils of the vanquished. He will look round him for new enemies that may furnish him with greater riches and

more glorious triumphs. Let us, then, hasten to conclude a lasting peace," &c. These views, acting upon minds influenced by other motives, made a deep impression, inasmuch that even the Ætolians declared their readiness to listen to terms, and to promote a general pacification.

The main inducement with Philip to compose the differences of the Grecian states and to secure their alliance, arose from the opportunity which then seemed to present itself, as connected with the successes of Hannibal, of checking the progress of the Romans in Illyricum, and even of expelling them from the eastern shores of the Adriatic. That powerful people had already established themselves in several parts of the country just named; had formed an alliance with Apollonia, one of the principal cities; and had pushed their outposts to the very frontiers of Macedon itself. As, however, an account of the skirmishing and negotiation that took place in Illyricum, between Philip and the Roman consuls who were sent to guard that province, is properly an introduction to the Macedonian war, which speedily ensued, and produced such memorable effects on Grecian independence, we prefer giving the details under the history of Rome. We now, therefore, return, according to the plan mentioned above, to bring forward the history of Alexander's successors in Syria and Asia Minor, till the series of events in these countries also unite their fortunes with the destiny of their Roman conquerors.

On the death of Seleucus who, as has been related, was murdered by Ptolemy Ceraunus, the kingdom of Syria fell into the hands of Antiochus, surnamed Soter, the eldest son of the late monarch. In narrating the occurrences which immediately succeeded the accession of Ceraunus to the throne of Macedon, we mentioned the attempt made by Antiochus to depose that usurper, and to place on his own head the crown which his father had so ardently desired, and which the latter had, in fact, conquered for his family by his victory over Lysimachus. The young king of Syria, however, was obliged to relinquish his undertaking, and even to resign his pretensions in favour of Ptolemy, Soter, to whom he likewise gave his sister in marriage.

For several years of this reign, history has little to record that could prove either interesting or instructive. Some time after his unsuccessful expedition to recover Macedon, the Syrian monarch was recalled into Asia Minor, to defend that part of his empire against the Gauls; and it was in recompense for a great victory gained by him over those warlike barbarians, that he was saluted by his grateful subjects, as saviour of their country, and is known in after times by the distinguishing epithet of Soter.

We have mentioned that, during the relaxation of authority which took place in the Lesser Asia, on the death of Lysimachus, several satrapies, or provincial governments, asserted their independence, and appeared in the form of separate kingdoms. Amongst these, Bithyola, Pergamus, Pontus, and Cappadocia were the most important, and make the most conspicuous figure in the subsequent history of the Asiatic peninsula. As, however, these states were thus severed from the empire of Antiochus, he was induced to make more than one effort to subject them to their former condition of dependence, and to recover the revenue which had been usually drawn from the rich

Rome and
Carthage.

provinces which they comprehended. His general, Patroclus, accordingly attacked the Bithynians, as rebels against the Syrian government; but he was defeated and obliged to withdraw his troops. Agnais, at the death of Phileterus, who had founded the kingdom of Pergamus, the monarch of the east appeared in Asia Minor, at the head of a large force, with the view of re-establishing his authority in that ancient stronghold of royal power. But Eumenes, the successor of Phileterus, was prepared to repel the invader. He had raised such an army as enabled him, not only to gain a decisive victory over the veteran forces of Antiochus, but also to enlarge his dominions very considerably at his expense. According to Strabo, this battle took place in the neighbourhood of Sardis; but the particular scene is not described, nor are the details of the conflict narrated with the scientific precision which we admire so much in the works of Arrian and Xenophon.

Antiochus was still further unfortunate in a war which he provoked with Ptolemy Philadelphus, king of Egypt. This latter sovereign had a half-brother named Magas, who was appointed by him governor of Cyrene. Having married a daughter of the king of Syria, Magas allowed himself to be seduced by his ambition from the duty which he owed to Ptolemy; for, raising the standard of rebellion, he engaged his father-in-law to assist him in his unjustifiable views upon Cyrene, which he proposed to erect into an independent kingdom. Antiochus had reason to repent of this injudicious alliance. The fleets of Ptolemy, powerful in all the adjoining seas, inflicted a severe blow on the Syrian ships and towns, as well as on all the maritime provinces of Lesser Asia, which still acknowledged the sway of the eastern empire. Hostilities continued during several years, in the course of which the Egyptians appear to have wrested from their adversaries the valuable provinces of Lycia, Pamphylia, Caria, and Cilicia; whilst Antiochus reaped no other advantage from his exertions and expenditure than to see on the temporary throne of Cyrene, a rebellious viceroy whom he had admitted into his family.

But a greater misfortune was about to visit his dominions in the form of a Gallic invasion. Those fierce barbarians, who had still retained a footing in the Lesser Asia, were now joined by such a powerful reinforcement of their countrymen, that Antiochus found it necessary to lead against them the royal army, that he might by one blow put an end to their ravages, and deter them from ever again approaching his shores. He met their numerous bands under the walls of Ephesus, where a dreadful battle immediately ensued, and where the physical strength had fearless valor of the invaders gained a complete triumph over the more disciplined ranks of their Asiatic opponents. The king was slain and his army routed; leaving to the Gauls a copious theme of ridicule and insult, in reference to the title of Soter, which he had borne as a trophy conquered from their arms.

Antiochus was succeeded by his youngest son, of the same name, the eldest having, according to Trogus Pompeius, paid the penalty of rebellion some years before. Upon hearing of his father's defeat and death, the young king hastened from the east, where he had already some time held the reins of government, and presented

himself in Syria, in order to retrieve, if possible, the affairs of his western provinces. But his arms appear not to have been more successful than those of his predecessor against their formidable enemy the Gauls; for after a variety of battles, of which only very faint traces have reached us in the page of history, the barbarians appear to have maintained their settlements even in the interior parts of the peninsula. It was with somewhat better success, however, that he directed his attention to the recovery of those provinces which the king of Egypt had subdued in the south. He defeated the troops of Ptolemy, and vanquished a rebel chief who had seized the government of Caria in despite of that monarch; for which trivial exploits he was accosted by his sycophantic subjects with the title of Theos, or the god. His triumphs, however, were never of long duration. Engaging the whole forces of his monarchy in a more regular system of hostility against the Egyptian king, he received many serious reverses, and ultimately forfeited all that he had recovered in Asia Minor, together with the important provinces of Coele-Syria and Phœnicia.

In order to maintain the disastrous warfare which we have just mentioned, Antiochus had found it necessary to withdraw his best troops from Asia, and to leave his garrisons in the north much weaker than a just view of their importance would have demanded. The defenceless condition of Bactria and Parthia suggested to the governors of these provinces the idea of asserting their independence. Theolitus raised the standard of rebellion in the former; and by combining the skill of a soldier with the artifice of a practised statesman, he subdued those adherents of Antiochus, whom he could not gain by gentler means. In Parthia, again, the resentment of the fierce and hardy natives was excited to the highest degree, by an indignity offered to the person of one of their countrymen, by Agathocles the royal lieutenant. Having slain the tyrannical governor, Arsaces and Tiridates, two noble brothers, (the latter of whom had received the insult alluded to) summoned the warlike Parthians to take arms in defence of their country, and to repel the haughty Greeks from the provinces of Upper Asia. Nor was the summons disobeyed. The Parthians having strengthened their ranks, by calling the brave and athletic Scythians to their aid, defied the power of Antiochus, and even spread the flame of rebellion so extensively over the northern parts of the empire, that the latter soon perceived he could no longer carry on war with Egypt but at the expense of all his Assyrian dominions.

These considerations induced the king of Syria to make peace with Ptolemy. To cement their union the latter induced him to marry his daughter, the Egyptian princess Berenice, and to settle his crown on the issue of that marriage, although Antiochus had already two sons by his wife Laodice, whom he had espoused in the very commencement of his reign. But this violent proceeding defeated the object which it was meant to promote; for, upon the death of Philadelphus, which happened soon after, the Syrian monarch repudiated Berenice, and restored his former queen and children to the full enjoyment of their rank and prospects. To secure the position they had thus regained, Laodice determined to prevent her mercenary husband on any future occasion from

Biography. hartering herself and children, for political concessions or personal aggrandizement. She poisoned Antiochus, had her son Seleucus proclaimed successor to the kingdom, and finally procured the murder of Beseoioe and her infant son, although this unfortunate princess had fled for safety to the precincts of the Daphneso temple.

In the same year did Ptolemy Evergetes, and Seleucus, surnamed Callinicus, ascend the thrones of Egypt and Syria, to engage in a war destructive to both. The former felt himself constrained to avenge the quarrel of his sister, who had been deprived of life under circumstances the most atrocious and appalling; whilst the latter, who had assumed the sceptre, put into his hand by means of the sacrilegious murder of which the other had to complain, prepared an army for the field, in order to maintain a right which had been taken from him by injustice, before it became necessary to recover it by violence. During the protracted conflict which ensued, the Gauls continued their ravages to Asia Minor, and the Parthians extended the spirit of dissension to the east; by which means, the magnificent empire left by Alexander was torn in pieces, year after year, and became gradually a prey more and more easy for the powerful nation which was already rising up to seize it.

Ptolemy, assisted by a large body of Greeks, who, disgusted at the murder of Berenice, no longer owned the government of Seleucus, poured into Syria with such an overwhelming force, that he immediately gained possession of the greater part of the territory of all the principal towns. The arms of the Syrian king on this occasion, were greatly weakened by the rebellion of his brother Antiochus, afterwards called Hierax; who, availing himself of the unpopular feeling attached to the accession of Seleucus, had received the allegiance of several provinces in Asia Minor, and evidently watched the progress of events, in order to seize an opportunity for placing himself on the throne of the east. The Egyptian, meantime, not satisfied with his conquests in Syria, conducted an expedition into the heart of the Assyrian empire: and pursuing his victorious course to the Oxus and Indus, overran rather than subdued the vast provinces of Media and Babyloonia; his ardour all the while being directed to the acquisition of wealth rather than to that of glory or of permanent power. The plunder with which he returned is said to have amounted to forty thousand talents of silver; in addition to which valuable treasure, he restored to Egypt between two and three thousand of her gods; whose ponderous figures had encumbered the cities of Susiana and Persis, from the period that Cambyzes had searched the temples of the Nile. For this remarkable benefaction, he was honoured with the title of Evergetes; a token of gratitude on the part of his subjects which would have been worse applied, had it respected solely his fruitless expedition into the dismembered satrapies of the eastern empire. Returning from his pious toils on the banks of the Tigris, whence, it is said, he sent his gods by water carriage to the shores of Arabia, the king of Egypt, when arrived in Palestine, insisted upon offering a sacrifice of thanksgiving to Jehovah, in the temple at Jerusalem, where he sought to gratify his priests with suitable gifts.

Whilst Ptolemy was exhausting his army by long marches in the east, Seleucus was straining every

nerve to raise, in the Lesser Asia, a competent force for the defence of his remaining territory, as well as for the recovery of that which he had lost. The Greeks in that country, alarmed at the measures of Hierax, who had formed an alliance with the Gauls, flocked once more to the standard of their king; and thereby enabled him to garrison his principal forts in Syria, and even to meet Ptolemy in the field at the head of a considerable army. The two kings met, and fought a bloody battle, in which, after great loss on both sides, victory declared for Ptolemy. The vanquished prince shut himself up in Antioch, which had been strongly fortified: and finding his affairs to be now in a desperate condition, he resolved to strengthen his army by an accommodation with his brother Hierax, who, as we have already mentioned, had enlisted a powerful body of Gauls. A treaty, originating in necessity on the one side, and accorded to on the other, by ambitious intrigue, was not likely to be durable: and accordingly, when the king of Egypt, who seems in all cases to have confined his wishes to the simple art of conquest, without attempting to derive any profit from his military success, had withdrawn his army from Syria, to engage in an enterprise of a very different nature, and which will be described hereafter, the two brothers renewed their suspicions of each other's sincerity, and determined on an appeal to arms.

A destructive war, of three years duration, was the consequence of this mutual distrust. The only memorable battle, however, of which authentic details have reached us, is that which was fought at Ancre; where Hierax, chiefly by the means of his Gallic mercenaries, gained a triumph over his royal brother. His success, it is said, had nearly proved fatal to himself; for his barbarian allies giving credence to a rumour that Seleucus had perished in the field, instantly resolved to despatch the victorious Hierax also, and thereby procure for themselves the sovereignty of the Asiatic kingdoms, to which their ambition had all along aspired. He escaped, indeed, the dreadful fate which was intended for him; but he was compelled to ransom his life at a high price, from the very soldiers who fought under his command, and received their maintenance from his stores.

The war which had desolated Syria and a large portion of Asia Minor, was soon after transferred to the province of Babyloonia. Hierax, accompanied by a hundred thousand of the most ferocious of the Gauls, directed his march to the capital of Assyria, where he hoped to enrich himself with the plunder of that flourishing city, and perhaps to found a new kingdom on the same auspicious spot in which the dynasty of his paternal house had been first planted. But his hopes were soon blasted, and all his plans rendered completely abortive. Seleucus pursued him with a large army, which being reinforced by the Macedonian inhabitants of the province, and, it is added, by eight thousand Babylonish Jews, attacked the predatory Gauls, and defeated them with so great an overthrow, that their chief was indebted for his safety to a speedy flight. Escaping first into Cappadocia, where he found a temporary retreat, Hierax next threw himself upon the protection of Ptolemy; but this monarch, so far from aiding him in his ambitious designs, detained him thirteen years a prisoner in Egypt, from which country, at the end of the

Defeat and captivity of Hierax.

Biography. period now named, he contrived to procure his liberation, only to lose his life whilst crossing the desert into Syria, by the hands of Arabian robbers.

Relieved from the war with Egypt, and from the still more harassing hostility with his brother, Seleucus immediately directed his thoughts to the condition of Upper Asia. The Parthians, who were now closely allied with the Bactrians, had availed themselves of the interval during which Seleucus was employed against Hiera and Ptolemy, to strengthen their forts and augment their arms, so that when the king marched to their borders he found them prepared to burst down upon Media, the finest province of his empire. A tedious and wasteful warfare now began, which continued with various success during four years, until at length a decisive battle was fought, by which the confederates placed their independence on a sure basis, which Seleucus lost both his army and his liberty. He was taken prisoner by the Parthians, who spared his life; but actuated by an obvious regard for their own security, they sent the royal captive into one of the wildest districts of Upper Asia, where, after enduring a restraint of ten years, he is said to have been killed by a fall from his horse.

The empire of Darius was already fast passing away from the successors of Alexander. Two independent states in the upper provinces, exposed to constant hazard the rich countries of Babylonia, Media, and Persia; whilst a powerful enemy in the west, whose numbers had no limits, and whose ambition appeared altogether insatiable, had gained a permanent footing in the centre of Asia Minor, and obviously meditated the conquest of the whole. There was still, however, a strong bond of loyalty in the Syrian provinces, which attached them to the house of Seleucus. Upon hearing of the king's captivity among the Parthians, they immediately placed on the throne his eldest son, who, to the name of his father was soon after invited to add, for what exploit it does not appear, the formidable title of Cernanus, or thunder. His reign was short and uneventful. Appian, Polybius, and Justin, to whom we are indebted for the very little that is known of him, merely inform us that he was cut off by treachery in the Lesser Asia, before he had an opportunity of performing any thing remarkable.

Seleucus Cernanus was succeeded by his brother Antiochus, afterwards surnamed "the Great," whose life was diversified with a succession of important events, which, in the close of his reign particularly, brought him into such close contact with the Romans, as to identify the future history of Syria with that of the western republic.

Antiochus happened to be at Babylon when the throne was rendered vacant by the murder of the reigning prince, and being still in early youth, and consequently unable to maintain his right, he was indebted, for a quiet accession, to the generous and steady conduct of the general Achæus. This faithful soldier, himself of the royal line, and possessed of the entire devotion of the army, might have seized the crown of Seleucus, now about to descend to a child; and he seems even to have been invited to perpetrate this act of treason by the mixed and mercenary crowd which composed his ranks. But Achæus, disdaining the bribe, and chiding the disloyal sentiments which prevailed among his troops, con-

ducted the young king to Antioch, which had for some time become the more usual residence of the Seleucids.

Antiochus had no sooner reached the capital of Syria, than he was assailed by the treacherous wiles of Hermeias, a minister to whom the late king, on his departure for the east, had committed the care of that part of the empire. The main object with this unworthy person was to aggrandize his own family at the expense of his sovereign; for which purpose he secured the appointment of his own two brothers, Molon and Alexander, as governors of the very important provinces of Media and Persia, from the inexperienced and unassuming Antiochus. Hardly were they established in their satrapies, when the treasonable spirit by which they were actuated began to show itself. They seduced the troops, embezzled the public property, and as soon as their arrangements were matured, Molon displayed the standard of rebellion in Media, whilst his brother followed his example in Persia.

The young monarch, impatient to punish his faithless satraps, would have marched instantly to the Euphrates at the head of the royal army, had not the crafty Hermeias dissuaded him from the undertaking, as less suitable for a king than an expedition which he proposed against a Syrian province still in the hands of the Egyptians. He distracted his mind, too, with groundless fears respecting a meditated rebellion on the part of Achæus, who had been appointed to command some of the more western provinces of the Lesser Asia. It was resolved, therefore, that two creatures of the minister, Xenon and Theodotus, should proceed against the rebels, while the king made preparations for a safer triumph nearer home.

But the activity of the rebels far surpassed the ignorant and ill-coordinated movements which were made by the royal lieutenant for the purpose of reducing them. Molon having already overrun Media, had compelled the king's forces to take refuge in the strongholds of Babylonia, and even threatened the capital itself; Xenatas, another weak commander, was despatched with a fresh army to sustain the empire and to punish the traitorous chiefs of Media and Persia: but he, allowing himself to be surprised in the night, was cut in pieces, with the greater part of his men, by the indefatigable Molon, who immediately took possession of Babylonia, and gave law to the surrounding country.

Upon being made acquainted with these disasters, Antiochus would no longer be restrained from proceeding into his eastern dominions, and fighting his battles in person. His expedition into Coele-Syria had only redounded to his disgrace; and he was now resolved to retrieve his fortune in a more spacious field, or to perish in the attempt. The intrigues of Hermeias could now prevail no further than to detain at home and afterwards destroy the brave honest general Epigenes, whose counsel would have greatly assisted the inexperience of the king in the important war he was about to wage. Deprived of this valuable aid, the royal commander nevertheless conducted his armament with considerable skill; and having crossed the Tigris, in defiance of all the stratagems practised by his enemies in the field, and by his still more dangerous enemies in the cabinet, he soon found himself in a condition to compel Molon either to hazard a battle or to abandon his province. The rebellious satrap was

Antiochus takes the field in person.

Biography. extremely desirous to shun an engagement with the king in person. He attempted, therefore, to surprise his camp in the dark ; and proceeding for this purpose with a body of chosen desperadoes, by secret paths, would probably have effected his object, had not a few youths, whose feelings of loyalty opposed the perpetration of such an atrocity, deserted from his side, to give intelligence of his design. Molon, as soon as he ascertained that some men had left him, conjectured the true cause of their departure, and immediately returned to his army to prepare for a general action.

From A. M. 3681. Early in the morning, Antiochus was in the field, marshalling his troops, and confirming their resolution to avenge his cause on the heads of the rebels. Molon, though still unwilling to put all his conquests and hopes to the hazard of a battle, could not retreat in the presence of the royal army, being perfectly aware that in the disposition which then prevailed in his ranks, as well as among the native inhabitants of the countries which he had subdued, a retrograde movement would be equivalent to the most disastrous defeat.

323. The armies advanced as if to determine the contending claims of their masters by the length of their swords. But no sooner did the Asiatics behold the graceful person of the young Antiochus leading on his right wing to the conflict, than they almost with one consent abjured the cause of the traitor, whom they deserted without striking a blow, and passed over to the standard which they had marched out to oppose. Such as did not join the king, were dispersed over the adjacent provinces. Molon, with his brothers Alexander and Nicolaus, preferred a voluntary death ; and Hiermeas, whose complicated villainy was at length detected, paid the penalty of his treason and numerous perjuries.

320. Of all the iniquities chargeable upon that wicked minister, none is more to be deplored, on account of its melancholy consequences, than the alienation which he effected between Antiochus and the generous Achæans. The king had been induced to treat the latter as a rebel ; and the feeling of self-defence had suggested to the abused governor the necessity of fortifying his interests even against his royal master. During the absence of Antiochus in the east, Achæus assumed sovereignty in the provinces which he had been appointed to command ; and accordingly, when the victorious army returned into Syria, it was expected that their next service would be directed against the usurping satrap of Asia Minor.

Views of Antiochus on Egypt. But the ambition of Antiochus prevailed over his resentment. An opportunity now presented itself for the recovery of Coele-Syria, a conquest which he had formerly attempted without success ; and the acquisition appeared to him of too much importance to be either neglected or postponed. The same commander, who had so skilfully defeated all his measures in the former campaign, having become disgusted with the treatment which he received from the court of Egypt, was now prepared to surrender the province to him, together with a considerable fleet stationed in one of the ports. Antiochus, on this occasion, succeeded to the utmost extent of his wishes ; for he not only reduced the greater part of the strongholds in Coele-Syria, but also expelled the Egyptian troops from Seleucia Pieria, a place which they had garrisoned ever since it was first conquered by Ptolemy

Ptolemy Philopater, who was now on the throne of Egypt, and surrounded by the most selfish and unprincipled advisers, could not fail, nevertheless, to perceive that his kingdom was threatened with a very serious danger. Antiochus, at the head of a formidable army, had not scrupled to make known his intention of invading his territories ; and no obstacle intervened to save his subjects from that dreadful visitation except the desert which separated Egypt from the Syrian dominions. The sand of the wilderness, however, had often, in former times, protected the fertile fields of the Nile ; and the counsellors of Ptolemy advised him to have recourse to its aid in the present emergency. They began by destroying all the wells between the Nile and the frontiers of Palestine ; after which they opened the floodgates of the river to inundate the adjacent country, so as to prevent completely the approach of any considerable force. Meanwhile, a negotiation was entered into by the belligerent powers, which was vigorously seconded by an embassy from Rhodes and Byzantium, states in alliance with Egypt, and who could not but suffer severely from a protracted war between the two principal maritime kingdoms on the shores of the Mediterranean.

The Egyptians did not, however, devote all their attention to the pending treaty. On the contrary, they employed all the means in their power for raising an army to check the pretensions of Antiochus, whose ambitious views were not a little encouraged by the knowledge which he possessed of their defenceless condition, as well as of the king's indolent and voluptuous character. They collected troops from their colonies in Africa, from the shores of Asia Minor, where they had still a number of garrison towns, and above all from the Grecian republics, which could at all times supply a large body of good soldiers, ready to serve the most liberal master.

Having protracted the negotiation until they had collected, in the neighbourhood of Alexandria, an army of seventy-five thousand foot, five thousand horse, and seventy elephants, the ministers of the Egyptian king assumed a higher tone, and retracted their concessions. They demanded that Coele-Syria should be forthwith restored to their master, as having been delivered up to Antiochus by the hands of a traitor ; whilst, with very little regard to consistency, they claimed for Achæus, who was actually in arms against his sovereign, all the benefits of the pacification which they were about to establish between Syria and Egypt. As these terms could not be admitted, both parties prepared for battle. The army of Antiochus was not much inferior to that of Ptolemy in numerical strength, whilst its deficiency in foot soldiers was amply compensated by cavalry and elephants.

Positions of the two armies. The Egyptians were the first to take the field. Having crossed the desert, they came in sight of the two enemy's advanced posts, who had already pitched his camp at Gaza, where he finally mustered his forces. Whilst the two armies were thus opposed to each other on the borders of the wilderness, it occurred to Theodotus, the former governor of Coele-Syria, who was now in the ranks of Antiochus, that he might render his new master an essential service were he to succeed in a private attempt on the life of Ptolemy. Favoured by the darkness of the night, and his knowledge of the Egyptian dress and language, both of which he assumed for the occasion, he found little

Molus and Alexander deserted by their troops

R-ruit of Achæans.

Biography. difficulty in reaching the pavilion where the king was wont to feast and to enjoy the society of his particular friends. His majesty, however, was accustomed to sleep in a more private tent, a circumstance which had escaped the inquiry of the vindictive Ætolian; the latter, therefore, plunging his dagger into the breast of the royal physician, and wounding two other attendants, some one of whom he mistook for Ptolemy, returned to the Syrian lines, without having effected his object. The Egyptians, enraged at the murder of Andreas, and still more at the meditated assassination of their sovereign, became impatient for battle; and as the commanders were willing to take advantage of the indignation and eager desire for revenge which prevailed throughout the camp, they made haste to lead forth their troops, with the view of compelling Antiochus to a combat.

It belongs not to us to describe the onset of armies and the tactics of generals. It is impossible, however, not to observe, that the Macedonian system of fighting was now altogether superseded by the introduction of Asiatic evolutions, and more especially by the cumbersome movements of elephants. At the battle of

Raphia, there were nearly two hundred of these animals in the field; cresting, as usual, a groundless confidence, and a still more groundless terror. The fortune of the day declared at first for Antiochus, who commanded one of his wings in person. Misled, however, by the ardour of pursuit, he soon afforded such an advantage to his adversary, as enabled him not only to repair his loss, but even to gain in the end a most complete victory. Ten thousand Syrian footmen and three hundred cavalry, are said to have been left dead in the field, whilst the number of prisoners exceeded four thousand. Cœle-Syria, Palestine, and Phœnicia were immediately restored to Egypt; on the basis of which concessions, a peace was soon afterwards concluded between the two kingdoms.

Relieved from the pressure of the Egyptian war, Antiochus forthwith directed his attention to the affairs of the Lesser Asia, where Achaëus, profiting by circumstances, had greatly extended his power, and enlarged his dominions. Phrygia and Lydia constituted the main body of his kingdom, whence he had made encroachments on Bithynia and Pergamus, whose kings, Prusias and Attalus, had been compelled to purchase his forbearance by a surrender of territory. He had likewise farther strengthened himself by an alliance with Mithridates, the king of Pontus; receiving in marriage a princess of that nation, whose name was Laodice, and whose heroic and devoted attachment at the siege of Sardis, has given her a just celebrity in the annals of Phrygia.

The power of Achaëus, however, soon gave way before the combined forces of Antiochus and of Attalus, who, to revenge himself upon his inveterate enemy, had joined the standard of the king of Syria. In one campaign, Achaëus was driven from the field, and compelled to take refuge in the strong citadel of Sardis. Anticipating the worst that might befall him, he had accumulated within the walls a large supply of provisions and military stores; and as the town was sufficiently extensive to accommodate the best part of his army, he was fully prepared to sustain the casualties of a lengthened siege.

But his hopes were disappointed by the success of a stratagem which was practised against the city. It

was taken in the night, and subjected to all the horrors which attend an assault on a town in the occupation of rebels; an event which confined his confidence of resistance to the strength of the citadel, in which his remaining troops were now shut up.

The ministers of Ptolemy, who had encouraged Achaëus in his rebellion, learning that he was now hard pressed by his victorious master, betrouth themselves of an expedient whereby at once to save their ally, and even to embroil Syria in a civil war. They employed one of their tools, Balis, a Cretan, to seduce some of Antiochus's soldiers employed in the blockade of Sardis, to assist in the escape of Achaëus. It was intended that the rebel satrap should proceed to Antioch, should proclaim himself king of Syria, and by the help of Egypt, should dispute with the successor of Seleucus, the possession of the throne. The crafty Balis, however, betrayed his employers, and delivered up Achaëus into the hands of Antiochus, who caused him to be put to death, and his body, wrapped in an ass's skin, to be fixed upon a cross. A herald soon announced to the citadel that Achaëus had paid the penalty of his treason, and exhorted the besieged to surrender. Stimulated by Laodice, the wife of their general, they preferred to hide the chance of an assault; which however being renewed from time to time, at length subdued their spirits, and induced them to listen to the terms proposed by Antiochus.

Having chastised the spirit of rebellion in Asia Minor, Antiochus immediately prepared to carry his arms against the Bactrians and Parthians. More than thirty years had now elapsed since those hardy Asiatics had refused to pay tribute, and to acknowledge allegiance to the descendants of Seleucus; being firmly resolved to support their liberty, and to maintain, on their respective thrones, the dynasty which they had been pleased to invest with the royal power and honours. Arsaces, the third of the name, reigned at this period over the Parthians; whilst the Bactrians were governed by Euthydemus, who was likewise the third sovereign from the new era of their independence.

Of the campaign which followed in those remote countries, the details furnished by Polybius are neither numerous nor particular. It appears that the first movements of Antiochus were attended with so much success, that Arsaces was glad to purchase peace on the hard condition of joining the army of the conqueror against his neighbour Euthydemus. The latter, confident in his strength, or wishing to save his people from the ravages of actual war, marched forth to meet the king of Syria in a contiguous province. A battle took place on the banks of the Arias, where the arms of the latter obtained a signal triumph, and in which the monarch himself displayed so much courage and address, that he at length justified the adulation of his courtiers, who had saluted him with the title of Autiochus the Great. A severe wound in the face, which dashed out his teeth, and the loss of his horse, which was killed under him, could not shake his resolution. He remained at the head of his troops, receiving charge after charge from the barbarian cavalry, until he had completely checked their impetuosity and thinned their ranks.

Euthydemus was more successful in negotiation than in the field. He represented to Antiochus that he had never personally rebelled against the king of Syria, but that he had mounted the throne of Bactria in right of conquest achieved over a usurper or the son

Expedition against Bactria and Parthia.

Victory of Antiochus.

Biography. of a usurper : that it would be bad policy in the sovereign of Asia to weaken the kingdom of the Bactrians whose power might be rendered extremely useful in defending the northern frontiers, and in checking the inroads of the savage tribes, which were ever ready to pour down upon its central provinces ; and, finally, that the victor ought to grant such terms to the chiefs whom he had just subdued, as would make it their interest to support him as an ally, and to court his favour as their natural protector. Antiochus was not deaf to this plausible reasoning, and being much pleased with Demetrius, the son of the Bactrian king, he acceded to the proposals of which the prince was the bearer ; assuring the youth that his father should be allowed to retain his royal title and independence, and that to himself he would give one of his daughters in marriage.

The affairs of the north being thus amicably settled, Antiochus applied his experienced mind to other departments of government ; restoring vigour, confidence, and happiness to his numerous subjects in the east. During the seven years that he spent at this time in Asia, he appears to have ratified treaties and confirmed alliances with several kings on the banks of the Indus. Both his wealth and power received considerable accessions ; for we are told by Polybius that he returned to Babylon with immense treasures and a hundred and fifty elephants. After another successful expedition to the mouth of the Euphrates, where he dislodged a band of Arabian pirates who infested the commercial city of Gerra, he proceeded to Antioch, the capital of his kingdom, loaded with honour, riches, and warlike reputation.

The same year in which Antiochus returned from his eastern triumphs, Ptolemy Philopater, the king of Egypt, brought his life to a close by a series of vicious indulgence. The successor, Ptolemy Epiphanes, was a mere child ; a circumstance which appears to have suggested to the king of Syria, and to Philip of Macedon, the ungenerous project of seizing upon his dominions. The former, at the head of a victorious army, and the latter, having under his command the finest fleet at that time on the sea, proceeded without delay to accomplish their scheme of partition.

Antiochus met but little resistance in his invasion of Coele-Syria and Palestine ; and Philip reduced the greater part of the cities in Asia Minor which belonged to the crown of Egypt, as well as several of the islands on the Grecian coast, which had now during a long period of time acknowledged the sway of the Ptolemies. In the prosecution of his ambitious plans, however, the Macedonian excited the enmities of the Rhodians ; who, inviting the co-operation of Attalus, the king of Pergamus, put to sea with a large navy, and engaged his fleet in the bay of Cassydé. Their success indeed was not equal to their zeal ; but the interference of the Romans, who already affected to act as the protectors of Greece, repressed the selfish policy of Philip, and called his attention to the safety of his paternal dominions.

As Attalus, the Rhodians, and the Egyptians were all in alliance with the Romans, the late unprovoked war on the kingdom of the young Ptolemy, and the subsequent aggression on the territory of Pergamus, afforded a sufficient pretext to the republicans of Italy for interfering with the projects of Antiochus, as well as with those of Philip. Attalus, indeed, entreated his powerful

vol. ix.

allies to send their legions into Asia Minor, to protect his country against the Syrians, or else to relieve him from the pressure of the war with the Macedonians. But the Romans were not yet quite prepared to accept the invitation. They pretended to consider Antiochus as their ally, and remonstrated against the use of arms until the more gentle methods of conference and solicitation should have been tried. An embassy was accordingly despatched to Antioch, informing the Syrian monarch that his hostilities in the Lesser Asia were far from being agreeable to the republic ; that the enemies of Syria were the friends of Rome, and must be protected ; and that if he wished to avoid the resentment of the Roman senate and people, he must forthwith recall his troops from Pergamus, as well as from all the Grecian dependencies of Egypt.

Antiochus complied so far with the request of these warlike umpires, as to withdraw his army from Asia Minor. His motive, however, for this important step was not to gratify the Romans, nor to relieve the fears of their client, the king of Pergamus. He had heard of preparations in Egypt, for depriving him once more of his favourite provinces, Palestine and Coele-Syria. Scopas, an Ætolian chief, had been sent to raise an army among his hardy countrymen, and was now on his march to attack the colonies which we have just named, at the head of a considerable force of Greeks and Egyptians. Antiochus did not give them time to extend their ravages, or to increase their ranks among his Syro-Phœnician subjects. He advanced against Scopas, defeated him in a memorable battle, near the foot of mount Panus, compelled him to take refuge in Sidon, a place of some strength, and afterwards to surrender with his army at discretion.

Antiochus, unwilling to relinquish his claims on the provinces of Asia Minor and the cities of Greece, which seemed still to belong to him as the successor of Seleucus Nicator, prepared, in the spring, a large fleet and a powerful land force, to pursue his designs on the shores of the Ægean. He sent his army to Sardis under the command of his two sons Ardyes and Mithridates, whilst he conducted in person a hundred gallees to Ephesus, where he established his head-quarters. To prevent all interruption that might arise on the part of Egypt, he entered into a friendly correspondence with that kingdom, and concluded with the regency a treaty of marriage between the young Epiphanes and his daughter Cleopatra ; binding himself to transfer with the bride, when the parties came of age, the long disputed provinces of Phœnicia and Coele-Syria.

No sooner had Antiochus collected his forces in the Grecian sea, than he proceeded to attack certain strongholds in Mysia and Caria, which had formerly belonged to Macedon. He next directed his generals to besiege Smyrna and Laupunctus, whilst he himself, crossing the Hellespont, advanced into Thracia, and made himself master of the Chersonesus. Finding Lysimachia in ruins, he began to rebuild its walls, and to repair its fortifications, that, as the heir of Seleucus, he might thence issue his commands to the warlike Thracians, who had long been accustomed to acknowledge a ruler in one of Alexander's successors.

Whilst these things were in progress, the Isthmian games were announced at Corinth, and were attended, as usual, by representatives from all the kings and states which claimed any connection with Greece. The Roman proconsul appeared in the name of his

Biography. republic, as the liberator and protector of the whole Grecian commonwealth, and made known that he was ready to hear the ambassadors from the several powers which were either at actual war, or had controversies to determine. The envoy of Antiochus was heard at considerable length, in defence of the measures which his master was pursuing; but the Roman replied to his numerous arguments, by a declaration that the conduct of the king of Syria was offensive to the people and senate of Rome, that his conquests must be relinquished, and his troops withdrawn within the limits of his Asiatic dominions. A conference was afterwards held in the camp of Antiochus, in which he renewed the reasoning which his ambassador had employed at Corinth, and in which his arguments were again met, on the part of the Roman commissioners, by the same declarations and threatenings which had been used on that occasion. As nothing was to be gained from men who had been instructed to make no concessions, and to put their chief confidence in the power of the sword, which they knew was about to be drawn, whatever might be the result of their deliberations, Antiochus broke up the meeting with an expression of displeasure; intimating that he had no intention of submitting his interests to the Romans either as judges or as umpires.

It was in the city of Rome itself that the matters in dispute were next discussed; but as the affairs of Syria, from this period, are more closely connected with Roman history than with that of Alexander's successors, we take leave of Antiochus for the present, to resume the narrative of events as they respect Egypt, till that kingdom also shall be found to merge in the spreading power of the western republic.

Ptolemy Philadelphus had been somewhat accustomed to the exercise of power before the reins of government were entirely left in his hands by the death of his father. The insulated position of Egypt, and its great natural defences, protected it successfully from the devastation of the Gauls, whose power was so terribly felt in Macedon and in the Lesser Asia; whilst the wise policy pursued by the first Ptolemy had secured for his kingdom a vast accession of inhabitants, of commercial industry, and of military power. Philadelphus, therefore, upon ascending the throne, found himself one of the greatest monarchs of his age; having, besides the kingdom of Egypt, properly so called, the provinces of Phenicia, Coele-Syria, Cyrene, the island of Cyprus, Pamphylia, Cilicia, Lycia, Caria, and the greater part of the Cyclades, subjected to his dominion. The son of the renowned Soter was not, however, a warlike character. He cultivated the arts, and gave great encouragement to learning; but, throughout his whole reign, he appears to have been unwilling to attempt any thing by arms which could possibly be obtained by treaties, or even by moderate concession. Upon hearing, for instance, of the great successes of the Romans against Pyrrhus, he sent ambassadors to them, to congratulate them on their success, and to desire their friendship. The people of Rome, gratified by this mark of attention, and eager to gain a footing on the southern shores of the Mediterranean, made haste to despatch envoys to the court of Ptolemy, ostensibly to return the civilities of so great a monarch, but, in fact, to lay the foundation of that influence

over the affairs of Egypt, which, at no distant period, Alexander rendered that kingdom an obedient ally, and afterwards a humble tributary to the republic of the Tiber.

The first war in which the forces of Philadelphus seem to have been employed, was that provoked by the ambition of Antigonus Gonatus, in his attempt to reduce the Grecian states to the power of Macedon. The Egyptian fleet failed, indeed, of success in this endeavour to relieve Athens; but the armament gained considerable credit by adding to the dominions of its master some valuable towns, situated on the Thracian coast, as well as several islands in the Ægean sea.

The revolt of Magas, the governor of Cyrene, engaged the peaceful Ptolemy in a series of warlike operations, both against his rebellious brother and against Antiochus, whose sister, Apama, that brother had married. The occurrences which took place in the contest with Syria have been already described; and it has also been mentioned, that the insurrection of Magas was finally compromised by a marriage treaty between the son of Ptolemy and the daughter of the rebel. According to this arrangement, the young Evergetes received with his cousin Berenice the allegiance of Cyrene, and some dependent districts on the coast of Lybia; a consummation which, by restoring peace at home, enabled his father to devote his undivided attention to the pursuits of science, the decoration of his cities, and the internal improvement of his kingdom. There was, after this, indeed, a war of considerable length, between Syria and Egypt, excited by the violence of Apama, the mother of Berenice; but, as Ptolemy did not take the field in person, the movements of his armies did not materially interfere with his benevolent schemes for extending commerce and agriculture among the industrious classes, and for promoting literature among the studious and wealthy. The great canal which he constructed between the Red sea and the Nile, proves at once his zeal and the high perfection to which the mechanical arts had attained; whilst his magnificent libraries, his schools, museum, and academies, and the numerous poets, historians, and philosophers, who occupied or adorned them, attest his liberality and discernment of character. After a prosperous reign of thirty-eight years, Ptolemy Philadelphus yielded to the infirmities of nature, and left a powerful and very flourishing kingdom to his successor Evergetes.

The new reign was clouded by a dark occurrence at Antioch, which again involved Egypt and Syria in war. It has been already related, that when peace was concluded between Antiochus and Philadelphus, the latter gave to the former his daughter Berenice in marriage, stipulating that the offspring of that union should succeed to the Syrian throne, though Antiochus had, by his wife Laodice, a son, already arrived at the age of manhood. The repudiated queen murdered her husband, and placed Seleucus on the vacant throne; who, in order to remove all competition on the part of Berenice and her child, made no scruple to deprive them both of life. Evergetes could not behold such proceedings unmoved. Advancing into Syria at the head of a powerful army, he took possession of the greater part of the country, which seems not to have been defended, and of the

Ptolemy
Evergetes.

Biography. cities, the most of which opened their gates at his approach. The important town of Seleucia Pieria, the seaport of the capital, fell into his hands; in the neighbourhood of which he was still further gratified with the apprehension of the cruel Laodice, at whose instigation his sister and nephew had lost their lives. The punishment of that unprincipled female seems, however, to have completely satisfied his resentment; for, instead of securing his conquests in Syria, and achieving the entire humiliation of Seleucus, he led his army on a plundering expedition into the remote provinces of Asia, whence, as we have already stated, he returned to the shores of Africa in triumph, loaded with spoil and encumbered with Egyptian idols.

Soon after his re-appearance in Egypt, Evergetes was solicited by Cleomenes, the king of Sparta, to grant the assistance of his arms in the struggle which that republic was then supporting with Antigonus, the ruler of Macedonia, and with the members of the Achaean League. But the battle of Sellasia proved that the aid afforded was inadequate. Cleomenes fled to the banks of the Nile, where he found his musty ally

reposing under the successful banners of a numerous army, which he had just led home from the savage mountains of Ethiopia, whither his love of romantic conquests had conducted them. He appears to have penetrated into the interior provinces of Abyssinia, and to have subdued the rude tribes which dwell on the shores of the Red sea; laying on the unfortunate natives the most oppressive contributions in cattle, gold, perfumes, and other articles belonging to that valuable merchandise which the Ethiopians and Arabs had long carried on with their Egyptian neighbours. At Adulis, the principal seaport of Abyssinia, he collected his victorious troops, and pronounced to them a speech on the wonderful exploits which they had achieved under his auspices, and on the numerous benefits which they had thereby secured to their native country. The throne on which he sat, composed of white marble and supported by a slab of porphyry, was consecrated to the god of war, whom he chose to claim for his father and patron; and that the descendants of the vanquished Ethiopians might not be ignorant of their obligations to Ptolemy Evergetes, king of Egypt, he gave orders that his name and principal triumphs should be inscribed on the votive chair. These inscriptions, it is worthy of remark, are still preserved, and constitute the only historical account that has reached these times of the Ethiopian warfare of this Egyptian monarch. About seven hundred years after the reign of Evergetes, they were first published in the *Topography of Cosmus Indicopleustes*, a Grecian monk, by whom they were copied on the spot. The traveller Bruce, moreover, informs us, that the stone containing the name of Ptolemy Evergetes, serves as a footstool to the throne on which the kings of Abyssinia are crowned at this day. Among the ruins of Axum, too, the ancient capital of that country, various fragments of marble have been found, bearing the name and title of the same Egyptian sovereign. This empty fame, however, is the only return that ever recompensed the toils of Evergetes among the fierce barbarians of the south.

About the date noted in the margin, three kings succeeded to their respective thrones, all of which had been founded by the successors of Alexander; namely,

139. 4.

Philip the Fourth to the Macedonian, Antiochus the Third to the Syrian, and Ptolemy Philopater to the Egyptian. The two last, whose dominions were almost contiguous, and whose interests were frequently opposed, soon found themselves in arms against each other. The king of Macedonia again was fully occupied with the Gauls and Romans, and with such of the Grecian states as adhered to those invaders. Our business, however, is with Philopater, who appears soon to have confined his hostility against Antiochus, to the encouragement which he afforded to Achæus, the rebel satrap, who had usurped the sovereignty of certain provinces in Asia Minor. It was not till the Syrian monarch returned from his expedition into Media, and had obtained from the treachery of Theodotus possession of Coele-Syria and Phœnicia, that the military power of Egypt was called into exertion.

We have already given an account of the battle of Raphia, which at once saved the kingdom of Ptolemy, and checked the growing ascendancy of Antiochus. The victorious king remained several months in the provinces which he had thus regained, in which he seems to have been received with submission and loyalty by a people who, being accustomed to change masters according to the issue of a campaign or an intrigue, could not be supposed to entertain any deep sentiment of affection either for Syrian or Egyptian. The only remarkable event which occurred during the residence of Philopater in Syria, is the visit which he paid to the temple at Jerusalem. Struck with the solemn appearance of the holy fane, and still more with the veneration which was entertained for it by every pious Israelite, his curiosity was so far excited, that he insisted upon being admitted into all parts of the house, even into the holy of holies. The sequel of the story partakes somewhat of the marvellous; and the only part of it which admits of no doubt, is the violent resentment which inflamed the breast of the king against the whole Jewish nation, as being implicated in the affront which he had sustained. He visited all Jews with the severest punishment, and disgraced his capital with criminality the most atrocious and vice the most gross. A civil war was the result, and thousands of his people perished under the hands of mercenary soldiers. The suppression of these tumults only paved the way for a conspiracy against the royal advisers; and during the massacre that ensued, Ptolemy Philopater was carried off by death, leaving his kingdom to a child about five years of age.

The minority of the young king was disturbed by several attempts and rumours of conspiracy; none of which appears to have had any foundation, except that which originated with Scopas, the Ætolian. Coele-Syria and Phœnicia had once more acknowledged allegiance to Antiochus; and the Egyptian ministers, as usual, entered into a resolution to take advantage of that monarch's absence in Thrace, in order to recover those disputed provinces for the crown of Alexandria. This attempt led to the battle of Panias, in which the forces of the regency sustained a signal defeat; but as the subsequent proceedings of Antiochus were modified by the ascendancy of Roman influence, which, in like manner, gradually extended itself to Egypt, the history of Alexander's successors may now be regarded as concluded. From this time

Biography. new views and new interests occupy the theatre of politics and of war, in Greece, Asia Minor, Syria, and Egypt. The auspices of the Roman generals and proconsuls, supersede henceforward the fortunes of Macedon, and the genius of Athens and Lacedæmon. The descendants of Æacus give place to the sons of Flaminius, Crassus, and Æmilius; and the glory of the legion is destined to eclipse the Alexanders proud splendour of the phalanx. Even the fame of Alexander himself is almost equalled by the renown of Cæsar, as a skilful warrior and an expert politician; and the wide range of territory which was won by the Macedonian hero, is surpassed by that which acknowledged the sway of the imperial eagle.
